Carrying out those orders was an epic achievement for which Pleasants deserves more credit than history has yet given him. With his regiment of about 400 miner-soldiers he did the job despite lack of co-operation from his superiors. General Meade and Major Duane, chief engineer of the Army of the Potomac, said the thing could not be done—that it was all "clap-trap and nonsense"; that such a length of mine had never been excavated in the history of military operations and could not be. But when it was completed at last, the "impossible" had been accomplished. From the steep slope the shaft ran in for the more than 500 feet with a clearance of about five feet. It was about four feet wide at the bottom and three at the top.

The whole length was shored and braced with timbers against the countless tons of sand and clay above. The tunnel ran a third of its length at a slight pitch upward, then took a steep pitch for another third, to regain the proper distance from the curving surface above, and thence ran nearly level to a point below the Confederate fort. Here the main gallery branched into two laterals about 38 feet long for placing the magazine.

Into the side galleries, on the eve of the projected attack, were carried 8,000 pounds of powder, the amount to which the requisition was cut by General Meade. The various magazines thus made were linked by fuses in tubes, the fuse led down the gallery and tamped with tons of earth. While this was going on, those working in the big tunnel could hear the Confederates above. Sounds of digging led them to believe their enterprise had been suspected and was about to be countered. Moreover, the shock of discharge of Confederate guns overhead led to fears of a cave-in. Everything argued for speedy shooting the mine, and preparations for the effort to take advantage of the certain breach in the lines were hastened. But it was here that the brilliance of Pleasants' achievement was nullified by the blundering of higher-ups.

A Fatal Choice.

While Pleasants was busy with his operations a division of negro troops were being trained by Burnside to lead the assault through the breach to be caused by the mine. But at the last minute Meade and Grant disapproved of their use for this duty lest they be criticized for selecting colored men to be the "battalion of death." So Burnside had the storm division chosen by drawing straws. As it turned out, this foredoomed the enterprise to failure because the lot fell to Gen James H. Ledlie, commander of the First division of Burnside's corps.

It was brought out then and by a congressional investigation later, that Ledlie's "bad habits" and consequent unreliability were well known in the Union army. It was disclosed that Ledlie stayed behind in a dug-out drinking throughout the Crater action and could not be induced to go out and try to extricate the remnants of his division from the deathtrap in which they were caught.

The Explosion of the Federal Mine (From a contemporary drawing).

When the tunneling operations had been completed on July 23 a total of 18,000 cubic feet of earth had been excavated The four tons of powder were placed in the laterals on July 27 and the next day the miners' tamping had been completed Pleasants was then ordered to explode the mine early on the morning of July 30. He lighted the fuse at 3:15 o'clock in the morning. The minutes ticked away—and nothing happened! So Lieut. Jacob Douty and Sergeant Henry Rees volunteered to risk their lives and go into the tunnel to see why.

They found that the fire had stopped where fuse lengths had been tied together, so they spliced fresh ends, lighted the fuse again and dashed hastily out of the tunnel. For a few minutes the waiting Union troops stood shivering in the cool dawn and then—

The Crater of the Mine Exploded on July 30, 1864, Showing the Entrance to the Federal Tunnel.

A Gigantic Upheaval.

They felt the earth shake under them but the only sound they heard was a dull grumbling roar. Their eyes, however, told them the story of what had happened. Over across "no man's land" they saw a section of the Confederate trenches rise up in a gigantic upheaval. The air above the spot was filled with a mounting cloud of earth, men, guns, planks and fragments. Confederates near the Crater ran in every direction. The waiting Union legions shrank back, to escape the shower of debris. Both sides gazed astounded, appalled. A great hole appeared in the ground, 200 feet long, 60 feet wide, 25 feet deep, smoking, dust-shrouded, horrible.

The Union artillerymen recovered from their surprise first. Almost immediately they began laying down a fiery barrage on both sides of the breach. Five minutes later, blue soldiers in ones, twos and groups could be seen running toward the smoking Crater.

Burnside and Ledlie had failed to clear their own defense obstacles and to prepare passages out of and over their own deep trenches So their storm troops were disordered and delayed accordingly. Not a shot was fired from the Confederate side at first, but by the time the Crater was filled by a huddled mob of foremost men, the Confederate rifles were cracking from flanks and front, hostile guns were throwing gusts of canister, and it was fatal to go beyond that scene of hideous death.

Out of the Death Pit.

Gallant officers of the Union line sprang out of the death pit and led a few of their bravest men as far as 100 yards beyond the Crater's lips, but forward of that none went and nothing could live. Survivors raced back for what shelter the pit could give them. There one after another they fell, torn by rifle balls and shell fragments.

Men started despairingly to dig a trench from the Crater back to the Union lines. Men in the lines began to dig a hasty ditch toward the Crater to save what life they could from certain death if the men remained there. Toward noon orders were gotten into the Crater for the men to withdraw as best they could. They dashed for their lines, but only a part of them reached safety.

The Confederate loss had been 276 officers and men, and this "stupendous failure," as Grant called it, had cost him 3,798 killed, wounded, captured or missing. In the afternoon the Confederates swept forward to drive away the last straggling Union troops and that night Mahone's division "held the Crater and all the horrors that lay in and about it."

* * *

Years later a farmer clearing land near Petersburg discovered by accident a tunnel under the ground. Further investigation revealed the fact that it was only one small part of an elaborate system that had been dug by the Confederates during the long siege of Petersburg, many of them no doubt, to prevent any repetition of Pleasants' feat.

Part of the Confederate tunnel system as it is today. Apparently forgotten since shortly after the Civil war, this tunnel constructed during the long siege of Petersburg, was discovered by accident about ten yeas ago by a farmer clearing land. In the photograph are shown the entrances to two branches of the passage. The one on the right is nearly a mile long. The left one is 1,700 feet long. Both are about 5 feet wide and 12 feet under the surface of the ground at the entrance.

Today the visitor can walk through those tunnels and marvel at the engineering skill which has made it possible for these underground passages to remain but little changed through the 70 years since they were in use.

Different, however, is the case with the Crater. Today it is little more than a depression in the ground. Shaded by the surrounding trees, grass-carpeted from top to bottom, it little resembles that place of horrors where on a hot July day in 1864 nearly 5,000 Americans died in vain.

Founder of the Chautauqua

THERE was a time when the chautauqua was "next only to the public school system in bringing to the masses of people some share of their inheritance in the world's great creations in art and literature." It was literally the "university of the people" and it was the creation of a man who did not himself have a college education.

He was John Heyl Vincent, born in Alabama in 1832 of a line of Pennsylvanians who moved back to that state soon after John was born. Educated at Wesleyan institute in Newark, N. J., he began to preach at the age of eighteen and later was ordained into the Methodist ministry. Transferred to the Rock River, Ill., conference in 1857 he became the pastor of a church at Galena, Ill. where one of his parishioners was a quiet little ex-captain of the army named Ulysses S. Grant.

After a trip to the old world Vincent was elected general agent of the Methodist Episcopal Sunday School Union in 1866 and two years later corresponding secretary of the Sunday School Union and Tract Society in New York. In these offices he did more than any other man to shape the International Uniform Sunday School Lesson system.

In 1874 Vincent and Lewis Miller founded a summer assembly on Chautauqua Lake, N. Y., for the training of Sunday school teachers and in 1878 the Chautauqua Literary and Scientific Circle was instituted, providing a system of popular education through home reading and study. The next year the first of the summer schools was organized and these developed rapidly.

In speaking of his work at Chautauqua Bishop Vincent said, "I do not expect to make a second Harvard or Yale out of Chautauqua, but I do want to give the people of this generation such a taste of what it is to be intelligent that they will see to it that their children have the best education the country can give."

How well he succeeded in doing that is shown by the extension of the idea—to the summer schools of colleges and universities, the summer assemblies, conferences and training schools of the various religious and secular organizations and the summer courses of lectures and entertainments which made the word "Chautauqua" a common noun. It is also shown by the declaration of Theodore Roosevelt that "Chautauqua is the most American thing in America."

Camera Man

WITH telephoto lens to aid them in getting long distance "shots" and high-speed film to record the scene even when the light is poor, it's not so difficult for the camera man of today to "cover" a modern war. But it was very different when the first camera man who ever "covered" a war went into the field to do his job.

His name was Mathew Brady, the son of Irish immigrants to New York state, who was engaged in the trade of making jewel and instrument cases when he became interested in the art of daguerreotypy soon after it was introduced into this country in 1839. The man who brought it here was Samuel Finley Breese Morse, a painter, (later famous as the inventor of the telegraph).

Brady learned his first lessons from Morse and learned them so well that by 1853 he was this nation's outstanding photographer.

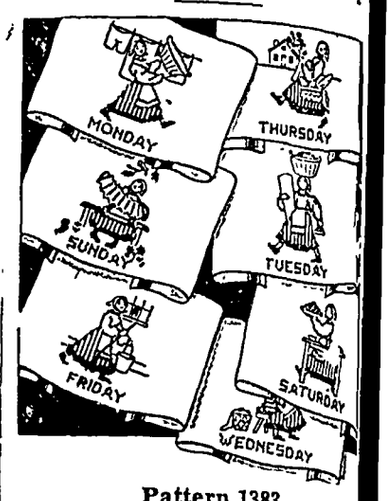
When the War Between the States opened he was both famous and wealthy and he could have lived a life of ease on his income. Instead he chose a career of privation and danger on the battlefields,

Brady fitted up a canvas-covered wagon to carry his equipment and to serve as his dark room in the field In it he had to make his own emulsion to coat the large glass plates that were his negatives, for the convenient film roll had not yet been thought of.

His wagon became a familiar sight to all the armies. It plowed through muddy roads, it was ferried over rivers in constant danger of being dumped overboard and all his precious equipment lost.

But fortunately for posterity Brady came safely through all these dangers and the United States government now owns a collection of his negatives, which are priceless records of one of the greatest tragedies in our history. It is also the symbol of a tragic career. After the war was over Brady found himself in financial difficulties. His negatives were sold to pay a storage bill and in 1874 the government acquired them by paying the charges of $2,840. Brady did not benefit by the deal but later—much later—the government did give him $25,000 for the collection which was then valued at $150,000. In his later years Brady lost his pre-eminence as a photographer and he died in comparative poverty and obscurity in 1896.

Happy Hulda Goes On Dishpan Duty



Pattern 1383

Happy Hulda, as chief-cook-and-bottle-washer, invites you to cross stitch this set of seven tea towels (8 to the inch crossed) in the gayest floss you can find. Pattern 1383 contains a transfer pattern of seven motifs (one for each day of the week) averaging about 6 by 6½ inches; material requirements; illustrations of all stitches used; color suggestions.

Send 15 cents in stamps or coin (coins preferred) for this pattern to The Sewing Circle Needlecraft Dept., 82 Eighth Ave , New York N. Y.

Write plainly pattern number, your name and address.

Uncle Phil Says:

Unfitness of Things

Shoes that are too small do not deceive the observant.

We wonder if silver-tongued orators at times have difficulty in finding something to be silver about.

In dying, it is dearer to leave a vacancy in the hearts of others than an absence of service to them.

When we begin to doubt the eternal infallibility of "public opinion," the country is safe. Thought is moving forward.

Not to Be Regarded Lightly

When we give a promise we consider it a small outlay, but often large demands are made upon it.

The wasp makes no honey, but it is quite as busy as the bee. The bee, you see, understood how to get the praise and poetry of man.

Civilization is self-control. Self-expression as interpreted, is merely "letting yourself go" and making a mess for yourself and everybody else.

Dr. Pierce's Pleasant Pellets made of May Apple are effective in removing accumulated body waste.—Adv.

Lieut. Col. Charles W. Ryder, now on duty with the army general staff, who has been appointed commandant of cadets at the United States Military academy.

Students Pay Tuition by Working as Janitors

all day and mop all night is the rigorous schedule these youths follow. They are students at go Art institute who work their way through art school by doing janitor work in the institute after There are 25 of the students who seize mops and pails and clean up rooms and corridors after in class.

A Few Little Smiles

COMMON PRACTICE

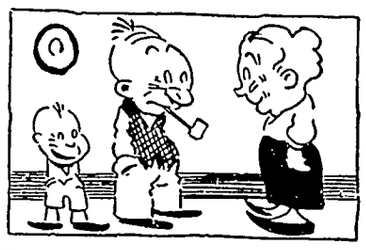
They were a couple of lads from the "upper crust," making an Atlantic crossing on the same liner, but they hadn't been introduced. Consequently, when the ship sank and they found themselves swimming together, neither spoke for several miles.

Finally one of them coughed tentatively. "Er—beg pahdon," he began, "do you mind my speaking to you?"

"Not at all," replied the other. "What can I do for you?"

"Well, I'd appreciate it awfully if you'd direct me toward New York."
—Washington Post.

THE HABIT



"Do you think our boy will leave footprints on the sands of time?"

"He'd leave 'em anywhere. Just look out in the hall."

Doggy

A dear old lady entered a shop and said, "I want one of those water bowls labelled 'Dog' please."

The shopkeeper, however, had only plain bowls in stock, and expressed his regret at being unable to meet her wishes.

The old lady, on second thought, agreed to accept a plain bowl, remarking, "After all, the puppies are too young to read."—Philadelphia Inquirer.

Just a Call

Actor—What about the salary?

Manager—Suppose we call it $250 a week?

Actor—All right.

Manager—Of course you understand that $250 a week is merely what we call it—you will get $25.—Atlanta Constitution.

Turn About

Pamela—Isn't Spot a naughty dog, mummy? He ate my doll's slipper.

Mother—Yes, darling. He ought to be punished!

Pamela—I did punish him. I went straight to the kennel and drank his milk.

What Price Art?

Motorist—I will give you $5 for that picture.

Artist—Won't you wait until I have finished it?

Motorist—No, I want the canvas to mend a puncture.

Dread of the Future

"What day in human history caused the greatest woe and anxiety?" asked the history teacher.

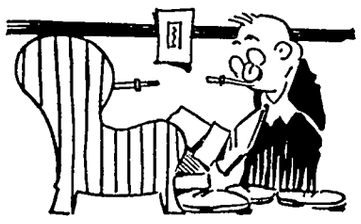
"Speaking off-hand," said the philosophical student, "I would say tomorrow."

Naturally

Niece—They say there are more marriages of blondes than brunettes. Why is that?

Bachelor Uncle—H'm! Naturally the light-headed ones go first.

DEBTS INCLUDED



"We don't meet people who belong to the Don't Worry Clubs these days."

"No, the tendency today is to belong to Don't Hurry Clubs."

Initiative Not Required

"It is always a mistake to start a quarrel," remarked the cautious friend.

"You don't have to start quarrels these days," answered Senator Sorghum. "You can always find one ready made whenever you feel like mixing in."

Cool Job

Where did Tony learn to swim so wonderfully?

He used to be a traffic cop in Venice.—The Automobilist.

Bull.

"That new farm-hand is terribly dumb."

"How's that?"

"He found some milk bottles in the grass and insisted he had found a cow's nest." —U. S. Coast Guard.

On the Right Path

Moe—My ambition is to be a great doctor. I want to become a bone specialist.

Rose—Well, you have a good head for it.—B'nai B'rith Magazine.

Murmurings of Spring

"IF YOU'D take a few steps, Sis, I believe I'd be inspired to answer that question, 'Did you ever see a dream walking?' You are nothing less than devastating—truly a menace!"

"You meow so sweetly, Connie. I'm a bit suspicious that this little peplum frock of mine has got you catty. Your eyes really aren't green by rights, you know."

Connie Sews Her Own.

"How could you? I think my dress looks as nice on me as yours does on you. Why practically all of the girls at the Laf-a-Lot last night wanted to know where I found such a lovely frock. Not one of them guessed that I made it myself. And did I feel elegant when I played Mendelssohn's Spring Song on Diane's new baby grand! The girls said I fit into the picture perfectly. I thought if only Dwight could see me now."

"I still say my two-piecer with its piped peplum, cute little buttons and stream-lines is the No. 1 spring outfit in this woman's town."

Mother Happens Along.

"Girls, girls, if your talk were only half as pretty as your frocks you'd be better off. Sometimes I wonder if you wouldn't be more appropriately titled The Cheek Twins, rather than The Chic Twins."

"Okay, Mother, you win. Let's change the subject by changing clothes. We'll put on our cullottes and join you in a round of golf, how's that? Gee, Mother, you never look sweeter than when you're wearing a casual young two-piece shirt dress. The plaid pique is just the thing for you, too. In fact, Mom, you're just about tops from any angle."

The Patterns.

Pattern 1257 is for sizes 12 to 20 (30 to 40 bust). Size 14 requires 4⅝ yards of 39-inch material plus 11 yards of ribbon or bias binding. Pattern 1231 is available in sizes 14 to 20 (32 to 42 bust). Size 16 requires 4¼ yards of 39-inch material.

Pattern 1236 comes in sizes 14 to 20 (32 to 42 bust). Size 16 requires 4¼ yards of 39-inch material.

Don't Irritate Gas Bloating

If you want to really GET RID OF GAS and terrible bloating, don't expect to do it by just doctoring your stomach with harsh, irritating alkalies and "gas tablets." Most GAS is lodged in the stomach and upper intestine and is due to old poisonous matter in the constipated bowels that are loaded with ill-causing bacteria

If your constipation is of long standing, enormous quantities of dangerous bacteria accumulate. Then your digestion is upset. GAS often presses heart and lungs, making life miserable

You can't eat or sleep. Your head aches. Your back aches. Your complexion is sallow and pimply. Your breath is foul. You are a sick, grouchy, wretched, unhappy person. YOUR SYSTEM IS POISONED.

Thousands of sufferers have found in Adlerika the quick, scientific way to rid their systems of harmful bacteria. Adlerika rids you of gas and cleans foul poisons out of BOTH upper and lower bowels. Give your bowels a REAL cleansing with Adlerika. Get rid of GAS. Adlerika does not gripe—is not habit forming. At all Leading Druggists.

Love's Base

The best and truest part of love is Friendship.

HELP KIDNEYS

To Get Rid of Acid and Poisonous Waste

Your kidneys help to keep you well by constantly filtering waste matter from the blood. If your kidneys get functionally disordered and fail to remove excess impurities, there may be poisoning of the whole system and body-wide distress.

Burning, scanty or too frequent urination may be a warning of some kidney or bladder disturbance.

You may suffer nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—feel weak, nervous, all played out.

In such cases it is better to rely on a medicine that has won country-wide acclaim than on something less favorably known. Use *Doan's Pills*. A multitude of grateful people recommend *Doan's. Ask your neighbor!*

DOAN'S PILLS

Household Questions

For Good Gravy—Did you know that gravy, to be served with roast meat, will taste much nicer and contain more nutriment if it is made with the water in which the vegetables have been boiled?

* * *

For Steamed or Boiled Puddings—Puddings will not stick to the basin if two strips of greaseproof paper are put crosswise in the basin before the mixture is poured in.

* * *

Frying Eggs—Eggs are less liable to break or stick to the pan if a little flour is added to the frying fat.

* * *

Shrink the Cord — When loose covers for chairs, etc., are being made, boil the piping cord before using. This little precaution prevents unsightly puckers after the cover is washed.

* * *

Boiling Old Potatoes—Old potatoes sometimes turn black during boiling. To prevent this add a squeeze of lemon juice to the water in which they are boiled.

* * *

Removing Stains on Hands—Vegetable stains can be removed from the hands by rubbing them with a slice of raw potato.

* * *

New Hot-Water Bottles—Have a little glycerine added to the water with which hot-water bottles are filled for the first time. This will make the rubber supple, and the bottle will last longer.

* * *

Protecting Buttonholes—A row of machine-sewing around button holes in knit underwear prevents stretching and makes them last longer.

You Get Greater Power AT THE DRAWBAR with A ROW CROP

State-supervised tests prove that the Oliver Row Crop Tractor delivers 24.40 drawbar horse power and 29.72 belt horse power. *It actually delivers 82% of its belt horse power as pulling power at the drawbar.*

If you are looking for outstanding fuel economy—for long life—ease of operation—and the finest line of mounted equipment in the world, let us tell you more about the Oliver Row Crop Tractor. The valve-in-head motor is force-feed lubricated at all points of high speed and heavy duty and is evenly cooled from top to bottom. It turns fuel into power as efficiently as the famous Tip-Toe drive wheels turn power into traction. If you are in the market for a tractor, you are going to *want* this one. See us today!

hnson Took Active Part In Legislation Session

MOINES, Iwa (Special)—ng adjournment of the eventh general assembly eek, Rep Oscar E. Johnson, Kanawha, Hancock coun- presentative in the legisla- eported on the outsanding lishments of the recent ses- the home folks

en interviewed in Des s on the day of adjournment, Johnson pointed to the re- old age pension bill, the re- motor vehicle bill, and the exempting commercial fertil- from the sales tax as meas- which, in his opinion, are of ost permanent importance a- the new laws placed upon statute books as a result of orty-seventh general assem- work

eral bills, sponsored by Rep. on personally are of particu- nterest to his constituents in ck county he believes st among these, Rep. John- amed the measure exempting ercial fertilizers from the tax.

. Johnson also sponsored was successful in having pass- bill providing an appropria- for the vegetable and potato ers' association of Hancock y

. Johnson as one of the cratic floor leaders sponsor- he revised motor vehicle code wa, also played a most activ- in coordinating this legisla- into one new statute, tuned odern traffic conditions The otor vehicle laws were enact- iece-meal from time to time before the effective date of ew law so muddled as to con- even the best legal talent in interpretation of them, it has pointed out.

chairman of the special com- e on old age assistance to h post Speaker LaMar Foster inted Rep. Johnson early in session. Hancock county's rep- ntative commented that he been "successful in securing gh of an appropriation for age assistance to care for all needy in Iowa and was suc- ful in securing the adoption of ective amendments which will e the act more readily and dily workable."

mployment Compensation Law

ep. Johnson also played an ve part in securing the pas- of the unemployment com- sation act, of which he likewise a sponsor This law provides kly benefits for unemployed ple not exceeding $15.00 per k and not less than $7.50 per k. It enables Iowa to coordin- with the federal social securi- program as it affects unem- yment.

nother measure sponsored by . Johnson which passed the slature enables the Iowa Fun- l Directors' and Embalmers' ociation and the Iowa Optome- association to derive $4.00 a r revenue from each license fee ued to practitioners in those fessions "for the advancement the arts and sciences of their pective professions.

Rep Johnson's bill to further restrict and regulate traffic in narcotic drugs likewise passed.

In connection with his work in relation to institutions under the board of conrol and the board of education, Rep Johnson secured the passage of a bill, sponsored by him, authorizing the state board of education to purchase land for an experimental farm at Iowa State College.

Two measures, for the passage of which Rep Johnson worked diligently failed to become law They were a revision of the chain store tax bill, designed to remove features of the old law held unconstitutional and an increase in the oleomargarine tax of five cents per pound The present tax is five cents a pound Rep Johnson's proposed bill would have made it ten cents.

As chairman for the apropriations committee for the state insane hospitals, Rep. Johnson visited all these state institutions in order to secure first hand information as to their requirements The result of his investigation and work resulted in apropriations in line with these requirements

Commentary On Duties

Asked what he considered might be of the most interest to newspaper readers concerning the legislature, Rep Johnson responded to the suggestion that, in his opinion, it is the daily routine or "grind" of the legislators themselves.

Rep Johnson replied to a question as to whether the people actually are aware of the tremendous volume of work which every representative and senator must do observing that possibly, in the ring of applause which accompanies the falling curtain, this inestimable amount of painstaking work and research involved in whipping a bill into shape and finally getting it onto the floor of the legislature and passed, sometimes is overlooked.

The basis for all work to be done, Rep Johnson pointed out, is the Code of Iowa When a legislator arrives in Des Moines at the start of a session, he must continue the study of the Code in a more intensive way than ever before This is essential in order that he may have a clear conception of just what the status of all laws are at the present time When this information is ferreted out by burning the midnight oil, he can proceed to conceive proposed changes to the law which will dove-tail in with the statutes which he desires to amend, change or repeal in line with the wishes of his constituents

Then comes the tedious task of drafting the bill which will alter the existing code. This involves, in some instances, research work in the state law library equivalent to that done by graduate students in our leading universitys when they are preparing thesis for master's or doctor's degrees.

After all this information is colected, the legislator proceeds to write his bill, having, of course, ascertained during his research work in the law library that it does not conflict with adverse decisions on similar laws in any other state of the union. This is accomplished by looking up every available ruling on any measure of a similar nature.

After Bill is in Shape

Finally assured that the measure is in proper shape to dove-tail into existing laws, that it stands every reasonable chance of holding water in the courts and will not be questioned for its constitutionality, the legislator then introduces the bill. This done, he then faces the still more strenuous task of formulating and presenting arguments to the house or senate either in session or by means of personal interviews with

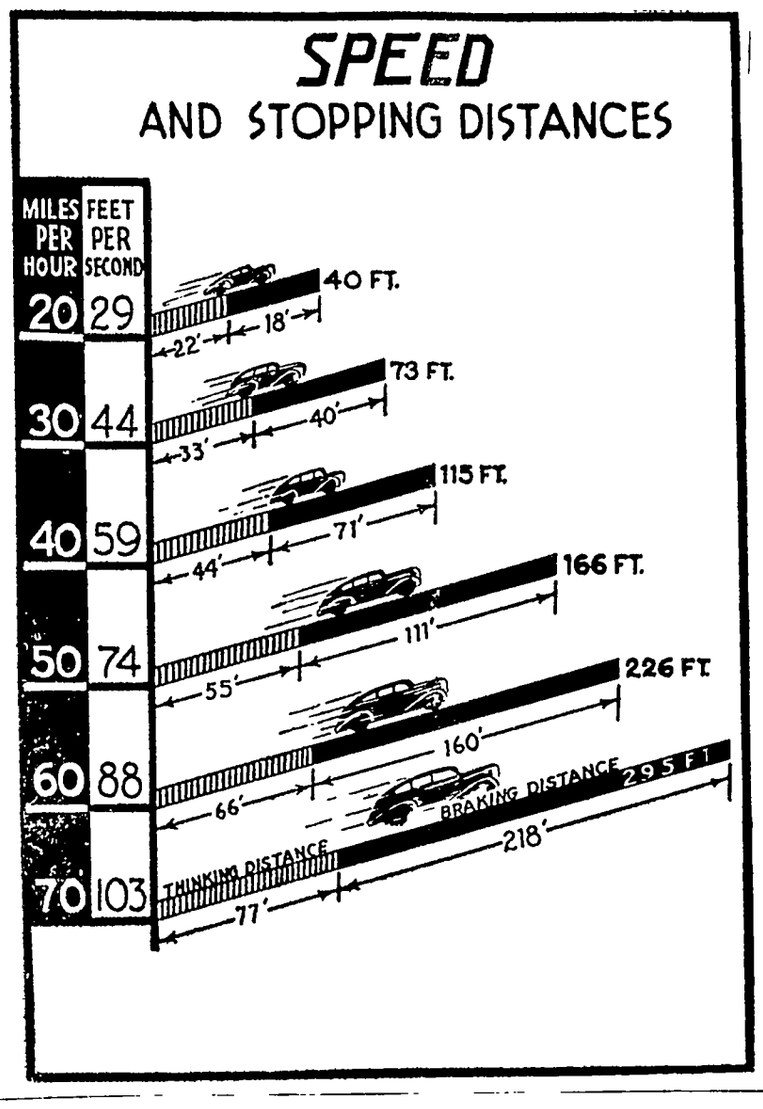
SPEED SPELLS SUICIDE!



SPEED SPELLS SUICIDE

If you are the type of driver who likes to brag that you drove from here to there in so many minutes flat, study this chart The thinking distances shown are based upon a series of tests covering many thousands of drivers Assuming you are normal both mentally and physically, your reaction time to a given stimulus will be three-fourths of a second. Traveling at 60 miles an hour, you will cover a distance of 66 feet before you can think to put your foot on the brake. Then, if your car has perfect four-wheel brakes, and you are driving on a dry pavement of less than 1 per cent grade, you will cover an additional distance of 160 feet before you can possibly stop It is interesting to note that the minimum stopping distance at 20 miles per hour is 40 feet and if your speed is multiplied three times and you are driving at 60 miles per hour, your minimum stopping distance is 226 feet Thus when speed is increased three times, the safe stopping distance increases 5 65 times. Bear this thought in mind the next time your foot gets heavy on the accelerator.

Automotive engineers have designed and built the modern car for your safety of high horsepower, shielded by safety glass, and protected by all steal bodies. Your sense of speed and motion lies dormant when traveling at high rates of speed. Don't be deluded by a sense of safety when the hand on your speedometer tops 50 miles an hour. Emergencies arise quickly, and even at 50 miles an hour, you are traveling 74 feet a second You can readily see that between you and the hospital is but a matter of split seconds if you are a driver who habitually drives at a high rate of speed Copyright, 1937, P. L. Cummings, Des Moines, Iowa

QUESTIONS

1 Can a truck weighing 10,000 lbs. be stopped as quickly as a car weighing 3,000 lbs ?
2. Traveling at 40 mlies per hour, what is safe stopping distance?
3 If forty feet is safe stopping distance at 20 miles per hour, is three times forty, or 120 feet, safe stopping distance at 60 miles per hour?
4 Why does the reaction time of drivers vary?
5. Should a person who is physically incompetent be permitted to operate a motor vehicle?
6 Would a maximum speed law be an effective safety regulation?
7. Name three conditions when the state law requires a motorist to reduce speed?
8 What percentage of accidents are caused by engineering defects in roadways and vehicles
9 Would wider roadways decrease intersectional traffic friction?
10. Name three major developments in automobiles which add to a motorists safety?

ELAINE NEUBERGER ENJOYS HER FIRST BIRTHDAY PARTY

Elaine Shirley, daughter of Mr and Mrs. Melvin Neuberger celebrated her second birthday and her first birthday party Saturday by having eighteen of her little friends come to her home to spend the afternoon playing games Fifteen mothers were present and assisted in keeping the little tots entertained. Elaine received many fine gifs.

An important part of the party was the nice lunch Mrs. Neuberger had prepared which consisted of ice cream with fresh strawberries and cup cakes. The little folks were all seated at a minature picnic table which had been made for the occasion by Mr. Neuberger The table was decorated in white and pink.

KLEMME FARMER BREAKS BONE IN LEG WHILE DOING CHORES

While Verner Lewis was doing chores last Wednesday morning he slipped and fell and broke a bone in his lower left leg. Mr. Lewis was brought to a physician in Klemme who reduced the fracture.

Mr. Lewis works as a tenant on the Edgar Zinn farm south and east of Klemme.

Auxiliary Meeting

APPROACHING MARRIAGE .... OF KLEMME TEACHER ANNOUNCED AT LUNCHEON

Mrs. Will J. Barz, Garner, held a one o'clock luncheon followed by four tables of bridge at her home Saturday in honor of her daughter, Miss Norma Barz, Klemme grade teacher.

Miss Barz announced hre approaching marriage to Dr. Henry Voetberg, of Alva, Oklahoma. Miss Barz has taught in the fifth and sixth grades in Klemme for the past seven years. Dr. Voetberg formerly practiced veterinary medicine here. He is now employed by the government in special work.

HIGHWAY PATROLMEN CONTINUE TO ARREST VIOLATORS HERE

Jim Pierce, of the Berry Seed Company of Clarinda was picked up on the highway near Klemme Saturday by Patrolmen West and Sterzing and brought into Justice Suckow's court and fined on two charges. Pierce was fined $30 00 and costs for overloading a truck and was also fined on another count, that of improper license registration for which he drew a $50.00 and cost fine. The latter was suspended when he produced evidence of having his company provide the higher license plates which was done later.

C. A. Larsen, Klemme, was fined $5.00 and costs Saturday in Suckow's court when he failed to observe a stop sign.

Milton Monson, address not given, was fined $5 00 and costs Sunday for operating a motor vehicle on the highway with delinquent license plates.

KLEMME LADY'S LEG FRACTURED IN FALL LAST WEDNESDAY

When Mrs. Wm. Schlawin was out in the yard at her home east of Klemme last Wednesday afternoon she slipped and fell and injured her right leg. She was brought to Klemme and a physician pronounced her injury as a fracture of both bones in the lower leg. The fracture was reduced and she was taken to her home for care.

HAD BEEN A RESIDENT OF KLEMME FOR THE PAST ELEVEN YEARS

Burial Will Be Made At Her Former Home At Lidderdale, Iowa

Mrs. Henry Jost, who has been ill at her home in Klemme for several months, died Tuesday evening at the age of fifty-four years.

A brief service will be held at the Klemme Reformed Church Thursday morning at seven o'clock after which the remains will be taken to Lidderdale, Iowa, former home of the deceased Funeral services will be held there Thursday afternoon at the Lutheran Church and interment will be made in the Lidderdale cemetery.

The obituary will be published next week.

PROMOTION DAY OBSERVED AT REFORMED CHURCH SUN.

Reports Of Previous Year Read And New Teachers Appointed

Promotion Day was observed at the Klemme Reformed Sunday School last Sunday, May 2nd, and the newly appointed teachers and officers took charge of their duties. From the various reports that were given the following items may be of interest.

The enrollment of the Adult Department was 185; Young Peoples Department 83; and Junior Department 126, making a total of 394.

The following have a perfect attendance mark for the year:

Esther Hartbeck, Phyllis Kirkwood, Elizabeth Goll, Edward Grosshuesch, Marjorie Hartbeck, Edward Barz, Eugene Haberkamp, Billy Grosshuesch, Lucille Hartbeck, Gertrude Grosshuesch, Ruben Grosshuesch, Edmund Josten, Rev. Grosshuesch, Les Hartbeck, Albert Barz and Mrs. Wm. Kirkwood.

The Treasurer reported an income of $560 for the year with a balance of $209.00.

Teachers appointed for the new year are:

Primary, Mrs. W. Rosendahl and Mrs P. Goll; 1st Grade, Mrs. Richard Ax and Mrs. W. Priebe; 2nd Grade, Miss Lida Griffen and Mrs. J. Bock; 3rd Grade, Mrs. Marvin Barz and Mrs. F. Becker; 4th Grade, Dale Schlei and Evert Barz; 5th Grade, Miss Norma Baack and Mrs. C. Kropp; 6th Grade, Clarence Swalve and Ronald Barz; 7th Grade, Mrs. L. Johnson and Miss Stella Thiemann; 8th Grade, Milvern Barz and Leo Brinkman; Jr. Young People, Miss Mabel Schuldt and Miss Ethel Barz; Sr Young People, Harold Kothenbuetal, Pres.; Adult Class, Rev C. Grosshuesch, Secretaries, Mr Paul Goll and Mrs. Leslie Hartbeck; Cradle Roll Supt., Mrs Fred Becker; Pianist, Miss Mildred Thiemann.

REFORMED CHURCH WILL BE REDECORATED and REFINISHED

George Lawhorn has the contract to do quite an extensive job of redecorating at the Reformed Church. The walls in the basement dining room, kitchen and a class room will be painted. The floor in the main auditorium ,hall and Bible Class room will be sanded down and refinished. The work will require a couple of weeks to complete.

HELLO, FOLKS!

A baby daughter was born on April 28th to Mr. and Mrs. Vernon L. Turgasen in a Chicago hospital. The little miss has been named Susan Kay.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building Washington, D. C.

Washington. — Although it has been three weeks since the Supreme court of the United States upheld the Wagner labor relations act, I doubt that there is more than a mere handful of people in this nation who are able to comprehend the full significance of those decisions of the highest court. The chances are, if our present form of government remains and we continue to adhere to our Constitution, the full import of the so-called Wagner act decisions (there were five of them) will not be discovered within a quarter of a century.

Wagner Act Decisions

No decision of the Supreme court in several decades contains the wide range of potentialities found in the decisions of April 12 and it may well be that the findings of the court at that time will constitute a turning point in United States history.

There are so many potentialities to be found in the Wagner act decisions that one may reasonably express a doubt whether states have any rights left. Likewise, one may express a doubt whether labor and the friends of labor have won or lost in the determination by the high court that the National Labor Relations board has power to compel an employer to deal with a majority of his workers, organized into union form. Above and beyond these phases lies another, namely, the question whether the United States congress does not have power to legislate strikes out of existence.

First, I am convinced in reviewing the court's action that there has been a tremendous amount of misinformation spread about the findings of the court. Never in my period of service in Washington have I seen so many different constructions placed upon an official act. We have seen and heard unmeasured criticism of the court for turning business over to the labor unions; we have witnessed a renewal of attacks on the Supreme court because it did not go far enough to the radical side in granting power to congress and the President, and we have been deluged with talk of what can now be done in a legislative way to carry out Mr. Roosevelt's theme song, "The More Abundant Life." The truth is, however, that the Supreme court in deciding the Wagner act cases actually restated in a clarified manner a position the court took twelve years ago. It was in 1925 that the court decided the so-called second Coronado coal mining case. In that opinion, the court laid down the rule, although it was obscured, that obstacles to production constituted an interference with interstate commerce. In the cases this month, the court reaffirmed and restated that very theory of law and government, because it declared in the Jones and Laughlin Steel company case that failure of the employer to permit settlement of the strike through an official agency of the government constituted interference with interstate commerce. Hitherto, the conception of interstate commerce generally has been limited to transportation of goods or communication across state lines.

To show the similiarity, it is necessary only to recall that striking miners attempted to close entrances to the Coronado mines in Colorado. The cases went to the Supreme court which held that illegal attempts to close the mines constituted an interference with shipment of the products into interstate commerce. So, I am quite convinced that the job the Supreme court did in this instance and as far as it relates to the orgy of New Deal theories consists only of clarifying the legal definition of interstate commerce. Laymen are not concerned with legal technicalities, nor do they understand them, but they do understand facts and it was facts in the Jones-Laughlin case upon which the court predicated its decision notwithstanding the wild acclaim by New Dealers for the "enlightened" construction of the Constitution in that opinion.

* * *

Any attempt to point out what the Wagner act decisions mean and how far they go is bound to lead into a maze of complicated discussion. I have no intention of getting myself so entangled despite the degrees in law that I hold. I am a firm believer in the declaration that human nature works out its problems after the manner of slow and orderly development.

Shies at Discussion

But there are certain circumstances connected with the present court rulings and conditions of this day that may probably be discussed without becoming involved in despised legal technicalities.

I mentioned earlier that if the court, as it did, could find that obstruction of production constituted interference with interstate commerce, it seems quite obvious that interfererce may come from employees as well as employers. It is a fact, therefore, that when the steel company here concerned refused to obey the mandate of the National Labor Relations board it prevented a settlement of a strike. It must be a fact, therefore, that a strike of the sit-down type constitutes interference with production and consequently interferes with interstate commerce. The next conclusion, and it seems perfectly obvious, is that if congress can legislate against employer and prevent him from interfering with interstate commerce, it can legislate to prevent the workers from interfering with interstate commerce.

Now, we come to the point, mentioned earlier, of the danger inherent in any situation where congress starts legislating on the question of human rights. Congresses before this time have been fair and congresses hereafter may be fair in enacting legislation dealing with the delicate matter of human rights. But where is the assurance that they will do so? How can we tell but that at some future time a congress subservient to big business may decide to lay down ridiculous rules about employment. It is possible, for example, that some congress may say that employers may not hire workers above fifty years of age. They seem to have that power—if they can make it appear that age becomes important to the maintenance of constant production.

I admit this sounds ridiculous. I intended that it should sound ridiculous. It has been mentioned as an extreme case to show what may be possible if these new powers are not wisely used. It exemplifies, moreover, what a factor uncertainty is when too much power has been granted any agency of the government, be it national or state or local.

* * *

Now, to touch up on some of the unsettled issues resulting from the court's pronouncement:

Unsettled Issues

All that has been obtained under the Wagner act decisions is complete recognition of the right of organized labor groups to bargain collectively free from employer domination. The principle of majority rule is laid down. An employer must deal with the representatives of a majority of his workers. The rights of the minority, whether that minority be a company union or an independent union are rather much overshadowed although they can present their grievances to the National Labor Relations board.

It is in that situation that trouble is foreseen. Most of the recent strikes have resulted from disputes over union recognition. Largely this union recognition question resulted from the maneuverings and agitation by John L. Lewis and his Committee for Industrial Organization. But it is not to be forgotten that the American Federation of Labor has several million members in its craft unions. Thus, it can easily be foreseen that the National Labor Relations board is going to be confronted many times with a fight between the C. I. O. and the A. F. of L. Each one of these organizations will claim that it represents a majority of the workers and, therefore, is entitled to be the spokesman for all of an employer's workers.

Most of us have seen how bitter internal labor rows can become. I am sure that most of my readers will recall cases within their own knowledge where carpenters and bricklayers have fought it out over the question of which one was to do certain work in construction. It has happened hundreds of times and each time bitter hatred has developed. When the right to speak for a whole body of employees becomes the question for determination, it seems to me perfectly obvious that the controversy will develop into one of white heat. And the labor board will have to decide which one should serve as the employees' representative. In the meantime, the employer can have nothing to say.

* * *

All of this may sound a bit fantastic; it may sound as an attempt to borrow trouble. It is neither. The situation is discussed for the reason that it is quite apparent there will be new attempts in congress now to write legislation controlling hours and wages. Representative Connery of Massachusetts, speaking as chairman of the house labor committee, declared the other day that such legislation would be drafted and he entertained no doubt that it would pass the house. Conditions in the senate are different, but Mr. Connery's opinion must be accepted as worthwhile in so far as the house is concerned.

Fix Hours and Wages

Thus, if congress undertakes such legislation it is confronted with the necessity of doing something by way of amendment of the Wagner act that will make union labor comply with federal regulation instead of leaving the Wagner act one-sided as it is. In other words, labor is entitled to its dues, to its fair share of profits, but it seems to me it is also entitled to be as subservient to law as those who pay the wages

UNCOMMON AMERICANS

By Elmo Scott Watson

© Western Newspaper Union

"Liberator of Bulgaria"

HIS name was Janarius Aloysius MacGahan and that fact alone should be enough to make him an "uncommon American." But he had other and better claims to distinction.

Born in 1844 in the little town of New Lexington, Ohio, young MacGahan grew up into a mild-mannered, timid youth, which was strangely in contrast to his character later. At the age of seventeen he tried to become a country school teacher but his application was rejected on the grounds that he was too young and inexperienced.

Deeply wounded by this rebuff, MacGahan left his native state and never returned to it. He went to Huntington, Ind., where he was given a school and taught it successfully for two years, then to St. Louis, where he studied for four years and wrote for the newspapers, all the time preparing himself for a career as a lawyer.

Next he decided to finish his studies in languages in Europe before starting his law career. But just as he was preparing to return to America, the Franco-Prussian war broke out and the New York Herald engaged him to accompany the French army as a war correspondent.

If he had been shy as a boy, he seems to have gotten over that. His new job took him into the thickest of the fight and there he wrote his dispatches while the bullets whistled around him. His graphic reports from the French front won him a position with the London News as well as the Herald.

In 1876 he went into the Balkans and his exposures of the Turkish atrocities in Bulgaria not only stirred England to the depths but led to action by the European powers which won for MacGahan the title of "Liberator of Bulgaria." His untimely death, caused by a fever which he took from a friend whom he refused to leave in Constantinople, brought to a close a brilliant newspaper career. He was buried first in the Turkish capital. Six years later his body was brought back to his native town of New Lexington, where thousands united in honoring the "home town boy" who had made good in other fields. Today his is one of the names honored in the Hall of Fame in the school of journalism at Ohio State university.

Swindler of Millions

AROUND the turn of the century, when Americans were becoming accustomed to the idea of "Big Business" in finance and industry, Cassie L. Chadwick taught them that "big" might be applied to swindling also. Born in Canada of poor parents, Elizabeth Bigley soon decided that she didn't want to remain poor.

After getting her out of a forgery scrape, her father sent her to live with a sister in Cleveland. There she represented herself as an English heiress and married a young doctor named Chadwick but he soon divorced her. For the next four years she supported herself as a spiritualist, clairvoyant and hypnotist under a variety of names in the Middle West. In Toledo she was arrested for forging a draft for $10,000 and sentenced to the penitentiary.

Paroled in 1893, she started out to get money in a big way. She let it be known that she was related to Andrew Carnegie and that the facts of that relationship could only be whispered. After a trip to New York to visit her "father," she came back to Cleveland and turned over to the president of a bank a trust fund agreement and notes amounting to more than $15,000,000. Since these were apparently signed by Carnegie himself, the banker readily gave her a receip for them

With her credit thus established, Mrs. Chadwick started on an orgy of wild borrowing and spending Once she bought $1,200 worth of handkerchiefs from a Cleveland store. She sent grand pianos to eight friends as "little surprises." She chartered a special train to take her friends to New York

Then suddenly her bubble of prosperity was punctured. An enterprising Cleveland newspaper printed a full-page story revealing the details of her past life. She managed to put off the anxious bankers who were demanding repayment of their loans and fled to New York. Arrested and brought back to Cleveland for trial, it was revealed that her liabilities were more than a million dollars. Several banks failed as the result of loans to her.

Moreover, Andrew Carnegie, who had examined the documents which she had deposited in the Cleveland bank, pronounced them forgeries and Mrs Chadwick an imposter. She was sentenced to the Ohio penitentiary again, this time for four years and there she died in 1907, leaving an estate of only $14,000.

Scenes and Persons in the Current News

1—Members of the Supreme court who recently, in an epochal series of decisions, declared the Wagner national labor relations act constitutional. Left to right (rear), Justices Roberts, Butler, Stone, Cardozo, (front) Brandeis, Van Devanter, Hughes, McReynolds and Sutherland. 2—Strikers being forcibly evicted from Hershey Chocolate plant by non-strikers and local farmers. 3—Premier Mitchell F. Hepburn of Ontario, who combated efforts of the C. I. O. to get a foothold in Canada in connection with the General Motors strike at Oshawa and forced the resignation of two members of his cabinet who opposed his policy.

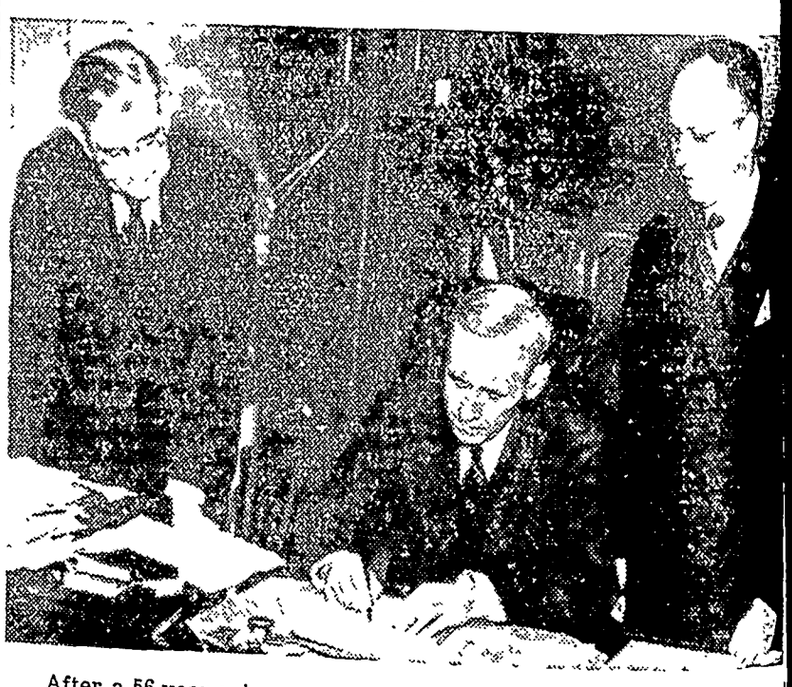
recently celebrated his eighty-fifth birthday. Head of Chicago crime commission, he received credit for coining the phrase "public enemy."

Kansas Gets Damp After 56 Years



After a 56-year reign as the great American desert, arid Kansas is slightly damp as Gov. Walter A. Huxman signs the legislative bill permitting the legal and regulated sale of 3.2 beer in Kansas—truly a history-making event. The ending of the long reign of "bone dry prohibition" was to promote temperance through use of light wines and beer. Kansas first went dry in 1881.

Tombstone Builds Memorial to Its Tough Old Days

As a memorial to the tough old days in the eighties when Tombstone, Ariz., was the scene of some of the bloodiest gunplay in the history of the Southwest, a concrete coffin has been erected on the main street as a monument to the nameless dead who fell in front of the notorious Bird Cage theater, because they were too slow on the draw. Immortalized through Walter Noble Burns' book, "Tombstone—an Iliad of the Southwest," the town is now a mecca for tourists. The dedication ceremony is shown above.

Historical Treasure Found by Store Clerk

Beryle Shinn, twenty-six-year-old department store clerk who accidentally discovered in Marin county, near Francisco, a small metal plate, subsequently identified as the "plate of brasse," a long-sought historical sure by which Sir Francis Drake claimed California lands for England in 1579. Dr. Herbert E. Bolton of University of California (left) being shown by Beryle Shinn, the discoverer, the location of the find.

New Departure in Dentistry

Dr. James E. Bliss (above left), instructor in prosthetics at Western serve university at Cleveland, Ohio, is shown performing a new den- try technique, which ensures that the face of a patient will look the me after a new set of teeth have been put in as before. In this scene is applying a plastic substance to the patient's face, which will harden o a mask, and he is having the patient photographed before the th are extracted.

ELDERLY CADDY

Known only as "Jim," this eighty-two-year-old man is one of the most picturesque figures of the British golfing world. A caddy at the Sunnindale links near London, Jim is on the job rain or shine.

Students at the California Institute of Technology at Pasadena examining a new type of television receiver developed at the institute by Harry R. Lubeke. A television demonstration proved a major attraction as 10,000 visitors jammed the show rooms of the school.

POULTRY

SHOULD BREED FOR HIGH-PRICED EGGS

Size as Well as Production Equally Important.

By Dr. W. C. Thompson, Poultry Husbandman, New Jersey College of Agriculture.—WNU Service.

Since big eggs make for increased poultry farm income because of the emphasis placed on size in grading eggs, and since the ability to produce big eggs is heritable, poultrymen should breed for egg size as well as for production and other inherited traits.

Fresh quality table eggs are sold on an egg size quality basis. This means that price returns are, to a large extent at least, based on the egg size quality of respective packs.

The poultry breeder who is interested in improving the average egg size of the yield produced by his pullet layers should remember that there is no significant correlation between the number of eggs that a bird lays and the size of those eggs and that the poultry breeder must select his breeding stock both with regard to the quantity and egg size quality. He should also keep in mind that egg size quality may be very materially increased by a proper introduction of this element into the poultry breeding improvement program.

The nearer the poultryman can come to produce pullet laying flocks which yield eggs of such size and quality as will command first-grade prices, the more profitable will be the egg farming enterprise.

In the practical application of such principles two methods are offered: First, if trapnesting is being done, pullets which show 60 per cent or more of first-grade eggs, or eggs weighing 24 ounces or more to the dozen should be separately banded with a legband. Future breeders, other things being equal, are best chosen from that group. This involves weighing eggs produced during any 30-day period after three months of production have passed.

According to the second method, suggested when no trapnesting is being done, the breeding stock is selected with regard to all the characteristics considered to be important, and the matings are made up as usual. In any case, only eggs weighing 24 to 28 ounces per dozen are placed in the incubator.

Figures gathered on several hundred layers indicate that the adoption of the 24-ounce-to-the-dozen minimum, or preferably the 26-ounce-to-the-dozen minimum, for hatching eggs will accomplish distinct improvement in the average egg size of the resultant pullet flocks.

Cites High Standards in Choosing Hatching Eggs

Selecting eggs for hatching according to a definite standard aids materially in improving the size, shape and color of eggs produced on the poultry farm, J. C. Taylor, associate extension poultryman at the New Jersey College of Agriculture, Rutgers university, tells egg producers.

The standard of egg selection for hatching suggested by Taylor is that no egg shall weigh less than 24 ounces to the dozen nor more than 28. "The size," he says, "should be uniform and the shape normal. Do not use eggs which are long, short, round or oddly shaped. The color should also be uniform—no cream colored or other tinted shells in the white eggs and the brown eggs should be of a shade most characteristic of the flock."

The care of eggs before they are placed in the incubator determines to some extent the success of the hatch. Collect the hatching eggs frequently, at least two or three times a day. Store the eggs in a clean, cool room or cellar where the temperature does not go above 55 or 60 degrees Fahrenheit. Be sure that all hatching eggs are turned once a day and do not hold eggs longer than 10 days before putting them in the incubator.

Poultry Siftings

Johannesburg, South Africa, has stopped cruelty to poultry by banning shipments in crowded crates.

* * *

Cornish hens are never permitted to set. The egg production is too essential.

* * *

A breeder cannot sell many settings of eggs for hatching and raise a good-sized flock from a few birds unless these birds are exceedingly productive.

* * *

The principal poultry markets of the country are New York, Boston, Chicago and Philadelphia.

* * *

Chickens are kept on about 85 per cent of all the farms in the United States. That means that there are hens on more than 5,000,000 farms.

* * *

There are about 400,000,000 adult chickens in the United States each year. These produce eggs at the rate of 60,000 every minute of the day and night.

AROUND the HOUSE

Items of Interest to the Housewife

To Remove Threads — When basting sewing material, try placing the knots of the thread on the right side. They will be easier to pull out when the garment is finished.

* * *

Melting Chocolate—Chocolate is easy to burn, and for that reason should never be melted directly over a fire. Melt it in the oven or over a pan of hot water.

* * *

Left-Over Liver—Liver that is left over can be converted into an excellent sandwich filling if it is rubbed through a sieve, well seasoned, and moistened with a little lemon juice and melted butter.

* * *

Butterscotch—Two cups brown sugar, four tablespoons molasses, four tablespoons water, two tablespoons butter, three tablespoons vinegar. Mix ingredients in sauce pan. Stir until it boils and cook until brittle when tested in cold water. Pour in greased pan. Cut into squares before cool.

* * *

Stuffed Orange Salad — Allow one orange for each person to be served. Cut through the skin three-quarters of the way down in inch strips, being careful not to break the strips apart. Remove orange pulp and cut in neat dice. Combine with pineapple and grapefruit dice and fill orange shell with mixture. Drop a spoonful of heavy mayonnaise on top of each salad and garnish with a maraschino cherry. Another good mixture for stuffing the orange shells is a combination of orange sections, dates stuffed with cream cheese and nut meats. Mask with mayonnaise.

* * *

Boiling Old Potatoes—Old potatoes sometimes turn black during boiling. To prevent this add a squeeze of lemon juice to the water in which they are boiled.

* * *

Hanging Pictures—Is your picture hanging on a nail which keeps breaking the plaster and so falling out? Before you put the nail in next time, fill the hole with glue, the plaster will not crumble.

* * *

Jelly Sauce—One glass jelly (crab-apple, red currant, grape, etc), quarter cup hot water, one tablespoon butter, one tablespoon flour. Add hot water to jelly and let melt on stove. Heat butter in saucepan, add flour and gradually hot jelly liquid. Cook until smooth and serve hot over almost any pudding.

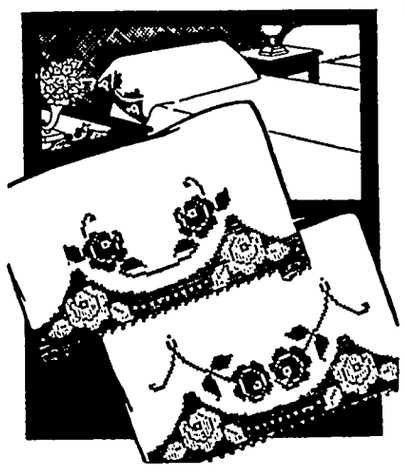
Pleasing Types of Needlework to Do

Add lacy crochet to dainty cross stitch, and what have you? A stunning decoration for your most prized scarfs, towels, pillow cases or whatever! However, either cross stitch or crochet may be used alone, if you wish, and both



Pattern 5751

are easy as can be, even for "amateurs." What could be more captivating than graceful sprays of full-blown roses, cross-stitched in color, with the border crocheted! In pattern 5751 you will find a transfer pattern of two motifs 4¾ by 10½ inches; two motifs 3¼ by 7¾ inches; a chart and directions for a 3 by 15¼ inch crocheted edge; material requirements; illustrations of all stitches used; color suggestions.

To obtain this pattern send 15 cents in stamps or coins (coins preferred) to The Sewing Circle Household Arts Dept., 259 W. Fourteenth St., New York, N. Y.

Write plainly pattern number, your name and address.

Stradivari Violins

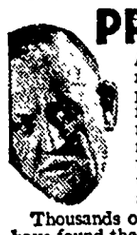
Stradivari violins cost from $10,000 to $40,000 today because, although 50,000 are reputed to exist, there are not more than 400 whose authenticity is supported by irrefutable documents. Furthermore, no new "Strads" have been discovered in the past 75 years.—Collier's Weekly.

Keep your body free of accumulated waste, take Dr. Pierce's Pleasant Pellets. 60 Pellets 30 cents. Adv.

Silent Hatred

The greatest hatred, like the greatest virtue and the worst dogs, is silent. — Jean Paul Richter.

Do You Have This OLDER YEARS PROBLEM?



Advancing years bring to so many people the constipation problem. And it is *so* important for older people to meet the matter correctly. Mere partial relief is not enough. For systems clogged with accumulated wastes are bound to result in aches and pains.

Thousands of elderly people have found the real answer to constipation problems in Nature's Remedy (NR Tablets). Nature's Remedy is a purely vegetable laxative. It not only thoroughly cleanses the bowels, but its action is gentle and refreshing — just the way nature intended. By all means, try Nature's Remedy —25 tablet box only 25 cents at any drugstore.

ANSWERS

1 Yes. Owing to proper design, any vehicle can be stopped in a comparative distance
2. Minimum stoping distance at 40 miles per hour is 115 feet.
3. No As the speed increases the safe stopping distance does not increase in ratio
4 Owing to variance of physical and mental condition.
5 A person who is physically incompacitated presents a serious traffic hazard on any highway
6 Statistics show that states having maximum speed laws have a greater number of traffic violations.
7 Speed must be reduced when approaching or passing a pedestrian; when approaching or passing any animal being led, driven, or ridden, when approaching any intersection, curve hill or bridge
8 Three per cent of all accidents are attributable to engineering defects in roadways and vehicles.
9 Traffic surveys show a greater percentage of accidents are caused by a false sense of safety caused by wider traffic lanes.
10 Four-wheel brakes, all steel bodies, and safety glass

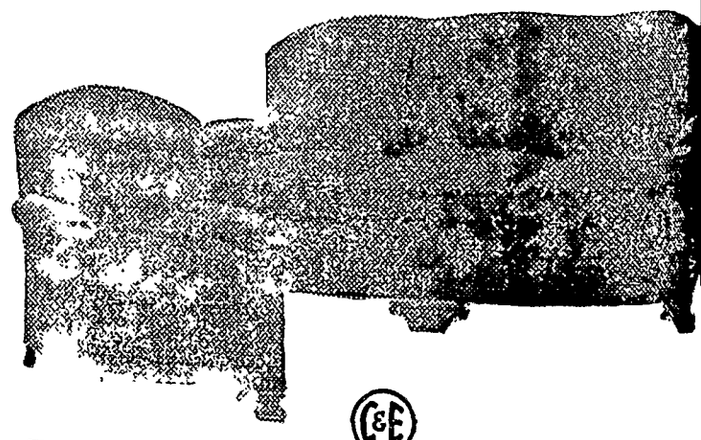
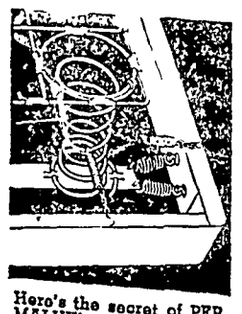
A BICYCLE BUILT FOR TWO
...and Burlap Spring Suspensio
— Follies of the Gay 90's



C&E
PERMALUX
All-Steel SPRING SUSPENSION

When Uncle Hector took his girl out for an airing on a bicycle built for two . . . burlap and twine spring suspension were quite the thing for "parlor" furniture. But in these more modern days, living room suites must be made of sterner stuff . . . PERMALUX *All-Steel Spring Suspension*, for example . . . the greatest improvement in furniture design in 50 years! Suites made the PERMALUX way are softer more luxurious . . and longer-lasting than suites made with webbing spring suspension.



Here's the secret of PERMALUX' unusual luxury! Every spring anchored in "floating" steel bands!

Every spring is securely seated in strong "floating" steel bands. There is NO twine or burlap to stretch or wear out. Seats cannot sag. The entire spring assembly is steel with silver-white finish, and open to full view. Sanitary. GUARANTEED to outlast the upholstery and the frame.

Be sure to see our smart new PERMALUX designs and models. You'll love their rich luxury. Terms to suit every budget

LL BOY AGAIN HURT IN FALL FROM PONY

ell—Lloyd Halfpop, 12, Mr and Mrs. Roy Halfpop of Goodell, suffered a fracture of the left hip when his pony slipped and fell on the pavement as he was riding home from school Monday afternoon

Two years ago on the way home from the same school Lloyd's right shoulder was fractured when he fell, as the same pony shied away from a barking dog The shoulder injury has never completely healed, and Lloyd was scheduled to go to University hospital at Iowa City when school closed this spring for further treatment and operation

After his fall Monday Lloyd was taken first to his parents' home, a mile west of Goodell, and then to Garner where x-ray examination revealed the hip fracture He was then taken to a Mason City hospital.

NO BIRD DOGS NOW

In the new conservation laws now in effect it has been made unlawful to train any bird dog on game in the wild from March 15th to July 15th No firearms or other device for taking small game shall be carried while training such dog during the closed season for quail or pheasants

SCHOOL NEWS

SCHOOL YEAR TO CLOSE WITH MANY INTERESTING EVENTS

With commencement only two weeks away, the Klemme Public School teachers and students are working on a busy program for the end of the year's work

The first of the main events which will bring the school year to a close is the all-school exhibit Friday night of this week Every grade room and many of the high school classes will have work on exhibit The program starts in the school gymnasium at seven-thirty with a series of special numbers by the music department This will be followed by the home economics department style show and a short parent-teacher discussion Following this people will be free to visit the exhibits and demonstrations to be held in six or seven other rooms in the building It is hoped that everyone who is interested in the school in any way will plan to attend

The next event of importance will be a week later the evening of May 14th when the juniors play host to the seniors at the annual junior-senior banquet The banquet will be held in the gymnasium this year and promises to be of high order The juniors and their sponsor Miss Allen have already been working on their plans for several weeks They promise the seniors an evening of royal entertainment

The evening of Sunday May 16th is the date set for the baccalaureate sermon which will be delivered this year by Reverend William Zabilka in the Methodist Church The title of Reverend Zabilka's sermon is "Backbone"

Class Day exercises will be held the evening of Monday May 17th The juniors are working on a program of [illegible] stunts and some will be humorous There will be no admission charge

D C E Flynn pastor of the First Methodist Church at Mason City, and widely known as a author and lecturer will be the speaker at the commencement exercises Wednesday May 19th This event has been moved up to Wednesday this year in order to secure Dr Flynn who is much in demand as a speaker The presentation of eighth grade diplomas and high school honor awards will be an interesting part of this program

The school and community picnic on Friday May 21st will officially close the school year It is hoped that every family in the community will plan to take at least a part of the day off to make this a festival of fun for all More specific notice will be given later in regard to what families are expected to bring

It would be worth while to clip this article from the Times and save it for reference in the busy commencement season just ahead

Grades 7 and 8

We have taken academic tests this week

Our geography classes in the seventh grade have been very interesting We are studying about American Possessions This week we have had Puerto Rico and the Hawaiian Islands

The eighth grade is planning to have another issue of the "Klemme Midget" ready to publish next week

Monday night the eighth grade had a surprise party on Miss Merritt It was held in the gymnasium Games were played and then refreshments were served Everyon had a lovely time.

Grades 5 and 6

Friday afternoon each of us made a May basket. When our small baskets were completed we made a larger basket and filled it with fruit and candy for Barbara Johnson who is unable to attend school because of illness.

Wednesday, Thursday and Friday were partly spent in taking "Achievement Tests."

Our recipe books are now completed We hope our mothers will like them

Grades 3 and 4

Achievement tests were taken this week

May basket day came early for some boys and girls in our room.

We made cuckoo clocks and airplanes in art class this week

The fourth grade begin the study of fractions in arithmetic next week

The third graders are drawing bird pictures and writing stories about them

Grades 1 and 2

Dear Jacobs and Irene Menage had their birthday parties this week

Miss Hansen read us a book about Raggedy Ann and Raggedy Andy Ruth brought us a book of songs about these rag dolls and we sang them

Instead of putting our spelling words into booklets this week we put them into litlle May baskets

We had our pictures taken on Wednesday

Silk Prints Lead the Style Parade

By CHERIE NICHOLAS

JUST one dazzling, color-gloried silk print after another is what's happening in the fabric realm this season. The new prints are more fascinating than ever, and try to resist them and do you? You do not. The urge for another and another in your wardrobe ever keeps on keeping on.

To add to the excitement, couturier and dressmaker are devising ways of making up these silks that are so artful and fraught with such high-pressure novelty the world of fashion is being cast into new throes of enthusiasm every time a style parade of last-minute costumes is staged.

A favorite treatment is pleating and when you pleat printed silk you multiply the beauty and intensity of its coloring to a thrilling degree. The all-around pleated skirt is a favorite topic with designers who are styling the new gowns of silk print. Even if you are making your dress yourself it is a good idea to have the skirt pleated, and it is almost a certainty that you will be pleased with results. The charming dinner dress to the left in the picture is fashioned of a water color print silk crepe with separate jacket and pleated skirt.

Another dressmaker treatment adding untold interest to print ensembles is the self-print lining. To achieve a maximum of practicality and wearability these coats with linings matched to the print of the frock are made reversible. You turn them inside out and vice versa. See the idea nicely worked out in the model centered in the group. The silk print is highly colorful and the monotone cloth of the coat repeats the background tone of the print.

Then there is this reigning vogue of the bolero. Dressmakers and designers are turning out the bolero frock of silk print in vast numbers. You'll love a print silk bolero frock Flattering it will prove to be and practical. See the model to the right in this group. Here is a bolero frock of feather silk print. The dark grounds such as this with wide-spaced motif are especially smart and attractive and wearable. The bodice buttons to a high neckline. The bolero has peaked shoulders and elbow sleeves. Note the red silk chiffon handkerchief in the buttoned pocket of the bolero. The circular skirt of the dress has emphasized creases. The straw bonnet has flowers massed at the front. Which calls to mind another feature designers are emphasizing, that of having flowers somewhere in the picture that are related in color to the print of the silk. This may be a corsage, a gay posy cluster at the new low of a neckline or it may be a bouquet played up in conjunction with a vivid gypsy sash tied at the front.

One of the outstanding innovations in the realm of print silk costumes is the redingote fashioned of matching print, the small figured being smartest for day wear. This redingote, while it tops off the dress of self print to a dramatic climax, will prove one of your happiest possessions to be worn as a separate coat or wrap over the monotone crepe cress on cool spring days and later on serving admirably as a summer wrap worn with dainty lingerie frocks.

It is good style, too, to wear over your navy or crepe afternoon dress either a bolero of eye-impelling silk print or a hip-length jacket if you prefer. The latter should be slightly fitted to be up to the mode and they are especially smart when buttoned down the front.

The silk print idea enters into every phase of fashion this season. You are encouraged to wear gay print from the tiptop of your head down to your feet.

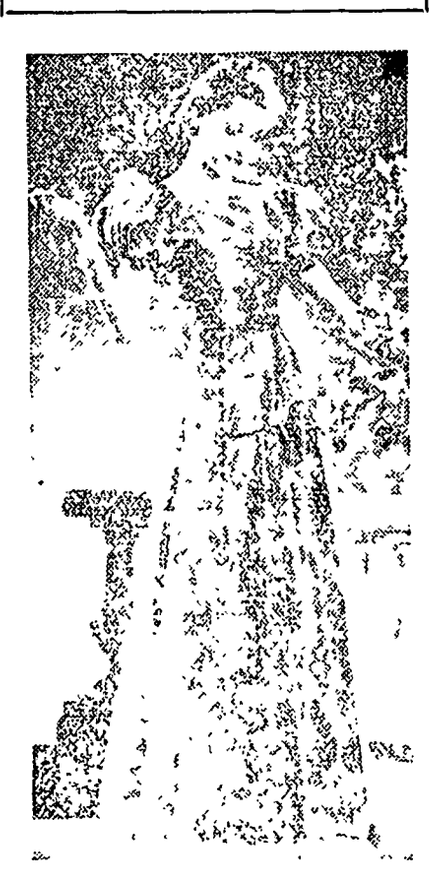
BLUE TAFFETA

By CHERIE NICHOLAS



Fancy turns to the southern-belle type of dress for evening wear. Here is a charming specimen of the quaint and picturesque type that is proving such a general favorite. It is made of silk taffeta in a delectable soft-toned medium blue. Young girls are showing a preference for sprightly taffeta and they love the way the little puff sleeves stand up in lively taffeta manner. Square necklines are much in evidence this season. This one is accented with rhinestone and enamel flower pins and there is a matching bracelet.

GLOVES TO MATCH YOUR SPRING SUIT

By CHERIE NICHOLAS

Cloth gloves to match spring suits are the latest news from Paris. An extra piece of material, ordered when the suit is bought, can be made up in any size or style, short or with deep gauntlet cuffs. Square fingertips are another innovation. The finger may be stitched at sides and straight across the top, giving a casual, out-of-doors look, especially popular in gloves of doeskin or chamois.

Half - finger gloves, which made their appearance last winter in the guise of lace mitts to go with gowns of the southern belle type, are now an established vogue. They are shown in pigskin and chamois for sports wear, and in suede for dress. The gloves extend as far as the finger-joint, revealing brightly polished nails. Very convenient when it comes to picking up a dropped coin, fitting a key or writing out a check. Polish in cardinal or burgundy may be worn to match or contrast with the gloves.

Further independence in glove fashions is exhibited in the unconventional treatment of seams along the back of the hand. These vary from two or three seams running across instead of up and down, to one crosswise seam with two short ones in the usual direction.

Tiny Watches Are Fitted to the Latest in Gloves

Small jeweled watches are being worn everywhere but on the wrist these days. Some of the new tailored suits with heavy cuffs have a small detachable watch encased over the left wrist.

Many of the new cigarette cases have small watches fitted on the outside, while purses and gloves that are fitted with watches have been shown for several months.

Keeping Up With Science

Indians Who Greeted Columbus Have Now Been Identified

Arawaks From Haiti, Says an Investigator

Washington. — An expedition has unearthed new light on the mysterious Indians who met Columbus, and whom he immortalized in history as "simple, honest and exceedingly liberal" natives.

Returning from the Bahama islands, Herbert W. Krieger of the Smithsonian institution reports first discovery of village sites of this Indian group.

One village where these Indians lived was found at the entrance to a huge cave. Under shelter of the overhanging entrance, Mr. Krieger unearthed a hearth where campfires burned, and pottery used in housekeeping. The cave stretched back for about two city blocks.

A chief's seat is one important object recovered from the cave. The seat, unlike many a stiff throne for European kings, was made with a lean-back effect, and had short legs about four inches high. Scrollwork adorned the wood.

Like Those on Watling Island.

This village discovered by Mr. Krieger is at Hamilton cave on Long island. Long island was one of Columbus' three stopping points in the Bahamas when he made his famous voyage in 1492. Indians of San Salvador or Watling island, where Columbus first landed, were of the same native type and group.

Science has heretofore depended mainly on Columbus' journal for information regarding these long-vanished Indians. Columbus called them the Lucayana.

Mr. Krieger's search for archeological remains has produced cumulative evidence that these Indians were Arawaks who migrated from Haiti. That is, their ancestry linked them with South American Indians rather than with tribes to the north in Florida. They had trade relations, however, with Florida, for their pottery and other objects bear some clues to contact with that region.

They Had Flattened Skulls.

Skulls found by Mr. Krieger show that the Indians met by Columbus had heads flattened front and back. This was a custom among Indians in Haiti, but not in Florida, another fact pointing to southern origin of these Bahaman natives.

Proof that these Indians used tomahawks of stone, with wood handles is announced by Mr. Krieger. Heretofore, only the stone weapon heads have been found, and these were taken for "celts" or unshafted stone axes to be held in the fist. Wood handles have now come to light. The discovery is another that links these Indians with southern origin, for such tomahawks were made in South America.

Modern Negroes of the Bahamas sometimes find the stone heads of these tomahawks, and superstitiously call them "thunderbolts."

Optical Phenomenon Is Discovered in Strange Mineral

Corning, N. Y.—In this modern day, when the properties of ordinary masses of matter are seemingly completely known, it was announced here that in a strange Canadian mineral a new phenomenon of optics had been found.

Scientists of the Optical Society of America heard of the baffling glowing property of a mineral known as Hackmanite. This mineral has been known to science since it was discovered, first in Greenland, back in 1906-08 on a Danish expedition.

O. Ivan Lee, mineralogist of Jersey City, described how Hackmanite exhibits a beautiful red-violet color when first fractured into pieces but how this color quickly passes when the fresh surface is exposed to light.

Mr. Lee's discovery is that this striking and characteristic color may be revived at will if the mineral is exposed to ultra-violet light for a short time. While kept in the dark the color persists permanently but exposure again to ordinary light promptly makes the color fade out.

There are two well-known phenomena which cause materials to glow in a fashion somewhat like Mr. Lee's new discovery. They are fluorescence and phosphorescence. The new-found glowing, however, is neither of these for the color seen is different in shade from the mineral's fluorescent or phosphorescent light.

Pithecanthropus Is Now Considered to Have Been an Ape

Ape-Man of Java Was Not Really a Man

PITHECANTHROPUS, Java's famous ape-man, has been demoted to a place definitely among the apes, in the opinion of his scientific discoverer, Dr. Eugene Dubois. He was a giant gibbon-like creature and no man at all. Evidence: Recently found additional thighbones which indicate that Pithecanthropus was "erectus" only occasionally and when on uneven ground habitually went stooped over like a modern gibbon; indications in jaw and skull that his head was attached to the spine well aft (ape-fashion) instead of set on squarely at its middle (man-fashion).

The whole Pithecanthropus question was opened up for re-discussion, according to the Dutch anthropologist, Dr. W. P. Van Stein Callenfels, by the discovery a little over a year ago of a child's skull at Modjokerto in Java, dated as Early Ice age by its associated fossils. The skull is stated to "belong somewhere in the line of human development. It may have been an infant Pithecanthropus."

But the previously known adult Pithecanthropus has always been regarded as belonging to the Middle Ice age, and Dr. Callenfels regards it as quite unlikely that this species began at the early time represented by the infant skull and survived when all other Early Ice age mammal species perished.

Just an Ice Age Gibbon.

Dr. Callenfels suggests that the skull of Pithecanthropus may be of Early Ice age date too; it was found by an army sergeant and site data are quite lacking. The thigh bone may not belong with the skull at all, but to the primitive but definitely human type discovered in a Late Ice age deposit at Solo in Java, and called Homo soloensis.

With his skull chased back to the Early Ice age to go with the Modjokerto infant skull, and his thighbone appropriated by the later-coming Solo Man, poor Pithecanthropus seems rather pushed out on a limb, away from the main trunk of human descent. Ape-man no longer, just a plain ape, though a big one with a big brain; and so his discoverer leaves him.

Gain for the Solo Man.

But the position of Solo Man, with his 1,200-cubic-centimeter brain, is much magnified. With another primitive Java man, Homo wadjakensis, and the strange Rhodesian Man of Africa, Dr. Dubois regards him as representative of the most primitive fossil human type, precursor to the present-day Australian race, most primitive existing human type.

The Dutch anthropologist characterizes Solo, Wadjak and Rhodesian as "the most important of all known fossil men, as representing the most primitive type of Homo sapiens."

"Camel" Locomotive Drinks Only Once Every 621 Miles

Moscow.—The new type of locomotive known as the "SO" but popularly called the camel, has completed a round trip run from Moscow to Vladivostok pulling a freight train of 1,200 tons. The distance covered was 13,000 miles, according to the Tass agency.

Equipped with a tender-condenser the SO used only one-tenth the amount of water normally needed by a freight locomotive for the long journey. With its ten-ton water load the SO can operate for about 621 miles without replenishing its water supply. Its long time between "drinks" makes the name camel appropriate.

The boiler and running parts of the new locomotive differ but little from the ordinary locomotive. The tender-condenser which so efficiently conserves the water supply is a most complicated mechanism.

Oldest Metal Statues of Man Found in Syria

Chicago.—The oldest metal statuettes of men and women ever discovered have been unearthed in ruins of a temple in Syria, dating from 3300 B. C.

Quaint, stiff little figures with solemn faces and arms folded or bent sharply upward, these copper statuettes are believed to represent gods of war and goddesses of fertility. They were discovered by the Syrian expedition of the Oriental Institute of the University of Chicago, at Tell Jedideh. The male figures wear silver helmets almost hiding their eyes, and the women have silver curls or an elaborate headdress.

Good Hybrid Corn Needs Good Soil

Better Varieties Equipped to Produce on Highly Fertile Land.

By A. L. Lang, Assistant Chief, Soil Experiment Fields, University of Illinois. WNU Service.

With farmers preparing to plant a record acreage of hybrid seed corn this year, they are advised that good hybrids need good soil.

Because of the accumulation of the many desirable characteristics in the better strains of hybrid corn, the good hybrids are more adapted and better equipped to produce high yields on highly fertile soils than are the common open-pollinated varieties.

Good hybrids need good soil not because they are unable to produce on poor soil, but because they have the ability to utilize more effectively the materials found in fertile soil.

A corn grower can not expect to grow 90-bushel or 100-bushel corn on 30-bushel land, and he may be wasting high quality seed if he tries it. On the other hand if he has high quality soil capable of producing big crops, he is wasteful if he does not use seed good enough to make full use of the land.

One good feature of corn improvement by hybrid breeding, is that superior hybrids may make it possible to obtain much larger returns from good systems of soil improvement than has been possible in the past. In other words a farmer need no longer fear that he is getting his land too good for his seed.

However, hybrid corn can not be expected to take the backache out of spreading limestone nor to serve as a substitute for crop rotations and applications of manure and fertilizer.

Carry Over Filled Silo Is a Timely Suggestion

Many successful stock farmers have for years made it a practice to carry over a supply of corn or grain for their live stock; especially is this true in sections of the country where crop failures are not uncommon. "Carry over a crib of corn" has been a favorite slogan. The last two widespread and destructive drouths have proven the wisdom of carrying over feed. For so often in a drouth year, not only the corn and grain crops are short but pastures, hay and forage. Without doubt, we will find it a safe and sound policy to carry over especially from a good year, a supply of grain and forage, says a writer in the Missouri Farmer.

Experiments and experience have proven that forage can best be preserved by ensiling. About any kind of plant that stock will eat can be made into silage and in such a state will keep for several years. Now we need a new slogan for the stock farmer and "Carry over a filled silo," is suggested.

Since the early introduction of silos, some 45 years ago, much progress has been made and today we have something like 550,000 silos in use in the United States. When we compare states that have made a large use of the silo with those who have made small use of it, we find that we are still very short of this equipment. A proper economical use of the silo would require at least 1,000,000 more silos.

Prevents Ham From Souring

The first precaution to prevent hams from souring is to be sure that the animal is not overheated before killing and to bleed the animal well after killing. All curing vessels should be scalded and the water for the brine or pickle should be boiled before using, says an authority at the North Carolina State college. Rub each ham with salt before packing for cure and, if brine cured, examine brine every few days to see that it covers the entire contents of container. After curing, hang the ham from six to eight feet above fire and smoke to taste. If curing directions are followed and these precautions taken the meat will keep without souring.

Feed for Cow in Milk

A common rule for feeding a cow in milk is from two to three pounds of good quality hay for each 100 pounds live weight, or one pound of hay and three pounds of corn silage for a similar weight unit. A 1,000-pound cow would then require 10 pounds of hay and 30 pounds of silage daily, plus sufficient grain mixture to meet her milk requirements, which are one pound of grain for each three to four pounds of milk produced, according to an authority in the Rural New-Yorker. Any of the standard commercial mixed feeds from 18 to 24 per cent mixtures are generally satisfactory. Fodder may be substituted for some of the hay if desired.

Water Hemlock Poisonous

Water hemlock is one of the most poisonous plants known. It may cause death in any species, including man. Cattle and sheep are most often affected by it. The plant belongs to the parsnip family. It grows along creek banks, ditches, and in swales and other low, moist areas. It attains a height of 4 to 8 feet and has a broad umbrella-like flower with many small white blossoms on top. Most farmers are familiar with this plant.

My Favorite Recipe

By Gloria Swanson, Film Star

Caviar Canape

1 can of caviar
1 egg
1 tablespoonful of lemon juice
1 tablespoonful of onion juice

Bread for toast according to number to be served.

Spread the caviar on toast. Then spread this the yolk of the egg which has been hard-boiled and run through a sieve. Season with the lemon and onion juice, although the latter is a matter of personal taste and should be used at the discretion of the individual. Trim the edges with the grated white of egg and garnish with small pieces of tomato.

* * *

Thus will it be when "native Americans" from all parts of the country gather at Orchestra hall in Chicago to give their folk music, songs, dances and plays at the National Folk festival on May 22 to 28—the first time it has ever been held north of the Mason and Dixon line. This festival is one of the really unique events in the recent history of this country.

Started by a Woman.

Its originator was Miss Sarah Gertrude Knott who, while she was connected with the University of North Carolina, conceived the idea of bringing together the varied exponents of our "folk culture." Later, while director of the Dramatic League of St. Louis, she set out to enlist the interest of others who have in one way or another been concerned with the distinctive elements in America's background.

Among them were such notables as Paul Green of the University of North Carolina, one of the leading playwrights of this country, who is president of the national committee which she organized; Dr. Homer P. Rainey of the American Youth commission, who is vice-president; Mary Austin, novelist and poet; Walter Prichard Eaton, head of the Yale school of the drama; Constance Rourke, historian and folklorist; Prof. George Lyman Kittredge of Harvard university; Dr. Walter Hough, head curator of anthropology of the Smithsonian institution in Washington; Louise Pound, poet; Frances Densmore, authority on Indian music; and a number of others.

Started four years ago in St. Louis as a co-operative, nonprofit venture and held at Chattanooga, Tenn., and Dallas, Texas, the two following years, the National Folk festival movement has in this short time become an important one in 20 states. The people who take part in the national festival are sent by their various communities or civic and educational organizations. They are not paid entertainers but people who are interested in preserving American folk spirit and molding it, through an annual national festival, into a presentation of those expressions, such as songs, music and dances, which many believe form the real basis of this country's cultural life. Last year's festival was held as a part of the Texas Centennial exposition and this year's is sponsored by the Adult Education council of Chicago as its contribution to the city's charter jubilee.

During the last few months many local and sectional festivals have been held and it is from these, as well as from similar ones held in former years, that the outstanding performers are selected for the national festival. Indicative of the widespread interest of the festival movement is this state-by-state review of its progress and the contributions of the various states to the national gathering:

ARIZONA—Cowboys, under direction of Romaine Loudermilk of Rimrock, bring the ballads

SARAH GERTRUDE KNOTT
Originator of the National Folk Festival.

of early life on the plains as well as the present day songs.

ILLINOIS—A group of veteran Chicago railway men will bring some of the early American railroad lore, such as the "Casey Jones" song. A chorus of 500 negroes, not including any paid or trained performers, will sing spirituals in real camp meeting style.

INDIANA — From this state come the French folk groups of Vincennes, under direction of Cecelia Ray Berry, Chicago author of French folk songs.

From Land of "Evangeline."

LOUISIANA—From Lousiana State university, Lafayette, and St. Martinsville, home of "Evangeline," come the Acadian dancers. They bring the Acadian band, French songs and customs.

MICHIGAN — Constance Rourke, the Grand Rapids author, Prof. E. C. Beck, Northern State Teachers college, Mt. Pleasant, and H. S. Babcock, Alma, bring a group of former lumberjacks who sing the songs and dance the dances that were peculiar to the lumber camp bunk-houses of 50 years ago.

MISSOURI AND ARKANSAS—May Kennedy McCord of Springfield and Mabel Mueller of Rolla have organized groups of the Ozark mountaineers. In Kansas City, a group of Mexicans have been found who have kept alive the folk lore which their people have contributed to American tradition.

NEW MEXICO—The Mexican and Spanish songs and dances, the influence of which is recognized in present-day life throughout the Southwest, is brought to the festival by groups organized by Arthur L. Campa of Albuquerque and Mrs. A. Lucero White of Santa Fe.

NEW YORK—From Staten Island come men from the Sailors' Snug Harbor, who will bring the sea chanteys or work songs of the sea which these former before-the-mast sailors sang.

NORTH CAROLINA — Frederick Koch, University of North Carolina, director of the Carolina Playmakers, will bring folk plays and Bascom Lamar Lunsford, director of the Mountain Song and Dance festival at Asheville, will present Anglo-Saxon lore, including square dances, song games, fiddle tunes and mountain ballads, including such songs as "Black Jack Davie," "Merrie Golden Tree," and "The Old Man in the North Countrie."

OKLAHOMA—Coming to represent this state is a delegation of Kiowa Indians with their songs, dances and ceremonials.

PENNSYLVANIA—A group of anthracite miners, assembled by George Korson and Bucknell university, will sing such work songs as "The Shoo Fly," "The Avondale Mine Disaster" and "Me Johnny Mitchell Man."

TENNESSEE — Song games, such as "London Bridge Is Falling Down," "Skip to My Lou," and "Buffalo Girl," and many others have been developed by a group from the Agricultural Adjustment administration, with Fred J. Colby, Nashville, as director.

TEXAS—More than 30 sectional festivals were held in Texas last year and several thousand Texans participated in the national festival at the Centennial at Dallas. The best of these groups will bring to Chicago some of the rich lore of that state. Cowboy ballads, music and dances predominate in this state's contributions.

Paul Bunyan Tradition.

WISCONSIN—Ethel Rockwell, chief of the bureau of dramatics at the state university, and a member of the national committee of the festival, is working to bring together folk plays and a group to present something of the Paul Bunyan tradition and other Badger state folk lore.

Other states which probably will send groups are: Iowa, folk plays; Kentucky, mountain songs; Georgia, folk customs; Vermont and Maine, New England lore; Kansas, plains songs; Alabama and Mississippi, negro lore and old-time music. In Ohio, Mrs. Mary Roberts Crowley of Hamilton county is attempting to assemble a group and Mrs. William E. Hutson of the Society for Preservation of Spirituals, may bring a group from Charleston, S. C.

The objective of the festival has been summed up as: "To bring together in a colorful, joy-giving National Folk festival the native and traditional folk arts which, for centuries, have refreshed the hearts of the American people in the various sections of our land."

In connection with the festival, several morning conferences are

ROMAINE LOUDERMILK
A cowboy singer from Arizona.

held each year at which leaders of the different phases of folklore get together, exchange ideas, and continue the development of a national lore. These conferences are always open to the public and it is often found that some of the most interesting contributions come from persons who have taken no previous part in the movement.

A Winsome Quartette

THERE was a lull in the mid-morning activities of the Chic Twins (in aprons this time) and their week-end guests when the candid camera caught this gay quartette. The guests are wearing—let's have a close-up — sports dresses because they are so all purpose: tennis frocks go shopping just as often as not. The spectator model to the right with its unusual use of buttons is demure enough to wear when calling on one's Sunday school teacher and yet would have sufficient swing to "belong" in the gallery at the golf tournament. Summer days offer so many unexpected opportunities that these dresses are chosen as equal to any informal occasion.

A Two-in-One Idea.

The aprons on the charming hostesses to the left are both cut from one pattern. The clever miss will never overlook a pattern package that offers two such charming numbers for the price of one. The exhibit is over now; feature in one yourself in the very near future by ordering these patterns today.

The Patterns.

Pattern 1276 is designed in sizes small (34 to 36), medium (38 to 40), large (42 to 44). Medium size requires 1¾ yards of 39-inch material. Pattern 1915 is designed in sizes 14 to 20 (32 to 42). Size 16 requires 3⅛ yards of 35-inch material.

Pattern 1224 is designed in sizes 12 to 20 (30 to 40). Size 14 requires 4⅞ yards of 39-inch material. With long sleeves size 14 requires 4⅞ yards of 35 inch material.

New Pattern Book.

Send for the Barbara Bell Spring and Summer Pattern Book. Make yourself attractive, practical and becoming clothes, selecting designs from the Barbara Bell well-planned, easy-to-make patterns. Interesting and exclusive fashions for little children and the difficult junior age; slenderizing, well-cut patterns for the mature figure; afternoon dresses for the most particular young women and matrons and other patterns for special occasions are all to be found in the Barbara Bell Pattern Book. Send 15 cents today for your copy.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

HERE'S MORE ABOUT REP. OSCAR JOHNSON

other legislators to assure its passage.

When it is considered that, in addition to having this tedious and painstaking work to do in connection with each measure in which a member is interested personally, the legislature must study the code, approximately 1,000 bills introduced in both houses of the legislature, and innumerable amendments to them in order that he may vote intelligently on their passage in the interests of his constituents and the people of Iowa as his constituents are related to the other citizens of the state and as the citizens of this state are related to those of the other 48 states of the union, it is Rep. Johnson's conclusion that any legislator does a good, big day's work every day that he is in Des Moines

In addition to all this, too, a legislator has his committe assignments whihc consume much time and require the intelligent exercise of the knowledge accumulated in his research work on bills.

Rep. Johnson served on the following committees in this legislature appropriations, county and township organization, dairy and food, federal coordination, liquor control, motor vehicles and transportation, old age assistance, pharmacy, roads and highways, social security, state educational institutions, state planning and ways and means, all major standing committees of the house having a tremendous volume of work and each of which spends probably as many hours in sessions as committees as the house spends in session on any one legislative day.

MR. AND MRS. FRED NEUHRING CELEBRATED WEDDING ANNIVERSARY

Silver Wedding Celebration Postponed Since March

Mr and Mrs. Fred Neuhring observed their twenty-fifth wedding anniversary Sunday by having a big dinner to which relatives were invited. Their wedding anniversary comes in March but because of bad weather and roads during that time it was celebrated Sunday

Those present for dinner were Henry Barz and family; George Thiemann and family, Julius Priebe and family; Henry Josten and family; Herman Priebe and family and Rev. Grosshuesch and family.

All enjoyed a fine dinner after which a program was given. Songs were sung by the children and Rev. Grosshuesch gave a talk.

In the evening the cousins and their families came to the Neuhring home for another celebration.

Black bass, crappies and bluegills may not be taken until June 15th.

GLADYS BRIDGES AND WALTER DRAKE WERE MARRIED HERE SUNDAY

Sunday, May 9th at 2 00 o'clock Miss Gladys Bridges and Mr Walter Drake were united in marriage at the Klemme Reformed Church with Rev Calvin Grosshuesch officiating The young couple were attended at the altar by Miss Lucille Stille as Bridesmaid, and Mr Cecil Bridges as Best Man

The Bride wore a white French flowered crepe dress with white accessories to match and carried a bouquet of tulips Her Bridesmaid wore a yellow French flowered crepe dress with white accessories to macth

Mr Drake, who is in the U S Naval service, wore his dress blues navy uniform The Best Man wore oxford gray

After the ceremony the wedding party drove to Mason City where they had a dinner at the Soda Grill Mrs Drake is the youngest daughter of Mrs Herman Bridges of Klemme She was born and raised in this community and attended the Klemme schools. graduating with the class of 1932 During the past couple of years she has clerked at the Thada store

Mr Drake is the youngest son of Mrs Margaret Drake of Garner He has spent most of his life in that community After finishing school he operated a motor freight truck for three years. About a year ago he enlisted in the Navy as seaman and is stationed at San Diego. California He is a member of the crew of the U S. S Altair

Mrs Drake will remain in Klemme during the summer and will continue work in the Thada store Next fall she will join her husband in California Mr Drake is on a leave of absence and will soon return to his ship at San Diego.

The Times joins with the many friends of the couple in extending best wishes for a happy future

SENIOR CLASS HAD SKIP-DAY LAST WEEK

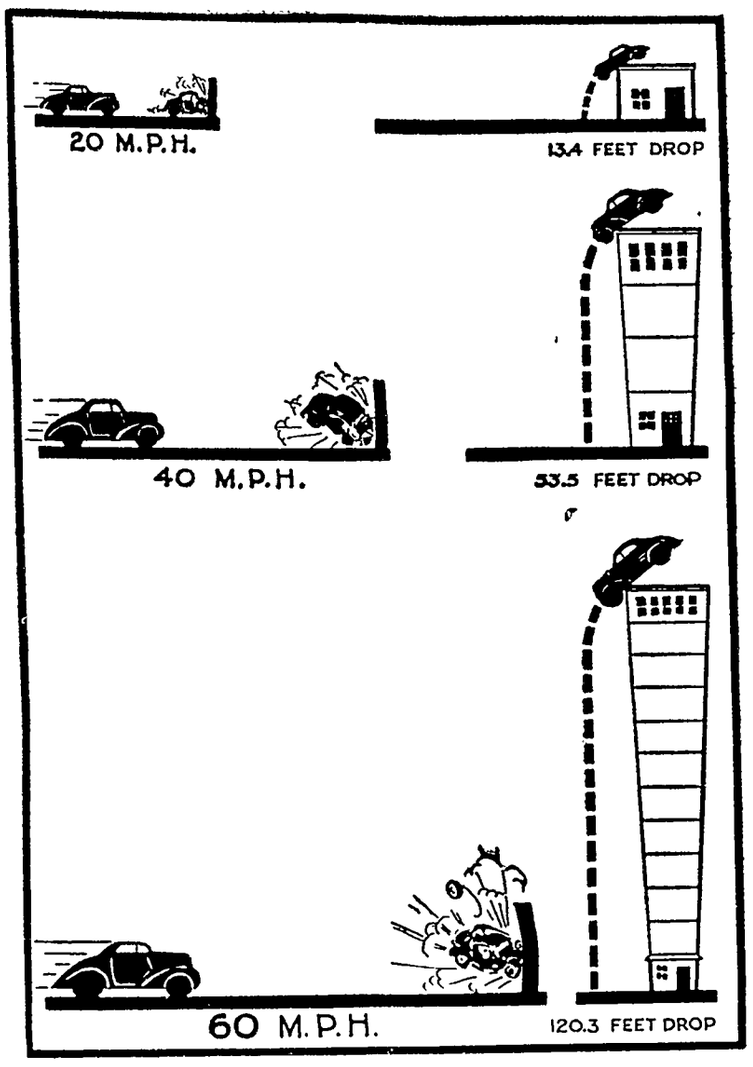
Members of the senior class, accompanied by their sponsor, Mr Galbreth, journeyed to Des Moines last Tuesday on their annual skip-day trip The seniors spent the day in visiting places of interest in the Capitol city Those visited were the State Capitol, the Register and Tribune building and its radio stations, Drake University, the Furnas Ice Cream Company, and the Northwestern Bell Telephone Company A trip to the Fort Des Moines Army Post was also planned but was cancelled on account of a misunderstanding in arrangements.

The tour had been arranged for the class by the Des Moines Chamber of Commerce It lasted until 3:30 in the afternoon and was very educational, so the seniors really went to school after all.

WILL ADDRESS SENIORS

Dr. C. E. Flynn

Terrific Impact At 60 Mi. Per Hr.



Would you contemplate such a suicidal act as driving an automobile off the roof of a twelve story building. The resulting impact would be no less than what would occur should you crack up when traveling at a speed of sixty miles per hour And if you happen to collide with another vehicle traveling at the same rate of speed, the impact in foot pounds would be doubled Statistics show that in 561,000 accidents, 123,980, or 22.1% were caused by excessive speed If highway safety is to become a reality, every individual driving an automobile should regard himself as an important factor in the battle to reduce highway accidents As long as drivers continue to drive blindly at high rates of speed, the accident toll will continue to mount A study of the accompanying illustration is intended to bring to the minds of every person who operates a motor vehicle the danger which he faces should he become involved in an accident While many factors are involved, in case of an accident, excessive speed is responsible for the greater percentage If any advance is to be made in reducing the terrible toll of injured and killed on public highways, it must be squarely up to every driver to use caution to reduce his speed, and to realize the dangers which lie just beyond his sight If you are a driver who revels in telling your friends how fast your car can roll, bear this fact in mind

SPEED IS THE PACE THAT KILLS.

Copyright, 1937, P L. Cummings, Des Moines, Iowa.

QUESTIONS

1 Why are excessive speeds responsible for a great number of fatalities?

2. What percent of accidents are caused by high speeds?

3 How can the impact of a vehicle traveling at sixty miles per hour be computed?

4 Why should every driver be interested in highway safety?

5 Would a vehicle weighing five tons, traveling at twenty miles per hour, collide with more impact than a truck weighing two tons?

6 Would a reduction of speed reduce traffic accidents?

7. What safety regulations govern lighting equipment on motor vehicles?

8 Where should an accident be reported?

9 What should you do in case of monoxide poisoning?

10 Is speed in itself necessarily dangerous?

ANSWERS TO QUESTIONS ON PAGE FOUR

LOCAL JUSTICE HAS TURNED OVER $171.00 TO HANCOCK SCHOOL FUNDS

The Above Amount Represents Fines Collected During Past Thirty Days

Henry Suckow, local justice of the peace, reports that in the thirty day period from April 10th to May 10th he has turned over to Hancock County the sum of $171-00 which represents fines collected This money goes into the coffer of the school funds of the county. Thus law violaters are contributing to the school fund and thus lessen the burden on the tax payers.

H. R. Soper, Estherville, was hailed into Justice Suckow's court by Patrolmen West and Sterzing charged with speeding and overloading a truck Last Wednesday Mr. Soper appeared in court and pleaded guilty to the speeding charge and was fined $10.00 and costs. He produced satisfactory evidence that he had purchased the higher license plates required for his truck

A case which has been pending in Justice Suckow's court was closed Saturday when Oscar Durham, Liberty township farm-hand, pleaded guilty to a petty larcency charge and was fined $10.00 and costs.

HELLO, FOLKS!

A fine baby boy, weight 7 lbs. 4 oz. was born to Mr and Mrs Paul Cavitt on Thursday, May 6th. The new arrival has been named Robert Eugene. Before her marriage Mrs. Cavitt was Wemkie Trampel.

Funeral For Klemme Lady Held At Lidderdale

MRS. AMELIA BETTIN, FORMER RESIDENT DIES

On a sunny slope in the Klemme Cemetery, a new mound of earth marks the final resting place of Mrs Amelia Bettin, 83 Funeral services were held in the Methodist Church at Charles City Tuesday afternoon, May 11th and interment made on the family lot here the same afternoon, beside her husband, Julius M, who died at the age of 46 years, 41 years ago. Here also are buried five of their children.

Obituary

Mrs. Bettin, whose maiden name was Koerner, was born in northern Germany in 1854 She came to America at the age of 18 and a few years later was united in marriage to Julius M Bettin They were among the pioneers in this community and owned and operated a farm in Liberty township for some thirty years. Here their children were born and here the husband died

At the age of 50, her family being grown, Mrs. Bettin retired from the farm and moved to Charles City, Iowa, where she has lived since

She leaves of her immediate family , five children, Emil, of Charles City, Iowa, Julius, of Chicago, Ill., Arthur of Forest City, Iowa, Bertha, of Charles City, Iowa, and Alma, Mrs. Roy Randall, of Wisconsin.

She leaves nieces and nephews in this community as follows Mrs Herman Stille, Mrs W F. Stille, Mrs. J. E. Stille, Mrs. August Lau, Mr. Albert Koerner, Miss Minnie Lenz, Mrs. C A. Arnold, Mrs. Harry Gibbs, besides many other more distant relatives.

Courtesy A. Wellemeyer, funeral director.

LARSEN BREAKING GROUND FOR COLD STORAGE LOCKER SYSTEM

C. A. Larsen purchased the vacant lot west of his store from John Day and today had a crew of men clearing away debris from the recent fire.

Mr. Larsen will build a modern cold storage locker system on the site and the new enterprise will be run in connection with the Klemme Food Market.

KLEMME STORES AGAIN OPEN TWO NIGHTS EACH WEEK

M. E. Ladies Aid

Mrs. C. A. Larsen, Mrs. A. G. Koerner and Mrs E. J Arnold are hostesses for the M E. Ladies Aid Society meeting to be held May 20th Members are asked to come early and help quilt.

County Meeting

The sixth committee meeting of the Farm Bureau ladies for the county met at Britt Tuesday. Eighteen ladies besides the H.D.A. were present. Mrs. Charles Weaver, county chairman presided. Various committees were appointed and plans were made for Acheivement Day, which will be held August 20th.

FUNERAL SERVICES HELD FOR MRS. HENRY JOST AT LIDDERDALE

Funeral Services Held Here In Morning; Burial Was At Lidderdale

Mrs. Henry Jost, 55, passed away at her home in Klemme Tuesday evening, May 4th, 1937 and funeral services were held at the Klemme Reformed Church last Thursday morning at 7:00 o'clock with Rev H R Wrede, pastor of St Paul's Lutheran Church of Garner, officiating

The body was then taken to Lidderdale, Iowa, former home of Mrs. Jost, where services were held in the Lutheran Church in the afternoon with Rev Wrede preaching the sermon and assisted by Rev. R. Herrmann who conducted the services at the grave in the Lutheran Cemetery at Lidderdale

Pallbearers here were members of the school board· C A. Larsen, C G Waterman, Albert Barz and Art Kudje, and Supt. W. H. Galbreth and Coach A. L. Kingery The teachers of the Klemme schools attended the services in a body Mr Henry Jost is president of the school board

Pallbearers at Lidderdale were B E. Albers, H. Boje, A. Fricke, O. Wenck, Geo Borcherding and D. Wenck.

Obituary

Jessie Margaretta Best was born July 31, 1882, in Carroll, county, Iowa, and was baptized in the Lutheran faith Sept 17 of the same year She was confirmed March 26, 1896 and has been a faithful and active Lutheran all her life

June 27, 1923, she was united in marriage with Henry Jost at Pomeroy and for three years the couple lived at Lidderdale Mr Jost moved to Klemme January, 1926, and has been employed at the elevator since. He moved his family to its new home March 1 of the same year

Left to mourn the passing of a loving wife and mother are her husband; one son, Harold; her mother, Mrs. Best, who has made her home with them for the past nine years; two brothers Frank Best of Pomeroy and Herman of Garner; one sister, Mrs. Emery Block of Manson; as well as numerous other relatives and friends.

Card Of Thanks

We wish to thank our friends and neighbors for their kind assistance during the illness of our beloved one; and also thank all those who contributed floral offerings and otherwise displayed their sympathy in our bereavement.

Henry Jost and son,
Harold
Mrs. Tina Best.

TWO FORMER KLEMME YOUNG PEOPLE SERIOUSLY INJURED IN WRECK

Melvin, 18 and Eva, 16, children of Mr and Mrs Martin Jensen, formerly of Klemme, but now living on a farm near Mitchell, are both in a serious condition In company with four other Mitchell high school students, the party were returning home from roller skating when the car in which they were riding struck a bridge abutment and turned over

Eva and Melvin received skull fractures; Dorothy Hungerford, daughter of Supt. Hungerford has a broken back; Junior Parkhurst, Bobby Cordes and James Zastrow were but slightly injured. All were taken to the Osage hospital following the accident.

Late reports are that the Jensen children are still in a serious condition.

Act I. in the Drama of Making the Constitution Began Just 150 Years Ago

By ELMO SCOTT WATSON

SPEAK of the importance of the Potomac river in the history of our country and the average American remembers that it was once a sort of "deadline" between the Union and Confederate armies in the War Between the States. Or he may dimly recall that the phrase "All quiet along the Potomac!", indicative of the stalemate that existed at one period in that conflict, became a by-word and a familiar synonym for an unchanged status quo.

But long before the sixties the Potomac river played an important, even though little-known, role in the history of this nation. Because of it we are today governed under a charter of liberties known as the Constitution of the United States of America. A surprising statement, that? Give heed, then, to this chain of events.

From their earliest days as English colonies, the Potomac had been the boundary line between Maryland and Virginia. But that does not mean that it was necessarily a well-defined boundary nor that the people of these two states shared the use of the river amicably. On the contrary, they were constantly having disputes over whether the exact line was the highwater mark or the low-water mark on the Virginia shore, since several square miles of valuable oyster beds were involved in the answer to that question.

Began in 1661.

As early as 1661 this matter was in dispute and it dragged along for a century without a settlement. Then in 1777 the two commonwealths, now American states instead of English colonies, appointed commissioners "to consider the most proper means to adjust and confirm the rights of each to the use and navigation of and jurisdiction over the Bay of Chesapeake and the Rivers Potomack and Pocomoke." But no definite agreement came out of this move and settlement of the question was delayed until after the Revolution.

In 1785 the question came up again and again commissioners were appointed to settle it. Edmund Randolph, George Mason, James Madison, Jr., and Alexander Henderson represented Virginia, while Thomas Johnson, Thomas Stone, Samuel Chase and Daniel of St. Thomas Jennifer represented Maryland. They met first at Alexandria but soon adjourned to the home of a distinguished citizen named George Washington, at Mount Vernon, where they not only reached an amicable settlement of the immediate question of the Potomac river boundary but they also discussed the larger questions of export and import duties and commercial matters in general.

At that time the new nation was operating under the Articles of Confederation and the Articles specifically forbade treaties or alliances between the states unless approved by congress. Despite this fact, when the Maryland legislature came to act on

Opening of the Constitutional Convention in Independence Hall, May, 1787.

ison who noted that "from the Legislative Journals of Virginia it appears that a vote to apply for a sanction of Congress was followed by a vote against a communication of the Compact to Congress" and he also mentioned other similar violations of the laws established under the articles of Confederation. But there was a deeper significance to all of this than appeared on the surface or was indicated by a call for a trade convention.

"Dis-united States."

The fortunes of the new United States had about reached their lowest ebb. Only 15 members, representing seven states, were attending the sessions of the Continental congress, which was making a futile effort, under the authority given it by the Articles of Confederation, to function as a governing body. Measure after measure was proposed in congress to provide funds for government expenses but most of these failed for lack of the necessary nine votes. Even when the bills were passed the states treated the demands upon them for funds with the greatest indifference. In fact, a more appropriate name for the nation at that time would have been the Dis-united States of America.

The soldiers of the disbanded army which had won the fight for freedom from England were unpaid and in an ugly mood. They wanted their money, long overdue, and large numbers of them camped outside the city and began threatening to stone the building where the congress was meeting unless their demands were met. Presently the situation became so threatening that the congress had to flee from Philadelphia to Princeton, N. J., where it sat for a while, then went on to New York.

Moreover, open rebellion had broken out in Massachusetts where Daniel Shays, leader of the common people in their effort to reform conditions which had become intolerable, had given the government of that state and the wealthy merchants of Boston plenty of worry and there was unrest among the common people of other states.

Recognizing the desperate condition of affairs, such men as Madison and Alexander Hamilton of New York saw in this proposed trade conference an opportunity to take the first steps toward strengthening the power of the central government. Believing that any direct proposal for a new organization of the federal government would meet with opposition from the people, they used the pretext

Independence Hall.

the report, it proposed that Pennsylvania and Delaware be invited to join with Maryland and Virginia in formulating a common commercial policy. Virginia went even farther. She invited all other states to send commissioners to a general trade convention and later announced Annapolis as the place of meeting. September, 1786, was set as the time for the meeting.

This action was clearly an illegal encroachment upon the authority of congress and was recognized as such by James Madof bettering trade conditions, which the people would favor, as an indirect approach to their real objective.

Only Five States Respond

They were correct in their surmise and on September 11, 1786, commissioners from Virginia, Delaware, Pennsylvania, New Jersey and New York assembled at Annapolis. Delegates had been appointed by North Carolina, Rhode Island, Massachusetts and New Hampshire but they did not appear and Georgia, South Carolina, Maryland and Connecticut took no action at all on the matter. Since only five states were represented, the commissioners "did not conceive it advisable to proceed on the business of their mission." But they did adopt a report written by Alexander Hamilton, who had played the leading role in the meeting, supported by Madison, who kept himself in the background. This was a report to the legislatures of the states represented at the meeting in which the defects in the federal government at that time were pointed out and which called for "a convention of deputies from the different states for the special purpose of entering into this investigation and digesting a plan for supplying such defects." Philadelphia was suggested as the place of meeting and the time was fixed for the second Monday of May of the next year.

Several of the states acted promptly upon this recommendation and in February, 1787, congress passed a resolution authorizing a constitutional convention and calling on the states to send delegates to such a meeting in Philadelphia "to take into consideration the situation of the United States, to revise the Articles of Confederation and to devise such further provisions as should appear to them necessary to render the Constitution of the federal government adequate to the exigencies of the Union." Each state could send as many delegates as it pleased, since each was to have but one collective vote.

"Little Rhody" Holds Out.

Of all the states only Rhode Island, which had been at odds with the federal government almost from the beginning, refused to send any delegates at all and, consistent with its attitude, it was the last to ratify the Constitution after one was finally adopted. New Hampshire was in favor of the meeting but because of lack of funds its delegates did not arrive until the convention was well under way.

Altogether 72 of the leading citizens of the 13 states were accredited as delegates although some of them failed or refused to go. Outstanding among the latter was Patrick Henry, the fiery orator of the Revolution, who was suspicious of the purposes of the convention. Or, as he phrased it, "I smelt a rat!" Of the 72 accredited delegates, 55 took part in the deliberations of the convention at one time or another but only 39 stayed on the job until the end. They were the following:

CONNECTICUT — Roger Sherman and William S. Johnson.

DELAWARE—Richard Bassett, Gunning Bedford, Jr., Jacob Broom, John Dickinson and George Read.

GEORGIA—Abraham Baldwin and William Few.

MARYLAND—Daniel Carroll, Daniel Jenifer and James McHenry.

MASSACHUSETTS—Nathaniel Gorman and Rufus King.

NEW HAMPSHIRE—Nicholas Gilman and John Langdon.

NEW JERSEY—David Breasley, Jonathan Dayton, William Livingston and William Patterson.

NEW YORK—Alexander Hamilton.

NORTH CAROLINA—William Blount, Richard D. Spaight and Hugh Williamson.

PENNSYLVANIA— George Clymer, Thomas Fitzsimmons, Benjamin Franklin, Jared Ingersoll, Thomas Mifflin, Gouverneur Morris, Robert Morris and James Wilson.

SOUTH CAROLINA — Pierce Butler, Charles Pinckney, Charles C. Pinckney and John Rudledge.

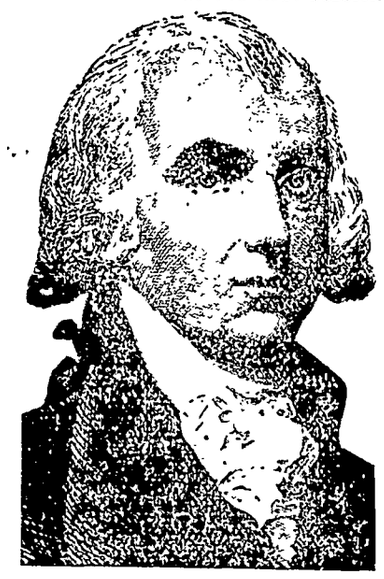
VIRGINIA—John Blair, James Madison and George Washington.

Of this number more than half, 21, were lawyers. Six are classified as "statesmen," three were farmers landowners or planters, three were merchants, two bankers or "financiers," one an educator, two physicians and one a soldier Most of them were well educated. Nine of them had studied in the Inner Temple or the Middle Temple in England, one at Oxford under Blackstone and two in Scottish universities. Half of the delegates were graduates of American or European colleges, three were professors and one, Dr. William S. Johnson, was president of Columbia college, on leave of absence to act as delegate from Connecticut.

A Youth Movement.

Moreover it was a convention of young men. The patriarch Benjamin Franklin was then eighty-one years old, but 20 of the 55 were under forty years of age. Jonathan Dayton of New Jersey was the "baby" of the convention — only twenty-seven years old. Charles Pinckney, who submitted the first draft of the Constitution, was only two years his elder. Alexander Hamilton of New York, destined to play a leading role in the convention but a more important one in securing the ratification of the Constitution, was barely thirty, and James Madison, who would become known as the "Father of the Constitution," was thirty-six.

Although the second Monday in May had been set as the date for the opening of the convention, the roads of that time were so poor and travel so slow and expensive that it was not until two weeks later that the first session



JAMES MADISON
"The Father of the Constitution."

was held. The convention met formally for the first time on Friday, May 25, although only a few more than half the delegates had arrived by that time. Seven states were represented at this meeting, according to one authority; according to another, there were nine. Whatever the number, those present got down to business at once by electing a presiding officer. Benjamin Franklin, because of his age and the fact that this was his home city, was the logical choice for this position but he graciously waived that honor and suggested the choice of George Washington.

So the late commander in the struggle for liberty, the man who was destined to become the first President under the Constitution which would be adopted after several weary weeks of struggle in this convention hall, took his place on the raised platform in Independence hall and on Monday, May 28 the convention entered upon the business for which it had been called.

At the first session, a rule enjoining secrecy on the part of the delegates as to their deliberations was adopted. Nearly all of them observed that rule and died without revealing any of the inner details of the drafting of the Constitution. Fortunately for posterity, however, James Madison, who had devised a system of shorthand of his own, took extensive notes on the proceedings and to him we owe the fullest accounts of the eventful sessions which followed.

* * *

Thus it was that 150 years ago this month Act 1 in the drama of making the American Magna Charta opened. And in the background of this drama is the story of another of those "tremendous trifles" of history—a dispute over a river as a boundary line which, through a long chain of events, led at last to this great moment!

Coking of Coal Is Greatly Improved by New Method

Better and Cheaper Product Promised

Pittsburgh, Pa. — Cheaper, better and more versatile coking of coal is in prospect as the result of five years of fundamental research at the Coal Research Laboratory of the Carnegie Institute of Technology here.

By breaking with traditional methods of turning bituminous coal into coke, gas, tar and chemicals, William B. Warren explained here recently to some leading industrialists, it should be possible for coke oven operators to decrease cost, cut operating time by a third, while improving quality and yield of coke.

Mr. Warren recommended that coal be preconditioned before coking by warming it to 200-400 degrees Centigrade (400-750 degrees Fahrenheit). This precarbonization treatment could be carried out in low temperature apparatus that is much less expensive than the coke ovens themselves.

Mr. Warren's Theory.

Delving into just what happens when coal is heated and carbonized, Mr. Warren evolved a theory. This theory, applied to practical operation of coke ovens, promises the large economies.

First, when coal is heated the large molecules break apart into much smaller units. At slightly higher temperatures, surface changes take place within the coal that cause the little units to recombine into larger ones once more. This takes place slowly and this temperature must be held for a time. Then as the temperature is raised real thermal decomposition takes place. The surfaces of the molecules are attacked and portions torn off, appearing as tar and gas.

By manipulating the process so that the molecules have large surfaces, which means the molecules are small in size, more tar is produced at the expense of coke. Or if tar is not desired, the high temperatures can be used when the molecules are large.

There is hope that the new knowledge of coking will allow the making of coke from coals which are not at present considered "coking coals."

One-sixth of all the coal produced in the United States is coked and the new methods promised by the Carnegie Institute's researches are for that reason of great economic importance. From coal, in addition to coke and gas, come ammonia and a vast array of drugs, perfumes, chemicals and dyes made from the coal tar.

All Elements Are Found in Every Part of Earth

Berlin.—Gold in "them thar hills?" Certainly. There is gold in every hill, in the dirt under your feet—in fact, gold in every mineral particle on earth.

Not only gold, but radium, platinum, common iron and lead, and every one of the whole list of 92 elements known to chemistry. There may be so little that they can't be measured by even the most delicate of commonly used chemical methods of analysis, but they are all present just the same.

This doctrine of the "omnipresence of all elements" is put forth by Drs. Walter and Ida Noddack, German chemists famous for their discovery of the two exceedingly rare elements, rhenium and masurium. The Noddacks are masters of some of the most sensitive methods of analysis ever devised, so that they are entitled to speak with authority.

Mixed in Fluid Form.

This complete mixing of all the earth's ingredients, they hold, took place back near the beginning of geologic history, when the earth was still in fluid form, and "boiling" actively.

The practical significance of the idea of elemental omnipresence is, that chemists should always state to how many decimal places they have carried any given analysis. They are not entitled to say of any element, "not present," or "concentration zero," but only, "not found in the concentration examined."

This point of view, the Noddacks believe, has real significance for chemical analysis as used in industry, medicine, and many other daily-life applications.

Using Telescope in Search for New Light on History

Fascinating Studies by Mt. Wilson Scientists

By WATSON DAVIS

A WIDESPREAD search that extends to the limits of the visible universe is being pursued in the hope that new light will be shed upon history, scientifically speaking.

Astronomy is not usually considered a branch of history but telescopes can look out in space's depths and see what happened there a hundred million years ago—that is, light from a stellar outburst that ancient takes that time to reach the earth.

Dr. Fritz Swicky, young and brilliant California Institute of Technology physicist, is investigating history in this sense with the help of Mt. Wilson Observatory's Drs. Walter Baade, Edwin Hubble and M. L. Humason.

Scientific Meaning of History.

Scientifically speaking, he says "history means the change in time of dimensionless ratios of significant physical quantities." As for instance, the famous red shift in the rainbows or spectra of distant star aggregations as compared with nebulae relatively neighbors to the earth. Interpreted under the theory of relativity, this is a historical effect on a large scale.

The assumption that history must be operative suggests clearly to Dr. Zwicky the necessity of an investigation of all those dimensionless ratios between significant physical quantities. Only after this investigation has been completed does he believe a final understanding of the red shift and other cosmic phenomena will be possible.

Suggestive Discrepancies.

Other effects are being investigated by Dr. Zwicky. There does not seem to be any significant difference in the speed of light from distant parts of the universe compared with light from nearby stars. But there are suggestions that great exploding stars, distant supernovae, spraying light and particles out into space, are seen or "received" imperfectly here on earth because some kinds of their radiations travel more slowly than others. Suggestive discrepancies have turned up in astronomical studies but not so positively that conclusions can be drawn.

This is the stuff that philosophy is made of. As yet the researches stay within the bounds of relativity theory's principles, but this investigation on fundamental reference systems for physical measurements on a cosmological scale may well go beyond the classical theory of general relativity. It promises to out-Einstein relativity.

People of This Day Are Taller and Mature Earlier

Berlin.—The present generation of young men and girls is growing faster than its parents and grandparents, maturing earlier, and attaining larger body size, recent physical measurements in Germany indicate.

Dr. Ernst Walther Koch of Leipzig, measuring large numbers of school children, declares that fourteen-year-olds, both boys and girls, average nearly four inches taller and more than eight pounds heavier than they used to, as shown by older records. He has also found evidences of earlier sexual maturity His general conclusion is that young people grow up faster, but that their final size is not greater than their ancestors'.

A colleague in the military medical service, Dr. Hans Muller, takes issue with Dr. Koch on the latter point. His measurements on army recruits have convinced him that young men keep on growing until they are twenty years old or more, and that their final height is appreciably greater than that of their forebears.

Brain Waves Are Found to Be Quite Consistent

New York.—Brain waves are consistent. Moods and mental activity and accomplishment may vary from day to day, but not the wavy lines on paper that tell scientists about the electrical energy that accompanies activity within man's brain.

The day-to-day consistency of a person's brain waves is reported by Drs. Lee Edward Travis and Abraham Gottlober of the State University of Iowa to the journal, Science. These brain-probing scientists recently reported that one person can be distinguished from others by his brain waves.

Brain waves vary according to whether a person is sleeping or awake and working at mental problems or awake and just sitting idly with nearly "blank" mind. The last condition is the one in which the Iowa scientists made their studies.

Scenes and Persons in the Current News

1—Papal attache bearing symbol of the Order of the Golden Rose conferred on Queen Elena of Italy by the pope recently. 2—Mrs. J. Borden Harriman appointed minister to Norway by the President. 3—Masaaki Tsuma (left) and Kenji Tsukagoshi, Japanese flyers welcomed at Croydon airport after flight from Tokyo to London. The Nipponese flyers received an ovation from crowds gathered to see them land.

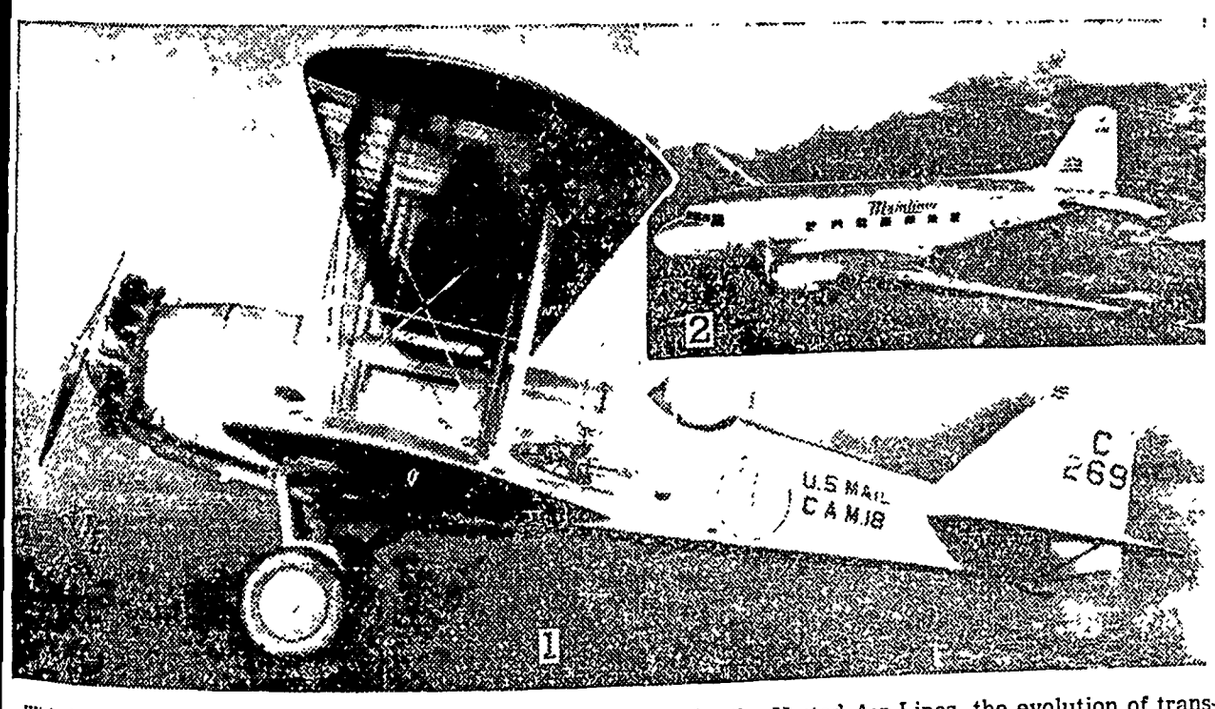
RAIL PRESIDENT

William M. Jeffers, who will become president of the Union Pacific railroad on October 1, with the retirement of Carl R. Gray, three days after his seventieth birthday and retirement age upon his own insistence that the company rules apply to him. Mr. Gray will continue his services with the railroad as vice chairman of the board of directors.

Indians Honor Champ Jim Braddock

Heavyweight Champion Jim Braddock was recently inducted into the tribe of the Lac Courte Orreille Indians near Stone Lake, Wis., where he did his preliminary training for the coming fight with Joe Louis. The champion was named "Che-Me-Ga-Ze-We-Ne-Ne," meaning chief fighting man. Next to him is Alex Martin, head man of the tribe.

Milestone in Transcontinental Air Service



With inauguration of 15½-hour service from coast to coast by the United Air Lines, the evolution of transcontinental air service in the past decade is pictured above. 1—Pioneer, single-engined mail plane, carrying two passengers, which started first schedule in 1927. 2—Modern air-conditioned mainliner, equipped with two 14-cylinder engines with a top speed of 212 miles an hour.

Invents "Anti-Jitter" Keyhole

Ralph Ring of San Francisco, shown with his most recent invention, an "anti-jitter" keyhole. A funnel arrangement on keyholes is aimed to guide the key in unsteady hands into the lock without too many preliminary attempts. Coming anywhere near the mark the key strikes on the periphery, and there you have it!

"GET A JOB, GIRLS"

Every woman should have a profession whether she intends to marry or not, in the opinion of Mrs Mary Roebling, herself a successful bank president in Trenton, N. J She believes that women are becoming increasingly important in business, in fact, she predicts that "within the next ten or twenty years women will be doing the deciding."

FARM TOPICS

USE WATER GLASS TO PRESERVE EGGS

Poultry Flock Owners Save the Over Supply.

Supplied by Nutrition Specialists, at Ohio State University.—WNU Service.

New-laid eggs can be put down in water glass at any time, so many owners of poultry flocks have found it to an advantage to preserve some eggs during the high-producing season for use during the months of low production, according to nutrition specialists at Ohio State university.

Only clean, fresh, infertile eggs should be put down in water glass. Dirty eggs will spoil and, if they are washed, the protective coating which prevents spoilage is removed. Cracked eggs should never be used. Even minute cracks may cause spoilage and contamination of the other eggs in the jar. It is a wise precaution to candle every egg before putting it into the water glass solution.

A five-gallon crock or jar will hold about 14 dozen eggs with room for at least two inches of water glass solution above them. The container should be thoroughly cleaned and scalded and allowed to dry before it is used. It is a good idea, too, to set it where the eggs are to be stored, as it is difficult to move safely when filled with eggs.

To prepare the solution, boil nine gallons of water, then cool. Add one quart of sodium silicate, or water glass, which can be bought in most drug stores, and mix well in the container. Put eggs carefully into the solution to avoid cracking them. Keep at least two inches of the water glass solution above the top layer of the eggs.

Evaporation can be prevented by covering the crock with a tight lid. This can easily be removed to put in more eggs. If the solution evaporates perceptibly, add enough water to maintain the level. Eggs preserved in water glass solution may be taken out at any time. If they are used for boiling, make a small hole with a pin in one end to prevent them from cracking.

Black Leghorns Found to Be Popular on Farms

The black-feathered sister of the White Leghorn is becoming increasingly popular on thousands of poultry farms for a number of reasons, says a poultryman in the Philadelphia Inquirer. First, the birds are extremely hardy and very healthy. Diseases common to other breeds, such as white diarrhoea, laying mortality on account of pickouts and cannibalism, are unknown in Black Leghorns. They require no bloodtesting, no vaccination or coddling of any kind, and thousands of farmers are depending on them for their living. They lay large white eggs and lots of them and are the only black-feathered fowl that dresses yellow for market purposes. Their flesh for the table is not excelled.

In England they are the leading breed. At the English egg-laying contests they have won every point for several years—most eggs, largest eggs, lowest feed cost.

Farm Hints

Hatching eggs held longer than 10 days decrease in hatchability.

* * *

California produced enough eggs in 1935 to serve two to every citizen of the United States six mornings of the year.

* * *

Dry clean hay is sometimes used in conjunction with gravel or sand for brooding litter. It is not as satisfactory as straw.

* * *

While turkeys have been known to lay 200 eggs or more during the season, the average production is probably around 70 eggs.

* * *

Vaccination of chickens at an early age can develop them into better egg layers, experiments still under way at the University of California indicate.

* * *

Roasters allowed to range 20 to 25 weeks before being placed on a fattening diet have a larger percentage of breast and leg meat.

* * *

A common cause of hog poisoning, although seldom identified, is the use of too much salt or salty brine in the ration.

* * *

An apple tree which makes an excessive vegetative growth in spring will develop shoots and water sprouts instead of fruit buds and be unproductive.

* * *

Poor seed is the greatest cause of low corn yields. It pays to select good seed and to test before planting. Testing is early spring work.

* * *

A 1½-ton farm motortruck driven 5,000 miles costs about 7 cents a mile for fuel, taxes, repairs and depreciation, according to the Bureau of Agricultural Economics.

* * *

Many of the worst weeds farmers in this country have to contend with have been imported with agricultural seed from foreign countries.

Talk About Smart Frocks

"AUNT ALMA, there's just one thing I don't like about my new dress—it's so attractive I'm afraid Sis over there will appropriate it when I'm not looking. Outside of that I'm crazy about it, and I think you're swell to make it for me. Why—"

"What's this, what's this? If that isn't a laugh. Aunt Alma! Imagine me wanting anybody's dress. Why since you've taught me to sew-my-own I never want anything. I just make it and that's that. This sport dress, for instance, took me only one afternoon."

"I think you do wonderfully well with your sewing, my dear. You'll be making my clothes the first thing I know. I feel especially pleased with my new spring dress and I have both of you to thank for suggesting this style. It does right well by my hips, and it's so comfortable through the shoulders. I guess I should diet but in this dress I feel nice and slender. Don't you see, girls, how important it is to choose a style that's particularly becoming? It's abiding by this theory that gives some women such enviable chic."

The Patterns.

Pattern 1280 is designed in sizes 12-20 (30 to 40). Size 14 requires 3¾ yards of 39 inch material.

Pattern 1233 is designed in sizes 34-52. Size 36 requires 5⅞ yards of 39 inch material. The collar in contrast requires five-eighths of a yard.

Pattern 1284 is designed in sizes 14-20 (32 to 44). Size 16 requires 3⅞ yards of 35 inch material.

Send for the Barbara Bell Spring and Summer Pattern Book. Make yourself attractive, practical and becoming clothes, selecting designs from the Barbara Bell well-planned, easy-to-make patterns. Interesting and exclusive fashions for little children and the difficult junior age; slenderizing, well-cut patterns for the mature figure; afternoon dresses for the most particular young women and matrons and other patterns for special occasions are all to be found in the Barbara Bell Pattern Book. Watch Your Kidneys!

Help Them Cleanse the Blood of Harmful Body Waste

Your kidneys are constantly filtering waste matter from the blood stream. But kidneys sometimes lag in their work—do not act as Nature intended—fail to remove impurities that, if retained, may poison the system and upset the whole body machinery.

Symptoms may be nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—a feeling of nervous anxiety and loss of pep and strength.

Other signs of kidney or bladder disorder may be burning, scanty or too frequent urination.

There should be no doubt that prompt treatment is wiser than neglect. Use *Doan's Pills*. *Doan's* have been winning new friends for more than forty years. They have a nation-wide reputation. Are recommended by grateful people the country over. *Ask your neighbor!*

DOAN'S PILLS

NOTICE OF APPLICATION
FOR TAX DEED

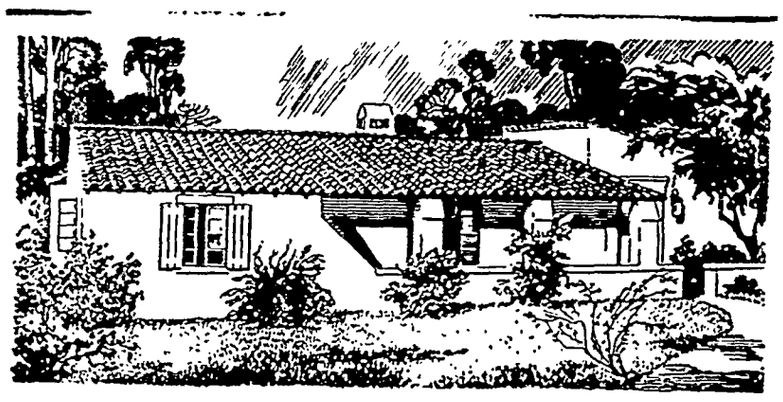
To Rachel L. Wilkins, the person to whom the hereinafter described is taxed and to Ida Bingham, Lester Wilkins, Chas L. Wilkins, Fred Wilkins, Elizabeth Knisley Albert Wilkins, Erne Wilkins and Lula Wilkins heirs at law of said Rachel L. Wilkins, deceased and to Albert Wilkins, Erne Wilkins and Lula Wilkins the parties in actual occupancy and possesion of the land hereinafter described

You and each of you are hereby notified that on the second day of March A D 1936 at the adjourned tax sale begun and publicly held on the first Monday of January A D 1936 the following described real estate situated in the Town of Goodell Hancock County, Iowa to-wit

Lot thirty three in Block one, Cline's Addition to the Town of Goodell, Hancock County, Iowa, was sold at tax sale under the provisions of Section 7255 of the Code of Iowa, to Hancock County, Iowa, by the Treasurer of Hancock County, Iowa, and the tax certificate No, 1653 was duly assigned to Emmet Kearney and by him duly assigned to Lula Wilkins, who is now the lawful holder of said certificate of purchase, and that the right of redemption will expire and a Treasurer's Deed for said above described real estate be made unless redemption from such sale be made within ninety days from the completed service of this notice.

Dated this 24th day of April A D 1937.

LULA WILKINS,
Owner of said certificate of purchase at tax sale



The Modest Budget Reaps the Benefit of a Firesafe CONCRETE HOME

Concrete is nearly the most satisfying of all home building materials, but costs little at *saves* in many ways.

Its firesafety reduces insurance premiums . . . its slow depreciation gives higher re-sale value . . . its permanence cuts costly repair bills. And another saving: *termites can't eat concrete!*

Your concrete home may be Ranch House, Spanish, Southern, Colonial, Modern. It will be warm and easy to heat in winter, cool and dry in summer, and its charm will endure through the years.

Don't overlook the importance of concrete floors. They stiffen the whole house; prevent cracked plaster, sticking doors and windows. They're warm, quiet, firesafe. And you can cover or finish them as you please—with wood, carpet, linoleum, terrazzo, or simply colored and waxed.

How to Get a Concrete Home:

1. Phone or write a nearby concrete products man or concrete contractor for the names of architects and builders experienced in concrete.
2. Select an architect familiar with concrete construction and tell him you want concrete walls and floors and a firesafe roof.
3. Have your plans figured by builders experienced in concrete construction. Let nothing shake your determination to obtain the best value for your home building dollar in today's market . . . A FIRESAFE CONCRETE HOME.

Free Booklet. Let us mail you beautiful booklet, showing 55 homes designed by leading architects.

SHAMROCKS BREAK EVEN IN TWO GAMES

Win Over Corwith; Lose To Goodell In Hard Contests

The Shamrock base ball team batted out their second win of the season when they took Corwith into camp by a score of 8 to 3 in a game played at Goodell last Wednesday Klemme went into a three run lead in the first inning on hits by Grosshuesch, Schuldt and Keeper, and a walk by Kluckhohn They scored single runs in the 3rd and 4th and put on another three run spree in the fifth

Corwith scored all of their runs in the third inning when Johnson poled a long home run with two men on base After this attack however Kluckhohn settled down and only thirteen batters faced him in the last four innings

Grosshuesch, with a double and two singles and Schuldt, with a triple and a single led the Klemme hitting Trampel got two singles

Lose To Goodellions

The Shamrocks fell victim to the no-hit pitching of Dawson, of Goodell, Monday and lost a hard-fought game by a score of 7 to 0 Dawson had complete mastery of the situation and only 22 men faced him in the seven innigs

A definition of a pedestrian was demanded in debate before the Oklahoma state legislature Senator Bower Broaddus obliged with this definition "A man who has three grown children—and one car."

ANSWERS

1 Traveling at a high rate of speed a vehicle cannot be stopped in time to avert a collision
2. 22 1% of all accidents are caused by excessive speed
3 The impact in foot pounds can be computed approximately by multiplying the weight times the velocity of the moving body
4 The insinct of self preservation should compel every motorist to observe traffic regulations
5 Yes Weight times velocity equals impact
6 In as much as excessive speed is responsible for 22 1% of accidents, it is logical to assume that lower speeds would reduce accidents
7 All vehicles must display a redlight casting a beam 50 ft to the rear, and shall be equipped with head lights casting a beam of light which shall not rise more than 42 in above the roadway a distance of 75 feet.
8. All accidents on public highways should be reported to county sheriff in county in which the accident occurs If accident occurs within the corporate limits of a city or town, the report should be made to the chief of police of that municipality.
9 Get fresh air to the victim immediately Loosen the clothing about the throat Call the doctor Apply artificial resperation.
10. Speed is dangerous only when the motorist is confronted with an unforseen condition.

HOW MANY HOOKS YOU MAY USE

Under the new laws it is now unlawful for any person to use more than two lines with one hook on each line in still fishing or trolling. Fly fishermen will have to be content to use only one fly on a line while bait casters may use not more than one spoon hook or artificial bait on one line. Double or treble hooks and all hooks attached as a part of an artificial bait or lure shall be counted as one hook.

Corn.. Is Poor Hog Feed!

if fed alone, but if properly supplemented is one of the best, if not the best, hog feed to be had.

In recent tests on identical lots of pigs it required the same number of days to make an average gain per head of seventy-two pounds on the lots fed corn alone, that it required to make an average gain of one hundred thirty-one pounds on the lots fed corn with a good supplement added Further, the lots fed corn alone consumed 642 pounds of corn for each 100 pounds of gain, while the lots fed corn and supplement required only 387 pounds of corn and 42 pounds of supplement for each 100 pounds of gain

For a moderate priced supplement that will give you the best gains when fed with your own grains you cannot beat FELCO PIG MEAL

Try a few bags for those growing pigs and the brood sows that have litters or will farrow soon, and prove to yourself that you can get best feeding returns with FELCO PIG MEAL

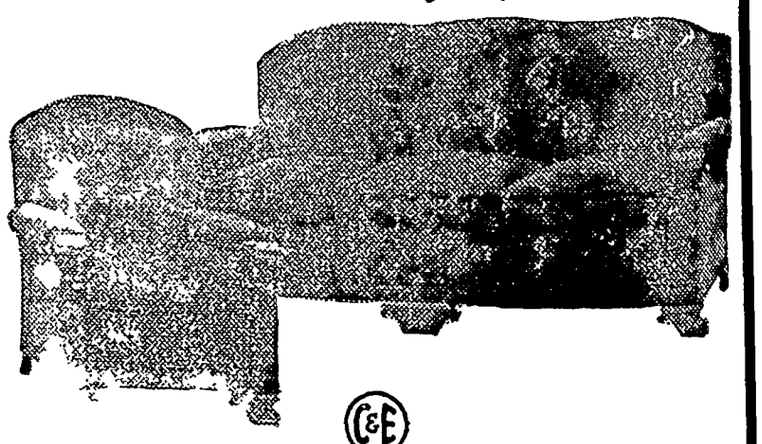
A BICYCLE BUILT FOR TWO

...and Burlap Spring Suspension — Follies of the Gay 90's

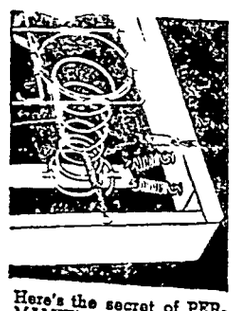


C&E

PERMALUX

All-Steel SPRING SUSPENSION

When Uncle Hector took his girl out for an airing on a bicycle built for two . . . burlap and twine spring suspension were quite the thing for "parlor" furniture. But in these more modern days, living room suites must be made of sterner stuff . . . PERMALUX *All-Steel Spring Suspension*, for example . . . the greatest improvement in furniture design in 50 years! Suites made the PERMALUX way are softer, more luxurious and longer-lasting than suites made with webbing spring suspension.



Here's the secret of PERMALUX' unusual luxury! Every spring anchored in "floating" steel bands!

Every spring is securely seated in strong "floating" steel bands. There is NO twine or burlap to stretch or wear out. Seats cannot sag. The entire spring assembly is steel with silver-white finish, and open to full view. Sanitary. GUARANTEED to outlast the upholstery and the frame.

Be sure to see our smart new PERMALUX designs and models. You'll love their rich luxury. Terms to suit every budget

NELLIE STROMER ACTIVE IN PREPARING FOR VEISHEA AT IOWA STATE COLLEGE

AMES Nellie Stromer is active in preparing for Veishea, the annual 3-day spring exposition of Iowa State College, this year to be held May 13-14-15

Miss Stromer, daughter of Herman R Stromer, Klemme, Iowa, is a senior in home economics at Ames Her part is to help with the home economics open house, the Gilbert and Sullivan operetta "H M S Pinafore" Homemaker Congress and with the traditional Veishea cherry pies

Nearly every student at Iowa State participates in Veishea to varying extent

Last Spring, approximately 16,000 people attended Veisha. Of this number, three-fourths were visitors to the campus

Among the features of the sixteenth annual Veishea are: 3-act Veishea play, "The Torchbearers," by Iowa State Players, campus dramatic organization, polo (Iowa State vs Missouri), College Cossacks, trick riding exhibit, 75 departmental "open house" displays, in which are outlined specific lines of study at the college, dedication of the new Veishea Fountain in the opening ceremonies.

Mr and Mrs. Herman Back and family visited at the Fred Kerns home at Belle Plaine Sunday.

MAY NEED LARGER PLATE FOR HYBRID SEED CORN

The chance of obtaining a uniform stand of corn may be materially increased by grading the seed and using the proper size plate in the planter for a particular grade, suggests E V. Collins, agricultural engineer at Iowa State College

Kernels of hybrid corn, Mr Collins advises, are usually larger than those of open pollenated varieties, and for this reason, plates with larger holes are needed While tips and butts of ears of open-pollinated seed corn are generally discarded, there is no necessity of following this practice—and it is not advised it the seed is hybrid—if the corn is graded and the planter plate chosen according to size of kernel.

ATTENTION

The new fishing laws have made the use of trot lines and throw lines more strict than in the past One end of such line must be set from the shore in plain sight and shall not extend entirely across any body of water One of the most important restrictions on throw and trot lines is the requirment of law that the person using such line shall be in consant attention of the tackle. The laws also provide that poles and lines must not be set without the person using them be in constant attendance

Now that a reporter has made it around the world in eighteen days will some one tell us why it takes a messenger boy thirty minutes to go around the block.

TAX COLLECTIONS ON GASOLINE IN APRIL EXCEED LAST YEAR

DES MOINES — Gasoline tax collections totaled $1,117,517.40 during April, State Treasurer Leo J Wegman announced Collections last month were $741,338.31 and in April 1936, they were $832,632.79

Last month's collections were aportioned as follows:

Sales tax $4,104.99; refunds $122,412.41, administration, treasurers office, $10,000; to counties for secondary roads, $436,000; to primary road funds, $545,000

Inheritance tax collections for April totaled $83,792.12 compared to $93,131.23 in March and $127,567.18 in April 1936

OLDSMOBILE CHEVROLET

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG., WASHINGTON, D. C.

Washington —Several weeks ago, I reported to you the apparent necessity for presidential action in the direction of a curb on spending. I have written about this subject many times and I have no regret that I have done so, because for a half dozen years our government has been spending money too rapidly.

Must Cut Spending

The President's latest message reviewing the budget situation indicates that the Chief Executive at last has started his thoughts in the direction of curtailed spending. Indeed, Mr. Roosevelt's message to congress in which he asked for a billion and a half dollars for relief purposes was characterized by quite a new note of firmness in his discussion of the need for cutting government costs. I think it is fair to say that in previous messages the President gave little more than lip service to the cause of economy in government. His previous suggestions to congress lacked force. Not so with the current call for a reduction in expenses. It had the earmarks of determination—but it yet remains to be seen whether he will insist strongly upon his conclusions when the showdown with congress comes.

The President's message was interesting in several respects beside the note of firmness, mentioned above. He confessed, for example, that there was no chance for a balanced budget in the next fiscal year. There is no chance, he disclosed, even for achieving the "layman's balance." That "layman's balance" ought to be explained for, my understanding of economics does not contemplate more than one kind of budget balancing, namely, income equalling outgo. But Mr. Roosevelt, in his campaign last year and in his message to congress last January, spoke of "layman's balance" as meaning a balance of income and outgo with the exception of expenditures for relief and for retirement of the public debt. I have heard it described in many quarters as a trick balance which I truly believe it should be called since it is not an honest balance.

In the January message, Mr. Roosevelt talked at length about the necessity for business taking on workers who were then on relief rolls. Only in that manner, he emphasized, could there be a reduction in relief rolls.

In the more recent message, the President omitted any reference to the responsibility of industry for reducing relief rolls by re-employing workers. That is not strange. The fact is, according to the government's own records, that industry is taking on workers at a more rapid rate than the administration had expected. But still there is no hope of a balanced budget this year.

So we must look elsewhere to find the reason. Instead of one, we find two reasons. The first and most important of the two is the fact that, by whatever analysis you make, the New Deal is guilty of continuing to waste money by hundreds of millions and it was not until a few weeks ago that any serious effort was made to choke off this drain, assuming the current effort is serious.

That statement sounds complicated and dull. It is not either one. The unvarnished truth is that Secretary Morgenthau and the flock of experts, trained only in theory, with whom he has surrounded himself, were unable to calculate what the present taxes would produce in revenue. Or, to say the same thing in a few words: Revenue receipts were far below what the Treasury experts guessed they would be.

Thus, the picture seems to be clear. On the one hand, the President heretofore has allowed the alphabetical agencies to run hither and yon in their money spending spree. On the other hand, the lack of competent financial men in the Treasury again is glaringly shown.

* * *

To get back to the question of curtailed spending I should like to call attention to the President's language in his latest message. He said that he proposed to use "every means at my command" to eliminate the deficit next year. That statement sounds strong enough. I question, however, that it can be called a program of retrenchment. In other words, Mr. Roosevelt was content in his message to congress simply to criticize, if not to denounce, extravagant outlays insofar as new commitments are concerned.

Sounds Strong; but—

During the last few weeks, Mr. Roosevelt has called upon the various agencies of the government for statements of their financial requirements and something of a review of what they have done with previous funds Considerable ballyhoo accompanied announcement of this survey of governmental requirement. But again, there was no evidence of specific determination by the Chief Executive as to what governmental activity should be restricted or entirely eliminated. It was like a charge of bird shot. It scattered. There was no target mentioned except in a general way.

There has been some talk that possibly Mr. Roosevelt's message and promise to use every means at his command for curtailing expenditures may have been intended as a message to his own subordinates that definite orders were to follow; that he intended his subordinates should see where they themselves could lop off spending plans, and could put their own houses in order. I hope it works out that way. On the other hand, I entertain very serious doubt that such a procedure will ever cause such individuals as the impetuous Mr. Harry Hopkins, relief administrator, to cut down on his spending. Mr. Hopkins loves to spend money. He seems to be happiest when he has billions to spread around, regardless of whether the spending plans really accomplish aid for the destitute. I suspect that congress alone can curb Mr. Hopkins and the only way congress can do so is by declining to appropriate extra money for him.

What I am trying to say in using Mr. Hopkins as the "horrible example," is that Mr. Roosevelt has taught his subordinates to spend money as freely as they can. To a considerable extent, he has let congress have a taste of new spending morsels and what politician does not like to spend money! Therefore, the President is confronted with the necessity of educating both his own subordinates and congress to the new order of conserving taxpayers' money. If he does not accomplish this, we will be saying in another six months what we have said many times—that we are confronted with national bankruptcy.

I cannot believe that the budgetary situation looks any different than it did last January. The difference in the picture is that Mr. Roosevelt at last has begun to see some of the dangers in the situation which he either failed to see or elected to ignore last January. There were few who believed in January that the tax receipts were going to amount to the estimate given congress by the President. The fact that they have fallen short of his calculations by four or five hundred million is a serious thing but it is not so serious that a remedy can not be worked out. The remedy, it seems to me, is a simple use of a simple practice among Americans: When you do not have the money, deny yourself some of the things you would buy if you had the cash.

* * *

Mr. Roosevelt's message asking for a billion and a half for relief served to get the collective mind of congress off the Supreme court packing plan only temporarily. The relief message caused quite a stir in the house of representatives where there has been a decided move already to continue appropriating huge sums of federal money for relief purposes, but it held the senate off the court question no longer than one business day.

Relief Message

I think there has been no question more frequently asked in my time in Washington than: "Will the President's bill to pack the Supreme court pass?"

I have watched the ebb and flow of the tide of sentiment in the senate constantly since the court packing plan was submitted. As the situation now stands, I believe Mr. Roosevelt has the odds in his favor. There is probably a margin of from five to ten votes on the President's side. Whether that will be the state of affairs when a vote comes, I think no one can foretell because the vote in the senate is going to be close.

Many informal polls of the senate have been taken. The results have varied somewhat. They have varied of necessity because there are many senators who remain noncommittal, and who are unwilling at this time to take a position for or against the President's scheme.

One may properly ask why this is. The answer is politics. A good many senators do not know how their home states feel about the plan. That is, they are not able to determine whether there has been a crystallization of sentiment for or against the thing.

Consequently, these senators are trying to wait outside of the playing field until they can tell whether they can be justified in going against presidential wishes or capitulating to the President's command. It is to be remembered that if they turn against the President, they antagonize the administration and particularly the Farley political machine. It is rather unhealthy for a New Dealer or Democrat to oppose the Farley machine.

Another reason why many senators are keeping their own counsel on the court packing scheme is that they believe there will be something in the nature of a compromise come out of the hearings and senate judiciary committee consideration

Man With Branded Hand

IN EVERGREEN cemetery in Muskegon, Mich., stands a monument which bears the inscription "Capt Walker's Branded Hand" and below it a bas-relief of an open hand with the letters "S. S." on the heel of the thumb. This monument recalls one of the stirring incidents of pre-Civil war days and marks the grave of a man who played a part in bringing on that conflict.

Capt. Jonathan Walker was a Massachusetts sea captain and in 1844 was engaged in coastwise trade Hating negro slavery, Walker tried to help seven blacks, who had fled from a Florida plantation, escape to the Bahamas He was arrested, brought to Pensacola, tried as a thief in federal court and found guilty He was sentenced to be branded on the right hand with the letters "S S." (slave stealer), to stand in the pillory one hour, be imprisoned fifteen days and pay a fine of $150.

After the first part of the sentence had been carried out, he was led again into the courthouse Ordered to put his hand on the post of the railing in front of the judge's bench, Walker protested when the marshal bound it fast to the post. He declared that he could hold it firm during the ordeal, but his protest was ignored and the branding took place

After his release from prison, Walker went back to his home in Massachusetts to find himself a hero and a martyr. John Greenleaf Whittier wrote a poem in which he besought Walker to hold his branded right hand aloft for all the world to see. Abolitionist leaders recognized in the incident a potent argument for their cause Accompanied by a fugitive slave he traveled through the North and lectured on the evils of slavery.

"The Man with the Branded Hand" became a famous figure and he did much to arouse the North and put it in a receptive frame of mind for Harriet Beecher Stowe's "Uncle Tom's Cabin" as a faithful picture of the horrors of slavery. In the '50's Walker and his family moved to Wisconsin and a few years later bought a small fruit farm in Michigan. There he lived during the remainder of his days and there he died in 1878, an almost forgotten figure who had played no little part in bringing on the greatest civil war in history.

Cap'n Streeter, Squatter King

FIFTY years ago it was only a sandbar on the shore of Lake Michigan opposite Chicago's famous "Gold Coast." Today towering skyscrapers, huge office buildings, a famous hotel and a great university stand on land valued at half a billion dollars. But Chicagoans still call it "Streeterville," thereby honoring the memory of Cap'n George Wellington Streeter, who battled valiantly against "them dern capitalists" and held out for 30 years before they finally dethroned this famous "squatter king" from his "Deestrict of Lake Michigan."

Streeter was a Civil war veteran who became a boatman on the Great Lakes. In 1884 he built a 100-ton ship in which he started for Honduras to take part in a revolution then in progress But his ship went aground on a sandbar and the skipper found himself marooned several hundred yards out in Lake Michigan from the Chicago shoreline. So he decided he might as well stay right there. Out of the timbers of his ship he and his wife, Maria, built a little shack on their sandy island and settled down

But the rich owners of property in that part of Chicago were extending their riparian rights out into the lake. As the little peninsulas of filled-in land reached out toward the captain's island, which had been enlarged by drifting sand, they decided that his shack was an eyesore and should be removed They called on the law to evict these squatters and five husky constables started out to do it. Cap'n Streeter put on his fighting costume—a high silk hat and a frock coat—he and Maria took their muskets in hand and the constables retreated hastily

Streeter found an old map of the city on which the boundary of Lake Michigan was plainly marked He contended that the "made land" was outside that boundary, therefore it was under federal jurisdiction and he claimed it by right of discovery. But the courts refused to recognize his claim to this "Deestrict of Lake Michigan" He and Maria were evicted time and again but they always came back So the struggle went on year after year, in court and out of court

"Cap'n" Streeter died in 1921 But his second wife, "Ma" Streeter, true to her promise to him, carried it on for several years more Finally she had to give up the fight and Chicago's "Thirty Years' war" with the "squatter king" came to end when she died last year

Suits Stress Short Fitted Jackets

By CHERIE NICHOLAS

THE coronation of the king and queen of Great Britain is reflecting no little influence throughout the world of fashion. Which perhaps accounts for the tremendous vogue for handsome suits tailored of handsome woolens which is sweeping throughout fashion's domain. Since London is proving a magnet for designers and merchants who wish to keep in touch with what's going on in a fashion way where such stirring epoch-making events are taking place, their first reaction would naturally be in favor of stunning woolen tailored apparel since English women set pace for the world in this direction.

At any rate this is proving an outstanding season for the tailored suit and all that goes with it in the way of chic accessories. The new woolens are as an intriguing lot as ever launched forth on a fashion career. While most any length jacket is accepted this year as good style, yet when it comes to top-notch swank the fashion-wise are centering their interest about the jaunty short-jacket types.

The suit to the left in the picture combines nubby wool sheer tweed with even nubbier knit and you know that the nubbier the smarter is the word this season for woolens. The short fitted jacket in brown and beige tweed has three half-moon pockets lined with the brown knit of the skirt. There's a brown knit ascot, a belt and buttons that are amusing in their oddity. By the way, you can add to the lure of a costume like this by wearing a blouse that fastens with fruit or vegetable buttons Seeing is believing in regard to these whimsical buttons, some of which are miniature strawberries or perhaps wee apples or peaches. If you prefer oblong buttons ask for the lilliputian bananas they are displaying this season or the teeny-weeny ears of corn, each and all in the realistic colorings of Nature.

The two-piece suit of pin-checked wool tweed on the seated figure is beige flecked with white, according to Schiaparelli's fabric version. Such an exciting color theme as beige has grown to be this season! It's beige for your suit, for your furs, for your monotone crepe afternoon gown and for accessories with your navy or black suit beige is a most important message. The diamond shaped composition buttons that fasten this jacket are decidedly novel and therefore impart the exclusive look. Panels form ingenious breast pockets. A navy blouse peeps from under the stand-up collar.

Check and double check! Here you see the game played in the suit to the right in the group. A navy and white box-swagger coatee in soft wool with large patch pockets and rounded lapels over a single breasted jacket to match makes this one of the smartest and most practical suits of the season. A navy monotone tweed skirt in simple lines is a pleasing variation from the check of the jacket. Wear with this costume a white baku breton sailor with roll brim faced in patent leather, for you must know that patent leather touches are ace-high chic.

The checked swagger-and-jacket suit just described is a good example of the fashion now prevailing for ensembles that are that composite they furnish quite a complete wardrobe in themselves. The present scheme of costume design that includes several items such as skirt, jacket, roomy topcoat and often an added cape denotes a very practical turn of affairs. These are so related in color and technique that, combine them as you will, they never fail to form a perfect unified outfit.

"AMOUR" SILK PRINT

By CHERIE NICHOLAS

The love affair that startled the world takes on a fashion note. Look at the silk over-blousette which this perfectly coiffed and hatted lady is wearing and you will be able to decipher the word "amour" designfully patterned in stripes on the printed silk. The blousette is worn over a black silk crepe dress The silk print is done in black and gray on a white silk crepe. The breton sailor she wears flared off the forehead instead of tilted forward is a "last word" hat fashion.

Nosegays for Buttonhole

A smart Paris wrinkle is an evening corsage of dahlias in seven different tones or one with three lilac sprays, white and mauve violets.

GLASS SLIPPERS ARE LATEST FOOT MAGIC

By CHERIE NICHOLAS

Glass slippers for the modern Cinderella are the latest word in foot-magic from Paris. To show that they are a 1937 vogue and won't actually disappear at midnight, they are trimmed in gold kid and show bright nail lacquer gleaming through.

Another version of the Cinderella slipper is created of woven strands of crystal. This, too, is semi-transparent. Other more practical types of footwear for spring indicate the growing importance of the pedicure as a fashion requisite. Tipped-toe shoes (with just the tip cut out at front), sports and evening slippers made of twisted bands of printed linen—all reveal lace-tipped stockings and brightly lacquered toes. Rust and ruby-red and burgundy are especially popular, usually worn a tone deeper than the fingernails.

Roman sandals and flat-heeled gold evening slippers with tiny strappings will be particularly popular with the "tall and willowy." Printed slippers made from the same material as the evening gown and colored kid sandals are also high in favor.

Ventilated Headwear Is Latest Edict From Paris

Ventilated headwear is a top note in the new collection Agnes shows. Pie-shaped wedges are cut out of black brims that lie low and hug the hair. Half-hats that reach back only to the ears are finished the rest of the way with flowing black veils.

A wide-brimmed black Panama, cut in two lengthwise, joins together again with half a dozen bows of black velvet baby ribbon. All its edges are also velvet-bound.

Agnes, too, makes much use of ribbon. Birdlike bows perch on the crowns of her sailor hats and stand aloft on the "cut-away" fronts of her off-the-face models.

Smithsonian Gets First Adding Machine

An old macaroni box filled with an arrangement of wheels, rubber bands, meat skewers and staples, the grand-daddy of the present day calculating machine, which was designed and constructed 52 years ago by Dorr E. Felt, was presented to the Smithsonian institution by the family of the inventor. Photograph shows Dr. Charles G. Abbot (left), secretary of the institution, receiving the cherished relic.

Jersey Quadruplets Have a Christening

famous foursome, the Kasper quadruplets, Frances, Frank, Felix and Ferdinand, born to Mr. and Kasper of Passaic, are shown following their christening recently. Their business manager, min F. Turner of Passaic, is shown on the extreme right. Governor Hoffman became the god- "quads" and was present at the ceremony.

AROUND the HOUSE

Items of Interest to the Housewife

Oiling Household Machinery—A little oil applied when needed will keep household machinery working longer and always ready for work. You can use cooking or salad oil to lubricate small cooking equipment.

* * *

Angel Cake — One cupful of white of eggs, one and one-quarter cupfuls of granulated sugar. One cupful of flour. One-half teaspoon cream of tartar. A pinch of salt added to whites before whipping; flavor to taste. Cook in a very slow oven. Yolks of the eggs may be used for mayonnaise.

* * *

Colorful Apples — If apples are put in water containing a little lemon juice a few minutes before cooking, they will keep their color.

* * *

Date Pie—Two cups milk, half pound dates, two eggs, one-quarter teaspoon salt, nutmeg. Cook dates with milk twenty minutes in top of double boiler. Strain and rub through sieve, then add eggs and salt. Line pie plate with paste, pour in filling and bake in quick oven at first to set rim, decrease heat afterwards.

* * *

Dust-Proofing Pictures—Has the dust got into your picture frame? It should be examined periodically and new brown paper backings should be stuck on to make it dust-proof.

* * *

When Washing Paint—Add a little turpentine to the hot soapy water. It greatly simplifies the job and makes much less "elbow grease" necessary, especially when the paint has that rather greasy film caused by the fumes from fires or gas stoves.

WNU Service.

Knowledge

WE GREEDILY ask of a man, "Does he know Latin or Greek? Does he write poetry or prose?" But whether he has become better or worse we never care a straw. We ought to ask, not who knows the most, but who knows the best. In true education anything that comes to our hand is as good as a book. So examine every man's talent, a peasant, a bricklayer, a passerby. You may learn something from all, each in his own line, of the real affair of this earth—how to live and die well. —Montaigne, 1533-1592.

Foreign Words and Phrases

Aequo animo. (L.) With equanimity.

J'ai parle. (F.) I have spoken.

Arbiter elegantiarum. (L.) An authority on matters of good taste.

Zum Beispiel (Z. B.) (Ger.) For example.

Sans facon. (F.) Without ceremony.

In puris naturalibus. (L.) In a state of nudity.

Quet-a-pens. (F.) An ambush.

Fiacre. (F.) A public hack.

Exeunt, exeunt omnes. (L.) They go out, they all go out.

Amende honorable. (F.) A satisfactory apology; reparation.

Ancien regime. (F.) The old order of things; the rulers of the ante-Revolution period.

Et id genus omne. (L.) And everything of the sort.

Ask Me Another

A General Quiz

© Bell Syndicate.—WNU Service.

1. How many glaciers are there in Glacier National park?
2. With what invention is the name of Gutenberg connected?
3. Did Article III of the Constitution, which set up the Supreme court, bestow on the court the power to define constitutionality?
4. What famous chief justice is said to have established such power?
5. Was the story of Romeo and Juliet originated by Shakespeare?
6. What is meant by "buying on margin"?

Answers

1. There are eighty, ranging in area from a few acres to about five square miles.
2. That of printing from movable types.
3. No.
4. John Marshall.
5. No. The story was popular in Italy before Shakespeare wrote the famous tragedy.
6. "Buying on margin" is a transaction in stocks whereby the purchaser makes a partial payment to his broker, who advances the remainder of the purchase money at a rate of interest, retaining the stock-certificates as security until the purchaser orders sale or the margin is used up by depreciation of the market.

Perfect Solitude

What I must do is all that concerns me, not what the people think. . . It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude

FIRESTONE TIRES AND AUTO SUPPLIES SAVE MONEY IN EVERY FARM OPERATION

EVEN though the prices of farm crops are advancing, the best way you can make more money is to SAVE IT in production costs.

YOU SAVE 25% in fuel costs and 25% in time by putting Ground Grip Tires on your tractor and all wheeled farm implements. They ride and pull easier and reduce repair bills.

YOU SAVE because one set of Firestone Tires will fit several implements. Your Implement Dealer or Firestone Tire Dealer has a plan whereby he will cut down the wheels on your present implements to a uniform diameter and weld a flat, steel rim to the end of the spokes. And by the use of Firestone Demountable Rims the tires and rims can be taken off one machine when not in use and applied to another.

YOU SAVE because Firestone Ground Grip Tires are built with EXTRA construction features. These outstanding advantages are patented and used only in Firestone Tires. Gum-Dipping saturates and coats every cord with pure liquid rubber. This process counteracts internal friction and heat and makes the tire much stronger to resist the strains of the extra pull. The two extra layers of Gum-Dipped cords under the tread bind the tread and body together into one inseparable unit of tremendous strength. The scientific arrangement in spacing of the deep, rugged bars of the self-cleaning tread gives greater traction and drawbar pull.

YOU SAVE by buying NOW as tire prices are sure to advance. The price of crude rubber has advanced 110% and cotton more than 26% during the past two years. Tire prices are bound to go higher. Buy Firestone Ground Grip Tires NOW for your cars, trucks, tractors and all wheeled farm implements and make money by reducing your cost of production. See your Implement Dealer, Firestone Tire Dealer or Firestone Auto Supply and Service Store TODAY.

THESE PATENTED CONSTRUCTION FEATURES USED ONLY IN FIRESTONE TIRES
TWO EXTRA LAYERS OF GUM-DIPPED CORDS UNDER THE TREAD
GUM-DIPPED CORD BODY
GROUND GRIP SUPER-TRACTION TREAD

The Farmer's Choice FOR RURAL HIGHWAYS

IT REALLY doesn't pay to drive on tires after the "non-skid" is worn off — in fact, the last 1,000 miles of wear in a tire are only worth about 38c. Why take the risk of a dangerous skid or perhaps fatal blowout when *new* Firestone Standard Tires cost so little?

More and more farmers are buying Firestone Standard Tires because they get the benefits of Gum-Dipping, the Firestone patented process that counteracts internal friction and heat which ordinarily destroy tire life. They get longer non-skid mileage and unusually low cost per mile with dependable SAFETY.

It is almost unbelievable that so much tire could be bought for so little. Firestone developed this tire primarily for rural highway use and a tire of first grade quality could only be made to sell at these low prices by building them in tremendous quantities. That's why you SAVE in first cost and in cost per mile. You also SAVE yourself from accidents because they give greater protection against dangerous skidding and blowouts.

John Bock was brought home from the hospital at Cherokee, Saturday, where he has been for some time receiving treatment Mr Bock has been in poor health for some time and his condition is worse since he suffered a stroke a short time ago.

We might again inform our readers that if they are looking for a nice place for a picnic one of these beautiful spring evenings that the Klemme Park is an Ideal place, especially convenient now as the Legion Auxiliary ladies have put picnic tables in the park for public use

Mr and Mrs Clarence Kluckhohn and Eugene drove to Osage Sunday to see Melvin and Eva Mae Jensen, who were in an automobile accident last Thursday evening and are now in the hospital They both show a little improvement Their many Klemme friends are hoping they will get well.

Mr and Mrs P M Wilson expect to leave Wednesday of next week for a visit with their daughter, Mrs. Bob Risser, husband and son at Washington D C E S D Kahrs, former Klemme druggist, now a resident of Ventura, will operate the drug store while Mr Wilson is away.

Sunday, Mothers' Day, Mr and Mrs Henry Galbreth entertained her relatives Those present were her mother Mrs John Hodson, of Plymouth, her sister, Mrs Walter Harman and family, of Plymouth; another sister, Mrs Rolland Gould and husband of Manly, and a friend, Miss Belknap, of Plymouth

Miss Agnes Galbreth and Miss Ruby Azeltine entertained the lady teachers Monday evening in honor of Miss Norma Barz, who is to be a June Bride They all attended the Avery Theatre and later came to the Henry Galbreth home, where a lovely lunch was served Miss Norma has taught in the Klemme schools for the past seven years.

Klemme Girl Will Teach At Crystal Lake

Miss Nellie Stromer, daughter of Mr and Mrs. H R. Stromer, will teach home economics m the high school at Crystal Lake next fall. Miss Stromer is a senior at Iowa State College, Ames, and will receive her diploma in a few weeks.

Attended Funeral At Sheldon

Miss Marie Blank, Mrs. Worthy Usher, Mrs. Tony Ahrenkiel and Mrs. Casey Blank drove to Sheldon Monday to attend the funeral of a relative, Mr, Arnold Kwickkle who leaves a wife and two small children.

Will Entertain Thursday In Honor Of Recent Bride

Mrs. Martin Barz and Mrs. Herman Bridges have issued invitations to a miscellaneous shower to be given at the Barz home Thursday afternoon in honor of Mrs. Walter Drake, recent bride.

Riverside School Picnic Was Held Last Friday

The Riverside School, Avery District No. 3, held their annual picnic last Tuesday. About fifty people were present. A program was presented in the morning and then a picnic dinner was enjoyed by all. Miss Novella Bredbenner is the teacher

Gets Bad Cut On Eyelid

Chris Lauen, farmer near Meservey, suffered a severe cut on his eyelid Monday while plowing, when a piece of steel snapped off the plow and struck him in the eye. He was brought to Klemme for surgical attention.

ALLIED MUTUAL
CAR and TRUCK
INSURANCE
We have a policy for your special requirement.
HENRY SMID, AGT.

Music Students

SOLICITED

During the ten summer weeks which I shall spend in Klemme my time will be available for private instruction on the instruments of the band.

Charges will be 65 cents for half hour lessons, $5.00 in advance for ten lessons.

Martin K. Elstad
High School Music Director

FEDERAL DEPOSIT INSURANCE CORPORATION $5,000 MAXIMUM INSURANCE FOR EACH DEPOSITOR MEMBER

The Class Of 1937

To the graduates of our High School, we offer our sincere congratulations, and with them goes a large measure of envy envy for the opportunities that stretch out before the young men and young women going out into the business of life

—And if we may offer one word of advice, it is that you prepare for your opportunities and the inevitable hardships by starting to save now, for saving is in itself a character-builder and a substantial reserve account will go far toward enabling you to grasp your opportunities and overcome the hardships.

We Will Welcome Your Account.

THE KLEMME TIMES

ME 41 KLEMME, IOWA, WEDNESDAY EVENING, MAY 19, 1937 NUMBER 52

emme Business Men Sponsor Free Movie Show

T OPEN AIR FREE MOVIE BE SHOWN MAY 29TH

ional Free Prize Feature Every Saturday Night Here

e first of Klemme's free op- movie shows will be given aturday evening, May 29th at Open-Air Theatre

e talkies for this year will be best obtainable and two pro- rs will be used so that the will be continuous and there be no waiting between reels. ted big time pictures will be n, especially selected to en- in the children as well as the s.

Free Prizes Given

new feature this year will be free prizes given away each rday night at the open-air re $5.00 to $10 00 in prizes be given away after each Be on hand at the first and get all the details.

and Concerts This Summer

e band concerts will be given ng the summer months on nesday evenings. Mr. Elstad, directs music in the Klemme ols, will direct the band this mer Thus Klemme offers two nights of free entertainment week on Wednesday night on Saturday night

LDING ACTIVITY IS BIG TRACTION IN KLEMME NOW

ain Street is humming with vity with a large crew of men work getting ready for he con- ction of a new building and er sysem for C A Larsen The ters will be ready to use in n or eight weeks, or sooner if rything goes well

nother crew of men have been y around the Jacobs property. ning up and getting ready for new store building which will be under construction for E Jacobs.

cellaneous Shower Given In Honor of Recent Bride

Mrs. Herman Bridges and Mrs. tin Barz were hostesses at the home Thursday afternoon at miscellaneous showe. given in or of Mrs Walter Drake, a re- bride

About thirty ladies were pres- and a social time was enjoyed playing various games after ich the bride opened her many ts Lunch was served by the stesses

RST BAND REHEARSAL WILL HELD MONDAY NIGHT

Mr Elstad announces that he ll hold the first band rehearsal the school house on Monday ght, May 24th at 7 30 o'clock. All no are interested in playing in e town band are invited to come this rehearsal.

Band concerts will be given in lemme once a week during the mmer months The band will be rected by Mr Elstad.

May Morning Breakfast

The Standard Bearers were in- ted to the home of their leader, Earl Schaeffer Saturday orning to a nice May breakfast. he small tables were appropri- tely decorated for the occasion, nd the morning was very much njoyed Sixteen girls attended.

ormer Klemme Teacher Is Post- mistress

Mrs. John Muenchow, of Arca- ia, Iowa, who before her mar- iage was Miss Georgia Ford, sev- nth and eighth grade teacher in he Klemme schools for several years, has been appointed as post- mistress at Arcadia, according to Post Master John Day.

AIRPLANE WRECKED NEAR KLEMME IN WINDSTORM

Flyer On Way To Alaska Visiting At The Elmer Howard Home

An airplane belonging to Merle Burton, of Anchorage, Alaska was wrecked during a wind storm last week Tuesday night when the storm tore the plane from its moorings in the pasture at the Elmer Howard farm northeast of Klemme

Mr Burton, who is a nephew of Mrs Elmer Howard, is a young man who has lived at Anchorage, Alaska, for the past five years He had come to the states to purcha e a plane Just before flying to Klemme for a short visit on his way to Alaska, he had purchased a new "Cub" airplane from the Taylor Aircraft Co of Bradford Pennsylvania Roy Holmes, a transport pilot of Detroit, Michigan, joined him and they came to Klemme

Burton and Holmes landed in the pasture at the Howard farm and securely moored the plane for the night, fastening it down with three heavy ropes lashed to stake, driven into the ground. The windstorm which came up in the evening tore the plane from its mooring ropes, even pulling up one of the stakes The wind evidently caught the plane underneath and tossed it into the air, for both wings and the tail were broken and the plane was found against a fence some distance from where it had been staked down. Mr Burton estimated the damage at $350 He immediately telegraphed the company for new parts and as soon as the plane is repaired he and Mr Holmes will leave for Alaska

Mr Burton will conduct a flying school at Anchorage and Mr Holmes will give flying instructions.

REFORMED BIBLE SCHOOL BEGINS MONDAY FOR FIVE WEEKS

The annual Bible School of the Reformed Church will begin Monday and continue for five weeks School begins at 8 00 o'clock in the morning

The teachers for this session are Delia Stromer. Gertie Trampel. Ethel Barz. Mabel Schuldt Mildred Thiemann and Rev Grosshuesch

DISTICT HOLSTEIN SHOW AT MASON CITY, JUNE 12

I C Hastings, Hancock County Holstein Association Chairman, announced recently that the district Holstein Show will be held at Mason City at the North Iowa Fair Grounds on June 12th Plans were made for the district show at a meeting in Hampton last week Those from Hancock County who attended were I. C Hastings, V A Cook, Sam Hammon and T C Petersen, County Agent

The district show idea has gained in popularity in the state because it is the farmer breeders' show Briefly the purposes are as follows:

(1) To bring together the best Holsteins in the district

(2) To demonstrate proper Holstein type

(3) To create more interest in Holsteins.

(4) To provide an opportunity for breeders to become better aquainted.

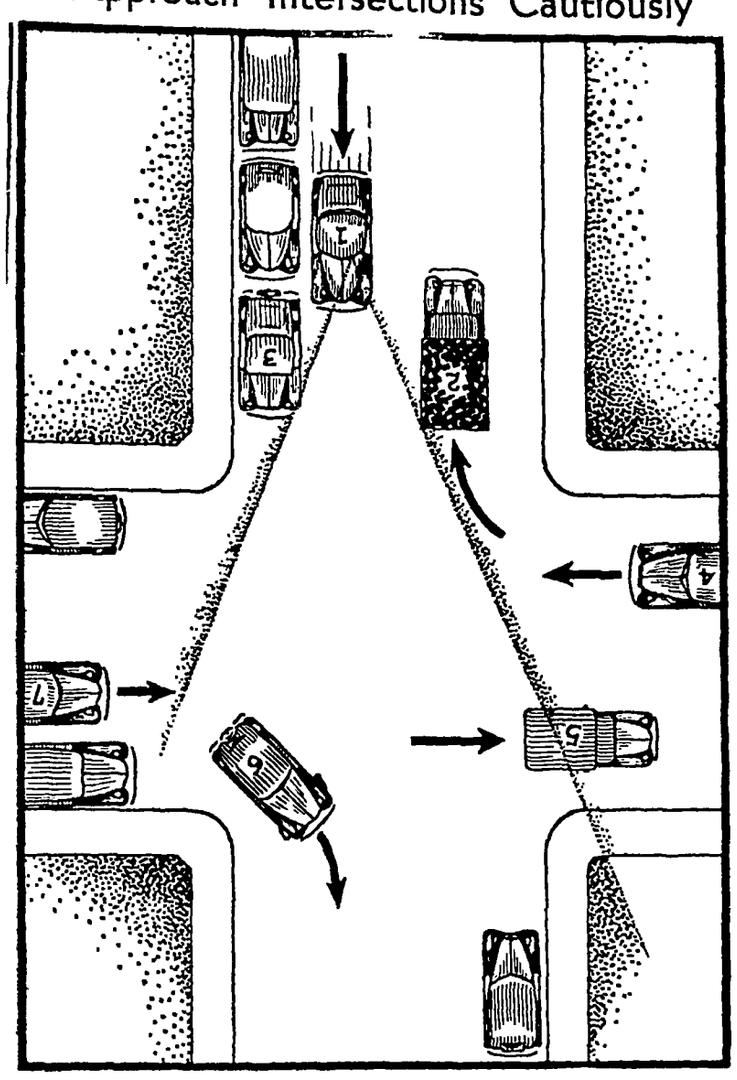
The state has been divided into ten districts and each district will hold heir own show. The counties included in this district are Winnebago, Worth, Hancock, Cerro Gordo, Wright, Franklin, Hamilton and Hardin. The Hancock County Committees, are anxious that breeders show their herd or individuals from their herd An outstanding cow, heifer, or bull may be found in anyone's herd

The plan is for the cattle to be brought in early on the day of the show so that the judging can be completed, and the cattle taken home the same day. Floyd Johnson, Extension Dairyman, has been secured by the committee to do the judging.

TROLLING

Under the new laws which became effective on April 30th, it is unlawful to fish by trolling from any machine propelled or sailboat except on the Mississippi or Missouri Rivers.

Approach Intersections Cautiously



When faced with a traffic condition that demands complete control of a motor vehicle, no driver should place himself in the position of operator of car No 1 The minimum safe stopping distance at 20 miles per hour is forty feet, and that distance would place vehicle No 1 in the center of the street intersection Inasmuch as his view is obstructed by traffic represented by cars No. 2 and No 3, he not only endangers the occupants of cars No 4 and No 7, but his own life as well Remember that the driver of car No 1, if he drives safely will not only drive his own car, but cars No 2, 3, 4, and 7 as well Too much stress cannot be placed on approaching street intersections at a reasonable speed It is a signifigant fact that 83% of all accidents involving motor vehicles occur at street intersections Is it not logical, then to assume that this percent could be reduced if drivers would use a little judgement? Why should any car operator drive blindly ahead to disaster when his vision is obstructed There can be no question as to the liability involved should a collision occur The driver of car No 1 is, without doubt, one of the most dangerous and flagrant of law violaters Until this type of driver is educated to the dangers confronting him and other vehicular traffic, the death and injury toll cannot be reduced It is sqarely up to every car driver to approach intersections at a cautious and sane rate of speed To disregard these words of warning is bound to result in a collision Not only does the driver of car No 1 have the responsibility to other vehicular traffic, bu he must bear in mind also the right of pedestrians at established crossings Thus the hazards at street intersections are doubled In the interest of safety, approach intersections at a rate of speed that will permit you to stop in a very short distance

Copyright, 1937, P L Cummings, Des Moines, Iowa

QUESTIONS

1 What percent of accidents involving motor vehicles occur at street intersections
2 What would you say is a safe speed for vehicle No. 1?
3 Is car No 3 parked correctly.
4 Should car No 1 proceed on through the intersection and collide with car No 7 who is responsible
5. Could the driver of car No 2 be held liable in the event car No 1 causes an accident at the intersection?
6 If a collision occurs at a city street intersection, where should the accident be reported?
7 Why is driving where vision is obstructed dangerous?
8 Are accidents unavoidable?
9 Name three conditions which could cause an accident as illustrated?
10 Define safe stopping distance.

ANSWERS TO QUESTIONS ON PAGE FOUR

RURAL YOUNG PEOPLE WILL MEET JUNE 7TH

The rural young people's program committee for the next meeting met and set June 7th at the I.O.O F Hall in Britt The feature of the program will be an illustrated talk by Dr Muhleman, of Algona, on his travels in Mexico. Other porgram and entertainment has been planned, so young people don't forget the date is JUNE 7TH

Reformed Ladies Aid Will Meet May 26th

The Ladies Aid Society of the Klemme Reformed Church will meet on Wednesday afternoon, May 26th with Mrs. Walter Rosendahl and Mrs Marvin Barz as hostesses.

Legion And Auxilary Plan Memorial Service

MRS. JULIA SCHAPER BURIED IN KLEMME CEMETERY SATURDAY

Lived In Liberty Township For Many Years

(Courtesy Arthur Wellemeyer)

Through a wet drizzling rain the Funeral Coach bearing the remains of Mrs. Julia Schaper made the 200-mile trip from Sioux City to Klemme Saturday morning

Relatives and former neighbors from Liberty township gathered at the Wellemeyer residence at 1 30 p m where brief services were held by Rev. Zabilka.

Suddenly the rain ceased and the sun shone brightly and the funeral party proceeded to the Klemme Cemetery where the usual ritual was read and interment made beside her husband George I. Schaper, who died sixteen years ago

George I Schaper taught in the rural schools of Hancock County for several years, this was about forty-five years ago. We remember he rode a bicycle, which was as rare a vehicle then as the airplane is now And then one day after a visit to Freeport, Ill, Mr Schaper returned with a partner, Julia Baumgartner

For many years George and Julia Schaper owned and operated the farm 4 miles west of Klemme where the Will Lemke family now live

The Schapers were good neighbors They not only loved and cared for their own children but they loved all the children in the community and were ever willing to help in Sunday School, Epworth League and other worthwhile community projects They were a great influence for good during the golden years that they lived in Liberty township

Out of town relatives attending the service were Rev Milton Schaper, Archer, Iowa; Mr and Mrs Homer Schaper, Sioux City, Iowa; and Mr and Mrs. George Baumgartner, Miss Anna Baumgartner, Mrs J Baumgartner, and Wesley Schaper all of Freeport, Ill.

POEM DEDICATED TO SENIORS

Rev Zabilka in closing his baccalaureate sermon last Sunday read a poem which he himself had written and dedicated it to the class of 1937 Because of numerous requests for the poem it is being printed. The subject for the sermon was "Backbone"

Dare to be brave, dare to be true;
Strive for the right, for the Lord is with you
Fight with sin bravely, fight and be strong;
Christ is your captain, fear only the wrong.

Dare to be brave, dare to be true;
God is your father, he wants to help you.
He knows your trials, when your heart quails,
Call him to your rescue, His grace never fails.

Dare to be brave, dare to be true;
God grant you courage, to carry you through.
Try to help others, ever be kind;
Let the oppressed a freind in you find.

Fight then young people, fight and be brave;
Christ is your helper, and you will he save.
Resolve like old Daniel, for honor or style,
Your God given soul you will not defile.

The most important piece of fishing tackle you can take with you on your fishing trip is your fishing license.

MEMORIAL SERVICES WILL BE HELD IN PARK ON SUNDAY, MAY 30

The Legion and Auxiliary are planning to hold Memorial Day services in the Klemme Park on Sunday morning, May 30th. The complete program will be published in the Times next week

Klemme business places will probably observe the holiday by remaining closed on Monday, May 31st, as several business men have indicated they will close on this date This information will also be definitely settled by next week and the closing date published

DRIVERS' LICENSE BLANKS ARE NOW AVAILABLE

If Stubs Have Been Clipped From Old License Examination Is Required

Dr. Robert E O'Brain, Secretary of State, has announced that application blanks for the renewal of drivers' licenses became available May 17, and that applications could not be filed at any time.

Blanks can be secured at the offices of practically all sheriffs, county treasurers, many banks, filling stations and other places throughout the State as it is intended to make them available as possible in order that it will be convenient for the public to secure them.

Dr O'Brian stated that applications were being received at this early period as an accomodation to the public in order that the issuance of licenses would not be delayed any longer than necessary as there will be congestion the first of July, and also by spreading of this issuance over a longer period, the expense to the State would be reduced to some extent.

All drivers who have no stub detached from their licenses can secure a new license by merely forwarding the appliation to-gether with the fifty cent fees No Cash will be accepted but personal checks, money orders and cashier's checks There will be no objection to several applications being sent in one container together with the remittance covering all of them. It is definitely stressed that any cash sent will be at the sender's risk.

Those having licenses from which stub has been detached will have to apply to the drivers' license examiners on their regular trips into the county and pass the examination before license will be renewed.

METHODIST BIBLE SCHOOL BEGINS MONDAY

Liberty Bible School Begins Week Later, May 31st.

Rev. Zabilka announces that the annual summer Bible School will be held in both Klemme and Liberty Methodist Churches this year The town school begins Monday. May 24th and the Liberty School one week later or May 31st.

Rev. Zabilka will superintend the work and will be assisted by Mrs Galbreth, Mrs. Schaeffer, Mrs Zabilka and Miss Ruth Bailey. Teachers will be Novella Bredbenner, Mabel Griffen, Marian Waterman and Elsie Ward, for the Klemme school.

In Liberty the teachers are Ruth Abele, Hazel Hefte, Marcelle Blumer, Lois Pringnitz and Lucille Stille.

In the inland waters (except lakes and within 300 feet of a dam or spillway) one throw or trot line may be used provided not more than 15 hooks are used. In the Mississippi, Missouri and Big Sioux Rivers one throw or trot line may be used with not more than twenty-five hooks.

RADIO BEACON
Position reported by sinking ship, possibly as much as 50 miles from her true position.
This steamer receives the distress signals, but having no radio compass, is unable to tell the direction from which they come. She can only proceed to the incorrect position and so is unable to find the sinking ship.
The steamer that is shown above picks up the distress call on its RADIO COMPASS, which tells the direction of the SOS; therefore her navigator disregards the reported position, and is able by means of these radio bearings to steer directly to the foundering ship, regardless of fog and storm, and save her crew.
Vessel in distress broadcasts the SOS call, giving also the latitude and longitude of her position, wrongly stating it to be at the point marked.

Rescuing Vessel Locates Ship That Gave the Wrong "Address."

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

THE most magnificent of all lighthouses was built before the dawn of New Testament history, but the most remarkable of navigational safeguards has come only in the past few years.

Day and night a monotonous drone of dots and dashes goes out over the sea, penetrating the thickest rain and fog, to help bring the voyager safely home.

Today radiobeacons are essential equipment on our most important lightships and lighthouses, and apparatus for receiving radiobeacon signals is carried on all modern passenger liners and many other vessels.

Thus, after more than 2,200 years, we approach the solution of one of mankind's oldest problems. The lofty Pharos of Alexandria, erected by the Ptolemies near the mouth of the Nile, has never been surpassed by any other lighthouse in height or in fame. Its name became the word for lighthouse in the Romance languages; the French use it in radiophare (radiobeacon).

But the signal which this magnificent tower gave to mariners was the light and the smoke from an open fire. No progress was made in marine signal lights for many centuries. Only a hundred and twenty-five years ago tallow candles burned in the famous Eddystone lighthouse near the English coast, and until 1816 the May Island light, off Scotland, still used a blazing coal fire to guide ships.

Nearly all the major advances in lights and fog signals—the electric lamp, the incandescent oil-vapor light, the Fresnel lens focusing the beam in the horizon of the mariner, the fast revolving light making it possible still further to gather the rays into powerful beams, and the fog bells, followed by the whistle, siren, and diaphone—have been developed within a little more than a century.

Only in the last 30 years has so necessary an aid been employed as the lighted buoy, boon to the navigator who must bring his vessel into port at night through treacherous shoals and narrow channels.

Only the Radio Signal Is Certain.

The most notable advance was made 15 years ago, when radiobeacons were placed by the United States lighthouse service on Ambrose Channel lightship and two other stations in the approaches to New York. Thus was solved an age-old problem. Only the radio signal penetrates fog and rain that blot out the most brilliant light. It can carry its message of safety through storms that drown the most powerful whistle.

Above the pilothouse of a modern liner you will see a small rotating coil antenna mounted on a metal frame. This coil receives radiobeacon signals now sent out from important lighthouses and lightships —more than 120 of them on the coasts of this country.

In approaching the coast, the navigator of a ship with this coil picks up a radiobeacon signal—perhaps the four dashes from Nantucket Shoals lightship, or the single dots from Ambrose. By rotating his radiocompass coil until the signal fades away ("taking the minimum" it is called), he determines the direction from which the signal comes, even from distances of more than a hundred miles.

Anyone who has stood on the deck of a liner in a dripping fog, and has wondered at the courage of the navigators going ahead toward the unseeable, must realize what a blessing this is to tense nerves—how valuable is this gift of science to better navigation and to safety at sea.

Radiobeacon systems now are being extended throughout the world, and radio direction-finders are being placed on more and more vessels, recently even on fishing craft. There also are direction-finding stations on shore which give radio bearings to ships asking for them.

These radiobeacons have added some 1,500,000 square miles of water to the area served by United States aids to navigation. In fact, their signals may carry far beyond this area.

Distance Finding on Great Lakes.

A simple arrangement for distance finding is now in use at a number of stations, especially on the Great Lakes. The radio signal and the sound signal are synchronized to be sent at the same instant, and the difference in the transmission time, as measured by a stop watch, gives the approximate distance of the vessel from the station. This is easily computed when it is remembered that sound in air travels approximately a mile in five seconds. The distance, therefore, is roughly the "time lag" divided by five.

A comparison of the number of Great Lakes ships which stranded during the four years preceding the use of radiobeacons, with the number for the four years following, indicates a 50 per cent reduction; also the saving of time by vessels taking radio bearings is a large factor in economical navigation.

The dramatic use of SOS calls in dangers and tragedies of the sea is familiar enough. Radiograms to and from friends on shipboard are commonplace. Radio also serves navigation in transmitting the correct time, a service of prime importance in determination of longitude at saa.

When wrecks obstruct channels, or when storms drag buoys from their normal locations, radio affords a valuable means of broadcasting such urgent information. Radio also transmits reports from mariners who observe defects in navigational aids.

A vessel equipped with a radiocompass can take a bearing on another ship sending radio signals, and thus determine its direction at sea by the same method it would use with a radiobeacon on shore. This taking of bearings between ship and ship diminishes the risk of collision in fog, and it also helps one ship to find another which may be in distress. The rescue of the crew of the British freighter Antinoe by the United States ship President Roosevelt in mid-Atlantic in January, 1926, is a notable example of this use of radio bearings.

Capt. George Fried, then master of the Roosevelt, immediately changed his course on receiving the SOS, and radio bearings on the Antinoe were taken every 15 minutes. He found the Antinoe's position as given was some 50 miles in error; but, steering by the radio bearings, he reached the Antinoe in about six hours. After three and a half days' heroic struggle, the 25 men of the sinking Antinoe were rescued.

Tragic loss of 42 lives, through lack of equipment for taking radio bearings, is shown in the wreck of the Alaska, which sank the very year that radiobeacons came into use.

One August day in 1921, the Wahkeena, in a dense fog off Cape Mendocino, California, picked up an SOS call from the Alaska. Having then no device for telling from which direction came the call for help, the Wahkeena cruised for ten hours before she could find the sinking Alaska.

Not So Lonesome Now.

Today, of course, all outside tenders and lightships use radio, and a number of isolated light stations and some tenders are equipped with radio-telephones, which greatly facilitate reports and orders in emergencies.

At remote stations, the lightkeeper's life long has been a symbol of loneliness. Before the days of radio, all the keepers heard was wind and waves, sea birds, or the foghorns of passing ships. During a period of bad weather in 1912, no tender could reach the lighthouse on Tillamook Rock, Ore., for seven weeks. The station on Cape Sarichef, at the entrance to Bering sea, went for ten months without any mail or news—August, 1912, to June, 1913!

Radio changed all that.

"Before we got our radio," wrote one keeper, "a new President might have been elected a month before we knew about it . . . This time, we heard it as soon as anybody. The last two big prize fights, when it was announced who was champion, we heard it . . . We listen also to ministers preaching, and there is singing. It is almost the same as being in church . . . When storms blow, our sets keep us posted; we can take all necessary precautions and follow the progress of the hurricane."

Washington Digest

National Topics Interpreted by William Bruckart

National Press Building Washington, D. C.

Washington.—Congress lately has passed and President Roosevelt has just signed the Guffey-Vinson coal bill. It is, therefore, a law. And presently, as a result of the passage of this legislation, you and I and every other person who uses soft coal will be paying higher prices.

Coal Will Be Higher

The increase in price that will result, however, is not the only phase of the Guffey-Vinson law that seems to be open to criticism. There are many who believe that in passing the Guffey-Vinson bill (and it was done under the lash of administration leaders) our government has taken a step which is very close to, even actually a step toward, fascism in America. It is an action so near to the policies of fascism in Italy that close students of the Mussolini plan say they can hardly discern any distinction.

Let us see what the Guffey-Vinson law does. It permits all soft coal producers in the United States to organize as in a monopoly under government control. True, the government is supposed under the law to fix the price of soft coal but actually the law is going to work out so that the producers and the mine unions will establish the prices, subject to the approval of a government commission. It will work out this way because the law has actually legalized the right of the producers to agree on the prices they will charge by virtue of the fact that those prices are based on the production costs in regional areas.

It is provided in the law that the United States shall be divided into 23 regions or sections. The United States coal commission is empowered to prescribe the prices, both minimum and maximum, to which coal from each of these areas or regions may be sold. In that manner, the law guarantees that the soft coal producers shall gain an acceptable rate on their investments. Since labor costs enter directly into production costs—indeed, they constitute a major factor—it becomes plain that whatever wages labor demands and obtains influences the level of the production costs and the result is a change in the selling price to the consuming public. Thus, when John L. Lewis, president of the United Mine Workers of America and head of the C. I. O., determines that the mine workers are not being paid sufficiently high wages, he demands an increase from the mine owners. The mine owners or producers, now that the Guffey-Vinson monopoly law has passed, simply submit the new costs to the coal commission and it has no alternative but to approve an increase in the selling price. In consequence, therefore, every bucketful of coal going into your stove and every shovelful that goes into the furnace of a home or the fire box of a factory carries an additional tax that has been legalized by law.

So, we see the bulk of the coal industry pass from the field of free competition into the form of a monopoly under government control. If that can be described otherwise than as fascism, I am ignorant of what constitutes fascism.

* * *

There remains the question whether the law promoted by Senator Guffey of Pennsylvania and Representative Vinson of Kentucky is constitutional.

Question Validity

It will be remembered that the Supreme court once threw out the original Guffey-Vinson law. It threw out that law because it held that the original legislation attempted to fix hours and wages for workers and that, in accordance with the unanimous decision of the court when it invalidated the NRA, was an illegal act by congress. The labor provisions alone were discussed in the litigation at that time. But in the current Guffey-Vinson law, those objectionable factors have been omitted. There is no way to discover whether the Supreme court will find the monopolistic practice authorized in the current legislation to be improper except the hunch that such a declaration of policy by the congress is not in conflict with the constitution directly.

Some members of the congress opposed the Guffey-Vinson bill because they believed it to be unconstitutional. There were so few of those, however, that the house of representatives debated the bill only a day and a half and the senate debated it only a few hours.

* * *

Some sections of the soft coal industry objected to the bill but they were quickly resigned to the intangible fact that it would become a law because of the power that John L. Lewis wielded over congressional leadership. The chief reason for the division of sentiment among the coal producers was that there is a wide range of costs among the producers. There are many mines which have low production costs and consequently they are able, or were able under open competition, to sell at lower prices than many of their competitors. There is another section of the mining industry where production costs are high and in consequence that section of the industry was barely able to scrape out a living return. Under the new law, the high cost mines will be assured of a reasonable return and that means that the low cost mines will gain exorbitant profit.

Backed by Lewis

On the face of things, it would seem that the low cost mines would be all for this law because of the heavy returns they can make. Such, however, is not the case. Thus mine owners pretty generally, would prefer taking their chances in open competition because they can make a larger profit through a heavy volume of sales at lower prices than under the new scheme whereby the high cost mines are bound to get a share of the business.

Proponents of the law contend that there is an obligation to the owners of the high cost mine or to the workers they employ. But what, I ask, is the user of coal going to do about it? What has he to say and how can he say it?

Again, sponsors of the legislation explain that interests of the consuming public are to be protected through the office of a consumers' council That is, there is a government official who is supposed to look after and protect your rights and mine against excessive prices. It may work out satisfactorily. I believe, however, that the odds are heavy against any of us receiving any benefits in this direction.

* * *

A few days after President Roosevelt signed the Guffey-Vinson law, Attorney General Cummings came forth with a letter urging congress to revise and tighten the anti-trust law. He said that monopoly was growing in the United States and that small businesses were being driven to the wall by the inroads of great masses of capital.

Strike at Trusts

There is evidence that capital is massing. We need not look any further for proof of this than the Guffey-Vinson law itself which permits capital to work together—the only hindrance being that which is subjected somewhat to the influence of organized labor under the Guffey-Vinson law. The result is exactly the same whether the massing of capital takes place under private arrangement or under government supervision such as is legalized in the Guffey-Vinson law.

This situation impresses me as being a bit incongruous. It seems to be a circumstance where the administration is trying to run in two directions at one and the same time. It is further exaggerated by the fact that the President lately has spoken with emphasis about the rapid increase in retail prices. Yet, besides raising wages for labor, the only tangible result that I can see under the Guffey-Vinson law is higher prices for all of us to pay.

Surely, monopoly has a tendency always to increase prices. It has been the chief subject of harrangue against monopoly and the Attorney General adverted to this fact in his recent appeal for legislation to prevent monopoly. But why is it bad for monopoly, privately arranged, to force higher prices and good for monopoly, legalized by congress, to force higher prices?

* * *

President Roosevelt has sent word around through all government departments to the effect that no government worker may engage in stock market speculation. He has told the civil service commission that "among the matters to be considered" when passing upon an employee's qualifications for retention or advancement, the commission may consider whether that employee has engaged in speculation in securities or commodities.

No Stock Gambling

At first blush, this did seem to be a sound order. I have heard much discussion of the matter, however, that gives rise to other thoughts about it. I think there can be nothing more reprehensible than for a public official or employee to use the confidential information which he obtains officially as the basis for stock speculation. On the other hand, is it not questionable whether a government should try to tell any of its employees that they cannot invest their surplus earnings in securities as a means of increasing their income? The President said that "bona fide investments" are all right but the question for which I have not been able to find an answer is "how can it be determined whether the purchase of a few shares of stock is speculation or bona fide investment?"

That brings up of necessity the difficulties of enforcement. It also brings to the forefront a real danger. That danger is not as remote as it seems. I refer to the use of power in the hands of the Chief Executive to take away individual liberty of action.

STAR DUST

Movie • Radio

By VIRGINIA VALE

SO PHENOMENAL is the success of National Broadcasting company's Spelling Bee program that soon it will be transferred from its Saturday afternoon spot to an evening hour on the blue network.

Apparently the whole country feels the urge to compete, for mail pours in from colleges, from old people's homes, from women's clubs and orphans' asylums, from volunteer firemen, and swanky country clubs asking for a chance to join the fun.

Paul Wing, who conducts the program, travels around the country at top speed, broadcasting from here and there, drawing such crowds of fans you would think it was Robert Taylor making a personal appearance.

—*—

If Carole Lombard is not already one of your favorite stars, she will be as soon as you see "Swing High, Swing Low." She is so beautiful, so ingratiating, such a good sport that you just want to climb up to the screen and shake Fred McMurray for nearly breaking her heart. This picture may do no end of damage and cause innumerable family rows, for Carole never nags, never whimpers, never rages. The character she plays is going to be held up as a model for behavior in private life by all the young fiances and husbands.

Carole Lombard

—*—

Frances Farmer, who plays the feminine lead in "Toast of New York," has skyrocketed to fame in record time, but nevertheless, she has not buried her stage ambitions. This summer she will go to New Hampshire to work with the Peterboro Players.

—*—

The rest of Hollywood may believe that Glenn Morris, Olympic decathlon winner, will make an ideal Tarzan, but Lupe Velez holds firmly to the belief that only Johnny Weismuller can effectively play the part. Even Lupe had to admit in the midst of argument that Glenn Morris had the looks and physique for the part, but she still held out that he would never be able to give the Tarzan yell. Whereupon some old meanie said that in that case the producers would hire the same yeller who howled for Johnny.

—*—

Marion Claire, who for the past two years has been trouping around the country with "The Great Waltz," has been signed to play Bobby Breen's mother in "Make a Wish." Schulberg has signed Lenore Ulric, who was so good as the vicious grafting friend of "Camille," to play in "The Great Gambini." A girl in her 'teens named Wyn Cahoon who has had considerable success on the New York stage has been signed by Columbia, who have also nailed the veteran Dick Arlen down to a contract to keep him from gallivanting off to England again.

—*—

For those audiences that like chills and fever, horror and suspense, blood and thunder, there are two new pictures just made to order. "The Soldier and the Lady," an RKO picture which is really that old classic of spine chillers, "Michael Strogoff," is the more spectacular since it introduces army scenes made in Europe. More intimate, but less blood-curdling, is "Love From a Stranger," which stars Ann Harding and Basil Rathbone. It is a story of a mild young woman who wins a sweepstake prize and marries a fiend who has dispatched several wives via morbidly-contrived murder.

—*—

ODDS AND ENDS—Bing Crosby has been kidded so much about his ballooning figure that he has taken up tennis in an effort to reduce. Incidentally, did you hear his old friend Harry Barris on his program? And wouldn't you love to see him in a picture with Bing? . . . Basil Rathbone, as I kept reminding myself all through his horrifying antics in "Love From a Stranger," keeps 86 kinds of tea on hand at his house so as to have just the flavor he wants of an afternoon . . . All Hollywood swooped down on the Selznick-International studios to watch the Coronation scenes in "The Prisoner of Zenda." And then Madeline Carroll broke up the scene by whispering to Ronald Colman just as the hundreds of extras in the procession got under way, "Don't look now, but I think we are being followed."

Clayfield Baffles Experts

There is a clayfield at the village of Ewenny, near Bridgend, from which clay has been taken for nearly a century, yet there are no signs of excavations, notes a writer in London Answers Magazine. Experts are baffled, for there should be a hole at least fifty feet dep. It is known as the "Potter's Field," and adjoins a world - famous pottery. Thousands of tons of clay have been taken from it, but the supply seems inexhaustible.

FARM TOPICS

DAIRYMEN ADVISED ON PASTURE CA

Fertilization Is Regarded the Best Plan.

By Carl B. Bender, Professor of Dairy bandry, New Jersey College of Agriculture.—WNU Service.

If the old myth that "cows at midnight on New Year's were true, many a cow would h advised her owner long ago pasture should be considered a c crop.

Most farmers do not consider ture as a cash crop, since never actually see any money ing returned directly from the ture. But the cow is the mid man in this case. It is because this lack of understanding on part of dairymen that pasture la are the most neglected sources farm revenue.

A complete pasture fertiliza program, which includes an ap cation of nitrogen fertilization the rate of 250 to 300 pounds acre in the spring, brings retu in cash four to six weeks after fertilizer is applied to the soil.

Experimental work has been tri out on a demonstration basis. T results have been uniformly go

More dairymen should tes plans this spring to treat their pa tures the same as they treat th other farm crops, and thereby g more and cheaper milk from the dairy cows.

Percheron First Among American Draft Hors

Among draft horses the cle legged Percheron has always he first place in American market something like 140,000 of them ha ing been registered in the stud bo without counting the 30,000 hors of almost undistinguishable type the French Draft book, says a writ in the New York Herald-Tribun Gray was the prevailing color the early Percherons imported this country, some of which can from France almost one hundre years ago. They were lighter weight and more breedy than th modern type, often showing coach conformation and action, with strong suggestion of Arab bloo about the head.

As heavier trucks came in wit more and better pavements, increas ing weight behind the collar was de manded by the buyers, and thi brought into prominence the coarse and more sluggish but heavier an tighter-made Belgian horses tha sometimes tip the scale beam a close to 2,000 pounds. The bree made wonderful progress in thi country until motor trucks were per fected, and seemingly fabulous prices were reported for some of th prize-winning stallions both here and in Belgium, where the government has long supervised all breeding op erations to eliminate the unsound and unfit.

Minorca Large Bird

The Minorca is the largest of the Mediterranean or egg breeds. It is characterized by its size, its length of body, and the large comb and long wattles. The Minorca shows a long back which has a noticeable slope from the shoulders downward to the base of the tail. The underline of the body is also noticeably long. The tail is rather low carried and is well spread. The Minorca also has long shanks and is well up on the legs, showing hock and part of the thigh.

Raising Geese

One acre of rough, unprofitable land is enough on which to raise a fine flock of geese but there should be a small stream of running water. If this ground is enclosed with wire netting, the geese will be by themselves, and not bother other poultry, for they are apt to be quarrelsome at feeding time. Geese should have only ground grain, though they thrive on oats after they are grown. Geese have no crop in which to soften their food so wheat and corn are not suitable feed for them.

Farmers Pay Weed Tax

Every farmer pays his share of the weed tax, with the average amounting to about $450 a farm a year, according to a crop production expert at the University of Illinois. Although much can be done toward reducing this loss through the use of a small fanning mill for cleaning grain, farmers must often have their seeds cleaned with special machines of commercial seedsmen in order to remove the many noxious weeds.

Farm Purchases

Figures show that in 1936 over 15,000 farm properties were sold at a figure of $35,200,000 by the federal land banks as compared with 9,700 properties valued at $28,100,000 in 1935. Approximately 75 per cent of the farms sold by the land banks last year were bought by farm operators. During the past three years farm operators have largely displaced non-farmers as heaviest purchasers of federal land bank properties, officials have pointed out.

Swank Uniforms at George VI's Coronation

Officers of the British army shown wearing special new uniforms in honor of the coronation of King George. Left to right, the uniforms are of the Scots Greys, the West Yorkshires, the Royal Scots Fusiliers, the Sea-Highlanders, and the King's Royal Rifles.

Bridge Builders Drive Golden Rivet

The last rivet was recently driven in the Golden Gate bridge at San ancisco. With many notables witnessing the ceremonies, a crew of n-hatted riveters drove a golden rivet into the span, signalizing com-tion of the structural steelwork. Mayor Rossi (right) of San Fran-co aided by riveter Edward Stanley drives the last rivet.

YOUNGEST DEAN

Miss Frances McLaughlin, twenty-one, assistant dean of women at the University of Pittsburgh, is one of the youngest deans in American colleges. Two years ago, a leader in many campus activities, she was Alma Mater Queen. She has charge of the women's placement bureau and women's fraternities. She joined the faculty a year and a half ago.

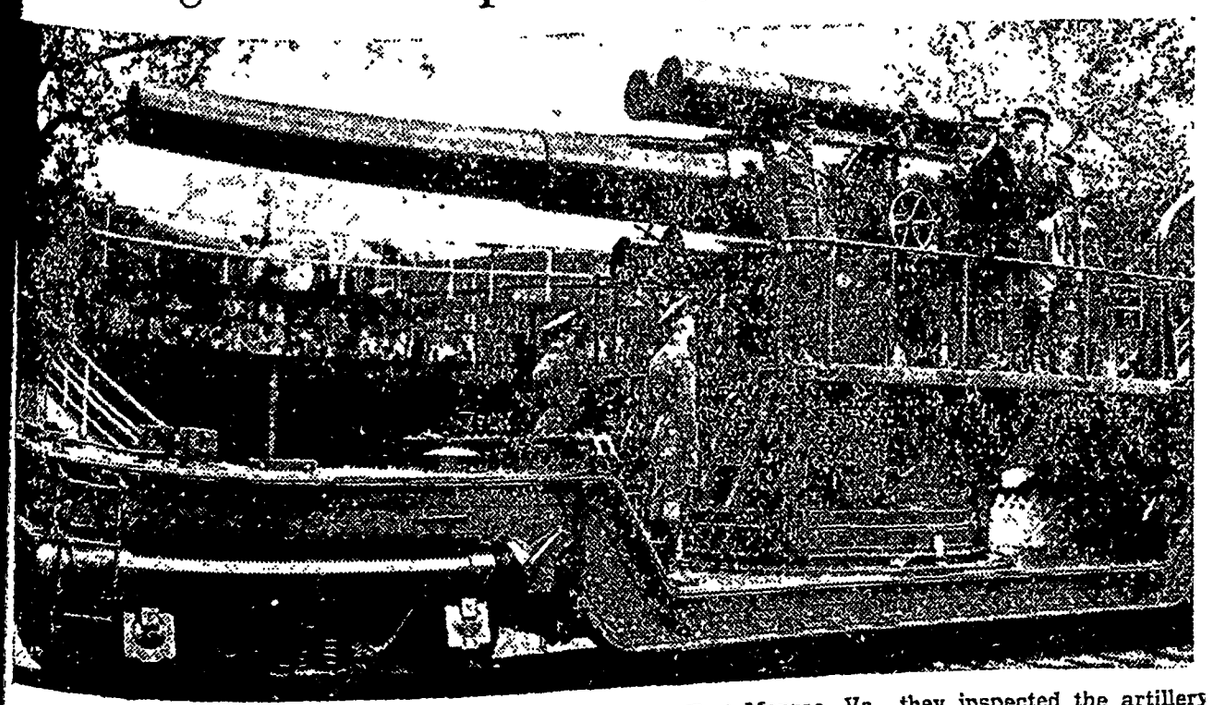
COAL COMMISSIONER

John C. Lewis, mine union mem-r, of Iowa, one of seven men ap-inted by President Roosevelt as a mmission to administer the sec-d Guffey coal control act.

They Have Twenty Varsity "Mothers"

Left motherless one month after their birth, these two babies now have 20 "mothers"—each one a coed at Cornell university, Ithaca, N. Y. The babies, Rose Ann (left) and Mary Alice, were borrowed by the New York State College of Home Economics in order to provide subjects for students of the family life courses to "practice" with.

Congressmen Inspect Heavy Artillery Trains



During a recent visit of 220 congressmen and senators to Fort Monroe, Va., they inspected the artillery railway trains of the Fifty-second coast artillery as shown above. On the gun car in civilian clothes is chairman of the house military affairs committee, Representative Lister Hill of Alabama, accompanied by commanding officers of the Fifty-second railway coast artillery.

COUNTRY BOY'S DREAM COME TRUE

Bob Feller, at 17, Left the Iowa Cornfields to Stand Big League Sluggers on Their Ears; He's New Idol of Youth.

By WILLIAM C. UTLEY

SPRING fever in the country is baseball fever this year—big league baseball. Tall gangling kids are leaning on hoes with a far-away look in their eyes and dreaming of breezing 'em past the Giants, the Cardinals, the Yankees.

Freckle-faced youngsters, stretched out on the cool grass around the old swimmin' hole, conjure up visions of making Mel Ott run for cover with a blazing fast ball, or handcuffing Al Simmons with a jack-rabbit inshoot. Still other boys stare at the pages of history and algebra books and find them covered with "earned runs" averages and strikeout records.

Reason: Bob Feller, christened Robert William, of Van Meter, Iowa. Other boys in their teens dreamed of walking right out of the cornfields to the major leagues and standing the heavy hitters on their burning ears. Bob Feller actually did it. Which proves that America is still America, and a country boy can make good overnight in the "big time" if he has the heart.

Feller's "Color" Rivals Ruth.

Babe Ruth was that kind of a boy, even if he came from a big city. He was an orphan who had to make his way in the world. He became baseball's highest paid player, reaching at his peak a contract which called for $80,000 for a single season. He was a national hero with his 50 or 60 home runs a year, and in every open field and sandlot the kids were gripping heavy bats at the end and swinging for all they were worth in the effort to ape their idol by lambasting one into the next congressional district. With his hulking frame, his good humor, his Horatio Alger history, he was probably the most colorful figure sport has ever produced.

Up to now. They are saying that Feller will be a greater hero to young America than even the mighty Babe. Since that memorable day, September 13, 1936, when Bob Feller, wearing the gray uniform of the Cleveland Indians though he was only seventeen years old, struck out 17 Philadelphia Athletics to break an American league record which had stood for 28 years, and tie the major league mark set by the great Dizzy Dean himself, the Iowa farm boy's name has been at the tip of every youthful tongue.

It's a good thing. Bob Feller is a clean, strong, healthy boy—a real boy. He is not afraid of hard work, never forsaking chores on his dad's farm, even for baseball, until he made baseball his profession. He'll get $10,000 for playing this year, and another $40,000 from advertising testimonials. But he still wears the same size hat. He hasn't taken up smoking, drinking or dancing, his studies go on under a tutor for he hopes to be graduated from high school, and he gets 12 hours sleep a night.

Better than anything else he likes to pitch that baseball. He has everything, except a change of pace perhaps, but he doesn't miss that much. Sport writers say his fast one is as fast as Walter Johnson's a generation ago; about Johnson they used to say, "How can you hit what you can't see?"

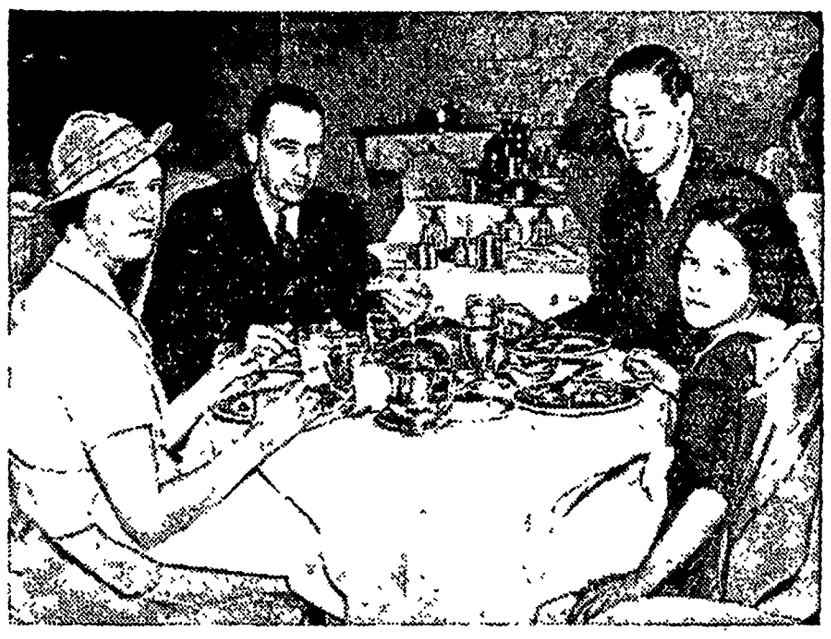
Coach Wally Schang of the Cleveland team, who, in his day, caught Eddie Plank and Chief Bender and others famed in the annals of the game, says: "There was never anyone like him. Mark my words—he'll go down in history as the greatest pitcher who ever lived." But the most important praise of all came from Umpire Bill Klem, grizzled veteran who has called 'em as he saw 'em for longer than most of us care to remember. After watching Feller make the National league champion New York Giants look like grammar school boys trying for his fast ball, Klem said: "I've never seen anything like it."

Son Lives Father's Dream.

How did Bob Feller get that way, at an age when most boys are trying to train that cowlick out of their hair to look slick at the high school "prom"? The answer is found in William Andrew Feller, the tall, wiry Iowa farmer who gazes with mingled awe and satisfaction at his son's exploits. It was all part of the senior Feller's plan. Never succeeding in his own ambition to become a professional ball player, he determined to make one of his son.

Accordingly, Bob's baseball education began early—when he was four. He and his father played catch, using the barn for a backstop, for Bob's control wasn't very good then, either. By the time he was fourteen young Feller could throw them in fast enough to crack his father's ribs, and he did. That was when Dad got a little careless judging the hop on Son's smoke ball. The barn's sides were apparently more solid than those of Mr. Feller, for they were only dented a bit when Bob let loose with a wild one.

Bob could throw a baseball 275 feet by the time he was nine, and 350 feet when he became thirteen; that is farther than the distance from the outfield fence to the home plate in most major league ball parks, and there are few big league players who can throw a ball that far on the fly.



Bob's dad and sister, Marguerite, join him for dinner at a hotel where the Cleveland Indians are stopping.

Dad Feller thought Bob was ready to begin playing in 1932, so to make sure he would start under the right circumstances Mr. Feller built a good baseball diamond on their 360-acre farm, provided fences and a small grandstand. He organized his own team, the Oak Views, with Bob playing shortstop and chasing the cattle and fowl out of the "park" before the games. Playing short in 1933, Bob hit .321, which means he made a safe hit in just about one of every three trips to the plate. He had a throw that nearly tore off the first baseman's hand.

Bob Starts a Game.

In grade school young Bob had liked to pitch, and had organized a nine to give the Van Meter high school team some practice. With Bob on the mound the little fellows licked the high school in seven of eight practice games. Dad Feller remembered this in the third inning of a game in Winterset, Iowa, in the spring of 1934. The Oak Views had hired a pitcher to hurl this important encounter. He had to be taken from the game with the bases full and nobody out in the third inning. Bob was sent in to pitch. He struck out the next two batters and got

Ready to heave a fast one.

two strikes over on the third. Then the runner on third tried to steal home. A perfect throw from Bob enabled the catcher to nip him at the plate.

By the middle of that July the Oak Views had decided Bob was good enough to be used as a starting pitcher, and let him start a game against the Waukee, Iowa, team.

"I was fifteen years old then," says Bob, "and weighed about 140 pounds. I'm six feet now and weigh around 185."

He was wild against Waukee, but when he put men on the bases by virtue of walks he relied on the fast one to get himself out of the hole. "I still do that today," he says. "Pitching for Cleveland, I have fanned three in a row, using nothing but speed."

Bob struck out 23 Waukee players, allowing two hits, and the Oak Views won, 9 to 2.

Bob Sees World Series.

And so it went. Game after game, Iowa's boy wonder went on to fan 13, 15, 18 or 20 of the opposing nines, allowing only two or three hits and often pitching a shutout. By the end of the 1934 season he had rolled up the almost incredible record of 157 innings pitched, 25 games won against four lost, and 360 strikeouts. He allowed only 41 hits and 21 earned runs. To top it all off, his batting average for the year was .403, a phenomenal mark.

Bob got his reward that fall after the season in Iowa was over. His dad took him to St. Louis to see the World Series games. They lived in a tourist camp, and it was great fun. But the quality of major league baseball, even as played by the Gas House Gang (who were to learn about a young man named Feller at a later date) and the classy Detroit Tigers, failed to give Bob cold feet. After watching some of the game's famous pitchers at their work, Bob said, "I think I can do better than that."

The next year word got 'round to Cyril C. Slapnicka, scout and assistant to the president of the Cleveland American league club, that there was something burning up the Iowa cornfields and it wasn't the drouth. With some misgivings he journeyed out to give Bob Feller the once-over.

What Slapnicka saw he was reluctant to believe. But after watching a few games he finally became convinced, and signed Bob Feller to a contract with the Fargo-Moorhead club of the Northern league. There is a rule in organized baseball which forbids a major league club to sign an unattached amateur player until he has served an apprenticeship with a team in some minor league.

$100,000 Bid for Him.

Some clubs contended last winter that this rule had been violated in the Feller case and that, therefore, Feller should be declared a "free agent" by Judge Kenesaw M. Landis, high commissioner of baseball. A "free agent" is a player who is not the property of any club and may sell himself to the highest bidder.

Although Bob actually never pitched for any minor league club, he had been owned by two, and Landis decided that he was still the property of the Indians. It was reported that other clubs had been ready to offer Bob as much as $100,000 as a bonus for signing a contract if the commissioner had decided otherwise.

The Fargo-Moorhead club had immediately turned Bob over to New Orleans, in the Southern association. New Orleans retired him last spring so that he could attend high school. As soon as his school semester was over, Cleveland drafted him from New Orleans. Manager Steve O'Neill of the Indians allowed the youngster to play with a semi-pro team in the Great Lakes city, so the Indian brain trust could keep an eye on him. They didn't have to watch him for long.

On July 6 O'Neill decided Bob was ready to taste big time opposition, and allowed him to pitch three innings of an exhibition game against the St. Louis Cardinals. The Gas House Gang looked no tougher to Bob from the pitching mound than they had from the grandstand in that World Series of 1934. They hardly even saw his fast ball and his curve had them breaking their backs, just as had the cornfield swingers out in Iowa.

Bob Wins Dizzy's Praise.

At the end of his three-inning stretch Bob had struck out eight Cardinals, including some of the cream of their far-famed attack. They got only one run and three hits off him. Even Dizzy Dean was moved to talk about some one other than himself. "The kid's got plenty of stuff," he admitted. Pepper Martin, another of the league's topflight stars who had gone down before Feller's blazing pitches, testified, "I couldn't find his curve ball at all. He knows how to pitch."

It was enough to convince O'Neill that Bob Feller was no dream, but a real flesh-and-blood baseball player. He nominated the kid on August 23 to start his first full major-league game.

The results were all that could be asked for. As Bob walked from the field two hours later, after striking out 15 batters of the St. Louis Browns, the crowd roared. A seventeen-year-old boy had come within one strikeout of tying the American league record set by the immortal Rube Waddell in 1909. "Heck," said Bob Feller, "I did better than that back in Iowa!"

As it has been related, he did better than that in the American league, breaking Waddell's mark three weeks later against the Athletics. He finished the season with a record of five won and three lost, and in 62 innings he had fanned 76 batters. His earned-runs average, the best measure of a pitcher's effectiveness, was 3.34, second only to the veteran Lefty Grove of the Boston Red Sox.

A DANISH SUMMER COMEDY ON THE SILVER SCREEN

"Sol Over Danmark" (Sun Over Demark) the Danish summer comedy which in this country is released through the Scandanavian Talking Pictures Inc of New York will be shown at the Avery Theatre, Garner, for one day only, Friday, May 21st.

"Sol Over Danmark" is a picture starring not only some of Denmark's most popular motion picture stars, but starring also the almost proverbial beauty of the Danish summer, to which it is a splendid tribute It's a tribute to the Danish wit and humor, and it is a tribute to the fine spirit of the Danish youth It deals with the many wonderful adventures of two young girls taking their vacation trip on Bicycles through the picturesque countryside of their beloved Denmark

Interwoven in the picture is a beautiful tale of young love, which conquers everything, and which does not know of any obstacles The music throughout the picture is old Danish melodies, most refreshing in its freedom from tiresome noisy jazz There will pe a continuous show from 1 00 p m and the prices will be 10 and 31 cents until 6 00 p m From 6 00 p m to closing time 10 and 36 cents The picture is being shown under the auspices of the Danish Brotherhood of Clear Lake

SCHOOL NEWS

Grades 7 and 8

Last week we finished up our work for the semester and began to review for the semester examinations.

The eighth grade made very attractive memory books. They used their class colors on the covers.

Melvin Coobs and Billy Zabilka were the only two who received 100% in spelling this week.

Miss Merritt entertained the seventh and eighth grade by taking them to the Avery Theatre Tuesday evening

Grades 5 and 6

Colleen Gram has moved to Cedar Falls Friday was her last day here at school with us.

On Thursday evening the boys and girls had a surprise party on Miss Barz They did all of the planning, including the games and serving the lunch They had Miss Azeltine bring her to the school house with the idea of working When she opened the door of the room the children shouted "Surprise" They presented her with some lovely gifts and a nice lunch was served Everyone had a very nice time Miss Barz wishes to thank all of them for the lovely party and gifts

Saturday it rained but did not spoil our plans for the annual event that Miss Barz has of going to her home for games and then attending the Avery Theatre After the show we went to her home where refreshments were served All said that they had a fine time

Miss Barz has on display in her room pictures she has taken of the boys and girls she has had in her room during the past seven years here in Klemme Many good laughs have resulted from "seeing ourselves as others used to see us

On Friday afternoon the Juniors invited us to see the gymnasium after decorations were completed for the Junior-Senior Banquet We thank them kindly for the invitation

Grades 3 and 4

Saturday afternoon the third and fourth grades and Miss Azeltine attended the show at Garner This took the place of the usual room picnic

Review for final tests started last week

The fourth graders are very much interested in their new study of fractions

We were very much pleased Friday when the Juniors and Miss Allen invited us down to see the gymnasium where the Junior-Senior Banquet was held

Grades 1 and 2

Phyllis Carol is reading a book to us The name of it is "Delicia."

We have been learning some new folk dances and played them out on the lawn

Many of our boys and girls have been bringing bouquets of spring flowers. We also have some jack-in-the-pulpits growing in a box on our reading table Edward brought a dragon fly to school on Wednesday.

Medieval Gilds, Archers Conduct Colorful Fetes

Twice each year, Vise, a quiet little city on the border of Belgium and Holland, decks itself in festive array and holds celebrations reminiscent of medieval times. Its Gild of the Arquebusiers holds a fete, while the Gild of the Free Arquebusiers make merry a week later, states a writer in the Boston Globe.

Even though the arquebus, a Sixteenth century gun, which preceeded the musket, went out of use about 1570, its carriers in this city, the arquebusiers, have kept up their ancient gilds and today membership in them is still looked upon as a mark of distinction. Twice annually they turn back the calendar 400 years and stage these celebrations with all the color of the Middle Ages.

Other Belgian cities as well as Vise preserve gilds and contests that date from medieval times. Just as colorful as the Fetes of the Arquebusiers are the archery contests still held throughout the year in Bruges by the Archers' Company of San Sebastian Once made up of men who formed the bodyguard of the Counts of Flanders, this company still prides itself that Charles II of England visited its tower in 1656 and wrote his name in its golden book. His brother, the Duke of Gloucester, even tried his hand at the bow there and left behind a silver arrow, still the show pieces of the tower.

About 50 men take part in the tournaments, wearing white jackets and shooting from a bandstand at the back of the tower. Their target, a clay pigeon on a pole above the building, is a hard one to hit, and on windy days it sometimes happens that no one breaks it.

History of London Runs as Far Back as 43 A. D.

London, the greatest city in the world, lies 50 miles above the mouth of the River Thames, spreading over both its banks. It has an area of 693 square miles and a population of more than 8,000,000. London is really the mother city of the British empire, and it would take the visitor weeks to view all the sights in the grand old city, which dates back so far that there isn't a recorded time when there wasn't London. The Roman legions were there in A. D. 43.

The British metropolis is but 1½ hours by rail from Southampton.

London has always been the workshop of Great Britain's literary lights. There toiled Shakespeare, Chaucer, Coleridge, Defoe, Dickens, Dryden, Gibbon, Goldsmith, Johnson, Keats, Lovelace, Marlowe, Milton, Raleigh, Shelley, Thackeray, and scores of the men and women who built the sturdy foundation of literary England. Many of the houses connected with the lives of these great writers wtill stand.

The Buffalo

The buffalo never has been regarded as a smart animal, but he had the sense of self-protection. He was known to the Indians as a prairie animal.

From the Indians the pioneers learned that the buffalo provided the redskins with fresh meat, dried meat, tallow (marrow kept in bladders), and dried tongue. From the skin the tribesmen made robes with the hair on; clothing and bedding Dressed without the hair, they built tepees and boats by sewing the green skins and stretching them over a wooden framework. Shields were made from the thickest parts; bags for use in traveling the trails and clothing of many kinds. Even coffins, then known as "winding sheets," served for the dead. From the sinews the Indians made ropes, thread and bowstrings. The Indian and buffalo taught the pioneers a lot of lessons in being provident.

Words of War

Only two and three generations ago Europe still considered Americans a raw and primitive people and her diplomats talked to us as they wouldn't dare talk to each other. In the year 1850, for instance, a British subject was put on trial for murder in New York and the British premier dared say: "The President should understand this—that the British nation will never permit a British subject to be dealt with as the people of New York propose to deal with this man . . ." and so forth, even to words of war.

Hearty Eaters

If certain celebrities really ate what legend says they did, the wonder is that they managed to do so much work. Dumas, they say, was insulted if offered less than three steaks for a meal. Balzac consumed 100 oysters, a dozen lamb cutlets and a sole or two at a sitting. But don't feel inferior if you require only a ham sandwich for lunch. Isaac Newton lived on a scanty diet of bread, water and vegetables.

Phoenix Sacred in China

The phoenix, called in Chinese "feng huang," is one of the four sacred creatures of the country, the others being the dragon (perhaps the most important of them all), the tortoise, and the unicorn. The unicorn is recognized as the king of the quadruped world, says Nature Magazine, the phoenix, ruler of all feathered life.

After being taunted by a creditor in court for failing to pay his debts and always wearing spats, George C Nathan of Boston said he had to wear them to cover the holes in his socks.

LICENSES

The Legislature made no change in the license requirment laws. License fees remain the same as in 1936 Female residents of the state are exempt from the fishing license requirement.

A previous attempt ended when the landing gear of her plane collapsed during a take-off at Luke field in the Hawaiian islands.

Keeping Up With Science

By Science Service

© Science Service.—WNU Service.

Highest Laboratory in World Built on Top of Mt. Evans

Protected Against Wind, Lightning and Rats

Denver.—The campus of the University of Denver has been extended up to the peak of Mt. Evans at 14,259 feet. There, at the end of the highest automobile road in the United States, stands the highest laboratory in the world, being some three thousand feet higher than the famous laboratory on the Jungfrau Joch in Europe.

This laboratory is a joint project of the Massachusetts Institute of Technology and the University of Denver. The building was pre-fabricated in Denver, cut into sections and transported from Denver to Mt Evans in one day by the use of a nine-truck caravan.

CCC men did yeoman service in carrying 40 sections averaging in weight from 200 to 500 pounds, up the rocky knoll from the terminal of the automobile road to the site of the laboratory. They also constructed the foundation for the building.

Will Stand Wind and Weather.

The laboratory is designed to withstand a wind velocity of 150 miles per hour and to screen out electrical disturbances of this region, which at times cause electric sparks to jump from one's fingertips, ears, and nose, and make the hair stand out like the quills of a frightened porcupine. Also it had to be made as impervious and impregnable to rodents and souvenir-hunting tourists as possible.

To make the structure windproof, side walls were eliminated, while the protection from lightning was accomplished by having the end walls, the roof, and the floor completely surrounded with metal which is connected to ground wires buried deeply in the mountain. This also protects against rodents.

Use of the laboratory will not be limited to research work on cosmic rays. The first work done was that by Dr. Fred D'Amour of the department of zoology, who studied the physiological changes in the rat due to high altitude. The department of meteorology has long desired a station at high altitude where observers could be placed.

Cattle Tick Fever Nearly Wiped Out in United States

Washington.—The areas under federal quarantine against cattle tick fever in the South have just reduced by 28,150 square miles, eliminating all remaining quarantined parishes in Louisiana and leaving under the ban three small blocks in Florida and two larger groups of counties on the eastern and southwestern boundaries of Texas. Total wiping out of the disease in the United States is in sight.

Cattle tick fever is a classic in the annals of bacteriology and medicine because it was the first disease proved to be carried by an insect—or more strictly, in this particular case, a tick; for ticks are not insects. It was in the eighteen-nineties that the late Dr. Theobald Smith, then of the United States Department of Agriculture, followed a "blind hunch" supplied by Texas stockmen and proved scientifically that ticks are the carriers of this disease. Later, it was found that insects as well as other species of ticks are responsible for the spread of many diseases afflicting both human beings and animals.

Dipping and Quarantine.

The United States Department of Agriculture, with the strong co-operation of the states concerned, undertook to eradicate this costly malady of cattle. Two principal means are employed: dipping the cattle in tick-killing baths and forbidding shipment of animals that might be harboring ticks into disease-free areas.

How effective this campaign has been is told by a glance at the Department of Agriculture's "tick map". On July 1, 1906, when the work was first taken in hand, the cattle tick fever area included practically the whole South, plus the southern half of California—a total of 728,565 square miles. The areas left under quarantine now add up to only 33,571 square miles, not much more than the single state of South Carolina.

How Old Testament People Pictured the God of Israel

Portrait of 1200 B. C. Unearthed in Syria

By EMILY C. DAVIS

WHAT did Jehovah, God of Israel, look like—as people of the Old Testament pictured Him?

Biblical Israelites ventured no real portraits. Other nations might surround themselves with statues of their deities, or engraved pictures, or bas-reliefs. But the ten commandments forbade graven images. And even though Israel gave in to temptation to make a golden calf, and even though some Israelites had a weakness for clay figurines of heathen goddesses, there was no known attempt to portray Jehovah.

Bas-relief Found in Syria.

Special interest, therefore, is aroused by discovery of a portrait which gives the modern world a fairly good idea of how the ancient world visualized Jehovah. The portrait is a bas-relief from the Twelfth century B. C., unearthed at Ras Shamra in Syria, where a Canaanite city stood.

French archaeologists, directed by Prof. Claude Schaeffer of the French National Museums, are finding ruins of Ras Shamra a veritable treasure city for evidences of lost history.

The bas-relief shows the deity El, mentioned in the Old Testament as a name for absolute Deity, and later, Prof. Schaeffer says, becoming God of Israel under the name of Jehovah, or Yahveh.

Stern-Faced and Bearded.

The Canaanite sculptor has carved a striking profile of a venerable, stern-faced individual wearing a beard and dressed in ankle-length costume and high peaked headdress. He sits stiffly on a high, richly ornamented throne with a footstool. Facing is the small king of the city, devoutly holding up his scepter and a pitcher containing some offering.

Portraits of El have been known before, but none of so early a century, which pictures El at the very time when the Israelites were fighting for their promised land under Yahveh's guidance.

The bas-relief is unfinished. Enemies invading Ras Shamra from overseas rudely interrupted life in the Canaanite city. This portrait of El was buried in the sculptor's wrecked home, to wait 3,000 years for a public showing.

Fingerprints Tell About One's Health and Character

New York.—Scientists may find that fingerprints, now important for identification, can in the future be made to tell something of the heredity, character and health of a person and his possible criminal tendencies, members of the American Orthopsychiatric association learned at their meeting here.

First results of research on this problem were reported by Dr. John A. Larson, assistant director of the psychopathic clinic of the recorder's court, Detroit. Dr. Larson examined the fingerprint patterns of 3,524 mental disease patients at Eloise state hospital, where he is attending neurologist. He found that the distribution of arches in the fingerprint patterns was consistently lower in the group of patients suffering from schizophrenia than in groups suffering from other kinds of mental disease. In a group of sex delinquents who had no mental disease, the distribution of arches was low but the whorls seemed to increase.

Great caution must be used in drawing conclusions from these findings, Dr. Larson pointed out.

Early studies had convinced Dr. Larson that fingerprint patterns obey the laws of heredity. Closest resemblances were found in a pair of identical twins. Although fingerprints are different for each individual, members of a family have certain similarities in their fingerprint patterns. Racial similarities and differences might also be found, Dr. Larson believes, so that it may be possible in the future not only to identify a person by his fingerprints but to determine his race and family connections.

Apricots From Asia May Flourish in Dakotas

Brookings, S. D.—California's apricot-blossoming hillsides may soon have rivals on the prairies of the Northwest, where nobody would ever ever have imagined this fruit to be possible.

Dr. N. E. Hansen, of the South Dakota State college here, has an Asiatic species which he has been nursing for about a dozen years, and which seems to be quite hardy under the severe climatic conditions of the Dakotas. He found the original trees in northern Manchuria.

...ed Cottons Rank High in Chic

By CHERIE NICHOLAS

...odern cottons putting on ...tyle airs! Their emer... ...m the humble housefrock ... as fascinating a story ...inderella romance might ...tons are certainly going ...d doing things in the way ...weave and design such as ...r ventured to do before. ...irit of cottons to do and ... especially true in regard ...eason's prints which are ...a glory and glamor that ... them into the swankiest ...tons were ever known to ...retentiously fashioned as ... are now turning out cot...nes for both day and eve..., you feel smartly dressed ...no matter the place, the ...e company you are in.

...tons such as were dis... ...a style clinic held in the ...ise Mart of Chicago re...ree of which are here ...that cause one to become ...scious to ace-high point ...siasm. Attractive cotton ...f the type pictured avail...epartment stores and spe...ps the country over give ...t answer to women seek...mum style at minimum

...ng dress, as shown to the ...e group, holds no terrors ...ited budget for it is any...costly even though it does ...earer an air of high-brow ...h is the grand and glori... about this season's hand...ons, they are inexpensive ...hey have all the voguish ...u would expect of much ...ced modes. In the gown ...o you see how dramatical...y cotton prints have ...nto the 1937 scene. The ... black scroll patterning ...trasts vividly colorful flo... girlish round collar and short puff sleeves are important style details. The gypsy sash girdle repeating leading colors in the print adds the final "touch that tells." A bright green felt hat with grosgrain ribbon trim colorfully tops this costume.

A peasant print and the new spaghetti trim are combined in the dress shown to the left to interpret style at its best. The print is in peasant blues, greens and yellows on a russet background ground. The spaghetti trim for belt and for the modish lacing on the waist is in multi colors. The skirt is flared as fashion now demands. The hat has a square high crown and the brim is bound in grosgrain.

Royal crimson (echoing coronation colors) and navy blue on a white background of cloky pique presents a stunning color study for the gown centered in the group. Because the print is a vividly colorful widely spaced bold floral it registers definitely 1937. This ensemble features a jacket with puffed sleeves and paneled down the back to correspond with the panel in the dress which is sleeveless and collarless. A new Gaucho style felt hat inspired by South America gives a nonchalant touch which is most intriguing. Adjustable knots hold the hat under the chin.

When you go cotton-print shopping don't forget that the bigger, the bolder, the print the smarter. You can go to any extreme and still not be found guilty of exceeding the speed limit so far as the colors and designs of the new cottons are concerned. There is a decided trend toward bold stripes and plaids. Then too, fancy turns to East Indian and oriental print designs. These are particularly smart for the now-so-popular house coats and for sports frocks.

FASHIONS CALLING FOR GREAT YARDAGE

By CHERIE NICHOLAS

The present dramatic fashions calling for great yardage as endorsed by leading designers give fabrics a larger share of the fashion spotlight than in many seasons. "Ballerina" skirts of layers and layers of stiff sheer silks, attached to long fitted bodices of silk net, silk tulles and silk marquisette show the inspiration of the recent Degas exhibits in Paris and New York. Full-skirted evening gowns sometimes use forty yards of silk.

Schiaparelli's ballet waltz dress with short skirt over stiff petticoats, the soubrette silhouette which caused such a sensation at the openings, is frequently interpreted in silk net, also in printed silk.

Cotton Laces Are Just the Thing for Daytime Frocks

Cotton laces, fashion forecasters declare, are going to be prominent among the daytime frocks worn this spring and summer. Street-length dresses made of lace in the many tailored styles are just the thing for the perfect combination of smartness and practicalness. The laces are varied in their patterns, some having big flower designs made up of large or small flowers or different sizes together. Others are patterned in geometric and modernistic figures. The beauty of the cotton laces is that they can usually be worn straight through the day, finishing up at the country club as fresh and smart as a daisy. A little sports dress may be just a sports dress, but when it's lace, you have sounded a style-correct decorative note, to say nothing of coolness and uncrushableness.

UNCOMMON AMERICANS

By Elmo Scott Watson

© Western Newspaper Union

Father of the Dime Novel

A FEW years before the opening of the Civil war a printer in Buffalo, N. Y., began issuing a magazine called the Youth's Casket and a little later another, called the Home Monthly. Neither was much of a success. More successful was his brother who ran a newsstand and began selling songs on single pages in much the same fashion as the ballad-hawkers of an earlier day. Then the printer brother published a number of these songs in a pamphlet called "The Dime Song Book" and it sold so well that they decided to move to New York city and publish other books for ten cents.

Thus it was that a great American institution was born, for these brothers were Erastus F. and Irwin P. Beadle and they were the "Fathers of the Dime Novel." They took into partnership another native of Buffalo, Robert Adams, and for the next three decades there came from the presses of Beadle and Company and Beadle and Adams a perfect flood of little books (the Pocket Library, the Half-Dime Library and the Dime Library) to thrill the souls of American boys and to fill the hearts of American parents with fear that their sons were being corrupted beyond all hope by these "yellow-backs."

How groundless that fear was is shown by the fact that some of the most distinguished Americans of today grew up on a reading diet of Beadle's dime novels. Exciting and thrilling those stories may have been (opening, as so many of them did, with "Bang! Bang! Bang! Three shots rang out and another redskin bit the dust") but they were also highly moral. For the villain was always foiled, Virtue always triumphed and it is doubtful if a single boy ever was ruined by reading one of them.

Irwin Beadle retired from the firm in 1862, Robert Adams died in 1866, and his two younger brothers, William and David, succeeded him. With them as partners Erastus Beadle carried the dime novel to the heights of its success. He continued in the business until 1889. Then he retired with a fortune built up by the dimes and nickels of Young America. He died in 1894—too early to realize that certain of the little "yellow backs" which he sold for a dime would later sell for hundreds of dollars because they are "Americana" and "collectors' items"!

She Wanted to Be President

SHE wanted to be President of the United States but if ever there was a forlorn hope it was that ambition of Victoria Clafin Woodhull.

She started under the handicap of being born in Ohio to a family that was not only poor but disreputable. And neither she nor her sister, Tennessee Clafin (or "Tennie C." as she wrote it) ever tried to retrieve the family reputation. Instead, both of them added several shocking items to Puritanical America's low estimate of the Clafins. For one thing they went in for spiritualism and, what was worse, they became free love advocates.

Victoria first married Dr. Canning Woodhull but soon discarded him for Col. James H. Blood, a handsome and distinguished Civil war veteran and a kindred spirit, whom she later married. Tennessee went to New York and won the admiration of Commodore Vanderbilt who set her and her sister up as brokers. Having thus entered the business world, the sisters set out to prove that women were just as capable as men in other lines of activity.

They began publishing Woodhull and Clafin's Weekly and with it Victoria started her own "boom" for President. She ran for that high office on a platform of women's rights—and kept right on running for many years. She went to Washington and appeared before the judiciary committee of the house of representatives to demand the right to vote. Of course, she failed to win that right just as she failed to get anyone to take her Presidential candidacy seriously.

So she finally gave up the attempt, discarded Colonel Blood and went to England where she acquired another husband, as did her sister Then both of them disowned free love, won their way into English society and for many years published a magazine devoted to advanced views on many subjects. Eventually Victoria settled down into a placid existence as the Lady Bountiful of a small town in Worcestershire and became known as "a social reformer who suffered for views now generally accepted." When she died in 1927 at the age of ninety, the vicar who preached her funeral sermon told his hearers, "We have been privileged to have had one of the world's greatest personalities among us"!

Lesson for May 16

THE FORBEARANCE OF ISAAC

LESSON TEXT—Genesis 26: 12-25.

GOLDEN TEXT—Blessed are the peacemakers: for they shall be called the children of God. Matthew 5:9.

PRIMARY TOPIC—A Man Who Wouldn't Quarrel

JUNIOR TOPIC—Was Isaac a Hero?

INTERMEDIATE AND SENIOR TOPIC—How to Prevent Quarrels.

YOUNG PEOPLE AND ADULT TOPIC—Promoting Peace.

In a world largely dominated by the philosophy that might is right, and in which men are urged to assert themselves and demand their rights, exacting them even by lawless and violent methods, it is increasingly difficult to proclaim the truth that meekness is not weakness and that the Christian virtues of patience and long-suffering are not simply outmoded theories which do not fit our modern world.

The story of Isaac, the second of the patriarchs, is instructive from beginning to end. The five chapters preceding our lesson merit careful reading. Isaac had come through many blessed experiences and had also sadly tasted the defeat of unbelief and sin before we reach the time of our lesson. Fearing a famine, and evidently not being certain that God would care for him, he had gone down from the promised land, and was dwelling in the land of the Philistines. But God had not forsaken him, and even there he blessed him.

I. Peace, Prosperity, and Envy (vv. 12-17).

Isaac was at peace although he was in the enemy's territory. God had given him great prosperity with the result that the Philistines hated him. Times have changed, but men are the same. Many are they who will not have the Lord Jesus Christ to rule over them, but who cast envious glances toward those who because they have honored God have been honored by him with peace of heart and have been prospered in whatever they do. (Read Psalm 1.)

Note that Isaac's testimony is strengthened by his willingness to yield even what was his right, rather than cause contention. Undoubtedly there are times when one must defend his name and his possessions, but all too often those who "stand up for their rights" have wrecked homes, churches, and nations, and have gained nothing but an empty victory.

II. Peace in the World Is Temporary (vv. 18-21).

Isaac moved on and digged more wells, and for a time he was again at peace, but not for long. He was still in the land of the Philistines. We are in the world. We long for peace, we would throw all our influence on the side of peace. But let us not be misled, for as long as sin is in the world there will be strife and war.

Many noble Christian men and women have permitted their God-given hatred of war and killing to mislead them into support of unscriptural and impossible peace programs, often to the loss of their interest in the preaching of the gospel and the winning of souls to Christ.

But is there then never to be "peace on earth"?

III. Perfect Peace in the Presence of God (vv. 22-25).

When Isaac came up into Canaan the land which God had promised him, he found permanent peace and renewed fellowship with God. Even so, the Christian man and woman who will step out of a spirituality-destroying fellowship with the world and will come wholly over into the spiritual Canaan will find true peace and intimate communion with God.

A broader application of the same truth brings before us the teaching of Scripture that when the One who has a right to reign, the Lord Jesus Christ, returns to take his throne, then and not before, will peace cover the earth. In the meantime those who bear the beautiful name Christian, who are true followers of the Prince of Peace, will give themselves to such patient, loving, and longsuffering testimony to Him that their personal influence will be toward peace in the home, in the church, in the community, in the earth.

Always remember that God's Word, the Bible, is our guide. Let us read it diligently, intelligently, prayerfully. To help the reader to do this, the writer of these notes will be glad to supply without cost or obligation a Bible-reading calendar with a workable plan for reading the blessed Book through in a year. If possible enclose a stamped and self-addressed envelope with your request.

Faults Showing Up

The good often sigh more over little faults than the wicked over great. Hence an old proverb, that the stain appears greater according to the brilliancy of what it touches. —Palmieri.

Sin of Not Doing

Doing nothing at all is often the worst kind of wrong doing. Simply failing to do what we ought to do may be more inexcusable than any mistake in our best methods of doing.

Parading the Fashions

A STYLE show De Luxe for De Ladies on this De Lightful Spring day!

Betty Ann feels just a bit the most elegant of the three for her housecoat is superlative. She has "skirts" like the ladies in the feminine yesterdays; her basque is form-fitting; her sash has a bow, and her sleeves puff. The illusion is so perfect that she is about to reach for smelling salts or a sprig of old lavender.

Matrons Have Vanity, Too.

Mama, very young for her years, can not resist styles that bring more compliments her way. The no-belt feature of this one is definitely new, and does wonders for the figure a bit past the slim stage. The continuing collar, which in soft pastels is always flattering, gives the break required by the all-in-one waist and skirt. The fitted top and flaring bottom make for style plus comfort, a demand matrons, even though youthful, always make.

Parties and Picnics.

Winifred on the left is privately making up her mind to have a housecoat, too; though she is mightily pleased with the way her print has turned out. She chose this style because the fitted, broken waist line and front seamed skirt are so very slenderizing. She's on her way to the 4-H meeting now and has only stopped to remind Betty Ann of the picnic "The Jolly Twelve" are having on Tuesday.

Pattern 1285 comes in sizes 12-20 (30 to 40). Size 14 requires 3¾ yards of 39 inch material.

Pattern 1282 is for sizes 14-20 (32 to 44 bust). Size 16 requires 5⅝ yards of 39 inch material. It requires 2½ yards of ribbon for tie belt.

P ...ern 1983 is for sizes 36 to 50. Size 38 requires 5⅜ yards of 39 inch material. With the short sleeves it requires only 5 yards of 39 inch material.

Send for the Barbara Bell Spring and Summer Pattern Book. Make yourself attractive, practical and becoming clothes, selecting designs from the Barbara Bell well-planned, easy-to-make patterns. Interesting and exclusive fashions for little children and the difficult junior age; slenderizing, well-cut patterns for the mature figure; afternoon dresses for the most particular young women and matrons and other patterns for special occasions are all to be found in the Barbara Bell Pattern Book. Send 15 cents today for your copy.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

© Bell Syndicate.—WNU Service.

Over-Estimate

Some think they are "revolutionary" when they are only "quarrelsome."

Why Laxatives Fail In Stubborn Constipation

Twelve to 24 hours is too long to wait when relief from clogged bowels and constipation is needed, for then enormous quantities of bacteria accumulate, causing GAS, indigestion and many restless, sleepless nights.

If you want REAL, QUICK RELIEF, take a liquid compound such as Adlerika. Adlerika contains SEVEN cathartic and carminative ingredients that act on the stomach and BOTH bowels. Most "overnight" laxatives contain one ingredient that acts on the lower bowel only.

Adlerika's DOUBLE ACTION gives your system a thorough cleansing, bringing out old poisonous waste matter that may have caused GAS pains, sour stomach, headaches and sleepless nights for months.

Adlerika relieves stomach GAS at once and usually removes bowel congestion in less than two hours. No waiting for overnight results. This famous treatment has been recommended by many doctors and druggists for 35 years. Take Adlerika one-half hour before breakfast or one hour before bedtime and in a short while you will feel marvelously refreshed. At all Leading Druggists.

Household Questions

Washing Windows—Add a little starch to the water used for washing windows. It not only helps remove the dirt, but gives a lasting polish.

* * *

With Fancywork—Before starting to draw the threads on linen for hemstitching, wet a small brush, rub it over a bar of soap until a lather is produced, scrub the threads of linen that you wish to draw, and they will pull out easily.

* * *

Tomato and Lima Bean Casserole—Drain the liquid from a No. 2 can of green baby lima beans and combine the beans with a can of tomatoes. Add a little butter and seasoning, then mix. Place in buttered casserole. Cover.

* * *

Boiled Whitefish—Clean a whitefish. To sufficient water to cover add salt and vinegar and a bunch of parsley and a quartered onion. Cook until the flesh separates easily from the bones. Drain and place on a hot platter, garnished with parsley and serve with a sauce.

* * *

Removing Mustard Stains — Mustard stains can be removed from table linen by washing in hot water an dsoap and rinsing in warm water.

IT'S WHAT HAPPENS Here THAT COUNTS

There's No "LOW BRIDGE" With Oliver Row Crop Cultivators

The Oliver Row Crop Tractor and mounted cultivator lets you do a *mighty good job of late cultivation.* There is ample clearance under the tractor and under the lowest cross parts of the cultivating attachment so the growing plants won't be damaged. There are two, four and six-row Oliver Cultivators, adjustable for practically every row width and all crops—and when you own an Oliver Row Crop you have a whole lot more than just a "general purpose" tractor. It will plow with two big bases—prepare seed beds with tread so light that a spike tooth harrow will erase the wheel tracks—and drill or check-row two or four rows at a time.

Before you buy any tractor, let us tell you about the Oliver Row Crop—the machine with centrally mounted attachments so that you can see what you are doing *all the time.*

WHAT A WAR COST

Many statistics have been compiled relative to the cost of the World War, but the figures are so large that it is impossible for the human mind to grasp their significance.

In an effort to put these figures into somewhat more understandable form, Dr. Nicholas Murray Butler, president of Columbia University, tells what might have been done with the 400 billion dollars spent on account of the war, as follows.

"The World War, all told, cost —apart from 30 million lives— 400 billion dollars With that money we could have built a $2,500 house, furnished it with $1,000 worth of furniture, placed it on five acres of land worth $100 an acre and given this home to each and every family in the United States, Canada, Australia, England, Wales, Ireland, Scotland, France, Belgium, Germany and Russia. We could have given to each city of 20,000 inhabitants and over, in each country named, a five million dollar library and a ten million dollar university Out of what was left we could have set aside a sum at five per cent that would provide a $1,000 salary yearly for an army of 125,000 teachers and a like salary for another army of 125,000 nurses."

Yet there is constant talk of another war It would probably be going on now if the nations had the money or the credit whereby it could be financed, and it seems bound to come eventually. And we call this an age of civilization

COUNCIL PROCEEDINGS
April 12th, 1937

Memorial Poppies Go On Sale This Week Saturday

FREE TALKING PICTURE SHOW THIS WEEK

The first open-air talking picture show will be held in Klemme's enlarged open-air theatre on Saturday evening. May 29th. Two machines will be used this season so that the pictures will be continuous. Bleacher seats are being built to accomodate a larger crowd. Free shows will be given every Saturday night during the summer

MILO PATET CALLED TO DES MOINES FOR HIGHWAY PATROL EXAMINATIONS

Milo Patet left this morning (Wednesday) for Des Moines where he was called to take a final examination for a position on the State Highway Patrol

Over 1500 applications were filed for positions From this number 300 were called in for personal enterviews and preliminary examinations From this group 120 will take final examinations at Des Moines.

Between 90 and 100 will then be selected to take special schooling and training at Camp Dodge. Fifty will then be put into active service and twenty-five or more will be put on the reserve list

GARNER GARDEN CLUB WILL HAVE FLOWER SHOW SATURDAY

Flower Growers Of Klemme And Vicinity Invited To Take Part

The Garden Flower Club of Garner will have a flower show and exhibit in the basement of the library Saturday, May 29th and have extended a special invitation to flower growers of Klemme and vicinity to exhibit their flowers

Flowers will be received from 8:00 to 10 00 a. m only, the judging will be at 11:00 a. m. and the show will open to the public at 1:30 p. m

Judges are Mrs. Archie Petersen and Mrs Harry Page, both of Mason City.

The Birth of Our Constitution

By RAYMOND PITCAIRN
National Chairman
Sentinels of the Republic

America at this time begins a significant celebration—significant not only to her own people, but to all the world

It is the 150th anniversary of the Federal Convention of 1787, which planned and wrote our Constitution.

From late in May until mid-September of that historic year, delegates from 12 of the original states met regularly in Philadelphia's famed Independence Hall to produce an historic document now known and honored wherever democracy lives

What the men who wrote our great Constitution, and later its Bill of Rights, achieved, was important not alone to their own troubled period of history **It is profoundly important today.**

By placing the power of government firmly and permanently in the hands of the people; by assuring political and religious freedom to all citizens, they established a form of government which still stands as a model.

In many other lands, kingdoms and empires have fallen In certain other lands, Communism and Dictatorship—the twin foes of democracy—work their harsh tyrannies. But for generation after generation, under the safeguard of our Constitution, America has grown in size, in prestige and in strength, and has offered its people standards of liberty, security and well-being equalled by no other nation on earth.

That safeguard must be preserved.

The nation-wide observance which extends through the summer should be more than a formal ceremony **It should be a national rededication to the principles of liberty immortalized by the Founders in the historic Charter that has borne America to greatness.**

KLEMME AUXILIARY TO SELL POPPIES IN KLEMME AND GOODELL

Poppies will bloom in Klemme and Goodell on Saturday, May 29, glowing on the coats of remembering Americans in honor of the World War dead The women of the Adam-Schaefer Unit of the American Legion Auxiliary will offer the poppies on the streets, giving everyone an oportunity to pay tribute to the war dead and to help the war's living victims with contributions given for the little red flowers.

Saturday, May 29, was set aside for poppy day The girl scouts have been asked to assist in the popy sales The Klemme ladies will go to Goodell and sell poppies. Since the Klemme unit has done welfare work in Goodell, they have been given the privelege of selling poppies there.

The American Legion poppy not only gives us a means of rendering personal tribute to the memory of those brave young men who sacrificed their lives for America, it also gives us a means of aiding those who also sacrificed but are still within reach of our help. From the annual wearing of the little flower come benefits reaching into every corner of the country and touching the lives of thousands of unfortunate men, women and children

The vast program of welfare and rehabilitation carried out by the American Legion and Auxiliary draws its principal support from the dimes, quarters and half dollars we drop into the coin boxes of the poppy workers supply the means for local, state and national activities for the benefits of disabled veterans and the families left in need through the death or disability of veterans The Poppy Day contributions make aid available during the other 364 days of the year to those who still are paying in steady installments the war's bitter debt of suffering and privation

ED. JACOBS LET CONTRACT TUESDAY FOR NEW DOUBLE FRONT BUILDING

Contractor John Suckow Expects To Have New Structure Ready In 60 Days

Ed Jacobs announced Tuesday that he had let the contract for the construction of his new double front store building. John Suckow, local contractor, was awarded the contract

Mr Jacobs new hardware store will be of brick construction, with a self supporting roof. The building will e 48 feet by 88 feet in size and will have two entrances on Main Street Everything in the way of modern equipment and display cases will be used.

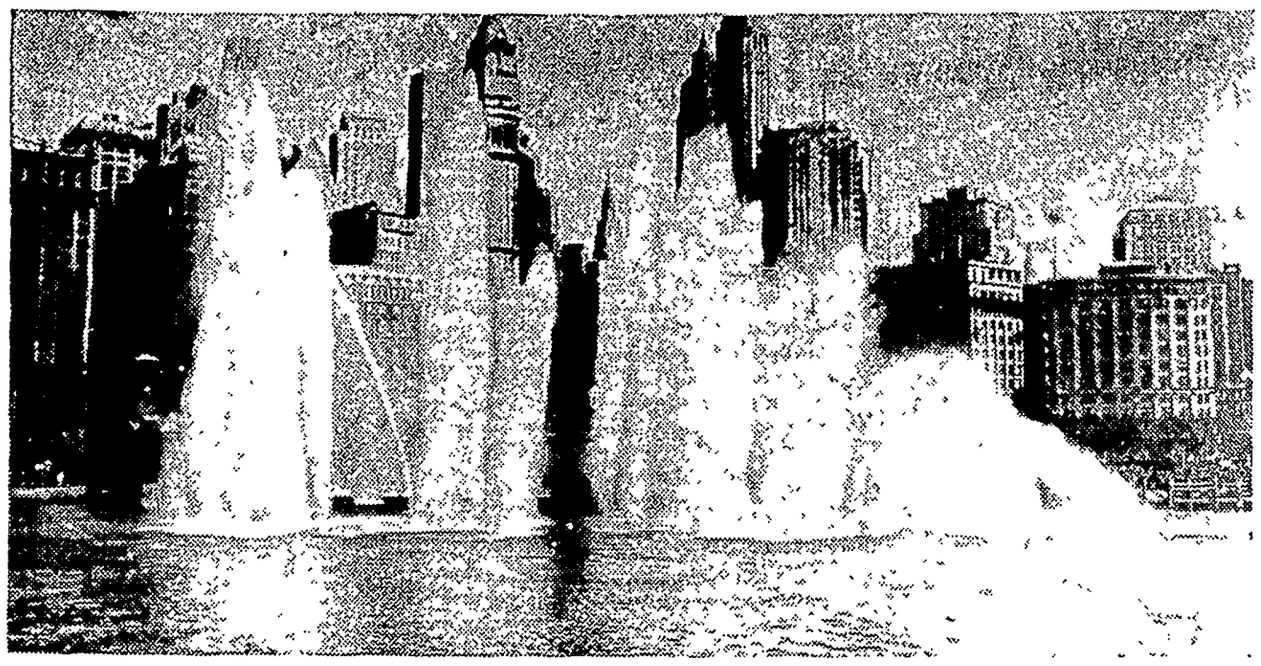
It is planned to have the building ready to move into in sixty days time .

DRIVERS WHO HAVE LOST STUBS HAVE TO TAKE EXAMINATIONS

DES MOINES — Automobile drivers who have lost stubs from their drivers licenses will have to take examinations to get new permits for the two year period beginning July 4, 1937, Lew Walace, superintendent of the state motor vehicle department announced. Others may make application now for renewal without examination. The fee is fifty cents.

Mrs. Evelyn Bogard & C J. Bogard her hus, To Mrs. Clara M. Patterson Q C. Deed, 5-21-37, $1 Lots 7 & 2, Blk. 3, Rofinot's Add. to Corwith.

Fire Department Creates Manhattan Geysers



Geyser-like streams of water spouted by 19 new fire department pumpers gave New York's skyline the picturesque scene reflected in the above photograph. This picture was made from the upper bay, looking toward the Manhattan skyline.

Rookie Outfielder Making Good With Brooklyn Dodgers

Gibby Brack, "freshman" outfielder of the Brooklyn Dodgers, whose play during the early part of the National league season has

earned him a regular job with the team. Brack has been effective with the bat and his defensive play has helped strengthen the Dodgers' outfield.

Golden Gate Fair Extends Welcome

Standing before a giant facsimile of the great seal of the state of California at Sacramento, Zoe Dell Lantis, pretty 1939 Golden Gate International exposition "pirate girl," extends an all-embracing gesture of welcome to California visitors and an invitation to walk the gangplank leading to "Treasure Island," site of the exposition in San Francisco bay two years hence.

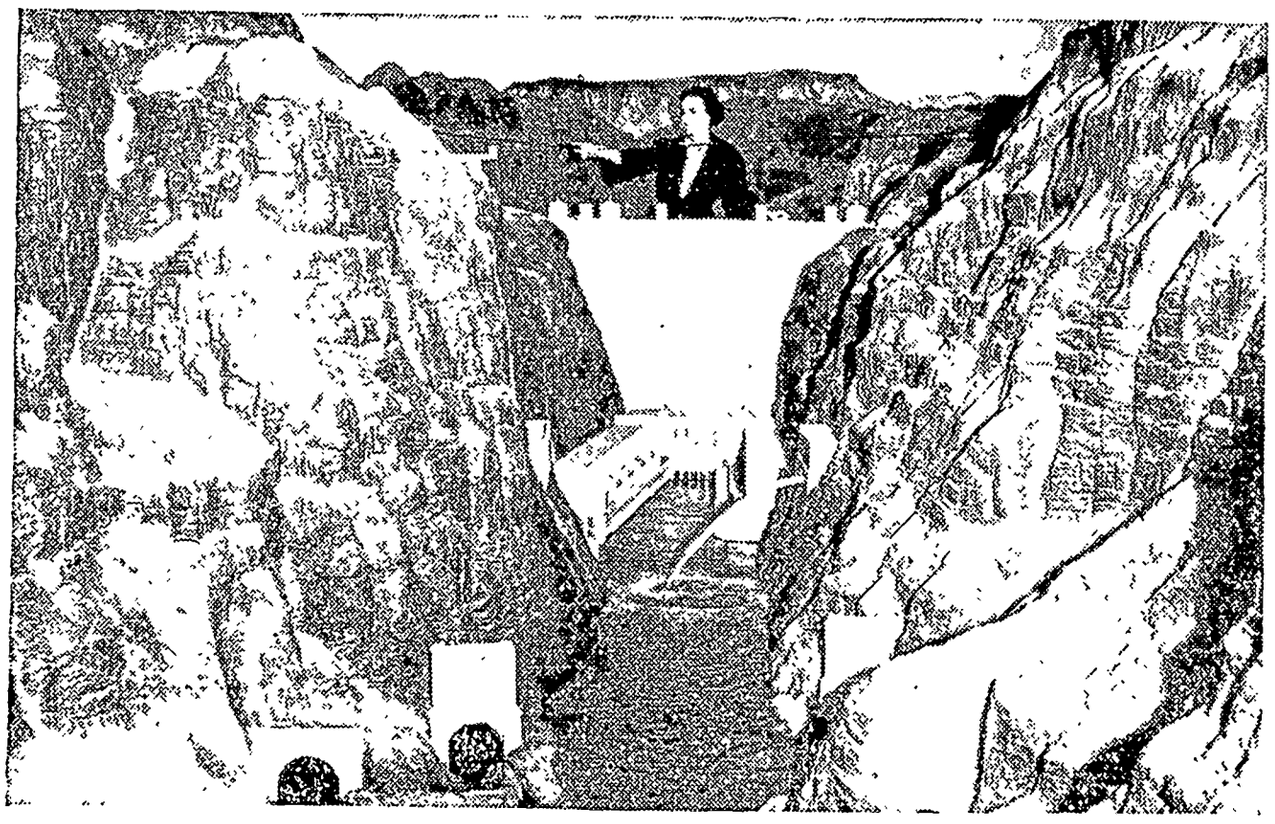
Giant Baby Panda Right at Home

Su-Lin, the giant baby panda Mrs. William Harkness captured in southwestern China last November and brought to this country, comes through the hollow log especially constructed at the Chicago Zoological park at Brookfield, Ill., to resemble his natural habitat and stares wide-eyed at the camera. He is now nine months old and weighs 35 pounds.

STRAIGHT SHOOTER

Not only is pretty Miss Clara Jerstad, deputy United States marshal of Seattle, Wash., shown above, one of the few women in the United States empowered to arrest persons on federal charges, but she is regarded as one of the best shots among federal peace officers.

"Vest Pocket" Boulder Dam Took Year to Build



Built accurately to scale and embodying faithfully every detail of its gigantic prototype, this model of Boulder dam is one of the exhibits at the State Exposition building in Los Angeles. Made of plaster, the model is 27 feet deep and 15 feet wide. It took one year to construct with the aid of government engineering charts. Miss Mary Cordner is admiring it here.

War of Antibodies and Antigens Told by Immunologist

Defensive Mechanism of the Body is Complex

Chicago.—A glimpse into the ultra-world of molecules where the antigens of invading disease germs are fought by antibodies, police of physiology's realm, was given here by Dr. Sanford B. Hooker of Boston in the presidential address before the American Association of Immunologists.

The defensive mechanism of the body is a complex of invisible physical and chemical forces and Dr. Hooker, reviewing current researches in a difficult field, gave his fellow medical scientists a picture of the important antibody or germ fighter. It is considered to be a kind of protein molecule formed by certain body cells when influenced by the antigen—evil stuff created by germs such as the toxin or poison of the diphtheria bacillus.

This protein molecule, called antibody globulin, is different from other globulin molecules. It has, probably at the surface of each molecule, specific combining groups. The antigen molecule, formed by the bacteria, also has combining groups at its surface. The union of these two is important in producing immunity or resistance to disease.

Patterns of Binding Points.

Antigen molecules have many combining groups, not necessarily of the same kind. Antibody molecules, formed by the body's cells, have each only one or a relatively few combining groups. The combining groups are thought of as more or less complex patterns of binding points. Those on the antibody molecule are distributed in a pattern that is the mirror image of the binding point pattern of antigens. And the antibody binding points have electrical charges which are the opposite of those carried by the antigen binding points.

One kind of combining group, it is assumed, must contain at least three properly adapted points which differ from those of another kind of combining group in atomic nature, spacing and sign and strength of electric charge.

Master-Key Antibody Molecules.

A single kind of antigen combining group, if sufficiently complex, may call forth somewhat different kinds of antibody. The perfect "master-key" antibody would be those which most faithfully and completely reflect the physical characters which determine the specificity of the antigen. Such antibody molecules would have binding points which could unite effectively with the antigen binding points and neutralize the evil power of the antigen.

"The same antiserum," Dr. Hooker said, "may contain grades of more imperfect and dissociable antibodies extending to the poorest kind whose pattern is so incomplete as to have the least affinity permissive of any recognizable association with antigen."

The more of these high-grade antibodies in an antiserum, the more effective will be the serum in protecting against disease.

Combating Disease and Decay With Rays of the Sun

Toronto.—The day when man will fight and conquer micro-organisms of disease and decay with the sun's rays or their laboratory-made equivalent seems to be drawing near. Steps already taken in this direction were described by A. R. Dennington of the Westinghouse Lamp company at the meeting here of the Canadian section of the American Institute of Electrical Engineers.

Sunlight can kill micro-organisms even when its ultra-violet and infrared rays are filtered out, Mr. Dennington explained. The rays of shorter wavelengths, from 2,537 angstroms down, are the most effective at germ-killing.

Such rays harnessed in a lamp which has an extremely thin indrawn window or glass bubble are already being used, Mr. Dennington said, by physicians to destroy the germs of skin infections. At the opposite extreme of medical use are the eight sterilizing lamps installed over the operating table at Duke university hospital to sterilize air during surgical operations and thus prevent wound infections.

Agriculture May Have Had Beginning in Old Stone Age

Theory Set Forth by Menghin of Vienna

By DR. FRANK THONE

DID agriculture have its earliest beginnings in the Old Stone Age?

Prof. Oswald Menghin of the University of Vienna thinks it possible. If he is correct in his conjecture, farming becomes a vastly older way of life than has usually been supposed.

There is no doubt, of course, that agriculture was widespread and well developed in the New Stone age, whose beginnings were something like 20,000 years ago. Abundant archaeological evidence shows that men grew grain and kept herds in the Neolithic of Egypt, of Mesopotamia, of India, of China. We do not know the age in years of the pre-Columbian corn-pumpkin-tobacco agriculture in America, but there can be no question that it also arose in a Neolithic culture stage.

Theory Based on Stone Blade.

The common assumption has gone beyond this, and credited the Neolithic peoples with the actual invention of agriculture. To the Paleolithic, or Old Stone age, peoples is assigned merely the role of hunter, fisher, and grubber-up of wild-growing roots.

Prof. Menghin points out that in the Old Stone age, which almost certainly runs back 200,000 years and possibly much more, the distribution of one particular type of stone blade, well adapted for turning the soil, coincides with the general distribution-zone of plants with thick, edible roots and tubers.

This kind of blade is usually called a "hand-ax," but it was adapted to other uses than chopping wood. It could also be held in both hands as kind of a crude hoe or trowel, and so serve well as a grubbing tool.

Conjectures on the Neolithic origin of agriculture usually picture men of the New Stone age as gathering wild grains and other food plants, and then discovering accidentally that they could be sown. Professor Menghin carries the same mode of reasoning back to his Old Stone age root-grubbers.

Heating Quality of Coal Determined by Refraction Index

New York.—A new experimental method by which scientists can look at a piece of coal and tell how much heat it will generate was announced at the meeting of the American Institute of Mining and Metallurgical Engineers here.

But don't rush down to your own coal pile and hope to tell whether the present delivery is better than the last one. The new method is relatively simple; but not that simple.

Two midwestern geologists, L. C. McCabe of the Illinois geological survey, and Prof. T. T. Quirke of the University of Illinois, described the secrets of coal analysis in their technical paper, "Angle of Polarization as an Index of Coal Rank."

Shown By Refraction.

Tiny cubes of coal are polished and brightly illuminated with a small lamp. The light reflected from the polished surface becomes polarized and is studied with Nicol prisms to determine the angle of polarization. By a fundamental rule of optics known as Brewster's law, the angle of polarization of the reflected light can be related to what scientists call the index of refraction. This last is the degree of bending which a material will cause as light passes through it.

Final and significant step in the research was the discovery that the amount of heat in B. T. U. (British Thermal Units) which a unit amount of coal can produce is related by a simple straight-line relationship with its index of refraction as measured in the apparatus.

Using the wide range of different kinds of coal found in Illinois from woody lignite to soft bituminous and so on to harder bituminous, it was found that as the heating qualities of the coals increased, so, too, did their index of refraction.

Iceland Floods Caused by Underground Fires

London. — Floods in most places are caused by water from the skies. Floods in Iceland — very destructive ones, too—have been caused by fires under the earth.

Investigations by Dr. Niels Nielsen, Copenhagen geologist, show that two recent destructive floods in Iceland were caused by the eruptions of volcanic vents opening under thick glaciers. The heat melted the ice rapidly and in such vast quantity that the total water volume of the larger of the two floods is estimated by the geologist at over a billion cubic yards.

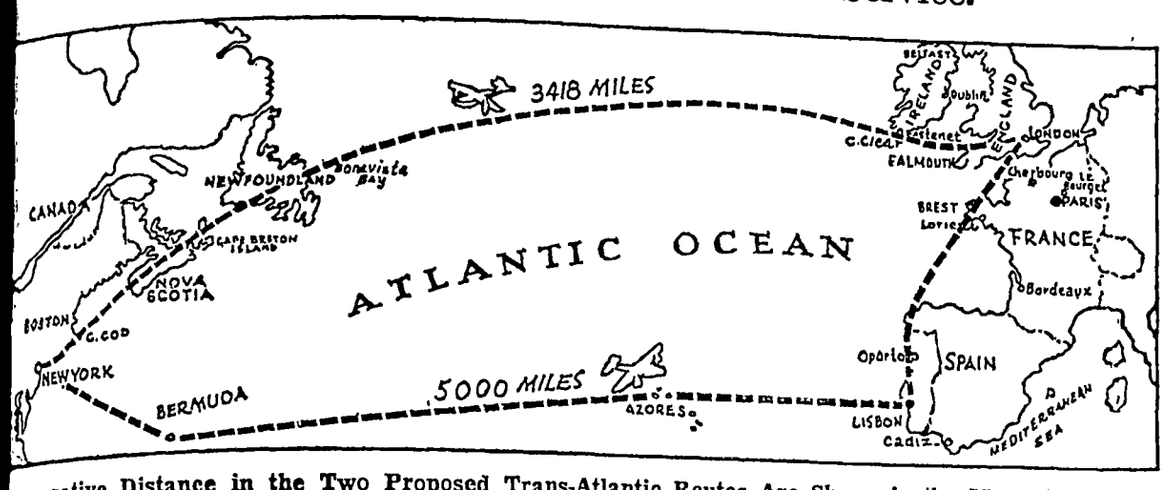
Placed anywhere, Daisy Fly Killer attracts and kills flies. Guaranteed, effective. Neat, convenient—Cannot spill—Will not soil or injure anything. Lasts all season. 20c at all dealers. Harold Somers, Inc., 150 De Kalb Ave., B'klyn, N.Y.
DAISY FLY KILLER

AP TRANS-ATLANTIC AIR ROUTE

-American, Glenn L. Martin and British Imperial Airways Are Building Planes to Begin Commercial Service.



mparative Distance in the Two Proposed Trans-Atlantic Routes Are Shown in the Map Above.

By WILLIAM C. UTLEY

OMMERCIAL flying on regular schedule across the Atlantic ocean to Europe is expected to become a fact in the late summer or early fall. Five years of research, experiment study have convinced the three prospective operators of the proposed routes that the time is at hand. Repeated success ying the wide Pacific and the blue Caribbean with the giant er ships has equipped the operators with the experience led for flying the most important oceanic course of them all.

n-American airways and Impeairways (of Great Britain) have been making preparations for operation which would involve round trip crossings per week. ntly a third party, Glenn L. in, announced plans of com- in the trans-Atlantic service. in was the builder of most of great clippers now flying the fic and of many of the army's t successful bombardment s over a span of 18 years. r his service Martin has de- d the largest transport flying ever built. For construction ips of this type his Baltimore , which was taxed to the limit e building of the Pacific clip- is being enlarged. The type hip he is building for transntic service will carry 40 pasers, 5,000 pounds of mail and enough for 5,000 miles of nonflying at a cruising speed of miles an hour.

British Have Two Ships.

such a rate of speed it would ossible to make the crossing west to east to continental pe in 18 hours, and to make the n trip, against prevailing s, in 21 hours. This is about l to the time required by limrailroad trains between Chicago New York. It is faster by four days than the Atlantic cross- of the Queen Mary and the mandie, the two fastest liners t.

nperial airways already has two t flying ships, the Cavalier and Caledonia, engaged in experital flights in preparation for the s-Atlantic service. Two other s of this, the "C" type, have in experimental service over Mediterranean for several ths; one of them not long ago blished a record of 13 hours 35 minutes for the 2,000 miles n Southampton to Alexandria. wenty-four more type "C" ships e been ordered. The total cost he fleet will approximate $10,000. They are a type of trans- new to the British. They are parable in many ways to the rsky clippers of Pan-American, ough they are somewhat small- They carry a gross weight of 00 pounds as against 42,000 for Sikorsky. They are 88 feet long, eet high and have a wing span 114 feet. Their four Pegasus horsepower engines are capable top speed of 210 miles an hour a cruising speed of 160 to 170 es an hour.

he plan is to use these planes passengers only on flights been New York and Hamilton, Berda; on such flights they will ry 18 in addition to the crew. y will be used for air mail only, the hop across the Atlantic to rope, carrying only first and secpilots, ship's clerk, radio optor and steward.

Unbroken Safety Record.

an-American claims to be ready begin trans-Atlantic flying at a ment's notice. It has available ny crews enriched by the experice of five years of flying over the ribbean sea. The route from Mi- to Panama was for years the gest over-water hop on any of world's commercial airlines. Since the first flight was made er this route on December 2, 1930, line has made two regularly heduled round trip flights a week. a total of 2,400 crossings there s never been an incident of any d, and only a few hops were nceled because of hurricanes. an-American has also flown dozs of successful flights from San ancisco to Manila. With the early fficulties ironed out it is now posble to extend the flights all the y to China.

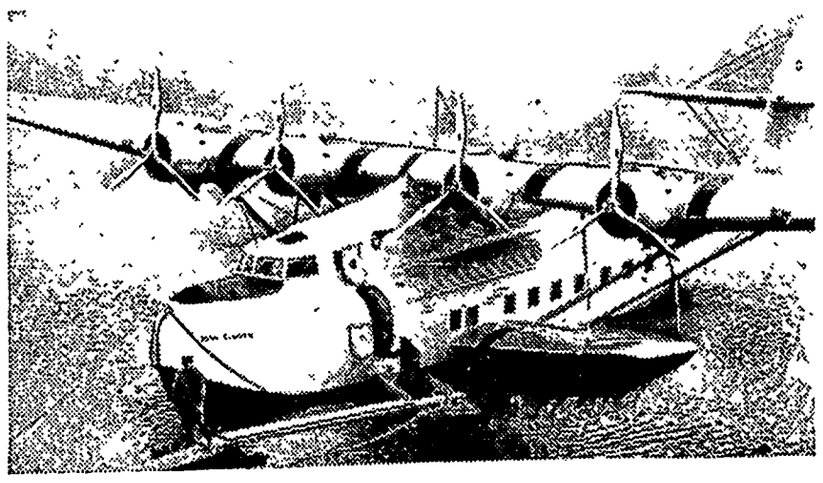
A new addition to the Martin clippers which Pan-American has in rvice on its Pacific route is a korsky 42B, larger than any of the n Sikorsky clippers now being wn to the West Indies and Pana. It is larger and improved er the earlier S42 which pioneered e Pacific route, its gross weight ing 42,000 pounds as compared th 38,000 pounds for the earlier pe. The wing span is 118 feet ainst the old 114 feet. Top speed of the new 42B is 201 miles an hour and cruising speed 164; this compares with 192 and 157 for the S42.

Two Trans-Atlantic Routes.

The new clipper is standing ready for the China run, which completes an all-American air mail route circling more than half the world. Airline distance from New York to Hong Kong is about 11,600 miles, while the distance around the globe in that latitude is some 21,000 miles. The planes beat the fastest surface transportation between Hong Kong and New York by 25 days, makmg the trip in 6½ days.

On the trans-Atlantic flight, two routes will be used, the southern route taking preference over the northern in bad weather. They were described by Louis Ludlow, congressman from Indiana who conducted hearings concerning the establishment of trans - Atlantic air mail rates:

"The distance by the Northern route from New York to London via Shediac, Nova Scotia, and Ireland," he explained, "is 3,418 miles. The step-off from Newfoundland to Ireland is a sheer distance of more than 2,000 miles over water, without any landing places. By the Southern route the distance from New York to London is about 5,000 miles, but the hazard of flight is relieved by numerous landing



One of the Giant China Clippers of Pan-American, Ready to Take Off. Ships of This Type Will Probably Be Used on the Trans-Atlantic Route.

places. The various legs of this flight are as follows: New York to Bermuda, 773 miles; Bermuda to Azores, 2,067 miles; Azores to Lisbon, 1,050 miles; Lisbon to Gironde, 609 miles; Gironde to London, 500 miles; total, 4,999 miles.

"The northern route, it will be seen, is the shorter of the two routes by more than 1,500 miles, but the safety factors are on the side of the southern route, and will be until more experience has been acquired in combating storms and ice in the high northern latitudes. Until such time, therefore, it is expected that most of the flying will be by the southern route, which is safe at all seasons of the year. The scheduled time for making the flight by the northern route will be between 24 and 30 hours and by the southern route between 36 and 40 hours. When we recall that the fastest steamships — the Queen Mary and the Normandie—consume 4 days and 20 hours making the trans-Atlantic trip from port to port, we have an idea of the extent to which the new air service will quicken mail, passenger and express transportation.

War Department Approves.

"Two departments of the government—the Post Office department and the State department—are deeply interested in the establishment of this trans-Atlantic air service," the Indiana legislator told members of the house. "It also is cordially approved by the War department, which sees nothing objectionable to it from a national defense standpoint. As an argument against delay it is contended that it would be in the interest of America to close the matter at once while it has British acquiescence.

"It is pointed out that the United States has no way to send air mail to Europe now, or at any time in the future, unless Britain allows it to get there, as the termini and intermediate landing points are controlled by the British. This is true as to Nova Scotia, Newfoundland and Ireland on the northern route, and Bermuda and the Azores on the southern route. The Azores are Portuguese territory, but conceded to be under the British sphere of influence.

"The Post Office department visualizes immediate success for the service and a complete fulfillment of expectations in a big way," Ludlow continued. "Whether or not its optimism is well founded remains to be seen, but certainly all of the factors of success seem to be in the equation. The air mail postage rate proposed for trans-Atlantic mail is 25 cents per letter of one-half ounce and 25 cents additional for each half ounce or fraction thereof. This compares with the existing foreign mail rate of 5 cents an ounce and 3 cents for each additional half ounce. The service contemplates the use of air mail all the way from point of origin to point of destination.

"Based on close calculation of the prospective volume of mail, the department preducts that at the 25-cent rate, the revenues would pay the contractual obligations at $2 per mile and the service would be self-sustaining from the start, which would differentiate it very markedly from the air service to China, which, although it has been in operation since November 22, 1935, still registers a big annual deficit.

Air Mail $2 a Mile.

"The picture of the trans-Atlantic air mail that is in the minds of the Post Office department officials visualizes London as the funnel through which air mail from all over Europe will be gathered and sent to America.

"On the other hand, New York is visualized as the funnel through which mail coming from the Orient, all countries in the Western Hemisphere north of Brazil, and all of the United States will pass on the way to London and points in Europe. From Hong Kong to San Francisco is six days by the China Clipper service; from San Francisco to New York is one day by fast plane, and from New York to London will be 30 hours, so that mail from Hong Kong crossing North America will reach London in eight or nine days by trans-Atlantic airmail.

"While the contract for carrying the trans-Atlantic air mail at a maximum cost of $2 a mile will be awarded on the basis of competitive bids, it is believed there is only one company in America capable of executing such a huge contract, and that is the Pan-American, which carries the mail to South America, Alaska and China. In England a like situation prevails, where Imperial airways, a government-subsidized concern, is the outstanding aviation company. It is probable that the service would start with the four-engine clippers that pioneered the Pacific, but testimony before our subcommittee described plans for constructing enormous new ships for this trans-Atlantic service, one of 60 tons and one of 125 tons.

"The China Clipper ships now in operation are about 25 or 26 tons, with a wing spread of 130 feet. The new ships will be immensely larger. It will be written into the contract that all airships used in this American postal service must be built in America and that the contractor shall employ only Americans.

"The Post Office department and State department believe after exhaustive investigations that trans-Atlantic air mail will be very profitable and desirable from the standpoint of America."

Dean of the Moody Bible Institute of Chicago.
© Western Newspaper Union.

Lesson for May 30

THE REMAKING OF JACOB

LESSON TEXT—Genesis 28:16-22, 32:24-30.

GOLDEN TEXT—And be not conformed to this world: but be ye transformed by the renewing of your mind. Romans 12:2.

PRIMARY TOPIC—Jacob's Great Discovery

JUNIOR TOPIC—What Changed Jacob.

INTERMEDIATE AND SENIOR TOPIC—Finding One's Better Self.

YOUNG PEOPLE AND ADULT TOPIC—Face to Face With God.

Front Page News! "Well-Known Crook Converted!" After years of deception, thievery, and all kinds of wickedness, Jacob, "the supplanter," had a transforming experience of the grace and power of God and became Israel—" a prince of God." That is indeed front-page news and the marvel of it all is that we may today proclaim the grace of God in Christ Jesus for the redemption of every one that believeth.

Memorial day is a most appropriate one for our lesson, for the first portion tells us of a memorial stone, and the last section tells of a great victory. We do well on this day to remember the days that are gone, to recall the heroic deeds of our valiant dead. It is right that we should honor them for victories rightly won and for a noble cause. But let us not fail to recognize that the great battles of life are those fought in the realm of the spirit and that the victories won there endure for all eternity. Every teacher of a class in the Bible school should with God's help endeavor to make this a day of blessed memory and victory in Christ for the boys and girls, or men and women of the class.

We consider today two experiences in the life of Jacob, both of which have their counterpart in the lives of many of God's children in our day.

I. A Vision and a Vow (Gen. 28:16-22).

Jacob met God. Have you met Him face to face? Have you had "such a revolutionary experience in some unexpected spot"? What a sacred place it has become in your life. Perhaps it was at mother's knee, or in a little crossroad's church, or on a busy city street. God was there—you dealt with him—he blessed your soul—life was changed. Such may be the experience of each one of us. The place where Jacob had this experience had been known only as Luz. Now it became Bethel—"the house of God."

Spiritual experiences are not simply for our pleasure; they carry a real responsibility. Jacob, recognized this and set up a memorial and made a vow. The depth of his purpose is revealed by the fact that it touched his earthly possessions.

The pledge of one-tenth to God is in accord with the Old Testament principle of the tithe. Many earnest believers regard the tithe as equally obligatory in our day. Others contend that it is an Old Testament principle only. Well, there is no need to differ too sharply on that point, for is it not clear that as children of God all that we have belongs to Him? Surely then we would not wish shamefacedly to admit that we give less than the Old Testament tithe. All that we have comes from His bountiful hand. He it is that gives "bread to eat and raiment to put on." Let us be cheerful (hilarious) givers of what he has entrusted to us, that his work on earth may be put forward.

II. A Struggle and a Victory (Gen. 32:24-30).

After varied experiences of both victory and defeat Jacob turns back to his own land. He hears of the approach of his brother Esau with 400 men. Before he meets him he spends a night alone. Whether it was in fear or in trust that he approached God on that night, we do not know. But we do read of the great struggle. It was more than a physical battle—real as that was—for here we have God wrestling with a weak and defeated, but proud man, seeking to bring him to the place where he will once for all "let go and let God" have his way with his life.

Into the night of struggle at Peniel have gone God's people in all the centuries, and lo, those who have submitted themselves to the mighty hand of God have come out as those that have "power with God and with men" (v. 28). Such an experience is the key to successful living and fruitful service for God. It is still true that "God resisteth the proud, but giveth grace unto the humble." (Jas. 4:6).

A Strong Arm

Give me the pure heart, O Lord, to feel Thy presence near me. Give me the clear mind that understands. Give me the stainless soul that shall return to Thee fearless when my time shall come. And give me the strong arm to defend, with all my heart, with all my mind, with all my soul, the glory of Thy kingdom.

Doing Right

Do right and God's recompense to you will be the power to do more right.

AROUND the HOUSE

Items of Interest to the Housewife

Protecting Mirrors—Keep mirrors out of the sun—it will cause spots and other blemishes.

* * *

Milk Puddings — Orange peel shredded very finely makes an excellent flavoring for milk puddings. It is a pleasant change from nutmeg when added to rice pudding or baked custard.

* * *

Fitting Your Hat—If you have a tight felt hat, hold it in the steam of a boiling kettle. When the felt is thoroughly damp it is easy to stretch it to the right size.

* * *

Rust Remover—Onion juice will remove rust from tableware.

* * *

Save Stockings—If stockings persistently wear out at the toes, try buying them one-half size larger.

* * *

Stewed Macaroni — Boil one pound macaroni in milk and water for three-quarters of an hour, adding one-fourth ounce butter, salt, and an onion stuck with cloves. Afterwards, drain the macaroni, add three ounces grated cheese, a little nutmeg, pepper, and a little milk or cream. Stew gently for five minutes and serve very hot.

* * *

Devilled Egg Lillies—Hard cook as many eggs as there are to be servings. Chill, then peel carefully. With a sharp knife cut strips from the large end to the center; remove yolks, mash and season with salt, pepper, mayonnaise and a little Worcestershire sauce. Carefully refill cavities having the white strips form the petals of the "lily." Lay each on a bed of curly endive. Accompany with cheese straws.

* * *

Cleaning Combs, Brushes—A teaspoon of ammonia in a quart of water will remove all grease and dirt from combs and brushes, after which they should be rinsed and dried in the sun.

* * *

Keeping Cheese Moist—To prevent it from becoming dry, keep it wrapped in butter muslin, or in the glazed hygienic paper in which some bread is wrapped.

* * *

Tough Pastry—Too much water will make pastry tough.

* * *

Making Cocoa—Cocoa loses that raw taste if made with half milk and half water, then boiled. More nutritious and digestible, too.

WNU Service.

Smiles

He Would

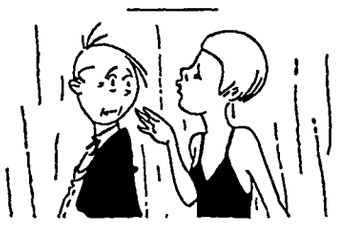
"Have you heard of the timber merchant who had the 'phone installed for the first time?"

"No. What happened?"

"Well, he kept putting trunk calls through to his branches!"

There is always more room at the top, says Oliver Optimist. I wonder if he's ever seen a pyramid.

NO INDUCEMENT



"Why do you continually refuse me? Haven't I promised to lay the world at your feet?"

"That's where it's always been."

What Relief!

"Gosh, I need five bucks and I don't know where to get it."

"I'm glad of that. I was afraid you thought you could get it from me."—N. Y. Evening Journal.

The Cheat

His wife was busy at her desk, with bills all round her. Suddenly she looked up from her work.

"How many fish did you catch last Saturday, dear?" she asked her husband.

"Six, darling," he replied, with reminiscent pride.

"I thought so; that's what you usually catch, isn't it? That rascal of a fishmonger has charged us for eight!"

Hindering Others

A VEXATION arises, and our expressions of impatience hinder others from taking it patiently. We say an unkind thing, and another is hindered in learning the lesson of charity that thinketh no evil. We say a provoking thing, and another is hindered in that day's effort to be meek. We may hinder without word or act. For wrong feeling is more infectious than wrong-doing; especially the various phrases of ill - temper, gloominess, touchiness, discontent, irritability—do we know how catching these are?—F. R. Havergal.

HERE'S FORMULA FOR LOW COST CHICK MASH

Use Of More Oats Than Usual And Less Corn Will Lower Costs, Poultry Head Says

Sky-high prices of corn at the present time need not stand in the way of feeding a complete ration to growing chicks

Substituting cheaper feeds, such as oats for a part of the corn will cut down the cost of the ration considerably under present conditions says H L Wilcke, head of the Iowa State College Poultry Department

Following is a formula for a starting and growing mash of about 18 percent protein which will give good results at lower cost than rations containing more corn (all quantities are in pounds) Ground yellow corn, 29; ground whole oats 35, ground wheat or flour middlings and bran, 10, soybean oilmeal, 5; meat and bone meal 10, dried buttermilk or skimmilk 5 alfalfa meal, 5; salt, 1 cod-liver oil, 1

If barley is available it may be substituted for the corn in the above formula At the present time, the ingredients which go into this mash cost about $2 60 per hundred

When this mash is used as a growing as well as a starting mash the chicks should be fed cracked corn and wheat, beginning at about 6 to 8 weeks of age The usual proportions of this feed are two parts of cracked corn to 1 part of wheat The use of this scratch grain will reduce the protein percentage of the grain consumed

WOOL POOL WED., JUNE 2ND

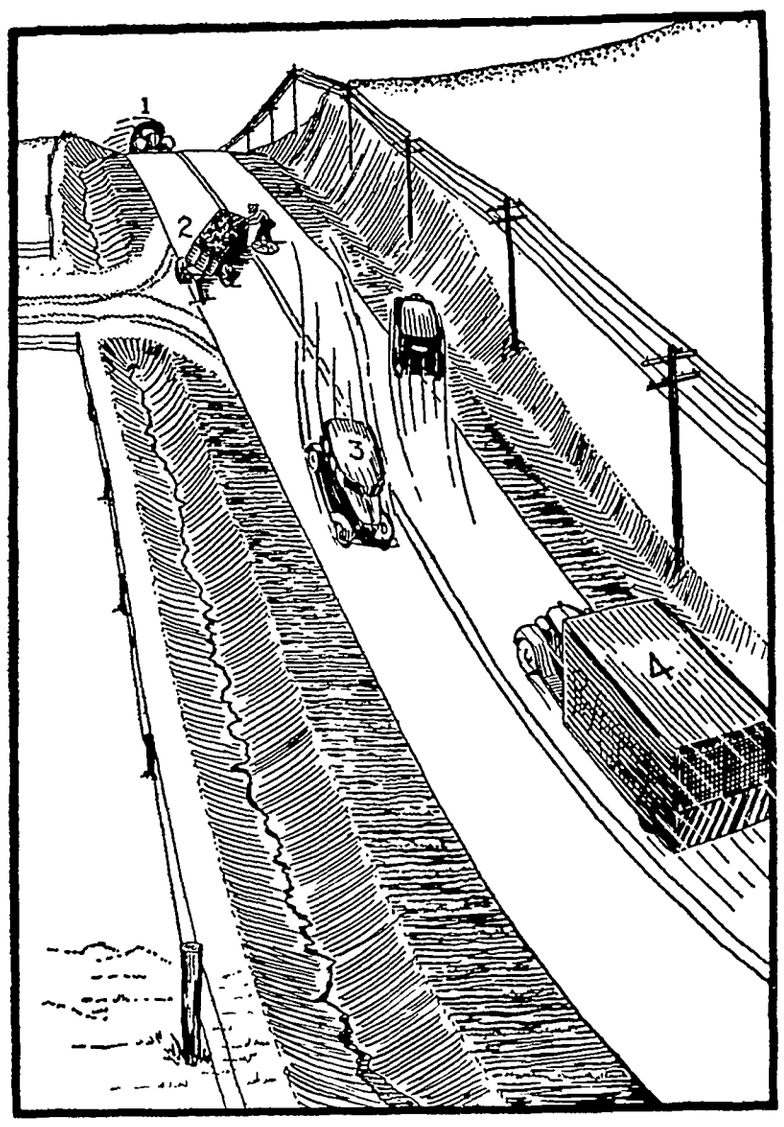
REDUCE SPEED AT CREST OF HILL



If the driver of car No 3 had used any judgement or caution, the traffic hazards presented in this illustration would have been avoided Figure No 2 represents the obstacle on a highway Traveling at a high rate of speed, car No 3 could not be stopped in the distance between the top of the hill and No 2 So it is seen that the driver of car No 5 had to trust to his luck to get past the obstacle and avoid oncoming traffic, forcing one car to take to the ditch to avoid collision It is the unforseen condition that causes accidents As long as drivers continue to drive blindly over the brows of hills and around curves at 60 and 70 miles per hour, innocent people are going to be killed and injured on public highways All motorists should band together in the prosecution of this menace of the highways The laws of our land prohibit anyone from endangering the lives of others by assault or threats of assault. These laws are written in the statute books by public opinion Therefore, the sooner the public opinion is brought to bear on careless and reckless automobile drivers, placing them in the same category as a thief with a gun, the sooner will partial safety return to our highways

As illustrated, No 2 is an unavoidable obstacle Assume the distance between car No 1 and figure No 2 to be 150 feet If car No 1 is traveling at 40 miles an hour, is can be stopped in a distance of 115 feet Thus an accident could be averted. But if he is traveling at 60 miles an hour as is car No 3, 226 feet would be required to come to a stop TAKE NO CHANCES WITH HIGH SPEEDS WHERE TRAFFIC CONDITIONS ARE UNFORESEEN

Copyright, 1937, P L. Cummings, Des Moines, Iowa

QUESTIONS

1 What is the responsibility of car No. 2 relative to other traffic?

2 What charges should be filed against the driver of car No 3?

3. Should the driver of vehicle No 4 continue at his set rate of speed?

4 If car No 1 is traveling 40 miles per hour and the distance to the obstruction is 200 feet, can he avoid an accident

5. In case of an accident on the open highway where should the accident be reported?

6. When coming upon the scene of an accident where should you stop your car?

7 Why is compulsory that drivers causing an accident give full information at once?

8. When a fatal accident occurs should the dead be removed?

9 What is a "safe clear distance" if your speed is 60 miles per hour?

10. Name three safety rules in driving over hills or around curves

ANSWERS

1 Remove the obstruction as soon as possible. Warn approaching traffic by any means at hand

2 Speeding, careless and reckless driving

3 No, Car No 4 should reduce speed immediately.

4. Yes At 40 miles an hour a safe stopping distance is 115 ft.

5 At the sheriff's office in the county in which the accident occured.

6 Drive on the shoulder, Never stop your car on the pavement.

7 To provide protection for the civil rights of the injured, and enable authorities to prosecute the offender.

8 Never move the dead That is the duty of the county coroner.

9. 226 feet is a minimum safe clear distance.

10 Stay in line; don't follow too closely; reduce your speed.

Old Greek City, Hippos, Was an Important Place

Hippos was one of the cities of the Decapolis in Palestine, its precise location being uncertain. In the Talmud it occurs under the name of Susita, and the Greek name Hippos is probably simply a translation. It was the rival of Tiberias, and the two towns stood opposite each other on the sea of Galilee, notes a writer in the Cleveland Plain Dealer.

Hippos is spoken of as an example of a heathen city in the midst of the land of Israel, but it seems to have been an important place, for the whole region around it was called after it, Hippene.

The Jewish encyclopedia says of Hippos:

"It was conquered by Alexander Janneus and afterward freed by Pompey, thus becoming one of the independent towns of the Decapolis. Later Augustus presented to Herod, after whose death it was again wrested from the Jewish dominions. From that time on Hippos was designated as a Greek city. At the outbreak of the Roman war, the Jews, led by Justus of Tiberias, devastated Hippos; but the inhabitants avenged themselves by massacring the Jews.

"In the Christian period Hippos became an episcopal see. A coin has been discovered bearing the name Hippos. It is of the time of Nero, having on the obverse side Nero's head and on the reverse a horse" (Hippos being the Greek for horse).

Rottweiler Dog Product of the Ancient Romans

The ancestor of the Rottweiler dog was developed in ancient Rome. When Caesar's legions crossed the Alps to conquer southern Europe, refrigeration was unknown. So they carried their meat supply "on the hoof." To guard and drive their herds, the Romans "went to the dogs," says a writer in the Washington Post.

Taken to what is now the town of Rottweil, Germany, one group of these dogs remained there after retreat of the legions, and became most popular there. Hence the name.

In Rottweil, and later, in other European towns, the Rottweiler continued as a guardian of cattle. In the Middle Ages, when highway robbery was so common, they assumed a new task.

Merchants, forced to transport large sums of money, used the dogs for this, tying purses around their necks. Few highwaymen dared molest them. They would die before breaking their guards.

One of Muddiest Rivers

The Colorado river has its headwaters in Colorado and Utah, and in the winding Green river of Wyoming. It flows through Utah and Arizona, forms part of the boundary between Arizona and Nevada, the entire boundary between Arizona and California. Seventeen hundred miles long, it drains a thirteenth of the area of the United States, passes eighty miles through Mexico and empties into the Gulf of California. The gulf once extended considerably farther north, into California, and in prehistoric days the Colorado river emptied into its eastern side. The river is one of the muddiest in the world; its burdens of silt built a huge delta through the middle of the slender gulf, separating its upper end from the ocean.—Literary Digest.

Gypsies Slaves in Time of Alexander the Great

About a million in number, gypsies are extremely vague about their own origin, which until recently defied research. Most experts, according to a correspondent in the Cleveland Plain Dealer, are now agreed that before the time of Alexander the Great the gypsies lived in India—the same race as the "Jats" or "Zotts" hailing from the mouth of the Indus in extreme western India. The "Sudras," as they were then called, were considered untouchables by the high-caste Hindus who conquered the country.

Subsequently, Alexander the Great, on his expedition to southeastern Persia, probably brought back large numbers of gypsies, who must have made valuable slaves because of their knowledge of working iron, a new and rare art in those times. The fact that gypsies all over the world still count in Greek tends to substantiate the theory of their early arrival in the Balkan region. In Macedonia at this period also were numerous Egyptian slaves, with whom undoubtedly the gypsies inter-married to some extent, and when they later set forth on their wanderings, anxious to forget their miserable existence in India, they told people that they were from Egypt.

Their tendency toward fortune-telling, sleight of hand and other magic which Europeans associated with Romanians probably accounts for the names Rom and Romany, so frequently applied to them. They are variously called also Tziganes, Zigeuner, Czigany, Calos, Bohemians, Zingaries.

Ghost of William Tell Walks in a Swiss Town

The ghost of William Tell walks in Altdorf, a town of approximately 4,200 inhabitants near the southern end of Lake Lucerne, in Switzerland, notes a correspondent in the Detroit Free Press. It is surrounded by lofty, snow-capped mountains. On the slope behind the town the Bannwald (banned forest), mentioned in Schiller's play, serves as a protection against avalanches.

Altdorf is famous as the place in which the great marksman, having incurred the ire of the tyrannical Austrian bailiff Gessler, was commanded to demonstrate his skill by shooting an apple from the head of his young son. In the open square a colossal bronze statue of Tell commemorates his intrepid deed.

Questioned about a second arrow in his quiver, Tell is said to have remarked that it was intended for the bailiff's heart had the first arrow harmed his son. He was promptly seized and was to have been taken by boat across Lake Lucerene to a prison in Kussnacht. Tell escaped on the way.

The Game of Bowling

The game of bowling came to this country from Holland, according to a writer in the Washington Post, where it has been popular for many centuries. The Dutch inhabitants of New York (then New Amsterdam) played it on a special square near the southern end of Manhattan. They called the square Bowling Green and the name has stuck for 300 years. Originally an outdoor game, bowling was greatly handicapped by the weather, but the first indoor greens, built in New York in 1840, eliminated this trouble. These were floored with baked clay, later with slate blocks. Finally wood came into use and the word "greens" was dropped and "alleys" substituted. The game is played in many foreign lands, but enjoys by far its greatest popularity in the United States.

Food Names a Puzzle

Plain American food masquerading under a foreign name often confuses the average diner. Perhaps he doesn't care for leftover lamb reheated in brown sauce with curry and mustard, but if he orders rechauffe of lamb, that is what he is going to get. If he doesn't like onions, he had better avoid anything with a "soubise" attached on the menu, and if he doesn't like grand mixtures of food he must be wary of "Macedoine." Pork chops "Florentine" are certain to be accompanied by spinach, as are "eggs Florentine." Salmon "a la Mornay" will be baked with mashed potatoes, Swiss cheese, egg yolk, white sauce, and bread crumbs. And sauce "aubeurre" is simply butter sauce.

Trees Form Society

A unique association in the South is The Live Oak society, whose membership consists of about 100 giant oak trees, says a writer in Collier's Weekly. To be a member a tree must be very old, have a legal representative, adhere to the constitution and bylaws and pay annual dues of 25 acorns. The secretary is a gentleman in Lafayette, Louisiana, and the president is a large tree on a farm near New Orleans.

Queen's Endowment

In ancient Egypt a queen's endowment consisted of donating to the priests 15 loaves of bread daily, 15 vessels of beer monthly and three oxen annually. And the queen undertook that this would be continued by her children and children's children forever on penalty of being slain by the sword if they failed the bequest.

GOODELL U. B. CHURCH

Rev. W. E. Dye, S. T. D., Pastor

Miss Zelda Elmbrink, S. S. Supt.

Sunday School 10:00 a.m.

At 11 00 o'clock we will hold the Memorial Services in the Local Cemetery with the Address Subject "What Mean Ye By These Stones?" Joshua 4·6.

Bible questions that will be answered at this service:

1. What king made a speech and was immediately eaten of worms?

2. What sorcerer was struck with blindness?

3 What man's hair became feathers?

4 Who saw a flying roll?

The Public is always welcomed to our services

CORONATION PICTURES WILL BE SHOWN AT THE AVERY

Good Fishing At East Twin

Bull head fishing at East Twin Lake is the best in years and nice strings of bullheads are caught there nearly every day The bullheads caught in East Twin will weigh nearly a pound

Self-Conscious People

Self-conscious people are invariably very observant, possessed of keen perception and sensitiveness, and have analytical minds, asserts a writer in Pearson's Weekly. Though seemingly unable to assert authority by reason of their shrinking natures, many of them have been known to rise to high office along various walks of life because of their special abilities. It is possible for a self-confident man to make mistakes all his life and not realize them, but self-conscious people usually "go slow" and so can improve themselves very quickly.

Taming Mothers-in-Law

Part of the ritual through which every young Australian aboriginal must go when he is initiated to manhood is to have one of his front teeth smashed out with a stone. The tooth is kept until he marries. Then, with due ceremony, it is pounded into a powder which his mother-in-law must swallow. Thereafter, she is forbidden by tribal law to speak to her son-in-law. She must, in fact, avoid him utterly. If she happens to be upon a trail along which he is traveling, she must hide so that he will not see her.

Bog Not Swamp

A bog is not a swamp and a swamp is not a bog, according to Dr. E. M. Gress, Pennsylvania botanist. A swamp is watered by a surface stream, and a bog by cold springs usually from below In the case of the swamp the water overflows the land, whereas a bog results from vegetation encroaching upon or overgrowing the water.

Gray Squirrels' Litters

Gray squirrels have two litters of four to six young a year. The old squirrel is a devoted mother and if the nest is disturbed she will at once carry the young to some safer retreat.

Gypsy Girl on a Bucharest Street.

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

IN ROUMANIA, East and West are so interwoven it is difficult to see where one leaves off and the other begins.

Perhaps the countless invasions which have swept her land may partly account for this strange blending of Orient and Occident. Each invader, whether he be Roman, Hun, Pole, or Turk, has left his strong imprint on the nature of the people.

Though Paris may be France, Bucharest is hardly Roumania. This capital has almost nothing in common with the country. It is a gay, cosmopolitan city, often, if not aptly called the Little Paris of the Balkans.

Its streets are crowded with smartly dressed women, officers resplendent in their colorful uniforms and gold braid, and men and women of the foreign colonies, who contrast strikingly with peasants in native dresses and gypsies in rags and tatters. Its restaurants and coffeehouses, always famous for good food, are abuzz with the latest political rumors and gossip.

The opening, in the autumn, of parliament by the king is a brilliant event. For several blocks and for hours, the palace guards in their bright blue uniforms, high patent leather jack boots, shining helmets with white horsehair plumes, stand smartly at attention until the members of parliament, the diplomatic corps, the army generals, and the king have passed.

The great moments are the arrival and departure of the king, in an open landau. Footmen in satin breeches, long coats of brocade, and three-cornered hats, and a ferocious coachman cracking his whip at six milk-white or coal-black stallions, on whose backs ride postilions in bright red hunting costumes, add to the striking medieval picture.

You find it fun in winter to hire an open sleigh drawn by horses bedecked with bells and red ribbons, and driven by a coachman in a high fur caciula (cachoula), a tall astrakhan cap, long velvet coat, and wide girdle of metal.

The wide avenue leading up to the Arc de Triomphe, past a pretty little race course and the golf links of the Country club is a miniature suggestion of the Champs Elysees in the French capital. Many stately palaces and homes line its streets. Roumania has gone modern in her new houses and apartments.

Good Music, Many Churches.

There is much music other than in the cafes. Bucharest boasts of rather good opera during the winter and a really fine symphony frequently plays modern music.

The National theater is well patronized and plays by Roumanian and foreign authors are given. Once ornate, the building is now shabby, although an air of faded elegance still pervades the place.

The Parliament buildings and the Roumanian Orthodox church stand on the summit of the only hill in Bucharest.

Bucharest is a city of churches. From everywhere can be seen rising the rounded domes of the Roumanian Orthodox church. The people are religious, but matter-of-fact about it. Despite the Slavic influence, there is no mysticism here. Religion is simply a part of everyday life The church is like a protective father, and they respond with a simple faith.

Down by the banks of the Dambovita, which Eddie Cantor made famous in one of his songs, is the great market, where flowers, fruit, food, household goods, and Roumanian handiwork are sold in the open booths of peasants and petty tradespeople.

Because so many peasants are unable to read, signs on many stores and shops are illustrated with pictures of the articles for sale within.

Around Bucharest the country is not unlike the agricultural state of Kansas. Here is a tremendous wheat and corn region. Visitors love to go through the villages in this fertile district. Crazy little Rube Goldberg houses, whose whitewashed walls are painted in soft pastel shades and decorated with borders of flowers or animals, present an amusingly shaky aspect along the streets. Roumania is one of the few countries now left in Europe whose peasants usually dress in native costume.

The Roumanian peasant is lovable. Always gracious, courteous, and goodnatured, he is industrious, yet somewhat inefficient. He works hard in his fields and forests, but always in a primitive manner, using the crude tools of his forefathers.

Spend a summer in a small cottage in Predeal, at the top of the Carpathian Pass, on the boundary line between the "Old Kingdom" and Transylvania. During your holidays you have many opportunities to observe the ancient methods of work followed by the peasants.

How Peasants Wash Clothes.

You will be particulary impressed with the native manner of washing clothes. The laundress builds a fire in the yard beneath a large iron pot, in which she puts the clothes to boil. Then, in a large wooden trough hewn from a log, she rubs and washes the garments with her hands, without even the aid of a washboard. Next, she wrings out the heavy linen with her own hands. Backbreaking work it is, but the clothes emerge spotlessly white.

With an old-fashioned iron, kept hot by a small charcoal fire inside, she presses them. She, no doubt, would scorn the electric washing machines and irons so essential to American housewives.

Politically. Roumania traveled toward the left after the war, as have in a degree most of the countries of the Near East. The large landholdings were expropriated and the acres sold to the peasants on easy terms, the result of which was to place the peasant in a more advanced position than he had ever known.

The land was appraised on a basis of reasonable value, and the gentry given Roumanian bonds in compensation for the land. When subsequently the nation went off the gold standard and her money depreciated, these bonds became almost worthless. Since 1926, however, her currency has been among the most stable.

In the Danube Delta country, during the spring and summer, many camps of gypsies are found. They carve out of wood huge water troughs, all variety and manner of cooking utensils, washing equipment, etc. With their wild animal eyes, scraggly black locks, wretchedly dirty, and clad in rags, gypsies are a proof of the disillusionment of reality.

In the Danube Delta Country.

The delta country covers a tremendous area spreading between the three branches of the Danube.

Most important of Danube channels is the Sulina, which carries most of the river traffic coming down from far-off Germany, Austria, Hungary, Yugoslavia, and Czechoslovakia.

The European Commission of the Danube, which assures free navigation of the river, struggles constantly to keep the silt, washed down from half of Europe, from clogging up this artery to the Black sea.

On the Danube's banks are two important ports, Galiti and Braila, which receive vessels of ocean draft. Principal exports are wheat, barley, corn, lumber, and some oil.

The bird life of the delta is wondrous beyond description. Many rare and beautiful birds are here for the looking. Hire at fifty cents for the day, a black, flat-bottom rowboat, and slip silently through the reeds and narrow channels of he delta. Suddenly you surprise perhaps 200 pelicans, which, webfotted and gross, make their get-away quickly. You may happen on a flock of wild swans sailing about in quiet dignity. Among the rarer varieties of duck is a snow-white bird with an emerald-green head and bill. Egrets, flamingos, cormorants, wild geese, many kinds of ducks, herons, and cranes are listed among the commoner varieties of bird life.

Constanta, Roumania's most important port, still bears traces of the Turkish occupation of Dobruja province, which is reflected in its shabby mosque and the red fezzes of many of its boatmen.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG. WASHINGTON, D. C.

Washington.—President Roosevelt, from the time he was Assistant Secretary of the Navy in the Wilson administration, has always been regarded as a friend of the military forces of the United States. He has never been a fanatic about his position but has held consistently to the view that the military services must be protected against continuing political attack which would destroy their usefulness. Likewise, Mr. Roosevelt has constantly argued for a policy of building up the army, navy and marine corps.

Building the Navy

Since he has been in the White House, Mr. Roosevelt has taken care always to see that sound policies of development were invoked as regards the military services and his interest in the navy in this direction has been marked. In consequence, the President has brought about a program of building in the navy that, examined from any angle, must be considered as having established a splendid first line of defense for our country. Whether one favors a big navy or a small navy, I think it must be admitted that the navy is the first line of defense and so the President, being fully acquainted with developments throughout the world, has seen to it that our navy shall be in a strong position as our first line of defense

It may be, as some critics of the President contend, that the hundreds of millions expended under Mr. Roosevelt's policies constituted too much of a fund in this direction; that we have no need for a navy as large as that now contemplated, and that the creation of a large navy indicated a policy of aggression by the United States. My own feeling is that these objections are not well founded. The turbulent situation in international relations, both in Europe and in Asia, seems to warrant a definite move on the part of the United States to be equipped. In other words, who is there that would wish our nation again to be caught without any worthwhile fighting units ready for action as we were in 1917? Further, although we are a peaceful nation, we must avoid a repetition of the 1917 conditions because we can not afford the waste of money that characterized the building up of our armed forces at that time.

* * *

One reason for the comments that I have just made on the navy and President Roosevelt's policies is the fact that we have a new neutrality law. It was passed just a day ahead of the expiration of the temporary neutrality law that was operative during the past year or so.

Neutrality Law

This new law probably is as good as any neutrality law that can be written. It represents the work of men in congress who are very serious in their desires to create machinery that will keep us out of war, or at least will slow down our entry into international conflict.

It lays down prohibitions against the sale of hundreds of items by American citizens or American corporations to any nation which the President may hold to be a "belligerent" nation, which is the way diplomats describe a nation at war.

The law has a further important and interesting provision. It requires that if any belligerent wants to buy products in this country, commodities that are not prohibited by the neutrality law, it must come to our shores and get them and must pay for them before the boat leaves. Thus, it has come about that the new law is called the "cash and carry" neutrality act.

That title sounds very satisfying. It sounds as though we will never make loans again as we did during the World war—loans never to be repaid except in some minor instances—and that none of our ships will become the targets of foreign gunboats because we are transporting munitions of war to any belligerent. Surely, this phase of the law will in a measure retard our entrance into any war and it will at the same time reduce the excitement in this country incident to the manufacture and sale of munitions of war because of the profits accruing under such circumstances.

But, it strikes me that, after all, this neutrality law is likely to be a rather futile gesture. Having observed governmental action over an extended period of years, I refuse to kid myself. I will not say that the new neutrality act will keep us out of war because, very definitely, it will not.

Let us see why. There are a thousand and one acts that a foreign nation can do to insult our national honor or damage our citizens and their commerce. These are called "overt" acts. When an overt act is committed, it is so easy to forget about the high principles stated in the present neutrality law. It can be repealed and a declaration of war substituted for it almost within twenty-four hours.

There have been a good many millions of citizens of the United States come onto this earth since the armistice of 1918. Among these are undoubtedly many who will learn of the present neutrality law with a feeling of safety; who will think that nothing now can happen and their mothers, wives and sweethearts will feel they need not worry about the time when these younger generations of men will have to march away, with drums beating and flags flying, never to return. For their peace of mind, the present neutrality law certainly is helpful. My suggestion is, however, that they look the facts in the face. When one of these overt acts is committed, in we will go regardless of the neutrality law

Look at the Facts

I might advert to some of the things that happened between 1914 and April 6, 1917. President Wilson, a sincere advocate of peace, did the best he could to prevent our participation in the World war. It was a matter that actually brought about his re-election in 1916 because his campaign leaders used the slogan, "He kept us out of war." Events came through with such startling speed, however, that a month after he was inaugurated for his second term, he was standing on the rostrum before a joint session of congress asking for immediate passage of a resolution placing our country in the war on the side of the Allies and against Germany and the Central Powers. Two days later we were formally in the fight and then, once we were made a belligerent by the decision of our government, it became "a war to make the world safe for democracy."

I think I need not review all of the various slogans that were employed in the national propaganda to solidify our nation behind its military forces. There were many of them. The nation was ninety-five per cent behind the government in a war to end all wars. Hundreds upon hundreds of millions of dollars were borrowed from our citizens who bought, first, liberty bonds and later, victory bonds. For the first time in later history of our nation we had a tremendous national debt, more than ten billions of which were loaned to those nations with which we were associated in the war. The remainder of these funds was spent like money in the hands of a drunken sailor, ashore for the first time in the year. Nor is there criticism to be made of that spending because we were not prepared for war.

So, while I do not now foresee our participation in any conflict within the next few years, I am quite convinced that Mr. Roosevelt has pursued an absolutely sound program in advocating a strong navy and a strong army. It will serve us well and will cost us very much less than if this building up process had to be accomplished overnight as it was in 1917. It may be surprising to a good many people to know that our army at present ranks as number 17 in the list of armies of nations even though our country is one of the largest and one of the richest in the family of nations.

My belief is that if our navy is made to rank with the greatest and plans are worked out as Mr. Roosevelt is trying to work them out so that our army will be possible of expansion, taxpayers' money will be much better spent than through boondoggling or wasted through useless development of theoretical schemes.

* * *

As the battle over President Roosevelt's proposal to pack the Supreme court of the United States with six new judges grows in heat, it becomes increasingly evident that members of congress are looking to the political aspects of the situation to a greater extent than obtained in the early stages of the fight. This circumstance certainly is working to the advantage of those who oppose the President's scheme and it is interesting to look at the picture from that angle.

Supreme Court

My observation of congressional activities in the past leads me to believe that every President must expect in his second term a certain amount of defection, a certain amount of running away, among the supporters who stood by him unflinchingly during his first term. Of course, most of his stalwarts will stick by him through thick and thin but it always has happened that a rather deep fringe of his party will begin to balk or duck when they reach the second lap and know that the head of their party will not seek election to a third term. The reason must be quite obvious. All members of the house and one-third of the senate membership have to seek votes in their home districts every two years. With a President in his second term, the interest of these candidates for office must turn to what their voters think rather than what the President thinks.

Glamor Via Sheer White Accent

By CHERIE NICHOLAS

ONE of the newest and most exciting style notes of the present season in this year of grace is the welcome return of femininity. We say "year of grace" for that's literally what it is—a year when gracious lines, glamorous sheer fabrics embellished with delicately wrought embroideries, laces and all such prettily feminine devices are the order of the day. Nowhere is this ladylike trend more charmingly symbolized than in the snowy lingerie touches which are bringing refreshing sprightliness to our new frocks and suits.

Swiss organdie, crisp and clear with a luminous transparency, is proving the idol of the hour for the new lingerie blouses so smart this season with your wool tailleur. It is also to be found in myriads of neckwear items and wrist wear touches which are this season glorifying every type of costume. Fine as a cobweb, this imported organdie is marvelously practical in spite of its lovely fragile look. This practicality comes in that the clever Swiss, using the pure icy waters of Alpine streams, have imparted to their sheer fabrics an absolutely permanent finish which holds smooth and crisp and new-looking after repeated tubbings. If your frivolous looking frills are of Swiss organdie they can be popped in and out of the tub as often as you wish with a minimum of effort, as no starching is required to restore the original fresh crispness to the fabric.

Handwork is appearing in utmost profusion on this year's lingerie fantasies. Allover embroidery, both cut-out and plain, embroidered edges and frills, appliqued lace and finest net are delicate and lovely on sheer organdie backgrounds. Tiny tucks and hand-fagoting are popular too, used not only on the plain organdie but also on the exciting new shadow-printed types. In these perfectly charming print organdies dainty floral motifs and vine patterns show up in clear white on clear white or pastel-ored backgrounds.

In choosing your lingerie blouse to wear with your tailleur, and you really must have a sheer utility feminine lingerie blouse to ... at top fashion, take as your ... the smartness of shadow-print organdie. It should be simply ... after the manner of the model ... the right in the accompanying illustration. A youthful turn-back collar and cascaded jabot distinguish this sheer Swiss organdie blouse which is so daintily shadow-printed in tiny floral motif. Valenciennes lace edges the collar, bow and ... puffed sleeves.

Snowy Swiss organdie in a dainty shadow print makes the very beautifully fashioned blouse to the left in the picture. And listen to this: Fine handtatting, so tremendously smart this season, as are many quaint trimmings revived from "way back when," edges cuffs and crisp ruffly effect in ... So here's to get busy and tat, tatting and hand crochet lace as stylish at this very moment they were during the gay nineties.

The fashion of snow white ... neckwear is going at top speed this season. You can find types of Swiss organdie from prim little ... collars to low-cut pointed bibs ... frothy jabots. See the double ... of finely embroidered Swiss organdie that flares so youthfully below prim little turn back collar ... below in the picture and note to the right the two-tiered jabot with ... neckband and quaint ribbon ... imparting an attractive Gibson ... air to a gilet of finest Swiss organdie.

SMART MILLINERY

By CHERIE NICHOLAS

As to smart millinery, the revival of the ever practical and flattering sailor is notable. Flower trims on sailors abound. The newest way of using flowers is to border the brim with a row of tiny flowers as shown here. The tiny blossoms are set in between a double-edge brim in a most becoming manner. The new sailors encourage the wearing of veils. The latest fad is to tie veiling by the yard over the face in Gibson girl fashion bringing the ends to a big fluttery bow at the back. The other hat pictured has the new and smart mushroom brim. Its flower trim emphasizes the use of a flower cluster placed at the front of the crown.

STAR DUST

Movie • Radio

★★★By VIRGINIA VALE★★★

BITTERLY does Miriam Hopkins regret the day last year when she told an interviewer that her judgment on screen stories for herself was infallibly bad. Whenever she gets balky about working in a picture selected for her, Sam Goldwyn reminds her of her own admission. Then he goes on to point out that she thought "Splendor" was a fine story and that she did not like "These Three." The latter was her greatest success, "Splendor" brought nothing but complaints from the customers.

Recently she completed "Woman Chases Man" and at the preview the audience roared with delight so continuously that it was necessary to take it back to the studio and insert some scenes to slow up the action so that laughter would not drown out the good lines.

—★—

If you have ever wanted to be a screen star, if you have ever even longed to visit Hollywood, then "A Star Is Born" is a picture you will adore. It is so ingratiating, it is hard to imagine anyone who would not enjoy it. Janet Gaynor and Fredric March play the roles of the girl who goes to Hollywood and makes good, the man who helps her and who loses his public just as she is winning hers. An old, old story certainly, but presented in a fresh manner, with gay, bantering lines, glimpses of studios and cafes and parties in Hollywood. Here Janet proves that she is a mature actress, not just an appealing ingenue. There are delightful comedy scenes where Janet broadly burlesques Garbo and Crawford and Hepburn.

Fredric March

—★—

Only the three or four ranking stars in any studio are given little portable bungalow dressing rooms parked right at the side of the set where they are working, so Robert Taylor was rather surprised when he went out to work in "Broadway Melody" to find George Murphy and Buddy Ebsen occupying a most elaborate one. Seeking out the business manager, he asked if he couldn't have a dressing room on the set since he had so many costume changes to make. "What's the matter with the one we gave you?" the business manager demanded angrily, stalking out on the set. Then he spied Ebsen and Murphy and bellowed "Those clowns are at it again," and promptly moved them out.

—★—

When Lanny Ross abandons the "Show Boat" program shortly, Charles Winninger, the original beloved Cap'n Andy is expected to return, but Eddie Cantor thinks that Winninger will be much to busy making pictures. He says Winninger is a knockout in the new Cantor picture "Ali Baba Goes to Town."

—★—

James Stewart is so worried for fear M-G-M will change their minds about lending him to R K O to play opposite G i n g e r Rogers that he has stopped having the phone answered at his house, a n d spends most of his time in a far away corner of the RKO lot where they are unlikely to locate him. To add further difficulties to the lives of phone studio operators, Buddy Ebsen spends most of his time on his new boat and when the studio wants him they have to dispatch a man to the dock who can holler "Eben" good and loud.

Ginger Rogers

—★—

ODDS AND ENDS—Warner Brothers wouldn't ask Bette Davis to take a supporting role in "Gentleman After Midnight," the new Leslie Howard-Olivia de Haviland picture, but she surprised them by asking for it . . . Basil Rathbone has a chance to play a hero at last in Bobby Breen's new picture, "Make a Wish" . . . Paul Muni rehearses his lines by speaking them into a home recording machine, then listening to them . . . Sidney Blackmer rehearses in a room with five mirrors placed at various angles so that he can see himself all around . . . Betty Furness has a charm bracelet from which dangle a dozen or so fraternity pins. She claims she picked them up at a pawnshop, but considering her popularity with college boys all the folks around the studio are frankly dubious . . . Victor Moore's son and daughter are making their screen debuts in his RKO picture, "Missus America" . . . John Beal recently rented the house formerly occupied by Charles Laughton in Hollywood, but didn't get around to explore the cellar until recently. He thought he might find mementoes of some of Laughton's horror roles, but confronted by weird sounds and a pair of flashing eyes, all he found was a mother cat with a litter of kittens.

For Dress and Utility

"WHY Mollie R., are you going out again? My own mother has become a gadabout and all because she made herself such a pretty new dress. Really, Ma, those soft graceful lines make you look lots slimmer. I think the long rippling collar has a good deal to do with it. Or maybe it's because the skirt fits where it should and has plenty of room at the bottom."

"Yes, My Darling Daughter."

"Daughter, dear, how you do run on! Imitate Sis; put your apron on and have the dusting done when I get back from the Civic Improvement League meeting. And speaking of aprons, that is the cleverest one Sis ever had. I love the way it crosses in the back."

"So do I, Mom, and see how it covers up my dress all over. Goodby, Mom, have a good time."

Sisterly Chit Chat.

"Sis, run upstairs for my apron, won't you? I wouldn't have a spot on this, my beloved model, for all the world. It's my idea of smooth: all these buttons; no belt; these here new puffed sleeves; and this flare that's a flare."

"Just you wait, Miss, till I grow up! Your clothes won't have a look in because I've already begun to Sew-My-Own. All right. I'm going."

And so on well into the afternoon!

The Patterns.

Pattern 1268 is for sizes 36 to 52. Size 38 requires 5¼ yards of 39 inch material plus 1½ yards of 1½ inch bias binding for trimming.

Pattern 1292 is designed for sizes 12 to 20 (30 to 42 bust). Size 14 requires 4⅝ yards of 39 inch material.

Pattern 1255 is designed in sizes 6, 8, 10, 12, and 14 years. Size 8 requires 1⅜ yards of 35 inch material for the blouse and 1⅔ yards for the apron.

Most Successful Author

Mark Twain probably is the highest-paid American author of all time. Harper's became his sole publishers in 1896. Early figures are lacking, but since the author's death, in 1910, the publishers have paid into the estate more than $1,250,000 in royalties. These figures do not include huge royalties from stage and screen nor do they account for the enormous earnings of Mark Twain as his own publisher.

Since 1896 Harper's have sold more than 6,500,000 volumes of the humorist's work.

Mr. and Mrs. W. Henry Galbreth spent Sunday visiting at the Rev. Wm. Galbreth home in Mason City.

Ruth Bailey has completed her teaching at Williams for the season and is spending the summer at home.

Paul Grange and son, Dorance, Ed Jacobs; Melvin Coobs and Dr E. G. Schaeffer were at Des Moines on business Saturday.

Mr. and Mrs. Einar Salling drove to Ledyard Saturday afternoon to spend the week end at the Adolph Lauritsen rome.

Clarence Boelman, of near Meservey, was taken to the hospital at Hampton last Wednesday evening for an appendix operation

Mrs. Fred Ridder entertained several ladies at a sewing bee at her home last Wednesday afternoon A nice lunch was served

Mrs. Ed. Wellemeyer, of Garner came Wednesday evening to attend the commencement exercises at the school house

Dr. Missman is the owner of a new Nash 400 coupe which was delivered to him Thursday evening.

Mr and Mrs. C. C. Kilgore and daughter, Ellen, enjoyed dinner Sunday at the Joe Burgess home near Goodell.

Harry Gram and family have moved to Cedar Falls where Mr. Gram purchased a filling station and cabin camp.

The Klemme Auto Company delivered a new Chevrolet master deluxe town sedan to C. G Waterman Tuesday

Mr and Mrs. Emil Patet, Mrs. Lena Schroeder and Mrs W F. Pavey were at Garner on business Monday.

Miss Gracka Quandt, who teaches music in the schools at Keystone, is spending the summer with her parents, Mr. and Mrs. Conrad Quandt.

A baby girl was born to Mr and Mrs. Henry Stoltenberg, of near Hayfield last Thursday. The family resided in Klemme a few years ago

Grandma Schlawin was a dinner guest at the Lew Griffen home Sunday. In the afternoon she accompanied the Griffens to the Rhine Schlawin home where they visited.

Rev and Mrs Calvin Grosshuesch were at Stout, Iowa, today (Wednesday) where Rev. Grosshuesch preached in the afternoon and evening at their Mission Festival

Miss Ada Mutch left for her home at Grundy Center Sunday morning for a few days after which she will return to Klemme to be with her sister, Mrs. A H Dulmes

Miss Glenna Gruetzmacher, who has been teaching in the Auburn high school, is home for the summer vacation Miss Gruetzmacher will teach music in the high school at Winthrop next season.

Mr Henry Wille was down town Tuesda ymorning for the first time in several months Mr Wille looks fine and his many friends are glad to learn that he is getting along well.

Walt Thada, "Stub" Lewis, Charlie Fritzel and Lew Weaver left early Sunday morning on a fishing trip to Northern Minnesota. The men say they are staying long enough to bring back plenty of fish.

Mr and Mrs C. G. Waterman and daughter, Marian; Mr. and Mrs R. A Jorgenson and son, Ray Jr and Mr and Mrs W. C. Keraus were Sunday guests at the home of Mr. and Mrs. Tom Mitchell at Swea City

A number of Klemme ladies attended the Eastern Star Chapter at Garner Friday evening when a farewell was given in honor of Mrs J R Mounce The officers wore their formal white dresses at this meeting

H F. Jost drove to Pomeroy Sunday for a visit with relatives and friends. Grandma Best returned to Klemme with him and will look after household duties at the Jost home during the summer

Mr and Mrs Victor Waldek, of Hayfield, and Mr and Mrs Emil Patet, of Klemme, left Tuesday morning for the Ozarks to look at some land which Mr Waldek purchased They expect to return home the latter part of the week.

Mr and Mrs. Erwin Haupt, of near Kanawha, were in Klemme last Wednesday evening to attend the commencement exercises Mrs Haupt's mother is living with them. She has not been well for some time.

A baby boy was born to Mr and Mrs Cleo Engle at Waukesha, Wis. Saturday evening, but the infant died at birth. Mrs Lena Schroeder, mother of Mrs. Engle, expects to leave the latter part of the week for Waukesha for a visit of ten days

Mr. and Mrs C G Waterman and daughter, Marian, returned Thursday evening from Chicago, where they were called by the illness of Mrs Mary Waterman Mrs. Waterman underwent a major operation and was making a satisfactory recovery when the Klemme folks left for home

Mr and Mrs. Melvin Neuberger and daughter, Mr Donald Neuberger and son and Miss Evelyn Halverson drove to Oakdale, Iowa, Sunday for a visit with Mrs. Donald Neuberger, who is taking treatments at the hospital there The Times is glad to report that Mrs Neuberger is making a most satisfactory recovery and that she says that she has never felt better.

HELLO, FOLKS!

A fine baby boy, weight six and one half pounds, was born to Mr and Mrs Stewart Hevelin on Friday, May 21st. They now have two children, the other a girl, Donna Mae

---

Klemme Pastor Will Be Memorial Speaker At Belmond

Rev Wm. Zabilka has been selected to give the Memorial Day address at Belmond next Sunday morning. As the services at Belmond will be held at the same time as the services in Klemme, Rev. Zabilka will not be able to assist here.

The 22x36 Oliver Red River Special For Individual Threshing

The 22 x 36 is an ideal machine for individual threshing or for the small threshing ring.

The trouble-free feeder sends the bundles in a steady flow to the *Big Cylinder* and *Man Behind The Gun*, where most of the grain is saved in the very first threshing operation. Then the *Steel Winged Beater* and *Beating Shakers* team up to get the rest of it out of the straw. The independently driven Grain Pan and End Shake Shoe combine to deliver bright, clean, merchantable grain to the sacks or wagon box.

If you need a thresher see us at once: Let us tell you more about this machine that is backed by almost one hundred years of actual threshing experience.

As Rev Grosshuesch will be out f town next Sunday, Rev. Huene- ann of the Ell township church ill preach in the Klemme Re- rmed Church Services will be in one-half hour later than usual

Facts Needed!

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

Census Bureau officials, it is reported om Washington, are proposing that customary ten-year count of our opulation and resources be taken this all, instead of waiting until 1940.

They believe that information thus ained could prove helpful in formulat- a practical policy in the distribution Government relief funds.

Whether or not this change would ave the desired effect only actual ex- erience could tell. But the great need a practical basis of facts for our nge relief program is widely recognized.

The responsibility for adequate help o the jobless and other unfortunates acknowledged by all Americans. They ant them to have the required help. But they want that help applied through ractical means, free not only from needless waste, but from even the sug- estion of political favoritism, manipu- ation or control, and within the ability of the nation to pay.

They believe that to achieve this end a reliable picture of actual conditions is essential. Such a picture has been hard to find. Reports of the number of our jobless are frequently contra- dictory. Records of those in actual want are similarly vague.

When the real facts are known a definite program can be approved by all.

Perhaps the process of moving up the census date will supply those facts. If so, it would win undoubted approba- tion from the great body of American citizens who willingly pay the bills, but who want to be assured that the money they supply is being spent in a way which will achieve the most effective results.

They want their money's worth—not for themselves, but for the families whom the billions of relief dollars are collected to help.

Such a relief program—based on actual facts—would help more than its needy beneficiaries. **By decreasing waste and confusion it could speed our entire nation along the road to sound and lasting recovery.**

Bridges With Houses an Odd London Attraction

Most people believe that when old London bridge was demolished more than a century ago Great Britain lost its last cross-river bridge with houses atop of it.

However, there stands in England two such bridges, according to a London correspondent in the Detroit News. One built in the Twelfth century and spanning the River Witham at Lincoln, the other at Bath and crossing the River Avon. It was built in 1770.

This bridge of Bath is named Pultenay after the earl who built it, and it is crossed by thousands of people who do not realize they are even crossing a bridge.

The bridge was designed by Robert Adam for Earl Pultenay, who wished to connect his estate at Bathwick with the city. A weir crosses the River Avon a few yards in front of the bridge, and this, with the colonnade on the left, and the great willow trees near the ruins of the old mill, presents a picture which has been painted many scores of times.

The Lincoln bridge, also known as the High bridge, has on its west side fine examples of half timbered houses that were built about the year 1540. On its east is an obelisk marking the site of a wayside chapel of St. Thomas of Canterbury, built in the Thirteenth century and demolished in 1763. Old London bridge also had a chapel to St. Thomas of Canterbury built in the center of it.

Baseball From Old Time Sport Known as Townball

Baseball undoubtedly originated in the United States The game was an evolution from an older game called townball that also developed in the United States from the old English game of rounders.

Townball was played on a square field at the corners of which were four - foot posts which served as bases. In scoring one run, the player ran around these posts, and if hit by a thrown ball while running, he was "out." The side first securing 100 runs was the winner.

In 1839, with others, according to the Literary Digest, the twenty-year-old Abner Doubleday, who later served as major-general of volunteers in the Civil war in command of the defenses of Washington, drew up the first set of baseball rules. But it was not until 1845 that the Knickerbocker Baseball Club of New York, the first organized club, modified the game by substituting bags for bases, limiting the number of players to nine on a side, and setting the game at nine innings.

Hungarian Dances

Hungarian popular dances faithfully reflect the typical features of the national character. The way in which quick and solemn rhythms change in the course of a dance shows how seriousness is mingled with gayety in the Hungarian soul. The erect bearing, graceful floating gestures and quick, staccato jumps suggest a light, equestrian race of the plains such as the Hungarians have always been. In the Magyar dance the man has the leading role, showing that it was at first a distinctly heroic dance. It was only much later that women were allowed to join in, and even then they had to obey their partners' commands fully, says the Hungarian Quarterly.

Temperature of Ice

Water (H_2O) gives up heat as the temperature drops. At 32 degrees Fahrenheit it becomes ice. But ice can be of any temperature below 32 degrees, and as the surrounding medium drops in temperature the ice will continue giving up heat to this medium. Ice at a temperature below freezing point will last longer (under the same conditions) than ice at 32 degrees. It will continue to absorb heat from the surrounding medium without melting until the temperature rises to 32 degrees, when melting will take place.

Hello, Folks!

A seven and one-half pound baby boy was born to Mr. and Mrs. Art Katter, Liberty township, at the Forest City hospital on Sunday. May 30th.

Raymond Barz Will Begin Study For Ministry

KLEMME YOUNG MAN WILL BE GRADUATE AT MISSION COLLEGE

Raymond Barz, son of Mr and Mrs Henry Barz, has completed his four years of college work at the Mission House College at Plymouth, Wisconsin, and will receive his diploma this week end.

Mr and Mrs. Henry Barz and Rev. and Mrs Calvin Grosshuesch will drive to Plymouth to be present at the commencement excercises this week end

Raymond expects to continue his work at the Mission House college by entering the Seminary there next fall to take three years of work and complete his education for the ministry.

FORMER KLEMME BOY GETS PROMOTION AS SUPERINTENDENT OF SCHOOLS

Adolph Lauritsen and family of Ledyard visited at the Einar Salling home over the week end Mr Lauritsen, who has been superintendent at the Ledyard schools for the past few years, has been elected to the position of superintendent of the schools at Parkersburg, Iowa The Parkersburg school is a large school and is in class A Klemme friends congratulate "Abe" on his advancement

Mr. Lauritsen also coached basketball and baseball at Ledyard and made a fine record in that line as his teams have been in state meets and he himself gained statewide recognition as a coach.

LUDEKE FAMILIES HELD PICNIC AND RE-UNION AT KLEMME PARK

The various members of the Ludeke family and their families had a picnic dinner and family reunion at the Klemme Park on Memorial Day The Ludeke, Ax, Schlichting and Schoenwetter families of this community were present.

The Klemme Park is an ideal place for a picnic with plenty of shade, nice lawn and picnic tables which were recently provided by the Auxiliary ladies. The public is welcome to use the park for gatherings and picnics.

The Monthly Birthday Supper will be held in Klemme Monday evening, June 7th.

MOVE BEES 30 MILES TO POLLINATE CLOVER CROP

Here's one way of capitalizing on the "bee" in business.

The Soder brothers of Stratford, Iowa, have more than a hundred humming hives of honey hunters

Carl A Peterson of Gowrie, who lives 30 miles away, hasn't any. But he plans to harvest for seed 60 acres of white sweet clover, the the finest bee-feed in Webster County

Soder's bees are going to help him.

At the suggestion of F B. Paddock, Iowa State College extension apiarist, Peterson has arranged to have 50 hives of the Soder brothers' bees brought to his farm, where the bees will insure a good crop of seed by carrying pollen from flower to flower—and honey into Soder hives.

Says Peterson, in a letter to Mr. Paddock, "Am going to learn all I can about bees this season. I may start raising some myself next year."

Bible Class Held Annual Picnic At Goodell Woods

The Young Peoples' Bible Class of the Klemme Reformed Church held their annual picnic on Memorial Day at the Goodell woods.

Loud noises to kill germs. The same invisible sound waves may pull huge aeroplanes and their pilots apart in the next war. An interesting and instructive article in the American Weekly, the magazine distributed with next Sunday's Chicago Herald and Examiner.

Many People Took Part In Memorial Service Here

Our Graduates— And the Road Ahead

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

As this is written thousands of young Americans—sturdy descendants of the hardiest breed of pioneers and nation-builders the world has ever seen—are being graduated from high schools, colleges and universities throughout the country

What awaits them in the years ahead?

There are critics who will say that the road to opportunity is blocked, that the world no longer has room or need for the personal courage and initiative which carried our fathers across a continent, that certain tired and crowded and despairing populations of the Old World have charted a better course—the surrender of all rights, all opinions to dictators, in return for promises of economic and political guardianship. To such cynics, the energy and the enthusiasm of youth merit only a sneer

But there are others who will tell them that the real joy of life is in achievement, that the American ideal still remains one of self-rule, self-reliance, open opportunity, and full freedom of religion, of speech and of thought.

The first idea is foreign both in spirit and in origin. The second is outstandingly American. Here is how one great American, Theodore Roosevelt, expressed it:

"It is not the critic who counts, nor the man who points out how the strong man stumbles, or where the doer of deeds could have done better.

"The credit belongs to the man who strives valiantly; who errs and may fail again and again, because there is no effort without error or shortcoming, but who does actually strive to do the deeds; who does know the great enthusiasm, the great devotion; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who know neither victory or defeat."

There is a message spoken for an earlier generation of young Americans. It remains a ringing message to youth today.

Muskrat, Cousin of Mouse

The muskrat is about a foot long and a cousin of the mouse. The tail is flattened in an up-and-down direction and serves as a rudder in water. It builds a dome-shaped house of grass in marshes, but bores a hole in the banks of lakes and rivers, the entrance to which is always below water. To the Indians of British Columbia, the muskrat is a god, observes a writer in the Washington Post. They say that, in the beginning, nothing existed but water and a muskrat. The muskrat sought his food at the bottom and his mouth was frequently filled with mud. This he kept spitting up, and so formed an island, which developed into the world.

Beautiful Montevideo

Montevideo is one of the great cities of South America and has a population of two-thirds of a million. In few cities has national and civic initiative been conceived and applied with greater intelligence and ability. It is one of the most beautiful capitals in the western hemisphere. The city is famous for its extensive parks with walks of inlaid mosaic. The Prado is the oldest and the most beautiful. A veritable garden of roses, it has picturesque glades, grottoes and lakes. In one space may be seen 800 varieties of roses, the greatest collection in the world.

England's White Walls

For centuries Dover castle, its gray walls high perched on white chalk cliffs, has been the first object to catch the eye—and the imagination. "The white walls of England" the cliffs have been called; the castle, in the phrase of Hubert de Burgh, its most notable constable, was "the very key and gate of England." The British preceded the Romans on that hill, Romans gave place to Saxons, and the Norman Conqueror built on the foundations of all three.

W.F.M.S.

The W.F.M.S. of the Methodist Church will meet on June 10th at the home of Mrs. Wm. Zabilka.

LARGE CROWD ATTENDED THE MEMORIAL SERVICES HERE ON SUNDAY

Rev. Calvin Grosshuesch Delivered Address From Park Band Stand

There was a large crowd in Klemme Sunday morning to attend the Memorial Day services held in the Klemme Park The services began at 10 30 o'clock and special music was furnished by the Klemme school band and a girls' sextette, both under the direction of Martin Elstad

Places of honor were reserved on the speaker's stand and special tribute was paid to Civil War Veteran Lew Lewis and wife, Spanish-American War Veteran Henry Jost and Gold Star Mothers, Mrs. Ed. Schaefter and Mrs. Henry Wille.

Rev Calvin Grosshuesch, pastor of the Klemme Reformed Church gave a fine address that was enjoyed by the audience.

Following the park services a parade was formed led by the Color Bearer and Guards and accompanied by the band, veterans and citizens, and was in charge of Dr. D. P Anderson, officer of the day. At the cemetery the Auxiliary ladies had charge of decorating the graves and the Legion gave their ritual in honor of fallen heroes of past wars.

The day was ideal which added to the beauty of the services.

KLEMME REFORMED CHURCH

Calvin Grosshuesch, Pastor

Young People's Bible Class.
8:00 p. m. Saturday
Mixed Choir.
Our Bible School will continue for three more weeks.

SPONTANEOUS COMBUSTION OF HAY ALWAYS A DANGER

Precautionary Measures Are: Be Sure Curing Is Thorough; Keep Hay Level; Salt It

What can be done to guard against spontaneous combustion or the heating of hay in the mow?

This is a question which comes frequently to the Farm Crops Department of Iowa State College at this time of year.

J C. Eldridge lists three ponts to bear in mind in checking fermentation and possible spontaneous combustion.

First, be sure the hay is properly cured. That should be obvious, but often hay is put in which has not dried sufficiently.

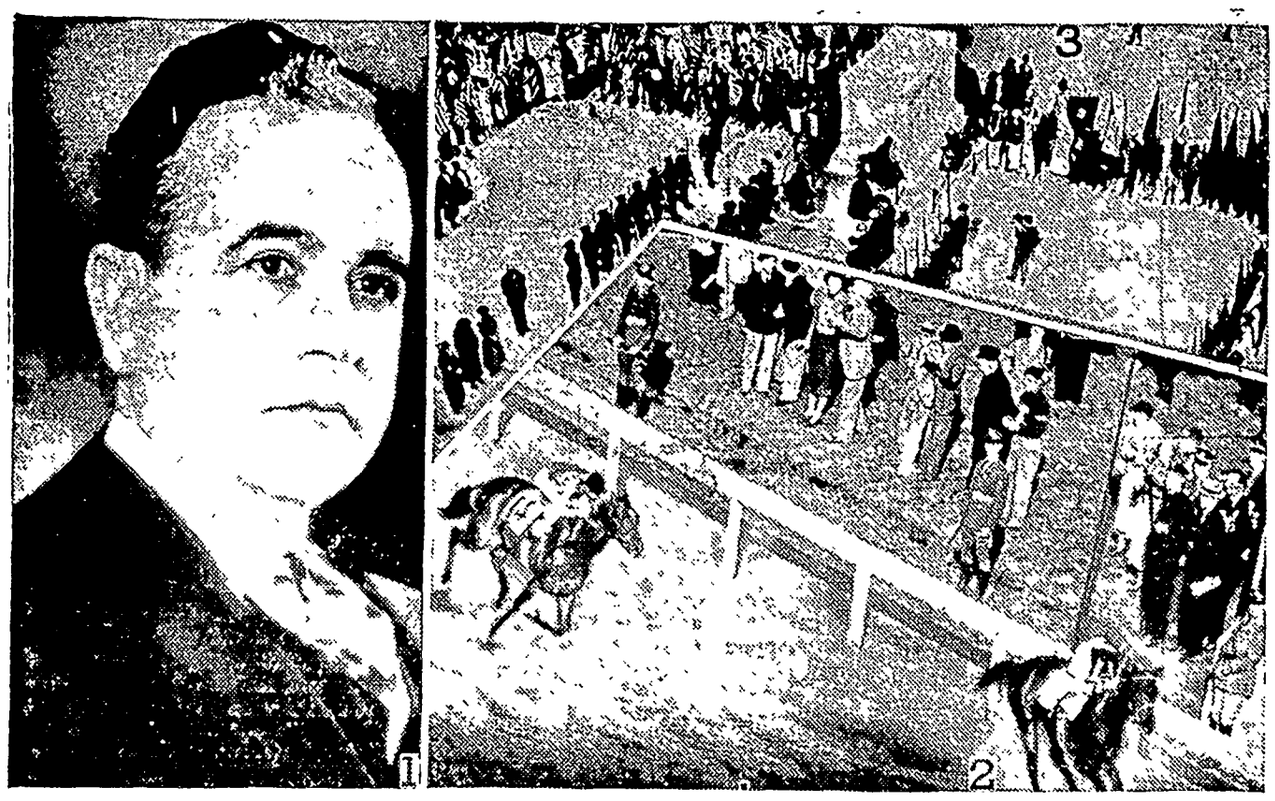
The second point is to mow the haw away carefully Dumping the hay in piles in the mow with air pockets between them encourages heating. Keep the hay level.

Third, sometimes it has helped to salt the hay as it is put in. Use about 1 pound of salt for each 100 pounds of hay, or 20 pounds per ton Apply the salt to the layers of hay in the mow.

Former Klemme Students Are Graduates

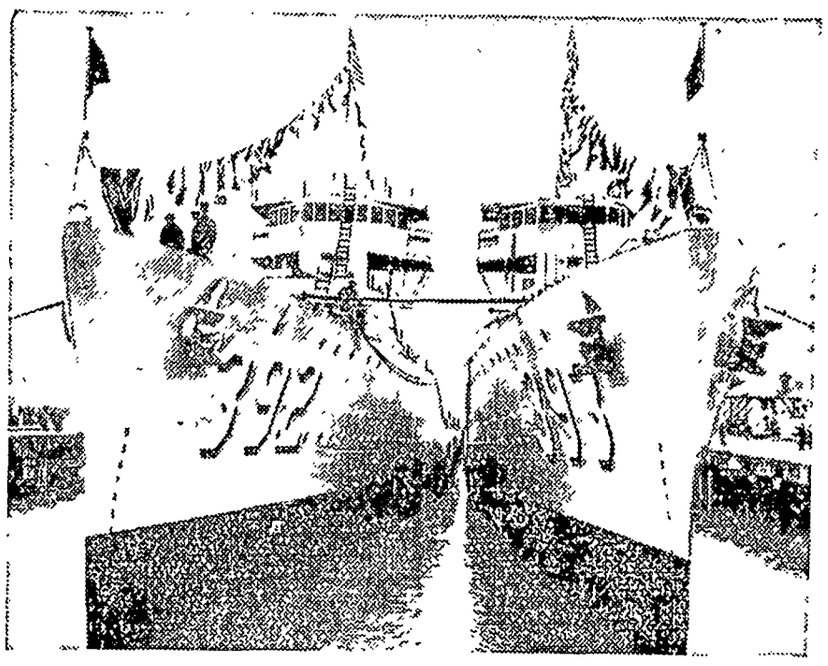
Friends have received commencement announcements from Richard Hughes and Max Barz, both former Klemme students. Max graduates from West High at Waterloo and Richard graduated at the LuVerne high school.

Scenes and Persons in the Current News



1—President Cetulno Vargas of Brazil, who has mobilized 40,000 troops to quell a rebellion in the state of Rio Grande. 2—War Admiral, son of Man-o-War, shown winning the recent Kentucky derby. 3—Members of the national chapter of the War Mothers of America, placing wreaths on the tomb of the Unknown Soldier in Arlington National cemetery.

New Twins Ready to Join Navy Family



Uncle Sam's two newest twin destroyers, the Patterson and Jarvis, are shown floating serenely in the drydock at Bremerton, Wash., before they joined their big family of sisters on the bounding main. The launching of the twins was sponsored by Miss Elizabeth Patterson.

GRANDMA GETS M. A.

Mrs. Rose A. Cahan, known to her fellow students at Teachers college of Columbia university as the "college grandmother," who has received a master of arts degree. She says she will continue her studies.

Expert on Weather to Study Arctic

Clifford J. McGregor, meteorologist of the weather bureau at Newark, N. J., airport, who will head an expedition of scientists into the Arctic in the three-masted schooner

"General A. W. Greeley," named for the famous Arctic explorer. Leaving the end of June, the expedition will remain in the Far North for 16 months, studying and recording weather data.

Art Museum Starts "Rental Library"

A unique rental plan of old master reproductions has been inaugurated by the Chicago Art institute to encourage art appreciation. Fourteen reproductions of famous paintings are available for rent to members of the institute at seven and one-half cents a month. Miss Adele Lawson, left, institute employee, offers Miss Betty Humphreys, a member, her choice of two masterpieces.

Speaker Bankhead Umpires Baseball Game

Legislative business was called off when Speaker of the House William B. Bankhead acted as master of ceremonies and umpire during the annual baseball game between the pages of the senate and the house of representatives in Washington recently. The speaker is shown calling a close one at the plate as Duane Dedricks of Utah, outfielder of the senate, slides home safely. Dan Ellis of Alabama is the catcher.

Jaguar Throne at Chichen Itza Is Carefully Guarded

Spectacular Find in Ruined Mayan City

Washington. — Tourists who visit the ruined Mayan city of Chichen Itza in Yucatan are allowed to see—but not sit in—the polka-dotted red Jaguar throne recently discovered by archeologists.

The Carnegie institution of Washington, which conducted the excavations, calls this throne, and objects with it, "the most spectacular discovery of archeological specimens in original position ever made in the New World."

Mexican authorities, says the Carnegie institution, have wisely decided not to remove the throne from the place in the temple, exactly where Indian officials placed it centuries ago. A glass protects the throne, and lights have been installed so that the fresh colors and snarling face of the stone jaguar may be seen and appreciated.

Throne, Not an Altar.

The animal is painted red, with large apple-green spots of jade inlaid, and green jade eyes. Its flat back forms a throne seat, in the opinion of Dr. Sylvanus G. Morley of the Carnegie staff. Dr. Morley disagrees with the view that the jaguar was used as an altar.

The jaguar discovery was made in the famous temple called El Castillo, or the Castle, a ruined building perched on a lofty pyramid. Recent excavations have revealed that temple and pyramid were enlarged and built over by ambitious Indians The visible ruins thus encase an earlier temple on its pyramid base. It was within the hidden temple, in an inner chamber, that the red stone jaguar was found well preserved.

A tunnel enables visitors to go to the inner stairway and climb the buried pyramid to the throne-room.

Curtains of Light Used to Measure Projectile Speed

Ottawa, Can.—An artillery shell crashing through invisible curtains of light is the newest means of determining the speed of projectiles developed by scientists at the National Research Laboratories here. Particular merit of the system is its portability which enables it to be used in the field and bring added accuracy to computations of range in actual combat.

Light beams, mirrors, photoelectric cells and sensitive recording mechanism are the equipment which makes possible the new development of Dr. D. C. Rose, physicist in the division of physics and electrical engineering of the Canadian laboratories.

Curtain of Light Used.

In effect the artillery shell passes down a narrow tunnel - d every 50 feet intersects a beam of light falling on a photocell. Momentarily the shell blocks off the light beam and this decrease in light intensity cuts down the electrical output of the cell. By an amplifying system this electrical change produces a permanent record on photographic film.

In field tests at the military camp at Petawawa, Dr. Rose set up metal frames whose upper and lower surfaces consisted of mirrors. A beam of light started from the bottom and was reflected back and forth across the space betwee the mirrors unti' its ray finally fell on a photoelectric cell concealed in a small box attached to the upper part of the frame. Thus the entire space within the frame was filled with a light beam which could be blocked out by the onrushing shell.

Airships to Make Own Ballast While Aloft

Berlin.—Zeppelins of the future will be able to take off without ballast, and once in the air will "manufacture" water, with a new reaction chamber invented by Ludwig Schirmer of this city.

The fundamental idea is very simple: hydrogen and hydrogen compounds are present in the airship's lifting gas; the air contains plenty of oxygen to combine with them and form water. Thus instead of valving gas and thereby losing valuable "lift," Herr Schirmer's invention will transform it nto ballast, thus making a double gravitational gain. It is the reverse of lifting oneself by the bootstraps

Glass Fibers Are Being Developed for Many Uses

Neckties, Dresses, Drapes and Awnings

By WATSON DAVIS

GLASS is familiar as bottle or tumblers, window panes, and, more recently, as translucent building blocks. It is proverbially breakable and fragile.

At first thought glass would not be judged a serious competitor to the ordinary textiles. Yet one of the most promising new uses for glass is as a fiber.

Dresses, neckties and other novelties can be made of glass fiber. But the early large scale practical usage of glass textiles is foreseen in drapes for use in theaters, hotel tapestries, awnings that can not be hurt by carelessly flung cigarettes and other such applications where real noninflammability is necessary.

Just now glass fibers are finding widest application as insulating material both against heat and on electric wires and as a filtering material. A mat of glass fibers such as used in house walls or refrigerators weighs a mere hundredth of the volume of solid glass, 1½ instead of 150 pounds per cubic foot.

Can Be Tied in Knots.

If drawn sufficiently fine glass becomes flexible and can even be tied in knots. And the strength needed to pull glass apart increases as the fiber diameter is reduced, so that while typical strength of glass rods is 20,000 pounds per square inch, commercially produced fibers have gone as high as 2,000,000. Fibers as fine as 0.00005 inch in diameter have been produced. Continuous filaments have been drawn without a break for 5,040 miles.

Color? The natural white suffices for most purposes now, but soon glass textiles, competing with cotton, wool and rayon, will emerge in all rainbow shades, with more permanency than we expect from other textiles.

For several centuries glass has been made into fiber for special purposes. The Germans made glass fiber commercially during the World war when blockades cut off supplies of asbestos.

Psychic Suicide Is Often Noted Among Primitive Peoples

Washington. — To bring on death by wishing to die is scientifically recognized as a possibility. Although the recent coma of Mrs. Helen Wills Love, condemned murderess, might be a manifestation brought on by the shock of the trial and conviction, it is considered within the realm of possibility that she might commit suicide by this means.

Psychic suicide, the term given by psychiatry to such a voluntary death by wish, is said to be fairly common among primitive peoples. Reports vouched for by noted explorers and practicing physicians show that many such people, when they make up their minds to die, actually do fall ill and perish. The illness seldom lasts long; death soon follows. It is not preceded by a coma. Some ethnologists feel that fright may stop their hearts, or that they may use secret poison.

Two Cases in Civilization.

Among civilized people having a much stronger attachment to life than do aborigines, deaths by will are very rare and may take months or years to accomplish. One case reported by Dr. A. A. Brill, New York psychiatrist, in an address on this subject before the American Association for the Advancement of Science, was of a woman who discovered that her husband was unfaithful to her. Although she told no one of her discovery, she lost interest in life and was sure she would die because no one loved or wanted her. For months she remained indifferent to efforts of her physician to help her. Then she died.

Undulant Fever Peril in Infected Horses

Indianapolis. — New sources of dangerous undulant fever has been discovered in horses, members of the Society of American Bacteriologists learned at their annual meeting here.

The cases of two children who developed serious undulant fever following contact with an infected horse, were presented by Drs. Charles M. Carpenter and Ruth A. Boak of the University of Rochester school of medicine and dentistry. These scientists and Dr. A. W. Deem of Ohio State university reported finding signs of undulant fever in horses.

Undulant fever, known also as Malta fever, infectious abortion of cattle, and, according to latest scientific terminology, brucellosis, is a serious, sometimes fatal malady characterized by the fact that the fever goes up and down in waves.

UNCOMMO AMERICA

By Elmo Scott Watson

Early-Day Dictator

LONG before Mussolini or were born, an American a demonstration of "how dic get that way." His name was phus Frederick Hubbard and h lieutenant-governor of the st Illinois at the time.

In 1825 Gov. Edward Coles r the lieutenant - governor th would leave the state the next and that Hubbard would be res ble for the executive duties o his absence which would not e three months. But Coles came sooner than he had expected.

The lieutenant-governor, how was so well pleased with the jo he decided he would like to governing. So he announced Coles, by his absence, had " cated" and that as lieutenan ernor, the legal successor t governor, he, Hubbard, was the governor. Coles paid no a tion to this but returned to his d and was recognized by all th ecutive officers as governor.

Undiscouraged by this fact, bard issued a commission as master general to W. L. D E and when the secretary of refused to sign it, Ewing, prom thereto by Hubbard, appealed t Supreme court to issue a manda forcing the secretary to sign commission. The court refuse Hubbard next appealed to the l lature to support him in his clai the governorship.

When it came to a vote, only legislators came out openly the "pretender" and after a v Hubbard decided to abandon plan of becoming "governor usurpation."

Later he decided to win that or by more legal methods and ing the campaign he made a spe which has become a classic in A erican political history He sa "Fellow-citizens, I offer myself a candidate before you for the of of governor. I do not pretend to a man of extraordinary talents, do I claim to be equal to Ju Caesar or Napoleon Bonaparte, yet to be as great a man as opponent, Governor Edwards. N ertheless I think I can govern pretty well. I do not think it require a very extraordinarily sm man to govern you; for to tell truth, fellow-citizens, I do not th you will be very hard to gove nohow!"

P. S. He wasn't elected.

Yankee Saint

ONE hundred years ago th looked upon John Humphr Noyes as a madman, a crank, heretic and an immoralist. But day the historians speak of h as "a Yankee saint," a "tr genius" and "one of the noble pioneers America has ever p duced."

Born in Vermont, Noyes was ed cated at Dartmouth and prepar himself for a career in law. B the religious fervor which swept t country in the early 1830's seiz him and he entered Andover the logical seminary to prepare hims for the ministry. However, after o taining his license to preach, Noy began to rebel against dogmatic a professional religion. Becomi known for his heresies, his licen was taken away from him. Th he announced he was going to e tablish a kingdom of God on ear and he founded the Putney co munity in Vermont.

There he put into practice his phi osophy of Christian Communis which included the most intima relationships of living. Because these daring experiments, Noye was repeatedly persecuted b groups of reformers and more tha once he narrowly escaped imprison ment. Finally, he moved his colon to Oneida, N. Y., where it becam famous for the successful industrie it started.

In 1869 Noyes inaugurated anoth er experiment which brought down upon him a fresh storm of protes from the exponents of traditiona morality. He called it "stirpicul ture" which was nothing more tha a program of scientific breeding for the human race long before the word "eugenics" had been coined. The results of these experiments are said by actuarial experts to be unparalleled in the records of modern vital statistics.

In 1881 his Oneida community was changed to a corporation and by the time of his death five years later there was little left of the original idea of the community but its name. During the next half century the name of John Humphrey Noyes sank into obscurity. Then his biography was written by a modern scholar who has declared: "However obvious his defects remain, John Noyes possessed the attributes of genius . . . Such a life has seemed far more worthy of commemoration than many of those more celebrated, more honored by the nation and the world, yet who never dared, as Noyes did, to translate ideals into the reality of living."

...ue Bridal Party in Summer Velvet

By CHERIE NICHOLAS

...MMER velvet is important ...fashion news for the bride-to-be ... is seeking a radiantly beautiful ... out of the ordinary material ... the making of her own gown as ... as those for her attendants.

...o word picturing can do justice ...this enchanting fabric, for the ...liness of summer velvet cannot ...visualized by the mere telling. ...less you have seen summer vel... you are due for a surprise for ...s not all-velvet by any means. ...gine, if you can, a sheer filmy ...sseline de soie or chiffon or ...ity organza background strewn ...h exquisitely delicate interwoven ...vet designs or motifs, well that's ...mer velvet.

...he idea of costuming the bride ...d her attendants in summer vel... becomes the more intriguing in ...f a most fascinating play on color ...made possible for the velvet mo... can be any color you choose. ...he scheme is worked out in this ...nner for the gowns pictured. ...ite mousseline de soie patterned ...h tiny winged motifs of white ...vet is used for the youthful wed...g gown as here shown. The bride ...ars pearls and a diamond clip ...the low V-shape decolletage. Her ...uquet is the new idea—pale lav...der orchids carried in a handle ...carved prystal, forming a fan ef...t.

...he matron of honor to the right ...the picture also wears summer ...vet—white mousseline de soie with ...en velvet motifs posed over a matching green slip. The sash is of bands of matching green velvet and pale yellow. The hat, a new version of the poke bonnet, is in the same green shade with a huge bow and long streamers of wide green velvet ribbon. The matron of honor's bouquet is of palest yellow and white freesias. Her Aris gloves are white glace kid with delicate embroidery in gold thread. Emeralds are set in necklace and clip. White and yellow are worn by each of the other bridesmaids with jewelry tuned to correspond. These frocks can be worn all summer.

Completing the scheme for this summer wedding the bride's mother, pictured to the left, wears the same summer velvet fabric but in a patterning of delphinium blue bowknots on a silk sheer with tiny flowers of delphinium, with a velvet sash of matching color. When the jacket is removed the dress has a low formal neckline. Her hat is a smart new tricorne of navy straw with tiny flowers of delphinium. The dainty corsage is of lilies of the valley in the center of which are a few delphinium blossoms.

For that "something different" look that brides covet for their wedding pageantry here are a few suggestions. If the bridesmaids have long streamers to their hats a clever touch is to snap one of the streamers about the right wrist under a bracelet bouquet. Then there is the idea of veils for the bridesmaids. These are of tulle in colors related to each costume. They are waist depth and fall gracefully about the shoulders.

SHORT DANCE FROCK

By CHERIE NICHOLAS

When the new short-length dance ...rock first made its appearance it ...created quite a sensation. However, ...did not take long for it to become ...general favorite. The dress pic...ured is of lovely printed silk chif...on. It accents the slender waist...ine such as fashion demands—a re...turn to the silhouettes of the long ...go. The gown was worn by a ...rominent society debutante at ...The Silk Parade to Waltz Time," ...benefit affair recently taking place ...n New York.

...anvin Jackets Are Made of Silver or Gold Kid

Silver or gold kid is used over and ...over again for evening at Lanvin's ...where flowing robes are trimmed ...with oriental applications of leather.

At the same house are separate ...jackets entirely of stitched kid ...which is so soft and fine that it ...looks like lacquered satin.

LACE FOR SUMMER BRIDE NEW STYLE

By CHERIE NICHOLAS

The June bride will be fashionably attired this season when she chooses lace for her gowns. With the present vogue for lace for daytime wear, for evening gowns, and for the highly popular house coats and delicate negligees, the romantic appeal of this material makes it a favorite for wedding gowns and bridesmaids' dresses.

Cut on classic lines, the beautiful lace patterns of this season allow for exquisite details of workmanship for the bridal gown. One lovely gown seen recently is perfectly simple in line but has fine details of appliqued seamings at the point below the hips where the slight fullness starts. The very full train, and the skirt and neck edges likewise, have an appliqued scalloped edge of lace. This intricate treatment shows to advantage particularly as the veil is quite short and does not fall to the train. In general these lace wedding gowns have shorter veils so that their delicate patterns are not obscured.

Wedding Parties Dressed All in Lace Is Fashion

Wedding parties dressed entirely in lace are in the fashion picture this year. One of the best we have seen is of all-white peau d'ange in a Chantilly pattern for the bride. There were no seams to the dress, avoiding any unnecessary line that might interfere with the beautiful pattern of the lace, and the edges throughout were entirely hand-appliqued. A matching mantilla headdress was worn with this wedding gown.

The wedding party, all in lace, made a charming and appropriate setting for the bride. The bridesmaids' dresses were of novelty all-over lace, in pastel shades. The headdresses, in contrast with the mantilla of the bride, were formed like a hood, from the collar at the back.

Hints on Tints

Capucine colors will be among the new color accents during the coming season. They have their origin in the various shades of the popular nasturtium.

STAR DUST

Movie • Radio

★★★By VIRGINIA VALE★★★

WHENEVER a crowd of actors, producers, directors, and writers get together in Hollywood, the most exciting arguments take place over questions that can never really be settled. Just the other night in the Brown Derby restaurant a group got to discussing who is the most talked-of man in pictures just now and the arguments grew so vehement, an innocent bystander might suspect that a riot was being planned. Instead, it was just a general tossing of verbal bouquets.

Several people think Robert Montgomery is the man of the hour. He recently pepped up his somewhat-wilting career by jumping from roles of society playboys to that of the maniac killer in "Night Must Fall." Other nominations for the man of the hour were David Selznick, because he produced "A Star Is Born," and Darryl Zannuck because he has made his pictures stand for a guarantee of hilarious entertainment.

—★—

Not since the days of the Talmadge sisters long ago, have film fans had the fun of watching sisters climb to fame as screen rivals. Now everyone is arguing about the respective talents of Olivia de Haviland and Joan Fontaine. They are sisters, you know. And although Olivia had a big start, appearing in four Warner Brothers pictures before Joan went to work at RKO, there are many who think that by this time next year, Joan will be well in the lead.

Olivia de Haviland

—★—

Mary Livingstone, who has played such a big part in the success of the Jack Benny radio programs, is thinking very seriously of taking part in a Paramount picture starring Buddy Rogers and Shirley Ross. It is a serious decision, because it entails having an operation on her nose and Mary does not like hospitals or ether or knives or inactivity or even breathing through her mouth.

—★—

Innumerable fans have asked me if the impressive mansion and estate which Fredric March presents to Janet Gaynor in the course of the plot of "A Star Is Born" was especially built for the picture. Others think they recognize it as the house once occupied by Barbara Stanwyck, when she was married to Frank Fay. Neither theory is correct. The house belongs to a Los Angeles real estate dealer and was merely rented by the Selznick-International company for two days.

—★—

The enterprising young Grand National company certainly stole a march on the rest of the studios when they signed Stu Erwin to a starring contract. Since that time "Dance, Charlie, Dance" which he made for Warner Brothers has been previewed and Stu has landed right up in the thin ranks of top-notch comedians. He has finished his first picture for Grand National. It is called "Small Town Boy" and everyone says it is a knockout.

—★—

Ever since Myrna Loy finished "Parnell," she has been enjoying a lazy vacation at Ensenada, Mexico, where a gleaming, luxurious hotel shares scenic honors with the harbor which is said to be the most beautiful in the world — even more beautiful than the far-famed Bay of Naples. Her husband, Arthur Hornblow, got away from his duties at Paramount long enough to spend a week with her and was seized with the inspiration to write a picture set in the locale of Ensenada. Myrna hopes that she can stay on there while it is filmed but M-G-M have a crowded program ahead for her.

Myrna Loy

—★—

ODDS AND ENDS—A little boy working on the set of "Varsity Show" at Warner Brothers came down with measles, and the whole troupe headed by Dick Powell had to knock off work and watch for symptoms for two or three days . . . Errol Flynn brought two lion hounds back to Hollywood with him, the only ones of their breed in America, and now everyone is wondering what these sporting dogs will do for amusement, hunting at the Universal zoo? . . . Jean Arthur just cannot fix her own hair, so when the studio hairdressers went out on strike, her director, Mitchell Leisen, arranged her locks for her, and very well too . . . Clark Gable and Carole Lombard went as cowboy and cowgirl to a recent masquerade birthday party and took the honored guest a Shetland pony as gift.

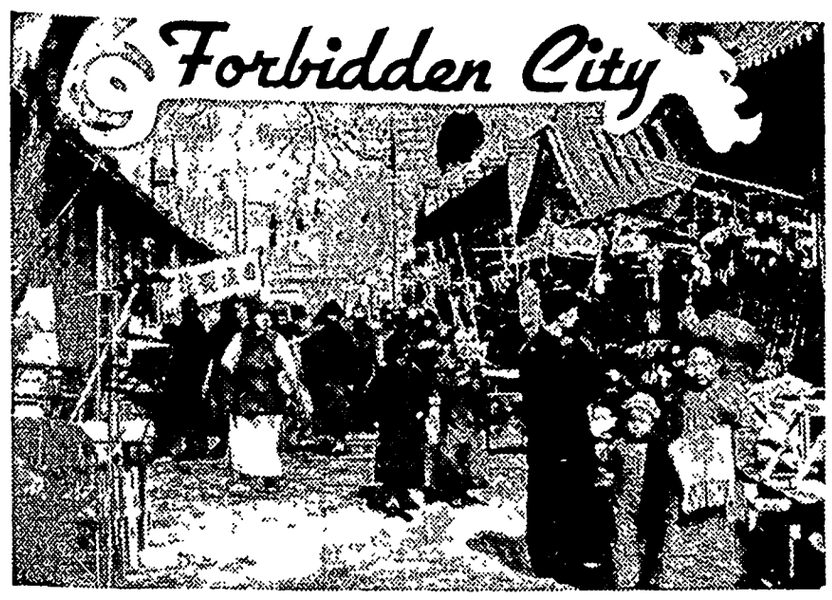
Forbidden City



Peiping Merchants Bait Poles With Toys.

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

WITHIN the Imperial City of Peiping, on the exact center of all, oriented to the cardinal points of the compass, is the Forbidden City, the Violet Town, which was the residence of the Dragon emperors. It is an inclosure a little longer than broad, and lies behind a wide moat and a double wall. The moat, in the summer time, is full of flowering lotus, and white cranes stalk thoughtfully among the rose-pink blooms.

Each corner of the wall has its tower, small, but very richly ornamented. There are four gates, one to each face of the wall, and their names are notable: East Gate Glorious; West Gate Glorious; Gate of Divine Military Progress, which is the Shen Wu Men, the North Gate, wherefrom in 1644 the last Ming emperor went sorrowfully to strangle himself on Coal Hill across the way, while the triumphant rebel soldiers were breaking into the Imperial City outside. Through it fled the Empress Dowager when the International Column battered down the southern gates in 1900. On the south is the Wu Men, the Meridian Gate, the great gate of ceremonies, not opened since the fall of the empire.

Only from Coal Hill immediately to the north, or from the White Dagoba in the Pei Hai to the northwest, can you bring the Forbidden City within the eye at once. From either height, you see the simple outline of its plan. Down the center line the great pavilions march one behind another, their roofs tiled with imperial yellow, since all this was of the throne.

They are audience halls, council halls devoted to this phase or that of ancestral veneration, and imperial living quarters. Smaller buildings lie along the wall to east and west; houses for the concubines and eunuchs, and space for stores. Each pavilion has its courtyard and its formal approach. The courts are threaded by little conventional moats with white marble balustrades; the terraces are balustraded, as are the ceremonial flights of steps.

In the north end are the pavilions and gardens that the Empress Dowager used. They are small and intimate, landscaped, shaded by cypress and cedar, and traversed by narrow walks among flower beds and fountains, for the old lady loved such things.

Decoration Is Colorful.

Some of the buildings are used as museums, displaying much unusual treasure, although, at the time of the disturbances in 1932 and 1933, most of the exhibits were boxed and shipped south, to the great indignation of Peiping.

The Forbidden City displays the Chinese decorative scheme at its most extravagant and royal. It is done in reds and yellows and blues and greens, all most violent. A little money is spent on its upkeep, and perhaps the close-set walls save it from the grinding of the wind-blown dust that dulls the colors and the gilding of places in the open.

The proportions of the buildings are majestic without being vast, for the Chinese architect knew how to create his effects without relying on mere size. The clear sky and the brilliant sun enter into all conceptions; the secret of their excellence lies between the air and light and a just balance in line and mass.

Yet, as for size, there is a courtyard in the south section of the Forbidden City where, at a victory celebration in 1918, some 15,000 troops were arrayed, with a large number of civilian officials and spectators, and it is related that the courtyard seemed in no sense crowded.

What now is seen in these palaces and courts is a setting only, a stage from which the players have departed, with their bright robes, their banners, and their stately processionals.

About the public buildings of Peiping, the shrines, the halls, the pavilions, and palaces, there are many books written. German and Russian and British savants have measured, dissected and surveyed. French scholars have breathed much life into the dry bones of architecture, dwelling with ardor, also, upon the pavilions of pleasure, and the marble-capped wells in which were filed, head downward, discarded favorites, male and female, of not-too-immaculate sovereigns.

Many of the structures are jerry-built and flimsy. The Chinese lacquer with which the surfaces are faced is cheap stuff, prone to flake off before it attains age. The fine pai-lous that arch the streets and define the approaches to important places are frail things which must be propped from every side while they are yet new. The stone, so intricately and beautifully carved, is soft and subject to quick erosion.

Many Lovely Things.

Many of the most imposing edifices, such as the White Dagoba that dominates the Pei Hai, one of the "Three Seas," are of brick and rubble, surfaced with plaster which, unless renewed every season, sloughs away in patches. Distant views are impressive, and close inspection disappointing.

Yet there are many things that are beautiful with an ageless beauty: corners of the Forbidden City, as delicate and fine as jewel filigree; the elaborate and cunning ornamentation under the eaves of the pavilions; the porcelain screens and arches; the timeless splendor of the tiled roofs, that persists in spite of the weeds and shrubs which spring from accumulations of dust in the cracks between the tiles. The patterns and designs are frozen in convention, but trees and water, air and light, are integral parts of every arrangement.

After you have dutifully followed the guidebooks through a score of temples and palaces, your impressions will tend to telescope upon themselves. But there are two things that you will never forget: the Temple of Confucius and the Temple of Heaven.

The Temple of Confucius is in the North City (the northern section of the Tatar City), between the Lama Temple and the old Hall of Classics. You come to it through noisome alleys that swarm with scavenger dogs and naked children.

A passage leads under murmurous dragon cypresses, between ranks of tall memorial tablets commemorating the visits and the patronages of emperors and princes. The passage opens upon a low terrace from which you descend to the central court by marble steps that flank a spirit stairway — Dragon eternally contending for the Pearl, between sculptured masses of sea and cloud.

From it you face the temple, looking along an avenue of ancient trees so thickly set that their interlaced branches cast a cool greenish gloom, very grateful in the summer time. Flanking it are low buildings that serve as storehouses and sleeping quarters for the priests.

The sun strikes through the trees and burns upon the old red walls of the pavilions, and the freshly painted patterns under the overhanging eaves glow richly in reflected light: turquoise blues and emerald greens, purples, and reds, and yellows. There are small golden roofed kiosks, and sacrificial burners of a bronze no longer cast. The noises of the city do not enter here.

A gentle, courteous old priest with hairless, ascetic face materializes from the shadows to attend you; he is unobtrusive and detached in robes of gray and black. There is no statue in the shrine: it is the High Place of an idea. Tablets, richly engraved, hang above the altar, publishing the virtues of the Sage, and the gray ash of joss sticks in the incense burner testifies to the devotion of many worshipers.

The thing is wholly of the spirit. You need know nothing of Confucius, nothing of China, to realize that here is peace made visible; here is tranquillity; here are a balance and a symmetry removed from striving; the conception of minds that have, after mature thought, settled their problems.

The Temple of Heaven.

Very different is the Temple of Heaven, out to the south in the Chinese City. It stands most fiercely in the sun, its walls enclosing a park larger than the Forbidden City. You go up from the highway along a broad avenue, mounting by a ramp to the center of a terraced line of pavilions. To the north is the round Hall of the Happy Year, its brilliant blue tiles and triple-roofed silhouette one of the distinctive things on the Peiping skyline.

Turning your back upon it, you walk south, through open pavilions and successive archways, to a stark altar of white carved marble, approached between winged columns. The altar consists of three round terraces, set one upon another, the top one smallest. The steps that ascend to it are in groups of nine, the mystical number; and the flagstones of the pavement are laid in concentric patterns in multiples of nine. And the roof of that altar is the vault of heaven.

Here the Emperor came to offer the Great Sacrifice on the day of the winter solstice, to render his Imperial Ancestors an account of his stewardship, and to solicit their guidance for his people through the succeeding year.

FARM TOPICS

SHOULD TURN EGGS WHILE INCUBATING

Poultry Expert Cites Four Fundamental Factors.

By Dr. W. C. Thompson, Poultry Husbandman, New Jersey Experiment Station. WNU Service.

Temperature, ventilation, moisture and change of position are the four fundamental factors in obtaining good hatches in incubators.

Changing the position of the embryos during the three weeks of development within the shell is very important. Mother hens, incubating their setting of eggs on the old-fashioned nest, usually move the eggs beneath them at least twice during the day, thus tending to equalize the exposure of each egg to the conditions of temperature, fresh air and moisture, all of which must be uniformly applied to each egg.

In the operation of the modern incubator, man can well copy this rule of the hen. Experimental evidence seems to indicate that he can go the hen one better by doubling the number of turnings during each 24-hour period.

If hatching eggs are changed in position once every six hours, optimum results, other things being equal, will generally result. It is partly a matter of preventing the sticking of the developing embryo to some one position within the shell, and partly a matter of equalizing the exposure of the respective eggs to the conditions which will bring about normal, natural embryonic growth.

Most modern incubators are provided with devices for turning eggs. It is important to be regular and consistent in this practice. It is one of those many small items which, taken collectively, spell successful hatching and the production of chicks.

Warm Soil Is Necessary to Grow the Sweet Corn

With jaded winter appetites hungering for such spring dishes as roastin' ears, home and commercial vegetable gardeners are advised that no definite date can be given for the safe planting of sweet corn, since the seed will not germinate or grow until the soil is fairly warm, according to B. L. Weaver, of the department of horticulture, University of Illinois, college of agriculture.

Planting a number of varieties which vary as to time of maturity is a recommended method of obtaining a succession of roasting ears throughout the season. A good succession of white corn may be had by planting Howling Mob, Early Evergreen, Stowell's Evergreen, Narrow Grain Evergreen or Country Gentleman at the same time. A succession of yellow varieties may be obtained by using Purdue Bantam, Golden Bantam, (Bancross), Golden Cross Bantam and Yellow or Golden Evergreen.

Yield and uniformity are much greater where hybrid seed is used. Hybrids, because of their vigor and possibly because of some inherent resistance, may be less susceptible to bacterial wilt than open-pollinated types.

Selecting New Flock

Poultrymen who are selecting their new breeding flock, if they are planning on raising their own baby chicks this spring, says D. D. Moyer, of the Missouri station, should retain only those hens which are healthy. Hens which have laid well certainly should be included. Satisfactory future breeders are also indicated by thoroughly bleached skin in the case of yellow skinned breeds, and an old, dry coat of feathers, a sign of late molting. Pullets to be used should have large, rugged bodies, well covered with muscle and fat.

They should show early sexual maturity by well developed comb and wattles, and a large, pliable abdomen with flexible pin bones that are spread apart. A healthy flock should be the aim of all poultrymen.

Higher Farming Costs

Labor and products bought by the farm in 1937 are predicted by the Department of Agriculture to cause a sharp increase in the cost of farming. Price for feed for live stock and seed will stay high until the crop of the 1937 season replenishes the present drouth-reduced supply. Farm machinery, fertilizer, and building supplies are expected to advance some in price due mostly to the increased cost of labor and material.

Keep Brood Sows Gaining

Brood sows should be kept gaining at the rate of about one pound per day up to farrowing time. Difficulty in farrowing, pig eating and poor milk flow are often traceable in inadequate rations, states a writer in Wallaces' Farmer. A good ration includes about a pound of oats per sow daily, a small amount of protein supplement such as tankage or soy bean meal, free access to legume hay and enough corn to put on the desired gain.

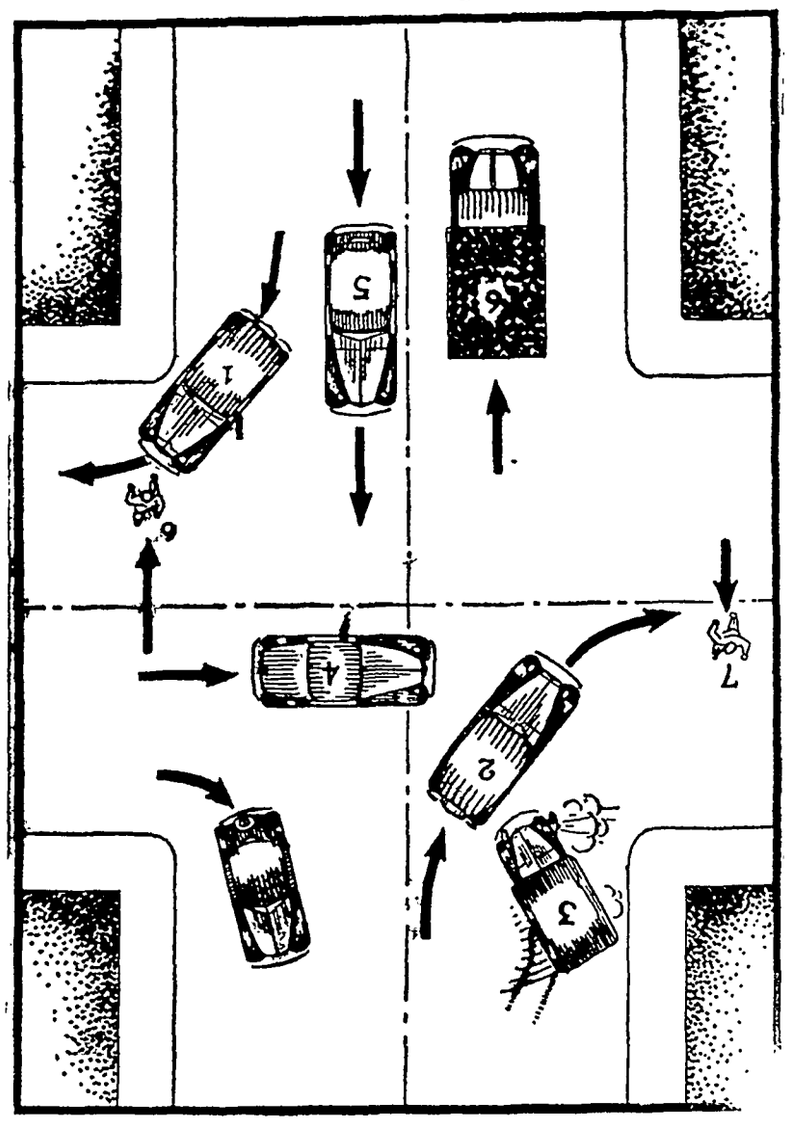
Observe Pedestrian's Rights At Crossings



Observe Pedestrian's Rights At Crossings

General confusion results at a street intersection when some driver fails to observe regulations made for the safety of motorists and pedestrians When crossing the street at an established intersection, and if he is observing traffic rules, a pedestrian has the right of way over vehicular traffic The driver of car No 1, making a right hand turn, must permit pedestrian No 6 to continue safely to the curb before proceeding Study the danger that confronts pedestrian No 7 Driver of car 2 is evidently one of these bull-headed rush and jam drivers who have no thought of their own safety or the safety of others Making a right hand turn from a left hand traffic lane, the driver of car No 3 is plainly in danger of a smash up Unless pedestrian No 7 is quick on his feet he will likely be run down The only possible driver car No 2 could plead would be ignorance If that is the plea of every driver who commits this violation the country is over-run with ignorant people It is a self evident fact that an officer can not be stationed at every street intersection The problem of safety at these points then devolves upon the motorists themselves

Some drivers who break all rules of etiquette when behind the wheel of their car are very thoughtful and courteous in their business and home surroundings. **Be As Courteous When Driving As You Would Be To Guests In Your Home.**

Copyright, 1937 P. L Cummings, Des Moines, Iowa

QUESTIONS

1 What violations are being committed by Car No 2?

2. Is the driver of car No 2 making a left turn correctly?

3 What is the right of pedestrian No 6?

4 Is the driver of car No 1 observing safety regulations?

5 When should hand signals be used?

6 If the driver of car No 5 desires to turn left what should he do?

7 Why should the driver of car No 2 be prosecuted?

8 Should car No 3 collide with car No. 2 who would be at fault?

9 Should an inexperienced driver attempt to drive in heavy traffic?

10 Are many accidents caused by poor vision?

ANSWERS

1. Turning right from left hand traffic lanes; cutting in; failure to use hand signals

2. Yes car in proper position Signalling for left turn

3 Pedestrian No 6 has right of way over car No 1

4 Car close to the curb; yielding right of way to pedestrian; signalling a right turn indicates he is a safe driver

5 When turning right or left, slowing down or stopping

6 Signal of his intention to turn

7 He is a menace to all traffic on the street

8 The driver of car No 2.

9 No His knowledge of regulations might be faulty, or judgement of speed and distance poor

10 Many fatal accidents are attributable to obscured vision by fog, snow, parked cars, etc as well as color blindness and poor eyesight.

A BICYCLE BUILT FOR TWO

and Burlap Spring Suspension

– Follies of the Gay 90's

C&E

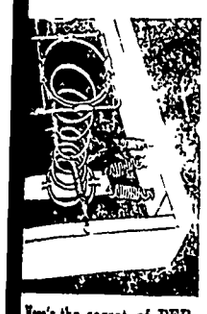
PERMALUX

All-Steel SPRING SUSPENSION

When Uncle Hector took his girl out for an airing on a bicycle built for two . . . burlap and twine spring suspension were quite the thing for "parlor" furniture. But in these more modern days, living room suites must be made of sterner stuff . . . PERMALUX *All-Steel Spring Suspension*, for example . . . the greatest improvement in furniture design in 50 years! Suites made the PERMALUX way are softer more luxurious . . . and longer-lasting than suites made with webbing spring suspension.

Every spring is securely seated in strong "floating" steel bands. There is NO twine or burlap to stretch or wear out. Seats cannot sag. The entire spring assembly is steel with silver-white finish, and open to full view. Sanitary GUARANTEED to outlast the upholstery and the frame.

Be sure to see our smart new PERMALUX designs and models You'll love their rich luxury. Terms to suit every budget.



Here's the secret of PERMALUX' unusual luxury! Every spring anchored in "floating" steel bands!

Milan Calls Cathedral Eighth Wonder of World

The people of its city which has been there since 400 B. C., call it the eighth wonder of the world, and they lack interest in the other seven. It is a cathedral of duomo which accommodates over 40,000 persons. It covers an area of 14,000 square yards, and its tower is 360 feet from the street below.

It is constructed of white marble, and on the roof there are over 100 turrets, while on the outside walls are carved in white marble over 2,000 statues Its stained glass windows are the largest in the world

The builders began it in the Fourteenth century, notes a writer in the Boston Globe but it was not finished until 1813, over 300 years in building its stupendous beauty.

The floor is mosaic marble of different colors, and owing to the centuries it took to finish, various styles of architecture are in it.

The city has over 1,000,000 inhabitants and is noted for one of the most famous, if not the greatest opera house in the world.

Taine said, "This is the true Christian temple. If I were a pagan asked to surrender my worship in an ancient forest and accept a religion to chant hosanna beneath a vaulted roof of stone, I would choose this duomo and this only—there is no other."

Milan Cathedral is unique.

Girl Kidnaped Long Ago by Indians Wed to Chief

There was kidnaping as far back as 1778 It was November 2, in that year, says a writer in the Philadelphia Record, that five-year-old Frances Slocum was kidnaped by Delaware Indians from her home in the Wyoming valley.

Not for 57 years did her family find her in an Indian camp near what is now Reserve, Ind The story they learned was amazing.

She had grown up as an Indian, adopted Indian thought, customs and beliefs, learned their traditions, married a chief of the Miami tribe and had borne four children. She had forgotten her native tongue, remembering only the name Slocum.

Even her character was molded by the association, and she greeted her long lost brothers and sisters with stoical indifference.

She recalled her childhood days on the banks of the Susquehanna, her family, the details of the abduction But nothing could make her go back to live with white people She had been treated kindly, she said. An Indian she had become, an Indian she would remain And she did.

Tram, Street Railway

Encyclopedia Britannica defines tramway as a "track or line of rails laid down in the public roads or streets along which wheeled vehicles are run." Tram is the British equivalent of street railway and the old country term is used in some American cities, notably Denver. According to the reference work, the name tramway appears to be of Scandinavian origin and primarily to mean a beam of wood. In lowland Scottish "tram" was used both to mean a beam of wood and specifically such a beam employed as the shaft of a cart. The name is often given in England to the wheeled vehicles used for carrying coal in mining. In 1555 a will referred to a log road as a "tram."

Time For Action

By RAYMOND PITCAIRN

National Chairman Sentinels of the Republic

While official Washington wrangles over the tax burden and possible methods of retrenchment, the Government shows no signs of reducing its costliest feature.

That is the long, long payroll composed of public jobholders.

During the month of March, for example, while economy discussion crowded the news columns, the Executive branch jumped its payroll by 2860 employes—reaching a total on March 31 of approximately 830,000.

That's bigger than the population of at least ten of our states. And it doesn't includes employes of the legislative, military, or judicial branches of the Federal government.

Their inclusion would raise still higher the total of Federal jobholders —all paid regularly out of public funds charged against the American worker and earner.

For March, alone, according to official reports, the bill exceeded $128,000,000.

Naturally the public asks why, with so much talk of economy, something isn't done to lighten this particular burden.

Nor is the public alone in its question.

Various commissions, including at least one Senatorial group, have recommended a plan of reorganization which, by eliminating some excess bureaus and merging others, could assure real progress toward efficient and economic administration of our national affairs.

But so far as Congress itself is concerned, there has been little, if any, action on this proposal.

Independent studies have approved the plan. A committee of Senate members recommends it. The public demands economy. Apparently only the beneficiaries of Bureaucracy themselves are opposed.

Whatever program of retrenchment may ultimately be adopted—whether it follows this or some other practical plan—the time has definitely come for Congress to stop talking economy and to act instead.

For the past eighteen months, Minnie the cat has been receiving a pay check of $3 20 a month as official mouser for a Standard Oil refinery at Bayonne, N. J.

After taking two drinks of bootleg whisky, James Darham of Chicago thought he was a fish, and was arrested for trying to swim in the street.

THE KING SETTLES DOWN TO WORK

George VI Faces Task of Dignifying Monarchy by Emulating His Late Father, but It Should Be Easy for Him.

It takes more than an incident like the reign of Edward VIII to upset the Crown of England, but it did tip ever so little. The task of the government and the present monarch is to set it straight again.

George VI and Queen Elizabeth, now that the pomp and circumstance of the coronation is a thing of the past, face the task of satisfying the British heart by emulating King George V and Queen Mary.

By WILLIAM C. UTLEY

NOW that the coronation is over—what of the newly-crowned king and queen? Their "big day" past, will they retire into that quiet dignity of family life and imperial duty which has characterized British ruling families for a hundred years, with the exception of a brief, but recent, period?

That is just what they will do For that is just what the British government intended they should do when it so swiftly moved to rid the Empire of the eldest son of George V, that his brother might be hurried to the throne.

George VI and Elizabeth have a job cut out for them: That is to live and reign just as nearly as did his parents as they possibly can. Only by such a program can the Crown, greater in significance than any king who wears it, recover completely from the jolt its dignity received under Edward VIII.

So long have British kings been above reproach, above even criticism or controversy, few who recognize the task now set before George VI also realize that he is not the first of his line to have faced it. Indeed, Queen Victoria, a hundred years ago, successfully undertook to restore the dignity of the crown in the face of a far greater crisis than the present one, if the present can be called a crisis at all. Queen "Vic" had to undo the bad work of a whole series of incompetent rulers.

Crown Is Symbol.

In this case the Crown has only tipped ever so slightly. But for the safety of the Empire it must not be allowed to tip at all. The immense job of promotion which the government applied to the coronation—which would not have been nearly so magnificent or well-attended had it not been for the events of the preceding year—was the second step in righting it. The abdication of Edward was the first.

It will not do here to go into the actual meaning of the Crown itself in too great length, for that has been done time and again in the American press during the weeks leading up to the coronation. Suffice it to say that the Crown is a symbol of the emotional bonds which hold the Empire together The dominions and territories which make up the Empire remain in it because they cherish the protection of the British navy or the advantages of British trade, or because by nature or blood they are fundamentally British. But they are governmentally independent states; the actual expression of their unity is found in their love for and allegiance to the Crown The Crown in itself is virtually abstract. The man who wears it provides them with a real, respectable person, a concrete object for their devotion—if he is the right sort of ruler.

When Edward ascended the throne, the Crown had enjoyed three rulers in a row who so perfectly exemplified the British ideal that Britons had begun to believe the monarchy itself (not the monarch) was permanently perfect. The short reign of Edward jarred them abruptly out of this misconception. Such an idealistic view of the monarchy also increased the public indignation to his shortcomings all out of proportion to their importance.

Falls Readily in Line.

Edward VIII became openly, sharply criticized in a manner entirely foreign to his three predecessors. The fact that the press had withheld reports of his romance with Mrs. Simpson and the impending crisis until only eight days before he abdicated only served to increase the shock when it did arrive. The prestige of the monarchy suddenly dropped to the lowest point in many years.

George V was known as a father to his people, a family man, a figure of the court and a country gentleman. His second son is already much like him, although he is of another generation, more progressive in many activities—but all of them highly respectable and commendable. He is not destined to furnish anything new for the gossips, once they run out of wind.

At forty-one (a fresh, boyish forty-one), he has reigned six months and in that short time has returned a dignity to the throne worthy of the best efforts of a much older and more experienced man. He seems willing enough to fall in line with the idea that he should emulate his late father.

He goes to church regularly and has brought back to the Buckingham Palace chapel the daily prayers that were absent during the reign of his brother. Whether prompted by the case of Edward or by the strict rules of the Church of England, he has made the slightest suspicion of divorce excuse to refuse anyone aspiring to the honors of the court.

That he may have expert advice in following his father's footsteps, he has returned to the post of private secretary to the king his father's life-long friend, Lord Wigram. Other members of the old king's household have likewise returned. The country seat of the family at Sandringham, Norfolk, will be carried on as it was under George V. The tenants who left under the "economy" of Edward are coming back. Even his father's racing stable and loft of pigeons are to remain intact.

Newspapers of England have helped him to build up the resemblance to his father by calling attention to it at every opportunity, even to the statement that his signature, "George R. I.", is penned in strikingly similar fashion to the way his father wrote it, despite the fact that he prints the "R. I." while his father wrote it in longhand.

Has Retiring Nature.

He is expected to become, indeed he has become, admired by Britons for the way in which he has surmounted personal handicaps. He is quite at ease in public today, despite the semi-retirement long forced upon him by illness which required his quitting the navy and by stammering which all but tied his tongue. An operation upon his stomach restored his health some time ago, until he has become an accomplished athlete, and persistent training under an Australian specialist so corrected his stammering until today he rarely ever does it, except under the most exciting conditions.

Long subjection to the more dynamic personality of his older brother as well as long periods of ill health have left him with rather a retiring nature, so that there is likely to be no more idle gossip about him than there was about George V. The raciest tales told about him concern his revealed ability to cuss when some sailors interfered with his shark-fishing and when the microphone failed in a public hall where he was speaking. Oh, yes, and the time at college when he was fined for smoking in the street while wearing cap and gown.

Yet in some ways he differs from his sire. He does not live quite so much the life of the court; rather would he spend the days in the country, at his great, white house in the park at Windsor, with the queen and his children.

He has the interest in industry that characterized Edward in one of his moods. He frequently inspects electrical plants, cotton mills, textile factories, telephone offices, warehouses and shipyards, and he knows every industrial section, every slum, in Great Britain. These have proved a valuable post-graduate course to Cambridge, for there he developed a real interest in the problems of capital and labor. Housing, citizenship, property and state, and welfare were other subjects which were important among his studies.

Elizabeth Follows Mary.

George VI is definitely of mechanical bent. He served in the forward turret of twelve-inch guns on the battleship Collingswood in the battle of Jutland. He can take an automobile apart and put it back together without having pieces left over. He is a good airplane pilot. He loves to operate model railroad systems and motion picture cameras. He has even been known to take the throttle of an actual railroad locomotive.

Queen Elizabeth should do equally well in her task of filling the shoes of Queen Mother Mary. She's a gal after Mary's own heart. The fact that she is the first commoner to become queen in 250 years further endears her to the British imagination.

Elizabeth's family is one of a type that every commoner knows and admires. Her brothers are not captains of regiments, but captains of industry, one of them chairman of one of Durham's largest coal-mining firms. Her family rates high in Scotland, but no member of it would think of approaching her at any court function.

Just as she is the first commoner queen since Henry VIII took Catherine Parr as his sixth wife in 1543, she is the first woman of Scotland to become queen since Henry I married Matilda of Scotland in 1100.

Never a "modern," Elizabeth shied away from most society, was noted for her lack of interest in fancy clothes. She was small in stature and rather plump, with a flashing smile and a pleasant freshness of manner; in short, she was a simple country girl. Since becoming queen she has been observed to become more particular in her dress and more interested in society.

Enjoys Boys' Camp.

Like King George, she loves to visit among the people, is frequently seen at orphanages, hospitals and the like. George is particularly interested in institutions of this kind, especially when they concern boys, for he is still a boy and an active one at heart.

One of the chief pleasures of the king's life is the annual summer camp for public school boys and working boys which he established shortly after leaving Cambridge. He likes to visit it himself and the year 1934 is the only one since establishment of the camp when he has failed to accompany the youngsters.

Donning shirt and shorts immediately upon arrival, he mingles with the crowd, swaps stories with them and is a well-loved figure in the campfire gatherings of an evening.

These are not the only times when he has become surprisingly human. More than once, the story is told, crowds waiting for him at a railroad station have been shocked and delighted to find him alighting from the cab, grimy with grease and dirt, rather than stepping clean and white from a comfortable coach.

But these things will probably occur much less often now that he has dedicated himself to becoming a carbon copy of his father. That that is certainly what he intends to do is further proved by the latest reports from London:

He is reported to be growing a beard. The crown is safe!

© Western Newspaper Union.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building Washington, D. C.

Washington.—The nation is continuing to witness labor disturbances of an exceedingly serious character. Many persons thought when the big sit-down strikes in the automobile industry were settled without serious bloodshed that we were on the way out of labor trouble in this country. The feeling in this regard had some confirmation when the great United States Steel corporation reached an agreement by which John L. Lewis and his faction of organized labor was recognized as the sole bargaining agency on wages for the greatest single unit of steel.

More Labor Troubles

Unhappily, those circumstances were not indicative of an end. They did not presage peace between labor and employers. The conflict is continuing and, I believe, holds the elements of much more danger than we have yet experienced. Because of the conditions that are now apparent and those which happen to lie ahead, the recent speech by Edward McGrady, Assistant Secretary of Labor, becomes both interesting and significant. Mr. McGrady, it will be remembered, made a speech at Atlantic City, New Jersey, in which he said boldly to the members of the garment workers union that if labor and capital both are to survive, there must be a sincere effort on the part of each group to understand the problems of the other. He reduced the differences between employer and employee to the simple formula, namely, that representatives of each side, if they expect to do justice by their own people, must sit down at a table and talk things over honestly.

Now, the Assistant Secretary's interest in labor cannot be questioned. He is a former official of organized labor. During his term as Assistant Secretary he has been exceedingly active and earnest in his attempts to solve labor problems and bring about industrial peace. His efforts at conciliation cover the range from the bitter maritime strike on the west coast to the more or less inconsequential sit-down strike of a hundred employees in a hotel here in Washington.

So, it seems thoroughly fair to assume that any advice given by Mr. McGrady must include absolute justice for the workers.

Mr. McGrady believes that the irresponsible practices which lead employers to treat labor representatives as agitators are due to ignorance. On the other hand, you cannot help reading between the lines of his recent speech an inference at least that he regards some labor representatives as quite as irresponsible as some employers. His view in this regard is indicated by the stress, the emphasis, which he laid upon the importance of discipline among union members together with his assertion that labor must recognize the sanctity of its contract with the employers just as much as the employers must recognize the validity of their contract with labor.

Mr. McGrady pointed out what losses result from shut downs or strikes and declared that the efficiency in production, which the country has a right to expect from industry, cannot be achieved unless labor and capital work together.

Further, the Assistant Secretary observed that "responsible labor leadership" must place efficiency and elimination of waste and loss among its objectives if organized labor is to achieve a worthwhile goal.

* * *

Mr. McGrady's exposition of his conception of relations between employer and employee comes as something of a ray of hope to the great masses of American citizens who are neither employers of labor nor members of labor unions. I have said in these columns before and I repeat that the tragedy of conflict between employer and employee, organized capital versus organized labor, lies in the fact that there are millions of people in the role of innocent bystanders. They are the individuals who suffer most. It is inevitable that they must suffer because in a nation whose commerce and industry is as complex as ours, every time capital or labor abuses the powers entrusted into its hands, those who are not members of either group pay a penalty which is not possible of measurement.

See Ray of Hope

This characteristic of life obtains not alone in the United States. It exists in every civilized country to the extent that that country is industrialized.

There is no better evidence of the truth of the statements I have just made than an incident which occurred a few days ago in the house of commons in London. Stanley Baldwin, prime minister of England, and one of the most powerful men among foreign statesmen today, called attention to "a dark cloud" which he saw on the economic horizon of time.

Mr. Baldwin was speaking to his colleagues in the house of commons something in the nature of a valedictory because he is soon to retire from public office after three decades of service to his government.

I happened to have had the privilege of close contact with Mr. Baldwin when he headed his country's debt refunding commission to the United States more than fifteen years ago. From that association I learned to respect his mental capacity and his ability to foresee coming events. When he says, therefore, that labor and capital must be honest with each other, I cannot help feeling that Mr. Baldwin foresees the possibility of bloody clashes and unsound results in the offing, conditions that will flow from the abuse of power.

Mr. Baldwin told the house of commons that: "You will find in our modern civilization, that just as war has changed from being a struggle between professional armies with civilians comparatively uninterested in it, so the weapons of industrial warfare have changed from arms that affected comparatively small localized business into weapons that affected directly those who have no concern whatever with the issue except perhaps natural sympathy with their own class."

The British prime minister added that, under such circumstances, "the one thing we must pray for, not only in our statesmen, but also in trade union leaders and masters, is wisdom." It seems to me that Mr. Baldwin's admonition can be uttered from high places in our American government with a value just as important as he gave to his words. The fact that Assistant Secretary McGrady has been the only public official to speak so frankly and so honestly is comforting, but it is to be deplored that he alone has spoken.

* * *

Since there are ominous signs in a class struggle that unfortunately has been promoted in this country, it seems to me the attention of the people ought to be directed somewhat more to conditions in congress. Some months ago I wrote in these columns my fear that the current session of congress was going to leave a rather dull record for having done nothing. Thus far, my fears have been justified to the fullest.

Nothing Doing

Congress went into session in the first week of January. To date, therefore, it has been in session five months. Its record of accomplishments includes passage of four appropriation bills, providing money for federal government departments; the Guffey-Vinson little NRA coal law and the cash and carry neutrality law. I do not see how anybody can be enthusiastic about those accomplishments. Passage of appropriation bills is mere routine usually because in most cases they involve no controversial question at all. Passage of the neutrality act likewise was an action about which there could be little dispute even though there may have been plenty of grounds for disagreement over the type of law enacted. That leaves, therefore, only the Guffey-Vinson coal bill over which there could have been much delay in house or senate debate. All of this makes the picture look even worse for congressional leadership.

There is talk already about adjournment of congress as soon as hot weather strikes Washington—and the temperatures can get very high and unpleasant. While this undercurrent of talk is not yet in an important volume, it emphasizes the fact that there is a growing body of legislators who see no possibility of accomplishing anything worthwhile in the current session.

But what are the reasons? Having gone rather thoroughly into this situation, I think there are two factors to be considered. One is the lack of capacity of the leadership among both Democrats and Republicans and the other is traceable to the White House. President Roosevelt for four years has told congress what to do and to that extent has destroyed the initiative of the legislators as a body and now that some members want to reassert the power of congress, the President's organized spokesmen appear not to know what to do.

* * *

It may be said that the immediate cause of the failure of congressional leadership to get much of the legislative program out of the way in five months is the controversy resulting from Mr. Roosevelt's proposal to add six justices of his own choosing to the United States Supreme court. That statement, in my opinion, is only partially true. There are many senators and representatives, otherwise loyal to the President, who now feel that the court re-organization plan cannot be put through. But those spokesmen thus far have not advised the President frankly of their views and in consequence the court bill is still in the way. To that extent, then, the legislative leadership has lacked courage and Mr. Roosevelt has remained adamant, which possibly charges him with some responsibility in the legislative stalemate.

SUNDAY SCHOOL Lesson

By REV HAROLD L. LUNDQUIST.
Dean of the Moody Bible Institute of Chicago.
© Western Newspaper Union.

Lesson for June 6

JOSEPH'S READINESS FOR SERVICE

LESSON TEXT—Genesis 41:33-44.
GOLDEN TEXT—Seest thou a man diligent in his business? he shall stand before kings. Proverbs 22:29.
PRIMARY TOPIC—Joseph's Errand.
JUNIOR TOPIC—Joseph Goes Before the King.
INTERMEDIATE AND SENIOR TOPIC—Ready to Serve.
YOUNG PEOPLE AND ADULT TOPIC—Preparation for Public Service.

Public service—that position of opportunity and responsibility—merits far better treatment than is commonly accorded to it, for we know only too well how often it is nothing but a political football carried hither and yon as the dictates of partisan purposes may indicate.

Scripture holds a very exalted view of the public servant. Paul tells us to "be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God" (Rom. 13:1). The Bible clearly teaches that every governmental agency and every public servant from the policeman on the beat to the President in the White House, is only permitted to exercise authority over his fellowmen because God has ordained that there should be such government. Clear it is that every right-thinking official of state and nation should be humble, teachable, discreet, and wise in the exercise of his power, and God-fearing in the discharge of his responsibility.

Joseph, the one in the procession of the patriarchs of Genesis who passes before us in the lesson today is interesting from many angles His personal history is charmingly written and a model of appealing biography. He is a marvelous type of Christ, and one could devote hours to such a study of his life. But our lesson subject presents him as one ready for public service, and we may well profit by the lesson. He is an example of what men who serve their country should be.

I. Before God—Humble and Teachable (vv. 33-36).

The background of our lesson is found in the four preceding chapters. Joseph, the boy with dreams and aspirations, has learned obedience, humility, purity, and many other useful lessons in the hard school of experience. It has well been said that the tuition of that school is high, but the lessons are well learned.

Now he stands before the king to interpret a double dream, sent as a warning to the nation. The wise men who knew not the true God had vainly sought to answer the king's questions. Joseph sets them and us an example—he receives instructions and guidance from God, and speaks wise words because taught of him. Would that all those who stand as counsellors before kings and presidents in our day would listen for the voice of God before they speak.

II. Before Men—Spiritual, Discreet, and Wise (vv. 37-39).

Pharaoh recognized that the Spirit of God was in Joseph. That is a great testimony for Joseph, and at the same time it reflects credit upon the king. Who can say what would be the result if our government officials were chosen for their spirituality?

Spirituality is not the only qualification, however, for such service. The Christian who expects men to favor him because he is a Christian, even though he be careless and incompetent, finds no comfort in the study of Joseph. He was discreet and wise. The follower of Christ should distinguish himself by diligent and intelligent application of all his powers to his work. Then men will honor both him and his God.

III. In Service—Responsible and Powerful (vv. 40-44).

He who had humbled himself under the mighty hand of God was exalted in due time. (See I Peter 5:6.) Joseph was willing to abide God's time, and did not run ahead of him as did his father, Jacob.

The record shows that he used his place of honor and privilege to perform a difficult and arduous task and to do it well. Right-spirited men do not glory in position or power, but use the opportunity to give themselves in sacrificial service to God and their fellow-men. Someone has aptly said that a politician is one who has his eye on the next election while a statesman has his eye on the next generation and its welfare. God give us more statesmen!

Never Despair

Let no man despair of himself. We may be sepulchres full of dead powers; but Christ is the resurrection and the life, to make us shrines full of living, seeing, soaring, rejoicing thoughts and passions.—Dr. W. L. Watkinson.

Advantages of Tact

Without tact you can learn nothing. Tact teaches you when to be silent. Inquirers who are always inquiring never learn anything.—Disraeli.

Fashions to Pep You Up!

HERE'S spring tonic for you, Miss America, done up in fine formula by Sew-Your-Own! The ingredients are bracing and please the taste.

The model at the left is the type to take right away before spring advances further. It is especially beneficial to the willowy figure with its alluring swing and grace, its delicate waistline, becoming collar and stylishly cuffed sleeves. Any of the lovely sheers will do well here.

Miss Athletic Girl.

The center package is labeled Miss Athletic Girl. She goes for it because without fuss and furbelows it still is feminine. And, too, she knows that the smart lines down the front and back are not gores but tucks which give the same stylish effect, and necessitate half the effort, thanks to the clever designing of Sew-Your-Own.

A Builder-Up.

Upper right is the Builder-Up for the younger Lady of Fashion. Because of it and her other Sew-Your-Owns she will go down in the Year Book as the Best Dressed Girl in the class the first thing she knows. This two-piecer has style unmistakable in its absolute simplicity of line, round collar so tiny as to be a mere suggestion, and in the perfect balance of its flared sleeves, peplum, and skirt.

The Patterns

Pattern 1257 is designed for sizes 12 to 20 (30 to 40 bust). Size 14 requires 4⅝ yards of 39-inch material plus 11 yards of bias binding for trimming as pictured.

Pattern 1288 is designed for sizes 14 to 20 (32 to 42 bust). Size 16 requires 3½ yards of 39-inch material plus 3¾ yards of ribbon for trimming as pictured.

Pattern 1294 is designed for sizes 8, 10, 12, 14, 16 years. Size 10 requires 2⅝ yards of 39-inch material.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

Come to Your Task

COME to your task with purpose high,
And uncomplaining mind;
Look to the days that onward lie,
And surely you shall find
Your just reward—a rest well won,
A quiet heart, and Heaven's "Well done!"

Come to your task, what'er it be.
And bring the best you know,
A will unbound, a nature free,
And so in stature grow,
Until, as all God's laborers can,
You reach the measure of a Man.

—A. B. Cooper.

My Favorite Recipe

By Janet Gaynor
Movie Star

Ice-Box Cookies

1 pound butter
5 cupfuls flour
1½ cupfuls sugar
3 eggs
Dates and nuts to suit
Vanilla flavoring

Cream the butter and sugar. Add the eggs, one by one, beating the mixture meanwhile. Add the five cupfuls of flour gradually while beating the mixture. Add the dates and nuts, which have been previously chopped into small bits. Add the flavoring.

Shape this into a roll. Put in the ice-box overnight. In the morning slice into thin layers, making the cookies, and bake in a moderate oven.

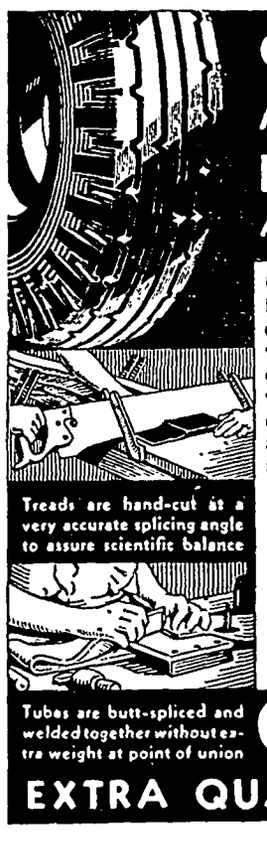
Corduroy's EXTRA QUALITY Makes Possible Corduroy's EXTRA GUARANTEE AGAINST ROAD HAZARDS, ETC.



Treads are hand-cut at a very accurate splicing angle to assure scientific balance
Tubes are butt-spliced and welded together without extra weight at point of union

Corduroy's extra quality extends to the smallest detail of materials and workmanship. For example, tubes as well as treads, are cut at scientifically accurate splicing angles, then welded together to achieve perfect, permanent balance at the point of union. There is no overlapping; not a fraction of an ounce of extra weight at this vital point. A detail, yes, but tremendously important to every car owner who wants maximum safety and performance at all speeds. It is thoroughgoing EXTRA QUALITY like this that makes possible Corduroy's EXTRA GUARANTEE AGAINST ROAD HAZARDS. Corduroys are sold only through independent merchants.

Flag Day, 1937

By RAYMOND PITCAIRN
National Chairman
Sentinels of the Republic

"It is a whole national history. It is e Constitution. It is the Government. is the free people that stand in the overnment, on the Constitution. For- not what it means; and, for the ke of its meaning, be true to your untry's flag."

That admonition was spoken by a reat American, long decades before e observance of Flag Day on June of each year became our national stom. It gains in significance as the ears roll on.

For the American flag is known to e world as the symbol of human berty. It was born in a struggle for reedom. It has carried that message herever flown—not only over our own ntinent but on all the winds of the orld.

Today much of the world could welcome its message. For freedom and emocracy are still under fire; in many nds the rights of liberty of speech, thought, and of endeavor—symbolized the Stars and Stripes through its entury and a half of existence—are till imperilled.

And from the political scrapheaps of hose nations which exalt domination y the few over government by the many, are frequently imported ideas which, if accepted, could dilute or destroy our own clear concepts of liberty.

Flag Day, 1937, will serve a noble purpose if it reminds us of those things. It will serve a still higher one if it refreshes in all of us the determination to preserve for our own posterity that precious freedom which our fathers won for us, and which their flag and ours still proclaims to all the world.

NEW TRAFFIC LAWS TAKE EFFECT JULY 4

Pedestrian Rules Set Out; 'Thumb' Tactics Limited

When the new Iowa motor vehicle law goes into effect July 4th, pedestrians for the first time will have rights and duties set out by law.

Previously according to Lew Wallace, state commissioner of motor vehicles, courts have established precedents regarding rights and duties of pedestrians, but now the legislature has set aside a place for them in the Iowa code

What are some of these new rights and duties of pedestrians.

For one thing, the new law requires that people walking on or along the highway MUST walk on the lefthand side of the roadway This, according to Wallace, is particularly important at night so pedestrians can see the lighs of cars as they approach on their side of the road

The new law also has a regulation for hitch-hikers which says that "no person shall stand in a roadway for the purpose of soliciting a ride."

The section goes on however, to point out that it is not a ban on hitch-hiking but a requirement that hitch-hikers stay off the pavement or traveled roadway while doing their thumbing

Here are some other points for pedestrians under the new law·

1. Pedestrians shall be subject to traffic control signals

2 Where there are no traffic signals but where there are crosswalks for pedestrians, the pedestrians shall have the right of way in preference to the automobile driver

3. Where there is no crosswalk and no traffic signal. the driver has the right of way

"Notwithstanding " the law says, however, "every driver shall exercise due care to avoid colliding with any pedestrian upon any roadway and shall give warning by sounding the horn when necessary and shall exercise due care upon observing and child or any confused or incapacitated person upon a roadway

REV. WILLIAM ZABILKA IS HONORED BY RECEIVING DOCTOR DEGREE

At the commencement exercises at John Fletcher College at Oskaloosa, Iowa, last Wednesday, the honorary degree of "Doctor of Divinity" was conferred upon Rev William Zabilka, pastor of the Klemme and Liberty Methodist churches

Rev Zabilka graduated from John Fletcher College exactly 25 years ago last Friday.

WEDDING RING LOST 25 YEARS IS FOUND

GOODELL—A wide gold wedding ring found by Mr. and Mrs Gerald Burke in the garden at their farm two miles west of here was identified as one lost by Mrs. William F Bier almost 25 years ago. In good condition, the ring's engraving, "W F. B. to B. A. M L.," was easily distinguishable It was lost a quarter of a century ago when Mrs. Beir was picking groundcherries at the farm which was then tenanted by Mr. and Mrs Bill Deiger.

Methodist Ladies Aid Will Meet Thursday, June 17th.

The Ladies Aid Society of the Methodist Church will meet on Thursday afternoon, June 17th. Mrs. Frank Gruetzmacher, Mrs. N. G. Moberly and Mrs. Emil Patet are the hostesses.

LET'S BE CAREFUL!

On Wednesday and Saturday nights there will be hundreds of children on Klemme's Main Street No doubt parents have cautioned their children to watch out for cars when crossing the streets, but many of the small children soon forget the warning and do not think of the danger when they sometimes dash into the street.

This means that the motorist must use more than ordinary precaution The business section is but three blocks long and by driving slow you will lose only a few seconds and may save a life

How would YOU feel if you were to accidentaly run into a little child and maim it for life, or perhaps be the cause of its untimely death?

THINK IT OVER MR. MOTORIST.

Large Class Of Rural Pupils Awarded Diplomas

133 HANCOCK RURAL EIGHTH GRADERS GET DIPLOMAS MON.

W A Winterstein of Iowa Falls gave the commencement address to 133 eighth grade graduates from the rural schools of Hancock county at Garner Monday forenoon June 7th at 10 o'clock in the high school auditorium Dr C A Fullerton, head of the music department of Iowa State Teachers College, directed the rural school chorus composed of 500 children The Rev T Ernest Hoon, pastor of the Methodist church at Garner, gave the invocation County Supt., J R Baggs awarded the letter "I" to 30 honor students who made an average of 90 per cent or above. Margery Sheets of Hutchins had the highest scholastic honors among those on the honor roll

Liberty Leads Honor Roll

Six Liberty township pupils were among the 30 highest in the county and received honor awards They are Ruth Upmeyer, Jeanne Griffen, Ruth Stille, Paul Huenemann, Virgil Chizek and Mildred Blummer Besides these, diplomas were also awarded to Walter G Greimann, Calvin Hefte, Gertrude Lorenz, Royal Molander, Calvin Schaefer, Edna Spitler, Gordon Upmeyer and Eva Velau

Six Graduates In Ell

Irene Becker and Bernadine Lundy received honor awards and diplomas. Four other pupils received diplomas: Louise Albers, Paul Barz, Adala Wille and Mervin Whitehurst.

Avery Has Seven

Seven Avery township pupils ceived diplomas· Zeola Carpenter, Margaret Carolus, Evelyn Lewis, Maxine Stokesbary, Donald Steenblock, Clarence Trampel and Donna Jean Johnson The latter also received an honor award

Twin Lake Has Large Class

From Twin Lake the following pupils all received diplomas: Stanton Brunes, Mary Dawson, Irene Dirks, Robert Eliason, Betty Neuhring, Bernard Nolte, Elaine Peterson, Doris Rueben, John Schwichtenberg, Arlene Schmidt and Eleanor Ruka. Eleanor was also an honor student.

People spend much time and money to learn Latin when the ability to say "NO" is much more valuable.

THURSDAY NIGHT ENTERTAINMENT IS FEATURE FOR SUMMER AT GOODELL

First Program Was Given Last Week On Thursday Evening

As has been the custom for several years, Goodell will again have free entertainment on Thursday evening of each week during the summer months

Goodell got off to a good start last week Thursday evening when a band concert, musical program and free movies were given.

Under the direction of Miss Phyllis Dougan, a group of local musicians gave a band concert. In addition visiting members of Miss Dougan's family were present and they appeared on the program. Roy, Donald, John and Darwin Dougan played the following instruments respectively· cornet, clarinet, trombone and baritone Miss Dougan also played three numbers on the accordian

Following the music Miss Dougan's class gave three tap dancing numbers. Free movies were then shown on the lot west of the community hall

FINAL CLEAN UP NOTICE

By June 11th have your alleys free from all junk and keep them so. No dumping of Rubbish, dead matter, etc in the streets or back alleys. Flies thrive and develop in this kind of stuff and from flies comes desease and sickness. If you must have a place to dump your refuse get a box or a can or else bury it.

Waste paper, etc. should be burned when dumped. If not it's soon on someone else's property. LET'S KEEP THE TOWN SPIK AND SPAN.

INSPECTION will be made at regular intervals during the summer months by

The Board of Health
Fire Chief
Council
Mayor.

PAUL GRANGE,
Mayor Town of Klemme

DRIVER'S LICENSES IN IOWA MUST BE RENEWED BY JULY 1

With the coming of June there remains but a couple of weeks in which to file application for Iowa drivers' licenses, Mrs. Vic Randall stated last week. The present licenses expire July 1st.

Farm Home Was Scene Of Wedding Thursday

EARL JOSTEN WEDS MISS FAYE LEE

Were Married At Home OF Bride's Parents

(Des Moines Register)

The marriage of Miss Faye Lee, daughter of Mr and Mrs. W B Lee, to Earl Josten of Valley Junction, formerly of Estherville, took place at 4 p m Wednesday at the home of the bride's parents, 1139 Forty-sixth street.

The Rev Thomas H. Gallager of Grace Methodist Episcopal church performed the ceremony in the presence of relatives and a few intimate friends.

Bride's Dress

The bride, who was given in marriage by her father, wore a blue Larkspur lace dress over taffeta and a corsage of Johanna Hill roses and lilies of the valley.

Miss Grace Lee, sister of the bride and only attendant, wore a biege lace dress over taffeta and a corsage of talisman roses Wayne Huntsinger of Estherville served the bridegroom as best man. Paul Nissen of Perry sang and nuptial music was given by Mr and Mrs R L. Caldwell of Estherville

Reception

A reception was given following the ceremony after which the couple left on a wedding trip to Minneapolis, Minn They will be at home at 832 Ninth street, Valley Junction upon their return.

Out of town guests at the wedding were Mr. and Mrs J R. Braithwaite of Bolivar, Mo. R. B Lee of Miami, Okla., John Josten. Erick Josten, and Mr and Mrs C A Larsen and daughter, LaVohn, all of Klemme; Miss Gladys Baldus of Jewell, Mrs. Paul Nissen of Perry and Misses Mildred Vedder and Frances Hageman and Tone Kately, all of Estherville

THE MOVIE SHOWS Better Than Ever

Open-air movie shows are being held in Klemme each Saturday night as usual, from now until the weather gets cold this fall

For several years it has been possible to run Free Shows and the merchants of Klemme have been pleased to pay the price and favor the public in this manner.

But the companies who make and distribute the films never favored free shows They said it hurt their business in larger towns, and they always fought the idea of running free pictures.

This year, it seems the Film companies have got their heads together and combined against us and refuse to furnish films for free shows. Therefore it will be necessary to run paid shows this season, Adults ten cents, Children twelve years and under free Five dollars in cash will be given away at the close of each show.

However, since we must change, the merchants are putting up just as much money as before, so that we get new and better pictures

Our operator has two new projecting machines (instad of one old one) with double sound equpiment. These machines throw an extra bright picture on our extra large screen and the show is continuous with no stops. It is in every way a twenty-five cent show which you are getting for ten cents.

We invite you to attend and feel sure you will be pleased with the beter shows.

AURTHUR WELLEMEYER
Mgr. of Movies for Merchants

Are Visiting In Indiana

Dr. Dye and family, of Goodell, left Sunday afternoon for Indiana where they will visit their people in Logansport, Indianapolis and Columbus for two weeks, returning in time to fill the pulpit Sunday, June 20th.

YOUNG KLEMME PEOPLE TOOK MARRIAGE VOWS THURSDAY AFTERNOON

Emma Kothenbeutal Became Bride Of Ronald Barz At Home Wedding

The home of Mr and Mrs Fred Kothenbeutal, who reside west of Klemme, was the scene of a pretty wedding last Thursday afternoon at 2 00 o'clock when their daughter, Emma, became the bride of Mr Ronald Barz, son of Mr and Mrs Fred Barz who reside northeast of Klemme. Rev Calvin Grosshuesch, pastor of the Klemme Reformed Church, performed the ceremony.

The home was appropriately decorated for the occasion, the color scheme being coral and white. The wedding vows were exchanged under a coral and white arch.

The bride wore a coral color net dress and carried a bouquet of white roses. She was attended by Miss Doris Barz, sister of the groom Miss Barz, the bridesmaid, wore a floor length light green dress.

The groom and his best man, Harold Kothenbeutal, brother of the bride, both wore light gray suits.

The wedding party took their places while the Wedding March was being played by Miss Ethel Barz

At the close of the afternoon a delicious lunch was served. A wedding cake, decorated in coral, was used as a center piece at the bride's table.

In the evening a large crowd gathered at the Garner Opera House where a dance and reception was held in honor of the newly married couple.

Mr and Mrs Barz were both raised in this community where they attended our schools and took active part in Sunday School and church work They will reside on a farm near Klemme, where they will soon be at home to their many friends.

Home From Hospital

GARNER—W E Trafford, farmer east of Garner who was seriously injured when the truck he was driving was struck by a west bound Milwaukee freight train several weeks ago, was released from Park hospital, Mason City, last week. Mr Trafford was brought to his home in an ambulance and will be compelled to remain in his bed for some time. The horse he was hauling in the truck was instantly killed and the truck demolished

WILL GIVE EXAMINATIONS FOR DRIVERS EVERY MONDAY

Effective June 14th, 1937, Driver's license examinations will be held at the Court House at Garner every Monday from 8:30 a. m. until 4:30 p m

METHODIST EPISCOPAL CHURCH

William Zabilka, Pastor

Monthly birthday supper and social Monday evening.

Ezra Wilson, silversmith of Greenfield, Ind., is still operating an automobile he built in 1910, and in which he has never allowed a woman to ride.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG WASHINGTON, D C

Washington.—I have frequently mentioned in these columns the problems that have confronted and continue to confront the commerce and industry of the United States. However one may regard the ethics of the business interests of the nation, I think everyone must admit that business has its problems that are just as serious as the job of earning a living is to you or me. This has been especially true during the period of the depression and it is equally true at this stage of economic recovery.

Business Problems

Business, moreover, is affected to a greater extent than you or me by any governmental policy that is pursued or any legislation that is enacted by congress or by state legislative bodies. In consequence, it seems to be a fair statement to say that business lives by the will and the whim of the elected representatives whether those representatives be local, state or national.

Those observations should demonstrate fully the importance of one piece of legislation now pending in congress. I refer to the so called permanent sugar bill. Seldom in history, I believe, has a single unit of industry found itself in a position where it is so utterly dependent upon federal policy for its existence as is the case now with those eighteen or twenty plants that refine about seventy-five per cent of all the sugar we use on our tables and otherwise in this nation.

The situation, succinctly, is that President Roosevelt has recommended to congress that it adopt legislation of a permanent character "to protect the interest of each group concerned," and assure meanwhile that the interest of the consumer shall have due consideration. Pursuant to the President's proposal of March 1, last, the house committee on agriculture is working out a piece of legislation which seeks to reconcile the differences of all the various interests and make thereby a permanent policy which this country may follow as regards sugar.

It must be remembered that the United States imports something like seventy-eight per cent of all the sugar it consumes. The other twenty-two per cent is produced by our sugar beet and sugar cane farmers—a consequential industry worthy of protection from its government but still quite unable to satisfy demands for the commodity. Some of the sugar we import comes from Puerto Rico; some comes from Hawaii; some from the Philippines, but the bulk comes from Cuba.

Since Puerto Rico and Hawaii are insular territories of our nation, they must receive consideration as an integral part of our nation. The Philippines are no longer a possession and yet there is something of a fatherly interest, or should be, on our part. With reference to Cuba, the United States long has attempted to help the islands economically and politically in order to insure the independence which our nation helped them to establish.

* * *

So it is seen that we have in the sugar problem questions involving (1) a home industry; (2) an industry in an insular possession; (3) an industry in a nation newly born and which we are trying to lead into a position of complete independence and solvency, and (4) the maintenance of our chief source of sugar supply in a nation for which our government yet feels somewhat responsible.

There's Sugar

That summary indicates the complexity of the general problem to be dealt with in the current legislation but the picture omits a most important unit in the industry. I refer again to those plants who must refine the sugar and must make it ready for home use or other consumption.

To make the picture complete, it ought to be recalled that for several years we have had a temporary law which fixed the amount of sugar that could be imported. It was managed through what is called a quota system; that is, the law provided authority for the secretary of agriculture to prescribe how much sugar could come in from each of the regions that I have described. This had the effect of stabilizing sugar prices and guaranteeing to the cane and beet growers of the United States a dependable market. But it had another effect which was shown by the operation of the law, an effect not so painfully evident when the law was enacted. This effect was to encourage the refining of sugar in the areas outside of the United States where the bulk of it was grown. In consequence of that, our own sugar refiners began to suffer and they continued to suffer because refiners operating in Cuba or Hawaii, to mention two examples, were able to employ labor that cost about one-fourth as much as the standard of wages paid in this country. The natural result was that our own workers were thrown out of jobs and the refining industry was running at barely two-thirds of its capacity.

To show by figures what has happened: Imports of sugar, ready for table use came from Cuba to the amount of about one thousand tons in 1925. In 1933, more than five hundred thousand tons of refined sugar was imported. It has grown some since and for every ton imported, naturally the refining plants of this country have had their volume reduced.

* * *

The President wants legislation that is fair to all interests but it seems that some of those interests are desirous of using cheap foreign labor in preference to American labor and they are fighting the President's bill. It is too early to forecast what is going to happen but there is every evidence that American owned sugar companies in some of these foreign areas are doing their utmost to kill the legislation which would substantially reduce the importations of this refined sugar.

Fair to All Interests

Now there is a question of foreign policy that is involved and that part of the situation in congress concerns the State department. The home industry, of course, concerns the Department of Agriculture but there is the Department of the Interior also to be considered because of the insular territories over which it has supervision. On the surface, it is made to appear that the secretaries of these three executive departments are at loggerheads over what shall be done and as far as I can see none of the three is paying much attention to protection of the refining people who have been caught between the upper and nether millstones My conversations with members of the house committee who have studied the problem backward and forward convinces me that congress had better for once do its own reasoning and pay less attention to the three cabinet members, each of whom is seeking to push forward the interests of his own department.

The whole situation can be summed up in one statement; if congress wants to preserve the sugar refining industry in this country (an industry that is more than two hundred years old) it can do so by providing a low limitation on the amount of refined sugar that can be imported and it can protect the cane and beet growers of the United States by establishing a quota of imports of both raw and refined sugar small enough to permit the home market to absorb the complete output of the American cane and beet growers.

I reach that conclusion because I am an American who believes in a self-sufficiency of American industry as far as it is possible to go. I take the position further because no other leading country in the world fails to protect its home industry in the handling of sugar.

* * *

Nearly everyone has realized lately that prices are climbing at an alarming rate. This has gone on over a period of about two years and there is nothing on the horizon to indicate that the top has been reached or that prices are becoming stabilized. You and I feel it, of course, directly in what we pay for the things we buy—shoes or clothing, food, furniture, and essentials for the household.

Prices Climbing

The situation is a bit disturbing for several reasons. For one thing, if prices continue to skyrocket, sooner or later we are going to be confronted with another condition like that of 1929 and no one can doubt that if prices get too high, a tailspin will follow. If there is another tailspin like that of 1929, I am afraid that this nation as such is likely to go to pieces.

Numerous factors are at work to cause the price increases. New Deal policies were formulated, first of all, with the idea of raising prices to bring us out of the depression. President Roosevelt contended it had to be that way.

His program to force prices higher has been eminently successful. In fact, it has been too successful and in that lies one of the grave dangers. Effective means of control are lacking and there is every possibility that the upward movement may reach the stage where it will fall of its own weight.

Another cause of the price inflation has been the labor movement. Throughout the nation, organized labor has been demanding higher and higher wages. I think there can be no doubt but that labor is entitled to higher wages than obtained during the depresssion. But in many cases, according to government records, the demands of organized labor have been so great as to constitute a burden on industry which it cannot carry.

GRASS FLAVOR IN MILK UNNECESSA

Keep Cows From Any Gre Few Hours Is Advised

By Dr. O. F. Garrett, Instructor in Manufacture, New Jersey College Agriculture.—WNU Service.

Nothing puts that desir "June" flavor in milk quite so cessfully as tender green grass, in order to avoid the undesir odor and flavor which nearly ways occurs when cows are turned on pasture, it is necess to observe caution in the pastu practice.

Research workers at the Cali nia and Oklahoma Agricultural periment stations have shown if cows are kept away from ro ages, especially green rougha at least five hours before milk very little of the "feedy" flavor be evident in the milk. This s procedure can be applied to p turing practices. The cows can turned on pasture immediately er the morning milking but should be removed to a dry lot barn at least five hours before next milking.

If this practice is followed for first two or three weeks in spring, there will be very little the undesirable grass odor and vor in the milk. This practice even eliminate most of the wild g lic or onion flavor if these pl are found in the pasture. At same time the cows will ha enough time to consume the nec sary quantity of grass to sup their needs.

To get the very finest flavor milk during the pasture season, i suggested that this procedure be lowed throughout the entire tu

Forcing Breeding Hens By Increasing Prote

Forcing breeding hens by creasing the amount of protein the ration may be done with no effects if an abundance of gre feed is supplied. Recent expe ments conducted at the Oklaho agricultural experiment stati show that the mortality of the bre ers fed green feed was not increas by forcing, observes a writer Successful Farming. Green feed p tects the hatching qualities of eg produced by forced breeders. R tions with a protein content as hi as 28 per cent may be fed witho injury to the hatchability or eggs sprouted oats, alfalfa meal, or so other green feed is fed each da Where forcing is done by increasi the protein in the feed and usi lights, the use of green feed is esp cially important to maintain go advances in the total egg produ tion.

Clean Water for Ponds

A location that will allow drai age from only clean pasture meadow should be chosen for t farm pond, says Marion Clark of t Missouri College of Agricultur Water from barnyards and lo should never be allowed to drain i to stock ponds. Where it is d sirable to construct a pond whe water from lots would normal drain into it, terraces should used to intercept the contaminat water and carry it to another wate shed where it will not pollute t pond water.

Grain Mixture for Poultry

There are several grains or com binations of grains that give satisfa tory results, but the one most com monly used in all sections of th state, says a North Carolina Sta college poultryman, is composed 60 per cent yellow corn and per cent wheat. However, this r tion should be largely governed b what is grown on the farm, and th cost of the grain which must b purchased. Where there is an abu dance of heavy barley (48 pounds the bushel) or heavy oats (38 pound to the bushel) these may be subst tuted for a part of the corn an wheat, but should never exceed per cent of the grain mixture.

Agricultural Notes

Hogs yield a greater proportio of edible meat than any other me animals.

For the past ten years the tobacc crop in the United States has aver aged about 1,350,000,000 pounds grown on 1,740,000 acres and having an estimated farm value of $214 000,000.

...ancy Now Turns to Exotic Cottons

By CHERIE NICHOLAS

...d, OH, OH! Did you ever see anything in the way of fabric dazzling to the eye, so daringly ...ignful, so altogether fascinating ...the new cotton weaves that are ...cing so madly, so merrily, so ...ionably into the current style ...ure?

...ow perfectly they tune into the ...ume needs of carefree summer-...e activities! It is no wild state-...nt to say that an entire wardrobe ...be successfully fashioned of cot-... materials that will carry smart-...hrough active sports and morn-... dress hours, that will answer ...the call for voguish afternoon ...umes, climaxing the around-the-...k program with evening formals ...t are just too lovely for words.

...Cottons for formal wear? Yes, in-...d! The next time you go to a ...ce or nighttime society event, ...nt for your own satisfaction, the ...sses fashioned of one type of ...on or another. You will see glam-...us printed piques, the flattering ...d filmy cotton voiles so in de-...nd at the present moment, dotted ...sses, shadow printed organdies, ...erfine seersucker sheers and oth-...ntrancing cotton weaves too nu-...rous to mention.

...Perhaps after all has been said ...d done it is the amazing cotton ...nts that are of outstanding style ...nificance. For excitement at high ...ch, watch the procession of ex-...s in cotton that are that authen-...ally oriental and superbly color-... you feel that they must have ...led direct from ports in far Per-..., or East India, perhaps Java or ...na, or from Hungary or some ...er central-Europe country, or ...t as likely the print that holds ...u spellbound may be of South American origin, for the latter rank high in style prestige this season.

Do these foreign-looking American-made prints make up effectively in dance frocks? Find the answer in the charming dress pictured to the right in the illustration. This sleeveless evening gown with graceful skirt and with halter-type bodice is made of one of the new Hungarian cotton prints which reproduce old-world textiles. The colors are rich and glowing and there is a gypsy flavor about them and the beads and the bracelets worn are in definite keeping with the trend in the summer mode. Needless to say that the colors of the print are fast to both sun and washing.

Take the thought of the perfectly gorgeous new cotton prints and the thought of the stunning new house coats, such as are proving the big sensation in fashion realms, put the two together and the duo-theme is enough to tempt any home-sewing woman into action. Which is exactly what is happening.

She who loves to go nautical will enjoy making up the beach coat to the left in the picture, which may be smartly used later on as an evening coat or as a house coat. The material, patterned with anchors and other seafaring themes, being properly pre-shrunk will not lose its perfect lines or fit from laundering, neither will the colors lose out in tubbing.

A cool competent play outfit of colorful early American print centers the trio. Being dependably pre-shrunk it is able to take its tubbings cheerfully without tendency to lose shape. The shirt and shorts are in one. The skirt whisks on and off at will.

SEPARATE BOLERO IN LACE IS SMART

By CHERIE NICHOLAS

One of the many reasons for the great popularity of the becoming bolero is its ability to dress up a costume, or to vary it for you. You have only to slip one on over a simple crepe dress to achieve the effect that is especially attractive this year. Boleros are particularly prominent in starched cotton lace, in pastel shades and white. Several of these, in different colors, will enable you to get different effects with a single frock.

The simple, brief bolero would probably be most practical, for the lace pattern gives a dressy effect in itself, and the tailored pattern of the bolero makes it adaptable to all types of costumes. One very attractive design has short puff sleeves, and wide revers, with the short jacket slightly flared. If you can sew at all, it is the easiest thing to make, of little more than a yard of lace. Such a bolero shows off to best advantage over a dress that is fairly simple, whether it be an afternoon frock, or a gown for evening.

Renaissance of Interest in the "Polka Dot" Theme

There is a renaissance of interest in the polka dot theme. There are enormous plate-sized dots with smaller dots scattered around them, all sprinkled with tiny confetti dots in contrasting colors. There are zigzag polka dot arrangements, irregular spacings. The classic polka dot takes on a new look in strange and "dizzy" color combinations for sportswear, such as queer reds combined with strong blues. Silk crepes, silk sheers and silk taffetas are favorite grounds for dot patterns, the companion idea often being carried out in a silk crepe with a silk sheer.

Tassels for Accent

Lavin is successful with a white suit with a swing jacket featuring square box pockets. The armholes are outlined in gay woolen tassels.

STAR DUST

Movie • Radio

★★★By VIRGINIA VALE★★★

THE President of the United States, no less, is the new diction coach at the Selznick-International studios in Hollywood. Whenever President Roosevelt makes an address over the radio, David Selznick has it recorded, and these records are used daily in training actors for voice tests.

Players memorize his speeches, then play the records over and over following his every intonation until they have mastered the art of perfect phrasing. Considering the great charm of the First Lady's recent broadcasts, studios might do well to get records of her talks.

—★—

In recent weeks Carole Lombard has been the busiest young woman in Hollywood, because her Paramount contract allows her to make one picture for another company each year, and all the companies have been sending scripts over to her house for her approval. There were such grand stories in the lot that Carole wants to make at least three of them.

Carole Lombard

Her first flight away from the home studio will be at Selznick-International where she will play in "Nothing Sacred" opposite Fredric March.

—★—

All of us who could not get to London for the coronation can comfort ourselves by watching the long-ago coronation scenes in "The Prince and the Pauper." This is a most likable and refreshing picture and very exciting too. The Mauch twins are a grand addition to the ranks of young players.

—★—

Some weeks ago, you may recall, Gloria Swanson's return to the screen was all set. She was going to make "Mazie Kenyon" for M-G-M. And then when Gloria arrived at the studio all ready to go to work, the director looked at her horror-stricken. She wouldn't do at all; she looked too young. Dashing over to London to coronation festivities to forget her disappointment, Gloria had about decided that her future lay in radio work, when Columbia pictures got her on the transatlantic phone and told her to hurry home, they had found the perfect story for her. It sounds like a wonderful break for Gloria.

—★—

In spite of her outstanding success in "Valiant Is the Word for Carrie" and the forthcoming "They Gave Him a Gun" which is said to be even better, Gladys George looks on herself as just a novice at screen acting. So intent is she on becoming as skilled a player on the screen as she was on the stage, that she spends all of her spare time studying movies. The players she admires most are Garbo, Spencer Tracy, and Merle Oberon.

—★—

Social life and cafe-hopping were at low ebb during the weeks when there was talk in the air of a strike of the Screen Actors' guild which counts all the great in its ranks, but the homes of Robert Montgomery, Jim Cagney, Fredric March and a few other leaders were continual mob scenes. These men won the undying gratitude of extras and bit players, for they were battling to improve their pay and working conditions, not their own. Everyone is relieved that no strike was necessary. These leaders rallied the support of their fellow-players so quickly and thoroughly that the producers gave in to their demands without a struggle.

James Cagney

—★—

ODDS AND ENDS—Hollywood will throw a grand party soon in honor of Weber and Fields and the fiftieth anniversary of their stage debut as a team. Imitations of their act will be put on by Jack Benny and George Burns, Eddie Cantor and George Jessel, and two motion-picture producers . . . Joan Crawford is teaching Mrs. Gary Cooper to crochet and Gary is threatening to buy them old-fashioned rocking chairs . . . Bette Davis never gets the least bit nervous in front of a camera or a microphone, but waiting between scenes gives her the jitters. She calms down by sipping tomato juice between scenes . . . Joe E. Brown, Jr., is the envy of all his pals because he takes Dixie Dunbar, the cutest little trick in 20th Century-Fox pictures, to his fraternity dances . . . James Dunn has bought an airplane so that he can fly around the country to big sports events whenever he has a few days between pictures . . . Whenever the R-K-O studio wants to reach Ginger Rogers on a day when she is not working, they call the hospital where James Stewart is undergoing treatment for arthritis . . . Paul Muni has rebelled against beards and weird make-up.

UNCOMMON AMERICANS

By Elmo Scott Watson

© Western Newspaper Union

Earliest Rebel

IN FRONT of the statehouse in Boston stands the statue of a woman, with a Bible in her hand and a child snuggled against her. The inscription on the monument tells you that this woman was a "Courageous Exponent of Civil Liberty and Religious Tolerance." But 300 years ago Massachusetts wasn't calling her by any such complimentary names. In the year 1637 she was "that proud dame, that Athaliah," a "notorious Impostor," a "dayngerous Instrument of the Devell raysed up by Sathan" and a "Breeder of Heresies." For she was Anne Hutchinson, the earliest rebel in this country.

She became a leader of a group of people who fell under the displeasure of the stern Puritans of Massachusetts Bay colony. Because these people held meetings in her house to discuss and criticize the sermons of the Puritan ministers, they finally placed her on trial for heresy, a trial that has been compared to that of Joan of Arc at Rouen.

Under their questioning, she proved herself more than a match for her prosecutors. But just at the moment when it seemed that she had defeated her accusers, she burst forth into a long speech describing God's revelations to her. Thus she convicted herself and her penalty was banishment from the colony.

But Anne Hutchinson was more than the first defender of religious freedom in America. She was our earliest feminist. The meetings held in her house, although primarily for religious discussion, were the forerunners of thousands of meetings since her day, wherever women gather together to improve themselves or the rest of the world. So her house became the "birthplace of the women's clubs of America"

After her banishment from Massachusetts Bay colony she went to that haven of religious freedom, the colony of Rhode Island, founded by Roger Williams. There she lived until 1642 when, left a widow, she took her brood of children (she had borne 14) to the Dutch colony of New York where later she and all of her children were killed. But she had not lived in vain for "civil liberty and religious toleration, the principles for which she suffered exile and death are written into the Constitution of the United States."

The Nation's Jester

HE WAS baptized as Charles Farrar Browne but the whole nation once loved him and laughed with him under the name of Artemus Ward. Born in Maine in 1834, Browne served an apprenticeship in a print shop and then became a journeyman printer. Finally he wandered to Cleveland, Ohio, where he became a local reporter for the Cleveland Plain Dealer and invented the character of "Artemus Ward," supposed to be a traveling showman, writing to the paper to give information and to ask for it. Readers of that paper roared over "Artemus Ward's" bad spelling and humorous descriptions of his adventures and it was not long until Browne got a call from New York to become editor of Vanity Fair, a comic paper.

But this editorship did not last long for the wandering foot of the former journeyman printer soon began to assert itself. He published "Artemus Ward, His Book" which had a phenomenal sale. Then he took to the lecture platform and "Artemus Ward," until now a fictitious character, became a living reality to thousands of Americans.

One of Ward's devoted readers was President Lincoln and his book played a role in an historic scene at the White House during the Civil war. In September, 1862, Lincoln called a meeting of his cabinet members whom he astonished by reading excerpts from Ward's book. When they failed to join in his laughter, Lincoln threw down the book and said "Gentlemen, why don't you laugh? With the fearful strain that is upon me night and day, if I didn't laugh, I should die and you need the medicine as much as I do."

He then told them the real purpose of the meeting which was to read to them a paper he had prepared and which he proposed to issue when the time was ripe. That paper was the Emancipation Proclamation. When he had finished reading it, Secretary Stanton exclaimed "Mr. President, if reading chapters of Artemus Ward is a prelude to such a deed as this, the book should be filed among the archives of the nation, and the author canonized."

The author was never canonized but before he died in 1867, Artemus Ward had not only become America's favorite jester but he had won fame as a humorist in England such as no other American before him had ever known.

Pagan Temple Found in Transjordan Is of Christ's Time

Place of Worship of the Nabataeans

New Haven—An "amazing" pagan temple in the Holy Land, reflecting light on the Bible drama of John the Baptist, Herodias, and Salome, has been unearthed by joint efforts of American and British archeologists.

Most of the ruins, which crown a high hill in Transjordan, southeast of the River Jordan, now stand revealed. The work is being done by the American Schools of Oriental Research at Jerusalem, led by Dr. Nelson Glueck, and the Transjordan Department of Antiquities, led by Lankester Harding. The president of the American Schools of Oriental Research, Prof. Millar Burrows of Yale, announced the find, here.

The temple is of great interest because it stood in the time of John the Baptist and of Christ, and because it was a place of worship of the Nabataeans. The spark which touched off conflict between Herod and John the Baptist was Herod's divorce of a Nabataean princess in order to marry his brother's wife Herodias, whom he preferred.

Little Known About Nabataeans.

Very little has been known about the Nabataeans who figure in Bible history, except that they were Arabs who possessed a strong kingdom in Transjordan and northeastern Arabia. Gods worshiped by these people are revealed in the temple ruins. Sculptures have been found of the powerful god Zeus-Hadad, armed with his thunderbolt, and of his consort, the goddess Atargatis, wearing leaf-like decorations on her forehead and shoulders. The Nabataeans also had a goddess of fortune, Tyche, who is portrayed with staring eyes and a crown on her her head, and encircled by the figures of the zodiac.

A sculptured eagle and snake entwined suggest to the archeologists that these Arab people borrowed Roman ideas in their religion, and the other gods show that they borrowed from Syria, Greece, and Egypt also.

Fierce Worms Kill Their Prey With Hollow Spears

Honolulu.—"Dog eat dog" is realized in the world of blind life underground, in fierce attack of worm on worm. One group of predatory worm kills its kindred prey with hollow spears that they carry in their mouths, and then suck their victim's body contents through the hollow of the deadly weapon, like a kid absorbing a malted milk.

Scenes from these small but sanguinary dramas are described in Science by Drs. M. B. Linford and J. M. Oliveira of the Pineapple Experiment station. These worms, belonging to the great group known as nematodes, were found in soils in Hawaii and other Pacific islands.

Victim Has No Chance.

One group of these spear-bearing worms has big, heavy weapons with large hollows. So quickly do they suck in the flesh and blood of their victims that the speared worm has no time to struggle.

A second group has slender spears. Their victims might conceivably squirm around violently. This, however, is prevented by the paralyzing action of the slender spear's thrust, apparently due to the saliva of the attacker injected through the hollow shaft.

These strange hunter worms have a certain amount of economic importance, because some of the species that become their prey are feeders on the roots of crop and ornamental plants.

Biggest Oyster Shell Is Found in Texas

Alpine, Texas.—Biggest oyster shell in the world, is the distinction claimed for an enormous fossil, four feet long and three feet wide, dug up by geologists of the national park service in the proposed Big Bend National Park area in western Texas. Dr. Charles N. Gould, who has been working in the rich fossil deposits of the region, thinks there may even be bigger shells waiting to be excavated.

Auto Trailer Real Jekyll and Hyde, Says Science Writer

It Can Bring the User Benefit or Disaster

By JANE STAFFORD

AUTO trailers now luring city people out for a summer's gypsying on the highways of the nation give to the casual observer no hint of sinister deeds, but they have a Jekyll-and-Hyde personality. As they travel the highways they can roll up benefit or disaster to health.

Acting as veritable Dr. Jekylls, the trailers can increase the physical well being of a large part of the population by getting these people outdoors and in sunshine much more than would otherwise be possible.

Acting as Mr. Hydes, they can jeopardize the health not only of those who ride and live in them but of whole communities through which the trailers pass. Here is the picture of Mr. Hyde in a trailer as worried health officers see him:

Communicable diseases—typhoid fever, smallpox, influenza and all the rest—are spread fastest by travel. With thousands of persons traveling constantly, many of whom never traveled before, the spread of disease may be greatly accelerated.

Milk and Water Problems.

Trailer tourists cannot depend on the milkman or the city water works to supply them with safe milk and drinking water. They must find these for themselves. Penalty for not using a safe supply may be a serious case of typhoid fever or some other ailment that can come from contaminated water or milk.

Gravest danger of all is the trailer tourist's garbage and other waste. If this is not properly disposed of, it will scatter disease along the highways and in tourist camps, villages, farms and cities.

A recent conference of health officers suggested many ways to meet this danger. Among them was the radical step of requiring health department approval of every trailer's sanitary arrangements before a license is issued by the highway authorities.

Birth-Ring Found in Human Teeth by Chicago Dentist

Chicago. — Discovery of a birth-ring in human teeth, something like the growth-ring of a tree, was announced by Dr. Isaac Schour of the University of Illinois College of Dentistry here.

The birth-ring is said to be a "definite biological landmark in the history of the individual." Its discovery, Dr. Schour believes, opens the way for other new discoveries in the history of the teeth and the individual.

The birth-ring, or neo-natal ring, to give it its scientific name, is found in the first or baby teeth. It appears in both the dentin and enamel and makes it possible to compare the amount and quality of each of these substances in the teeth before and after birth.

Marked by Biologic Changes.

The teeth start to grow about four months before the baby is born and the last tooth has not completed its growth until the age of twenty years is reached. During this time several important biologic changes take place, the most important of which is birth. One effect of this experience, in which the change from dependent to independent life is made, is a loss of weight which it takes the baby 10 days or more to regain.

Reflected Light Used in Matching Colors

Durham, N. C.—Housewives with a piece of silk or skein of yarn to "match," hold the sample against the piece they are shopping for, and decide whether or not the colors agree. In the very much larger shopping jobs that industry has to take care of, much more exact matching processes are necessary, and these are taken care of by a scientific light-analyzing and measuring device, the spectrograph. How this operates was told before the meeting of the American Physical society of Duke university, by Prof. Arthur C. Hardy of the Massachusetts Institute of Technology.

With the spectrograph, light reflected from the sample or standard is split into its component spectral parts, and the exact wavelength of each of these portions is determined, as well as a measure of its intensity. The result is a numerical formula exactly describing all the parts of the light and telling how it is put together.

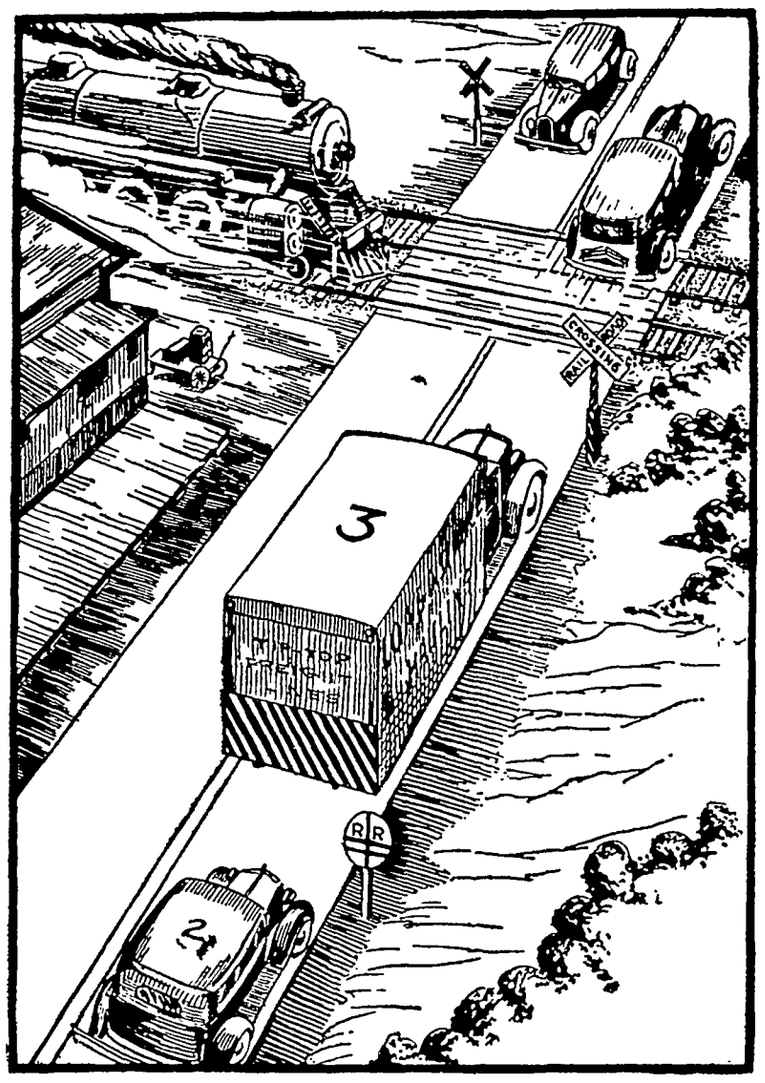
A RENDEZVOUS WITH DEATH



A Rendezvous With Death

Every year more and more accidents occur at grade crossings This condition is indefensible All approaches to grade crossings are plainly marked by standard warning signs erected by the highway commission The railroad companies also have erected signs of a wording and dimension that can not be overlooked But thoughtless drivers race madly ahead to destruction Until motor vehicle operators are educated to the fact that warning and regulatory signs are erected for their safety accidents will continue to occur

Following too closely has caused accidents at grade crossings The driver of car No. 2, should he cut out to pass truck No 3 would be another fatality. His vision is obscured by the truck, and if he was traveling at even forty miles per hour an accident could not be averted. If you don't follow too closely you will have a better opportunity to observe warning signs and traffic conditions

To race to a crossing with a train, as illustrated, is a twin brother to suicide A speeding train, weighing several hundred tons will hit with an impact comparable to a ton of T N T Of course, if you are second late in getting to your destination is a matter of life and death, go ahead and take the chance You MIGHT win As a measure of safety do not proceed immediately after a train has passed There might be one coming from the other direction Every problem has two sides; most railroads have two tracks, and more than one train

Copyright 1937 P L. Cummings, Des Moines. Iowa

QUESTIONS

1 Why do some RR warning signs have two horizontal bars?

2. Should driver of car No 2 attempt to pass truck No 3?

3 Is driver No. 2 a safe driver?

4 As illustrated above could the RR be liable in case of an accident?

5 Should grade crossings be eliminated?

6. How should motorists prevent accidents at grade crossings?

7 What should driver No 3 do before stopping?

7. What safety appliance for trucks is mandatory by law?

9 How many feet from a grade crossing are warning signs set?

10. Why are signs erected by railroads striped black & white?

ANSWERS

1. Indicative of a double track crossing

2. No He couldn't avoid an accident.

3. Following too closely is not the best of driving practise

4. If it could be proven in court building obstructed view, or other lack of precaution on the part of the railroad company

5. Grade crossings must be eliminated to protect careless drivers

6. By stopping, looking and listening before crossing.

7. Signal driver of car No. 2 of his intention to stop.

8. Three flares to be used when stalled at night. placed beside the vehicle, 75 ft. to front and 75 ft. to rear.

9. Three hundred feet.

10 To increase visibiliy at night

Mr and Mrs. Henry Helps, Mrs D A. Marshall, Miss Irene Marshall and Mrs. Earl Jewell of Des Moines, were Monday afternoon visitors at the Harlow Helps home.

DON'T WAIT FOR YOUR DRIVER'S LICENSE

Lew Wallace, Superintendent of the Motor Vehicle Department of Iowa, today stated that all persons subject to the provisions of the driver's license law who did not make their application for their license, before midnight of July 4, would not be issued a license without examination.

Mr Wallace also stated that as soon as possible after July 5, when the issuance of licenses already applied for is completed, a concentrated drive throughout the State would be made to apprehend those operating without proper licenses, and all cases would be prosecuted to the limit.

"The driver's license law was put on our statutes not as a tax measure but as a traffic safety measure to protect the careful, competent operator against the reckless and incompetent operator, and many who are not capable of operating, and cannot pass a proper examination, are attempting to drive motor vehicles without being properly licensed," stated Mr. Wallace. "These cases in most instances are serious menaces to the general public, and it is our intent to, within the limits of the personnel available, see that they are taken off the highway."

Klemme Band To Appear At Mason City

BAND WILL TAKE NORTH IA. FESTIVAL

e entry list already that of last year, indi- that the second annual band festival to be son City Tuesday, June blish a new record in of North Iowa music musical organizations accepted invitations to

to glorify the cause of which serve their home , the festival will in- our concerts all day in in Mason City, a gi- le at 11:00 a. m. and a eant with massed band ons in the evening at City stadium.

Iowa Training School and from Eldora has been engaged to give a drill in the evening Other musical features have been prepared for the festival, all of which will be free to the public Arrangements for entertaining the visiting players have been made

Among the musical organizations which have accepted and which will be heard by outstanding musicians attracted to the festival are the following bands Belmond, Buffalo Center, Clear Lake, Clear Lake Junior Drum Corps, Eldora Training School, Fonda Hampton, Hanlontown, Kensett, Klemme, Lake Mills Municipal, Lake Mills school, Marble Rock, Manly, Mason City High School, Mason City Legion Junior Drum and Bugle Crops, Nora Springs, Northwood, Rockwell, Swaledale, Thompson, Ventura and West Union.

frolic in Des Moines, Monday, June 14th.

In the morning carrier salesmen will hold a short business meeting followed by a special showing of the big three-ring Barnes-Carruthers Circus in the Coliseum After the circus a group picture will be taken which will appear later in the Des Moines Sunday Register photogravure section

A parade will be held starting at noon winding through downtown Des Moines loop streets Prizes totaling $125 will be offered for boys having the best stunts and costumes This parade, the largest of its kind in America, is more than a mile long and was witnessed last year by over 40,000 people

After the parade, carrier salesmen will be taken to Riverview Amusement park for an afternoon of rides shows and refreshments —all free Carrier salesmen who wish will be admitted to a regular Western League baseball game between Des Moines and Rock Island at no cost.

Delegates and members of their families who have also been invited to the convention, will be identified by special badges.

IOWA PARKS

Iowa is less than a century old. A young state that leads the nation in farming, literacy, and per capita wealth Iowa comprised of 25 per cent of the most valuable farm land in the nation nevertheless has aquired for your public estate over 18,500 acres for parks and preserves These areas are rich in Iowa's history, scenic grandeur of rocky canyons, streams and forests, and offer sports and recreation to 2,400,000 visitors each year State parks and preserves are not confined to any one section, but are scattered throughout the state Usually there are several areas within a two hours drive of your home Enjoyable access to parks is possible during all seasons of the year over Iowa's fine highway system The primary purpose of having your public estate is to preserve the unusual and unique historic spots of the state for all time, in a manner to permit maximum enjoyment and recreation by the public These parks are the meeting place of the farmer, the playground of the urban dweller, the lamoratory of the student and a resting place for the weary.

GAMBLING ODDS ARE AGAINST YOU

You Get the Short End When You Woo Lady Luck, Whether You Play Poker, Bridge, Roulette, Dice or Horses.

By WILLIAM C. UTLEY

"HEADS or tails, what'll you take?" There can't be a man or woman m America who hasn't been asked that question at least once. And there are mighty few who will refuse to choose one or the other, in an attempt to decide whether to go to the movies or the dance, or to determine who gets the extra pork chop on the platter.

It's probably the simplest manifestation of the inclination to gamble that seems to be born in most of us. The toss of a coin looks fair enough, but even on a "fifty-fifty" break such as that you can't be sure that in a given number of tosses, say 100, half the tosses will be "heads" and half "tails."

In all games of chance the probability of winning is against the player, even if he can be sure the game is "on the level." Yet man has gambled from time immemorial. It makes little difference whether his purpose was to relieve the monotony of everyday existence or to get something for nothing; he has always been willing to take a chance.

Gambling was popular, even famous, in ancient Babylonia, China and India many centuries before the birth of Christ. History tells us many tales of games of chance among the Greeks and Romans. Germans gambled in the first century of the Christian era.

Monte Carlo "Wide Open."

Hundreds of years ago gambling was recognized as a menace to society. In England the first law against it was enacted in 1661. In 1698 lotteries were made illegal; gambling was further curtailed by acts of Parliament in 1845, 1853 and 1906. In 1838 France suppressed gaming tables, and in 1872 Germany closed gambling resorts, even the world-famed ones at Baden-Baden and Hamburg. Belgium clamped down on gambling in 1902, and today the only spot in Europe where the resorts "run wide open" is at Monte Carlo, in the tiny principality of Monaco.

Roulette wheels, gaming houses, faro, "policy" rackets, bookmaking lotteries and wheels of fortune are pretty generally forbidden in civilized countries today. The laws of the different countries vary, however, as do even the laws among the states of the United States.

Inside or outside the law, gambling flourishes in every section of the country. Thousands upon thousands daily visit the race tracks. Throngs invest in tickets on the Irish sweepstakes. Crap games are going on in big city alleys and in the back rooms of stores. Apartment kitchens have their Saturday night poker parties. Ladies gamble at bridge in the afternoon.

Outside the Law.

It is impossible to say exactly or even approximately, how big the gambling industry is in the United States, for most of it is conducted outside the law, just as saloons were conducted during the prohibition era. But a few representative figures are at hand to show that the total must be an enormous one.

In the twenty-two states where betting on the races is conducted with the use of pari-mutuel machines there has been $224,000,000 wagered in a single year; this does not include the five tracks in New York state, where the "take" is enormous.

Four Irish Sweepstakes drew about $19,500,000 in American money, for which the Yanks received in return some $11,500,000 in prize money. In England the wagering on sweepstakes, horses, greyhounds, pools and the like totals more than $25,000,000 a year; Scotland Yard and the British Home Office are helping the churches to fight them.

Types of Gamblers.

Probably the most wide-open town in the United States is Reno, Nevada, where state, city and county realize a sizable revenue in taxes upon the gambling houses. The latter live off the idle hours and loose purses of the hundreds who come to Reno to live for a few weeks that they may obtain divorces; most of such persons are pretty well to do, and fond of gambling.

All banking games—faro, roulette, etc.—are taxed $165 a quarter in Nevada; slot machines, no matter whether they operate on pennies, nickels, dimes, quarters or half-dollars, are licensed for $30 a quarter. Last year Reno gambling houses paid taxes of $94,245 12. Of this the city received $38,424.08, the state and county $52,232 76, and the municipality of Sparks, three miles distant, $3,588 30

Gamblers fall into three main types. There is, first of all, the superstitious gambler. He believes implicitly that Luck is a sort of supernatural power, a god that can decide his fate. He woos luck by talking to his dice, or by carrying a rabbit's foot in his pocket. He seldom thinks about the mathematical possibilities of winning or losing; if he wins, Lady Luck is with him; if he loses, he is suffering a "jinx."

A Reno Gambling House Going Full Swing.

Another type is the seeker after thrills. Usually this is a person of some means. It is largely this type which frequents the fashionable gambling houses of Palm Beach, or those in the large cities where the turnover may be half a million dollars a week for a single "club."

Craps Not Fair.

The third classification embraces the professionals. They make their living at gambling, and they know the ropes. Usually they are figures on the fringe of the underworld, and not infrequently they become mixed up in scrapes which have only a minor relation to their gambling activities. The professional, more likely than not, is fully capable of cheating with marked cards, loaded dice and other implements beyond the pale, and will do so if he thinks he can get away with it. He seldom dies a natural death.

Whatever class to which a gambler belongs, he will sooner or later make a bad risk in the anticipation of feeling the emotional stimulation of seeing a "long shot" come in. He knows there is such a thing as "loaded" dice, but thinks he is too smart to be fooled with them. What he forgets is that dice are mathematically loaded against him, even if they are perfect dice.

Prof. John Von Neumann, mathematician of the Institute for Advanced Study at Princeton, warns students in his lectures that it is impossible to win over a long period in a crap game. The magic "seven-eleven" combination is by far the most frequent throw, he says, but if it doesn't turn up on the first cast the chances are reversed. "That leaves a .490 winning average, so the game is not fair," he explains.

In dice explicit hazards are introduced by the rules. Seven can be thrown in six ways and 11 in two, while 2, 3 and 12 result from only one or two combinations. The conditions are favorable to win on the first throw. But if "seven-eleven" is missed, repetition of the first throw is unlikely, and the seven is now working against the player and the net effect is against him.

Even chess, generally accepted as the most intellectual of all games, depends upon chance, says Prof Von Neumann. He points out that "white," which has the first move, can always win, although if "black" is wise to the theory, he can play defensively and tie "white."

In poker the chances are one in 300,000 to obtain any certain combination of five cards. Chance is also introduced in this type of game by the action of the opponent, and intellectual reasoning is sometimes needed. There is little chance of improving the original hand in poker, so the most logical places for the exercise of skill are in making the discards, and in deciding whether or not opponents are "bluffing" in their bets.

Poker and Bridge Chances.

Here are some of the most sought-after hands in poker, and the possibilities of their being obtained.

One pair	1-1
Two pairs	1-21
Three of a kind	1-47
Flush	1-509
Full house	1-694
Four of a kind	1-4,165
Straight flush	1-72,193
Royal flush	1-649,739

In a game of bridge there are 635,013,559,600 possible combinations of hands. You have four chances out of that many of getting a "perfect" hand—thirteen of one suit. Here are the chances on some other distributions:

12-1	2,028 hands
11-2	73,008 hands
11-1-1	158,184 hands

After your cards have been obtained there is still the element of chance that those your partner holds will not "go well" with them.

In gambling houses it is healthy to remember that the odds are always in favor of the house. If it were not they could not afford to stay in business very long. As it is, they make a profit and pay enormous taxes or, if they are operating illegally, they are forced to "kick in" handsomely to the "syndicate" or gang which usually operates them as units in a chain, or to politicians and police for "protection."

Roulette furnishes a good example of the manner in which the bank always enjoys an advantage over the player. Suppose a wager is made on any part of the board, except on a given number, and the zero appears. The player is required to give up half his stake or let the wager stand for the next play. The zero pays everything for the house at Monte Carlo, if all the wheels are in operation.

4,000,000 Sweepstakes Tickets.

Authorities consider lotteries or sweepstakes, if they are conducted honestly, as the fairest of all forms of gambling. The losing player need part with no more than the original sum he invested. But the chances of winning are mighty slim, because there are usually millions of tickets sold in the big lotteries.

In the Irish Sweepstakes, for instance, more than 4,000,000 tickets are usually sold. For each ticket held, the purchaser has one chance in 133,333 to win one of the grand prizes—$150,000, $75,000, or $50,000; one chance in 6,667 to win a secondary prize of $3,500, and one chance in 4,000 to win a small prize of $500.

The most vicious of all gambling rackets is the "numbers" game which flourishes in many of the big cities, despite the honest efforts of the law to stamp it out. In some of these games the chance of winning is as small as one in 1 billion.

Slot machines may actually be set so that the house takes in 80 per cent of all the money played, and they frequently are. Few slot machines pay the house as little as 60 per cent.

In addition, the games in gambling houses are not always honest, as has been proved in raid after raid It's well to keep in mind that the gambler's rule since gambling was invented has been: "Never give a sucker an even break."

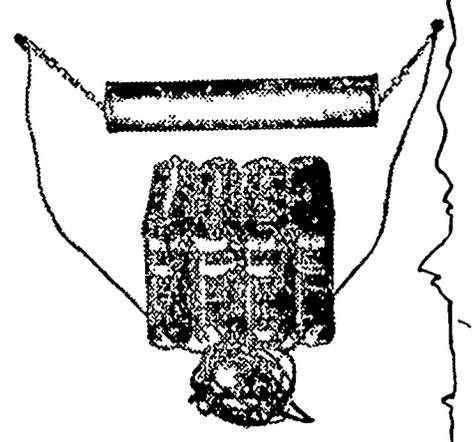
HUMIDOR COUNTER MAGNET

THE illustration shows the outfit as you receive it and to operate the humidor, it is supplied with chains at each end, which allow it to hang in full view of customers in the cigar case. The batteries are concealed in any convenient location. Connections between batteries and humidor cannot be seen when installed, according to simple instructions that accompany each order A space eight inches square at each end is under the operator's control In appearance this magnet resembles any ordinary cigar counter humidor



No. 622. Humidor Counter Magnet, with switch, 4 Hot Shots, 30 feet of connecting wire, instructions and 5 White Dice, Complete $50.00

This page from a catalog of a manufacturer of gambling paraphernalia illustrates one of the reasons why the odds are against you.

Landing a Giant Tuna in Nova Scotia.

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

AS ONE stands on the seashore at the full of the tide and looks out over the swelling floods surging in from the distant horizon, his feet are on the threshold of an enormous empire, so vast in extent and population that the achievements of the haughtiest rulers of mankind are dwarfed by comparison.

Though fleets sail over its depth, they make no significant impression upon this immense realm.

The subjects of this empire swarm through the waters in myriads totaling far greater numbers than all the life of the continental world In fact, scientific investigators indicate that the oceans were the original abode of life on the globe, and that the continents were peopled from that inexhaustible reservoir.

Geologists believe that the depressions now occupied by the oceans have been located in approximately their present positions during the entire history of the earth, and that the foundations of the land masses likewise have been situated nearly as they are at the present time.

But during the great geological periods, the ocean has repeatedly invaded their edges and even their interior basins, sometimes to an enormous extent, forming shallow epicontinental seas.

Thus, all the continents of the world are bordered by a strip of shallow sea, the continental shelf, which slopes gradually from the coast to depths varying from 100 to 1,000 fathoms at its outer edge. Beyond this limit there is usually a more rapid gradient to the main floor of the ocean—the continental slope.

This world-wide shallow strip is of major importance to the life of the seas.

North Atlantic Shelf.

This article deals especially with the mollusks and other small creatures inhabiting the continental shelf which borders the Atlantic coast of North America from Nova Scotia to New York, and includes the extensive New England fisheries.

A most remarkable stretch of shore this is. Its southern half is of comparatively even contour, but, beginning with the region of Cape Hatteras, the coast to the northward has subsided and is indented with deep bays and irregularities, finally terminating in the long curving and tapering indentation of the Gulf of Maine.

The latter is the most noteworthy feature of the coast, its wide mouth being guarded on either hand by Cape Cod and Cape Sable, and its inner reaches narrowing to a double apex in the Bay of Fundy.

All this northern half of the Atlantic seaboard is a succession of drowned valleys, and its topography and geological history indicate that it has subsided beneath the waves of the sea during relatively recent times. On the other hand, the even outline of the coast from Hatteras south to Florida shows no evidence of such sinking.

The oceanic shelf to the 100-fathom line widens rapidly to the northward, reaching its greatest extent off the Gulf of Maine, where it is approximately 400 miles wide.

The central floor of the Gulf of Maine is an ancient river valley to which the river systems, represented by those now existent, contributed their drainage, to be emptied into the prehistoric sea by a single channel and mouth still traceable on the sea floor at the edge of the continental shelf.

Throughout this extensive and comparatively shallow oceanic margin, well illuminated by the sun's rays, conditions are favorable for an enormous development of the marine plants on which sea animals feed: namely, the microscopic diatoms, one-celled algae, and the larger seaweeds.

Nursery for Food Fishes.

Here numerous streams empty their loads of silt, rich in nitrates, phosphates, and other chemicals needed for plant food. The strong tides rushing into the narrowing channel from the open sea keep the water stirred with upwelling currents plentifully supplied with oxygen.

Hordes of small crustaceans, the copepods, feed upon this plant life. At certain seasons they swarm in these waters in numbers so vast that they give the sea a reddish color for miles.

These tiny creatures are rich in oils and are greedily devoured by large schools of mackerel, herring, alewives, and shad. Bluefish, cod, hake, and haddock pursue and devour the smaller fishes, and even the huge finback and humpback whales do not disdain to feed upon the herring.

Thus the shallow banks off New England, especially Georges and Browns Banks, at the entrance to the Gulf of Maine, as well as the Grand Banks of Newfoundland, farther away, form a veritable nursery for the important food fishes of our coasts, and thus connect mankind by an interlacing food chain with the microscopic plant life of these shallow waters.

The evolution of the animal world, as we know it, would have been impossible had these primitive plants not come into existence. From such forms, also, all the higher land plants of the world originate.

The Intertidal Zone.

As the open seas were peopled from the oceanic shelf, so the fresh-water streams and swamps received parts of the overflow. Countless species found food and a measure of safety from enemies by creeping into the area between the tides, where they acquired resistance to exposure to the open air at the intervals of low water. Here a rapid evolution took place, so that the intertidal zone became densely populated with life.

Finally, from fresh-water swamps on the one hand and from the upper parts of the marine tidal zone on the other, first plants and then animals invaded the land itself and produced the highly specialized types that now reign over it.

North of Cape Cod, the coast of New England is predominantly high and rocky. Beginning with the headlands of Nahant, Marblehead, and Cape Ann, north of Boston, the cliffs are at first isolated to local regions, with intervening stretches of sandy beaches and flats. But from Portland, in Casco Bay, northward, the coast is an almost unbroken succession of granite cliffs, sloping rock-ribbed promontories, and reentrant bays and harbors, with occasional beaches.

The tidal waters flowing from the open sea are gradually confined by the narrowing outline of the Gulf of Maine, which forces them to a progressively increasing height, and reach a climax in the Bay of Fundy. From Massachusetts Bay north to Portland, the tide rises nine feet. It continues to increase northward, until it becomes 18 feet at Eastport and 37 to 48 feet at the ends of the two tapering horns which terminate the Bay of Fundy.

Here, too, there are interpolated stretches of beaches, flat points, and swampy meadows, and these are entirely covered at high tide. Naturally the width of the tidal zone on the side of a vertical cliff is measured exactly by the vertical rise and fall of the water. For example, the cliffs that surround Bliss island, at the entrance of Passamaquoddy bay, are exposed for 22 feet from the top of the barnacle frieze that marks the high-tide limit to the water level at low tide.

Crowded With Life.

This region between the tides is teeming with life, both plant and animal, in crowded array. On the vertical granite walls of Bliss island, the various species are arranged in overlapping zones, with the conspicuous white band of rock barnacles.

Below this, the rockweeds hang in thick, gracefully festooned clusters down to the low-water mark.

Concealed beneath the rockweed, and succeeding the base of the barnacle zone, the rocks are covered with a dense layer of young black mussels.

Among them are closely crowded groups of the common dog whelk, feeding upon the mussels, and laying their graceful vase-shaped egg cases, tinted rose and yellow, in mosaiclike patches in the crevices.

The latter mollusks secrete a purple dye, formerly used by the Indians for coloring their deerskin garments. They are related to the murex of the Phoenicians, from which that people derived the famous royal purple, later arrogated by the Roman emperors for their personal use.

The dog whelk has a thick shell with a characteristic spindle-shaped opening. It is extremely variable in color, size, and sculpture along the New England shore.

The common periwinkle creeps everywhere over the rockweed from the low-water mark to the highest part of the barnacle zone and even upon the bare rocks far above it. This remarkable sea snail can stand exposure to the open air longer than any other marine creature of the northern coast.

It is in a transitional state of evolution toward terrestrial life, for its gill seems to be on the point of being replaced by a lung. It has a very wide range, being found on both sides of the Atlantic. In England it is the common "winkle" sold in markets.

Lesson for June 13

THE BROTHERLY LOVE OF JUDAH

LESSON TEXT—Genesis 44 18-34.
GOLDEN TEXT—Let brotherly love continue. Hebrews 13:1.
PRIMARY TOPIC — Benjamin's Big Brother.
JUNIOR TOPIC—Big Brothers.
INTERMEDIATE TOPIC—Loving as a Brother.
YOUNG PEOPLE AND ADULT TOPIC—Self-Sacrifice in the Family.

The fundamental unit of society is the family. It is of more importance than the state, the church, and the social order of which it is a part. The breakdown of the home and the sacred relationships sustained between parents and children, or brothers and sisters, points to the destruction of society itself.

God established the family in the garden of Eden. His plan and purpose have never been changed, nor have his laws for the protection of the home, for the sanctity of marriage, for brotherly love, been set aside. Men and nations may devise other plans and follow the dictates of the flesh, but that road always leads to ruin.

The continuation of our story of the life of Joseph and his brethren brings before us today the filial and paternal love of Judah, and affords us an opportunity to stress true brotherly devotion. No one should fail to review the connection between the chapter before us and the lesson of last week. Joseph had been dealing with his brethren who had failed to recognize him as the one they had sold into captivity. He was bringing them kindly but definitely to that point of repentance at which he could show himself gracious to them. In doing so he had brought disaster upon them. Being happily on their way homeward with a new supply of food, they were overtaken and Benjamin, the beloved of Jacob, stands accused as a thief, and by their own words condemned to die.

In this crisis the mouths of the ten others are closed, but Judah, who had really saved the life of Joseph (Gen. 37:26, 27), stands forth to make an eloquent and pathetic appeal to Joseph. It presents him as a brother who is

I. Courageous

Easy rests the yoke of family life as long as all is joyful and prosperous. But when adversity strikes, when sorrow comes, or sickness, or sin, then the true test of devotion is at hand.

It was a brave and manly thing for Judah to stand before the one whom he knew only as the man who was "even as Pharaoh." The circumstances were all against him. He expected the flaming anger of the offended ruler. His brethren had collapsed in despair. It was one of those dark hours which come to every family when someone must demonstrate true love by being strong-hearted and steady.

II. Intelligent.

Crises call for more than a cheerful smile or an encouraging word, much as they do mean in such an hour. But we must be prepared by our close contact with our loved ones to speak and act with vigor and assurance.

The plea of Judah is a masterpiece of logic, argumentation, and appeal, demonstrating that Judah was not only well-informed about his family and its problems, but ready to use his knowledge skillfully and effectively.

III. Sacrificial.

One step deeper goes the devotion of this man to his father and his brother He has done no wrong that merits punishment, but evidently his brother has been guilty. Had he been of the spirit of Cain he would have said "Am I my brother's keeper?" and let him answer for himself. Why should he suffer for another? Why should he allow himself to be imprisoned in a strange land to save his father from sorrow and his brother from what seemed to be the just reward for his deeds?

Thus reasons the man of the world, but such is not the language of love. "Let thy servant abide instead of the lad. as a bondsman"—so speaks the true brother. And this is but a faint prefiguring of the One "who sticketh closer than a brother," who "though he was rich, yet for your sakes became poor that ye through his poverty might be rich" (Prov. 18:24; II Cor. 8:9).

Let us improve the opportunity to review our relations with our own family, to determine whether there is aught that we in intelligent and courageous self-sacrifice should do for our own.

An Aim in Life

We want an aim that can never grow vile, and which cannot disappoint our hope. There is but one such on earth, and it is that of being like God. He who strives after union with perfect love must grow out of selfishness, and his success is secured in the omnipotent holiness of God.

A Guide to Paradise

The life of a faithful Christian man is a guide to paradise.—Thos. a Kempis.

Dressed for the Occasion

"HI THERE, Mrs. Astorbilt, where are you going in that lovely summer gown?"

"Not very far, Miss Junior Deb, just down to the store to buy material for a play suit like yours."

"Well, Ma-mah, if you must copy my style, you couldn't find a better model because these shorts really fit, and the whole thing is a tailored job."

A Stylist Speaks.

"May I as Susie Sew-Your-Own interrupt you two with the latest word from my class in dress design? You, Sis, are a pre-vue of Miss America in proper sports wear while Ma-mah is modern to the minute with her raised waistline and fulled bodice. I, in this morning frock, have what the book calls classic simplicity. Be that as it may, I couldn't get along without it, because it's so cool and comfortable."

Everybody's Happy.

"Thanks for the approval, Susie. Your clever dress would be a bright spot in anybody's kitchen, and now that you've got the swing of this sewing business there will be no stopping you. But even so, I must admit I'm a proud mother. You can go just as far as you like with this new hobby."

"Gee, Ma-mah, isn't it swell to be on such friendly terms with Fashion? I think good old Sew-Your-Own deserves most of the credit for arranging the introduction. Spring means so much more when one's clothes look the part."

"You're quite right, dear, but now let's run along. We have work to do."

The Patterns.

Pattern 1270 comes in sizes 14 to 20 (32 to 42 bust.) Size 16 requires 5⅜ yards of 39 inch material.

Pattern 1272 is designed for sizes 14 to 20 (32 to 42 bust). Size 16 requires 4⅜ yards of 39 inch material. 2½ yards of ribbon are required for the tie belt.

Pattern 1304 is for sizes 34 to 46. Size 36 requires 3¾ yards of 35 inch material plus ½ yard contrasting.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

THE KLEMME TIMES

VOL. 41 KLEMME, IOWA, WEDNESDAY EVENING, JUNE 16, 1937 NUMBER 56

shing Was Good In The Lake Of The Woods

VILLE AND THE EDITOR N FROM FISHING TRIP

The Owner Of A Horse In The Canadian Woods

Wille of Garner, and the returned home Monday g from the Lake of the region in Ontario, Canada, they spent several days We consider we had very luck as we brought back n lake trout, twenty-two ike and around fifteen or fair sized northerns.

ng up in Canada is a new nce for both of us and we y had a big time. If the of the Times will bear s we will describe some of igh spots" of our ramblings the country "where men n and the women sleep with oes on."

drove 567 miles north of e and were met on the y at a point 40 miles north or Falls by our host and Mr Cleo Gaudry. To get us the lake where we could a few days we had to make ge into Little Berry Lake, the lake to another port- our camp on Dry Berry nd it was on this lake we d to fish for lake trout. ad a fine supper at camp ght and the dish we were terested in was "tamerack

Ville Trades For Horse

ere is any livestock in the , Art Wille is bound to trade, and we have quite a tell on Art Coming up the to camp one of the guides e writer that Gaudry had t a horse over on the ice nter to use on hauling lug- nd supplies up the long . After having used the ut a couple of times, it got the corral and had not been nce and is somewhere in nada Wilds. When we got mp Art wanted to know ey had a rail fence around the camp. He was told that ere they kept the horse for n the portage Art immedi- melled a trade and it was few minutes until he had a pair of boots with Andy a guide, for the horse "sight seen." Andy owned a pair s, Art owned a horse! But n't know his newly acquir- perty was rambling around, either had he figured out e could get him back to the some ten or fifteen miles the lakes. And, was Art's ed when he found out that e he really "got took" on a trade! Personally we are e didn't get the horse be- e would have traded all the own from Canada and we would have had any fishing.

rout Fishing Great Sport

next morning we had a fine fellow by the name of Don rson for our guide and we ut into Dry Berry to try our at the big lake trout. We several hours trolling the aters and Art finally hook- ten pounder But the trout one out into water too deep hing and we had but one strike. We were quite disap- d but Don asked us if we like to go out to another or our trout and of course as what we wanted. Howev- informed us that none of his had ever been on the lake e was not sure he could get and that we took a chance of s lost in the attempt. A for- nger had told him about the and that trout would strike y time, although they were fish weighing only about o five pounds. No one except the ranger had ever been on the lake. So we started home for camp, got a quick lunch and started out in a boat powered with an outboard motor. Don took precautions to study the map thoroughly before leaving and then took a government air-plane surveying map with him. Anyone who has been up in that part of Canada will realize the difficulty of trying to locate a rapids or a small waterfall some fifteen miles away from known surroundings. That was what Don had to locate in order to find the little lake we were going to try trout fishing on It took us two and a half hours of steady running the motor to get there and we sighted white water across on the opposite shore and knew we had hit our mark. We had a little difficulty finding the portage cut by the ranger. To get to the lake above meant to unload our boat, carry everything up over the portage, come back and carry the boat over and then the motor, and then get everything together again on the little lake. It was worth it Trout started hitting at once and in the hour and a half we were there we caught eighteen nice trout, weighing around four pounds a piece. We did not dare to stay any longer as we had to get out and get to familiar parts on the lake below before dark, or take chances on getting lost on the way back. We then had to lug everything again and again set up and start for camp We were lucky enough to hit the right bay to take us back into familiar waters but it was long after dark when we reached camp. Art and the writer were the first men beside the ranger ever to fish on the little lake We were priveleged to name the lake so from now on it will be "King Corn Lake," named in honor of Iowa, of course

Fast Pike Fishing Next

Saturday forenoon we puttered around trying to raise another big trout out in Dry Berry but with no luck except for a four pounder Mr. Gaudry came over from his main camp on Lake of the Woods, sixty miles away, to take us back for pike and northern fishing To get to Split Rock Camp on the big lake meant going back over Little Berry, a forty five mile drive down to Nestor Falls and then an eleven mile boat trip out into the Lake of the Woods. Mrs. Gaudry had a fine dinner waiting for us that evening and a venison pie was a delicious dish we will never forget

The next morning we tried several pike beds without much luck but Mr. Gaudry headed the boat up through the narrows into Split Rock river and we headed into some rapids where we cast into the tumbling waters and had the fastest pike fishing we think it is possible to have anywhere In less than fifteen minutes we had hooked twenty-two pike that weighed anywhere from three to five pounds.

As time was getting short for us we started hunting up possible waters for northerns and would pick up one now and then The northerns were not large, the best one weighing about ten pounds. However we were plenty satisfied as we had a beautiful bunch of trout and pike, and that was what we wanted the most.

We had a fine dinner and then packed for the trip to Nestor Falls and home Our fish were dressed and packed for the trip home

Lots Of Big Game

If we had not caught a single fish the trip would have been worth what it cost. The scenery is the most beautiful we have ever seen. The lakes are dotted with hundreds of islands, ranging from a rock pushing out of the water to islands several miles long. Everything is rock wherever you look

Former Klemme Business Man Married On Memorial Day

ANDREW WELLEMEYER MARRIED MISSOURI GIRL ON MEMORIAL DAY

Andrew J Wellemeyer, better known to his Klemme friends as "Jack," only son of Mr and Mrs Arthur Wellemeyer of Klemme and Miss Elma Pitts, of Springfield, Missouri, were married at Dallas, Texas on Sunday, May 30 at the home of Rev Geo Truett a former pastor of Springfield Missouri

They will reside for a time at Austin Texas and later will move to San Antonio Mr Wellemeyer is connected with the Lerner Vogue Shops with headquarters in Kansas City, Kansas The firm deals in ladies ready-to-wear and have several stores in a number of states Mr Wellemeyer is in charge of opening new stores and so his business requires frequent moving For two years he managed a store at Springfield and more recently has been at Waco, Austin and San Antonio

Jack is a Klemme product was born in Liberty township, went through the Klemme schools, assisted his father in the general store business and managed the grocery department Later he attended school at Kansas City and was graduated from the University of Chicago From reports we gather the young lady he has selected as his wife is an attractive girl who has devoted much of her time in the business world.

The Times joins in offering congratulations to Mr. and Mrs Andrew Wellemeyer.

HERE'S CHANCE FOR SOME KLEMME BACHELOR TO GET A MISSOURI LADY FRIEND

Somebody is evidently trying to have some fun with a lady in Missouri A short time ago a Klemme housewife purchased a box of strawberries in Klemme and after emptying the berries into a dish noticed writing on the bottom of the berry box, with this message written with a lead pencil.

"I am an old maid 29 yrs. old with false teeth, glass eye and a wooden leg; been in some pretty bad wrecks. Would like to correspond with someone near my own age Please write to me for I am lonesome. My name and address is Miss Betty Sue Burnette, Washburn, Mo"

Now here is a real chance for some fine looking Klemme bachelor to strike up an aquaintance.

KLEMME GIRL MARRIED GARNER YOUNG MAN LAST THURSDAY P. M.

Miss Violet Schaefer, daughter of Mr and Mrs. Roy Schaefer, of Liberty towwnship, and Mr. Emory Weaver, son of Mr. and Mrs. Louis Weaver, of south of Garner, were united in marriage last week Thursday afternoon at the Peace Reformed Church parsonage in Ell township with the Rev William Huenemann officiating

The young couple were attended by Miss Bernice Weaver, sister of the groom, and Mr. Richard Brouwer.

After completing the school in Liberty township the bride attended the Klemme high school The groom attended the Garner high school. Both of these young people were born and raised in this community and are popular with the younger set.

After the first of March Mr. and Mrs Weaver expect to operate a farm, but until then will reside with the bride's parents.

HASKINS RITES HELD IN GARNER WEDNESDAY

Funeral Service Conducted In Church; Wife, Five Children Left

More than 400 were in attendance at the funeral services of Myron Haskins at the Methodist church in Garner Wednesday afternoon, the Rev T Ernest Hoon officiating J. R. Baggs, Fred Missal, Elmer Katter and Elmer Raw sang, accompanied by Mrs. Howard Dusenberg.

Pallbearers were Charles Marks, Carl O. Roe, D D. Ross, Charley Lawhorn and Matt Becker Burial was at Garner in Concord cemetery.

Mr. Haskins is survived by his wife and five children, Mrs. E. M Ferleman, Mason City, Mrs. Nettie Panuk, Mrs Lola Wilson, Mrs. Beulah Rekow, all of Garner; Webb Haskins of La Crosse, Wis., a brother, Artell Haskins of Waterloo and Ness Gardner, a half brother.

Klemme people who attended the funeral were Mrs C. E .Bachman, Mr. and Mrs. Verner Nelson, Mr. and Mrs. Tom Nelson, Mr and Mrs. Fred Kluckhohn, Henry Lewis and Frank Kluckhohn.

Torturing his 700 wives was the favorite indoor sport of the Sultan of Morocco who has just died. Read about him in the American Weekly the magazine distributed with next Sunday's Chicago Herald and Examiner.

Durant, Miss Florence Zollinger, H.D A., Dr C. V Hamilton and Mrs. D E. Keat, county club chairman Charlotte Hammon was in charge of initiating honorary member County Agent, T C. Petersen.

Mrs W. S Lee judged the music and Miss Eunice Wesenberg, assistant to Agent Petersen, accompanied the contestants

REPORT ON ALLEY INSPECTION

This inspection was made by the following members of the town officials

Board of Health, Dulmes
Street and Alley committee, Lau and Etchen.
Fire Chief, Brinkman.
Mayor, Grange.

The town allies (Main Street) with the exception of one or two places were in excellent shape These exceptions no doubt will be taken care of promptly, at least the board expects this.

We also noted one or two out houses in the business district that we believe could be done away with. If you have one and are accessable to the sewer why not get rid of it?

Livestock Owners

To you who have cows and other livestock staked out on chains

FIRST there is a town ordinance that prohibits staking on the streets or on other peoples lots At least get permission from these people.

SECOND, Any of this stock so staked as to allow them to get on the side walk will be taken in by the Marshall. LITTER on the side walk from this stock will not be tolerated Govern yourself accordingly.

Let's keep our town
"Spik and Span"

Board of Health.
Street & Alley Committee.
Fire Chief.
Mayor

FRANK CLARK OF GOODELL WAS BURIED FRIDAY P. M.

Pioneer Farmer's Funeral Conducted At United Brethren Church

GOODELL — Funeral services were held Friday at the United Brethren church for Frank Clark, 75, farmer. Mr. Clark had farmed and been a landowner in this vicinity for the past 60 years. He was in poor health the past few months. Death came very suddenly from a heart attack. The Rev. Wm. Zabilka, M E. minister of Klemme, officiated in the absence of the local pastor, the Rev. Walter Dye Mr. Clark is survived by his widow, two children, Harold, at home and Mrs. Ralph Stokesbary, also of Goodell one brother, Bert Clark of Louisiana and four grandchildren. Burial was made in Amsterdam cemetery east of town.

NORMA BARZ IS BRIDE OF DR. VOETBERG

Garner Reformed Church Is Scene Of Wedding Of Couple

Miss Norma H. Barz, daughter of Mr. and Mrs. W. J. Barz of Garner, was married to Dr Henry Voetberg of Alva Okla., son of Mr. and Mrs. S J. Voetberg of Shell Rock on June 11 at high noon at Zion Reformed church in Garner with the Rev. William Huenemann officiating.

The couple was attended by Miss Willa Peden, sorority sister of the bride, Des Moines, and Miss Sylvia Kusrew, of Columbus, Wis., Richard Clark, Mason City and Raymond Barz, Klemme Mrs Earl Schaeffer of Klemme played the "Lohengrin" wedding march as a processional and the Mendehlssohn march as a recessional and Miss Ethel Barz sang "I Love You Truly" and "Oh Promise Me" and Miss Jacqueline Kudje played a violin solo, "At Dawning." Ushers were Alton and Curtis Upmeyer, Evert and Milvern Barz and Donald Haes. The church was beautifully decorated with baskets of peonies

Following the ceremony a wedding dinner was server at the C. D. of A Hall in Garner to 135 friends and relatives. During the dinner Eva and Edith Voetberg, daughters of Dr. and Mrs. D. N. Voetberg of Traer, sang.

The wedding date was the thirty-fifth anniversary of the bride's parents' wedding and the bride wore her mother's wedding gown of white mull with veil caught with white rose buds and carried a shower bouquet of white roses, sweat peas and baby breath. The bridesmaids were beautifully dressed in pink and yellow floor length dresses and carried beautiful bouquets of pink and yellow roses The groom and his attendants wore dark suits.

The bride was graduated from Garner high school and attended Mason City J. C., completing her education at Drake University She taught in the schools at Ventura for one year and the past seven in the Klemme schools. The bridegroom is a veterinarian having completed his work at Iowa State College and is employed by the U. S. government as inspector of dairy stock.

Following the ceremony they left on a trip to northern Minnesota and Wisconsin and will return to Garner and then go to Tererro, N. M. returning to Alva, Okla., where the will make their home

The Times joins with the many friends of Dr. and Mrs. Voetberg in extending best wishes and congratulations.

BARN ON WALTER BLUMER FARM BURNED DURING HEAVY STORM

The barn on the farm occupied by Walter Blumer in Liberty township was burned to the ground Saturday noon when it was struck by lightning during the severe storm which struck this part of the state. The barn and silo were completely destroyed. Livestock and equipment were saved, except a couple of young calves which could not be taken out, were killed.

The storm Saturday was severe and was accompanied by heavy winds and rain. Many fields were flooded and crops were damaged. Branches were torn off and a few trees blown over here in town but no serious damage was done.

In the Kentucky mountains the small farmers have an ingenious way of weighing hogs. They place a board across the fence, stand the hog on one end, and pile stones on the other until they balance. Then they guess the weight of the stones.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building Washington, D. C.

Washington.—Farm leaders have gone before congress again to press a new agricultural program. Like several that have come through in the last half-dozen years, the new proposition is based on a subsidy. The current program, like the old AAA, is predicated on agreements by which farmers will not do something and be paid for not doing it.

Urge New Farm Program

To obtain the subsidies from the federal treasury contemplated in the new farm legislation, farmers will have to sign contracts agreeing to curtail their acreages up to twenty per cent of their average cultivation for the last several years. If they fail or refuse to sign these contracts, the legislation describes them as not co-operating and, therefore, they would be denied the right to obtain loans from the federal government and they would not have a guarantee of "parity prices," as a penalty. Moreover, those farmers who failed or refused to co-operate in this manner would be subjected to prohibitive taxes on the sale of products grown in excess of limits on totals to be prescribed by Secretary Wallace of the Department of Agriculture.

The announced basis of this new program is for "conservation of the soil." Further, its sponsors contend that it will mean a gradual upbuilding of the fertility of the soil so that, in the end, fewer acres will have to be cultivated to produce the same volume of corn or cotton or wheat or whatever other crop is grown.

But I think there are few individuals who will say that the above reasons honestly constitute the basis for this new farm legislation. I think it must be admitted that the plan is only a subterfuge; that, while it may help some farmers by giving them cash, it is pure politics with cash as a sop.

I am not one equipped to say that agriculture does not need a subsidy even though prices of farm products are now almost double what they were in 1933. It is entirely possible that farmers throughout the nation still need help in the form of cash. It may be the better part of wisdom to vote such payments as are contemplated in this new legislation. On the other hand, however, if there is that need then let us be honest about it.

President Roosevelt lately has signed a new law which provides subsidies to shipping companies in order that America may have its own merchant marine, but those payments are to be called subsidies. They are not disguised nor concealed. It seems ridiculous, therefore, that the farm leaders should not be frank with the members of their organizations. If they feel that a subsidy is needed, why not put it up to congress that way so that those farmers who believe in subsidies as well as those who want to see agriculture left alone for awhile can understand what is going on.

* * *

I imagine that the farm leaders who are sponsoring the new legislation could scarcely have chosen a presentation of their program. I mean that, in presenting this type of legislation when congress is undergoing a wave of economy, the program is likely to receive scant consideration. It always has been the case that legislation goes through several stages of hauling and filling in congress with the result that after much debate a bill satisfactory to the majority emerges. In presenting their program at this time, therefore, the farm leaders are not doing a very good job of leading. There will be much agitation on the part of the farm leaders that will get just nowhere at all because of conditions in congress.

Chose Bad Time

Edward A. O'Neal, president of the American Farm Bureau Federation, recently was quoted as saying that the new plan would not require any payments direct from the treasury; that is, it would pay its own way through the medium of taxes if it "works perfectly" That is the rub. I find doubt in nearly all quarters that the plan can "work perfectly." It is so complex and requires such a bureaucracy for administration of it that to expect it to "work perfectly," is virtually to expect that legislation will control the weather. I think everyone will agree that congress and the administration has not yet been able to find the formula for controlling the weather.

I believe it can be said fairly that many farmers are dissatisfied with the soil conservation program adopted as a substitute for the AAA which the much criticized Supreme court held unconstitutional by a unanimous vote. Even those officials of the Department of Agriculture who are frank will admit that the soil conservation is not an effective means for controlling production. It does have merit as far as it goes in conserving the soil. But there is another phase: It has been pointed out too often almost to need repetition here that the soil conservation law, as occurred under the AAA, results in millions of dollars being paid to individuals and corporations who are in no way participating in conservation activities.

Now, while Mr. O'Neal thinks that the proposed law can be operated without expense to the federal treasury, there is yet the conviction in some quarters that it probably will cost about six hundred million dollars a year to pay the subsidies and pay for administration of the law. Six hundred million dollars a year is a large sum at any time and it bulks much larger at a time when there is a nation-wide cry for a balanced budget for the federal government. It is a sum that, if the budget of the federal government otherwise were balanced, would be sufficient to frighten thousands of holders of United States bonds.

It would seem then that the farm leaders ought to take into consideration the status of the federal government's financial affairs if they want to develop a program that will live. I have heard from many students of agricultural problems that the remedy for farm conditions is not an expensive new system of farm subsidies. They assert that it will be impossible for Uncle Sam to continue annual payments to some three million or more farmers and they are convinced, further, that most farmers themselves objected to being placed in the category of relief clients. An argument is also advanced that more and more farmers believe federal policies that cause money to be handed out free to farmers will, in the end, destroy the independence of agriculture. However that may be and however the majority of the farmers feel about receiving money gratis from the government at Washington, it cannot be said that agriculture is being placed on a sound footing by politicians and political farm leaders whose sole objective is to loot the treasury. Farmers would not permit it to happen to the governments of their states or their counties but a considerable number of them apparently have been persuaded that the governmet at Washington is something else.

* * *

The Department of Commerce which has supervision of airplane traffic has announced that it will not permit American pilots to participate in an air race that was proposed for this summer. The race was to have taken place from New York to Paris, but the Department of Commerce has vetoed the plan unequivocally because it considers the race as nothing more than a stunt.

Air Pilots Out of Races

It may occur to some that such a ruling by the Department of Commerce constitutes an interference with private business beyond reason. I cannot share that view. The experts have been unable to find in this proposed race any possibility of benefit for aviation nor any experimentation that would lead to more scientific flying. It has taken the position that there is too great a danger involved for those pilots who are foolhardy enough to undertake the three thousand two hundred mile flight across the ocean. Its position is further fortified with the argument that if any of the pilots should lose their lives in that type of aviation, it will cause many thousands of persons to lose faith in the airplane as a means of transportation. In short, the department thinks that there are only disadvantages and no advantages in the prospect.

While many persons may disagree with the position the department has taken, it is heartening to those of us who like to see private business encouraged, to know that a responsible federal agency charged with supervision of a private industry is again functioning as it was intended to do. For several years, the Department of Commerce, with particular respect to its aviation division, has been in a state of turmoil. There were wide differences of opinion and in consequence little in the way of permanent development was sponsored from Washington for the aviation industry.

In criticizing the government's inactivity, no observer would be fair unless he also called attention to the frailties and the failures of the industry itself. It is true that some of the larger lines lately have made sensational improvements in the equipment they use in the air and in the operations part of flying. It is true that larger and better planes have been built and are building. But it is likewise true that a number of airlines have adopted penurious, penny pinching policies and have refused to replace worn out and obsolete planes because they did not want to invest additional money. Until the air industry awakens to the necessity for spending money and until the Department of Commerce becomes a smooth functioning supervisory agent, the air travel of this country will not even approach the limit of its capacity.

ways Are Being Built.

x years now government under the supervision of al park service have been roads and trails and re- forests and streams. rk is just begun. Only sev- es of high-standard roads, ve miles of secondary d fewer than 600 miles of ve been completed. Yet ast three years this infant tional park system, not yet d, has been attracting more than any other of our 25 parks.

han a mile east of Gatlin- nnessee, a white and green ounces the boundary of the moky Mountains National

end of a long curve, a short beyond, the highway forks. and peer through the haze leep, tree-blanketed slopes t Le Conte and Sugarland n, whose lofty summits are often hidden in lowhanging clouds.

There is only one modern road over the mountains between Tennessee and North Carolina. It winds through the scenic valley of the West Prong of Little Pigeon river, crossing and recrossing the stream to the state line at Newfound Gap.

The Chimneys, rugged twin peaks, thickly forested, stand like sentinels, guarding the bridge which carries the highway across the West Prong. From the bridge all the way to Newfound Gap the traveler is hemmed in by steep, wooded mountain slopes, unbroken except where a waterfall, too high above and too far away to be heard, gleams in the sun like a white silken ribbon as a mountain stream sweeps over a precipice toward the noisy river cascading below.

At Newfound Gap along the state line the mountain top has been excavated and space provided for parking several hundred automobiles. Here the arboreal wonderland that is the Great Smokies spreads before you in both states.

Down Into North Carolina.

From this point the highway descends into North Carolina along the Oconaluftee river, through the Qualla Indian reservation, toward Asheville and Bryson City, North Carolina gateways to the park.

Southwestward from Newfound Gap, the Skyway, one of the highest highways in the country, is taking shape. It has been completed nearly to Clingmans Dome, the loftiest peak in the Great Smokies. Ultimately it will wind forty miles over and around peaks along the state line until it reaches the western end of the park, affording amazing vistas of jumbled mountains and billowy valleys. Portions of the Skyway are already 6,300 feet above sea level.

It is along the trails that the hiker meets isolated mountain families in their cabins, and stumbles upon the remnants of abandoned mills that not long ago ground out the mountaineers' "turn" of cornmeal.

Nearly everything one observes in and around a mountain cabin is homemade. Trundle beds, high-backed chairs, spinning wheels, and looms are usually heirlooms.

One of the first known white men to study the wonders of the Great Smoky mountains was a botanist, William Bartram of Philadelphia, who climbed among these heights about the time patriots in Independence Hall signed the Declaration of Independence. After him came other botanists who have found the mountains their paradise, one of the largest and last vestiges of the native forest that swathed the hills and valleys of colonial America.

Orchids and Ferns.

So diversified are the wild flowers of the Great Smokies that visitors from many sections of the country find species that grow abundantly in their fields and woodlands among others that are rare to them. Twenty-two orchids find a natural habitat in these rugged and well-watered mountains; there are 50 kinds of lilies; 7 of trilliums; 22 of violets, and 5 of magnolias.

The native wild orchids, while not so large as the more familiar cultivated species, have all the exquisite form and dainty coloring of their "civilized" cousins. Like many other plant families in the Smokies, the orchids are found throughout a long blossoming season. Certain species make a bold debut in the very early spring; others appear reluctant to yield sway to chilly autumn.

Ferns range from the most delicate, with lacy fronds, to the most hardy types. There are lush carpets of mosses and lichens of many varieties, and hundreds of mushrooms and other fungus species range from almost microscopic sizes to the large and showy varieties, many of which are prized edibles.

Here the catawba rhododendron is at its best. In late June and July its white and purple blossoms cover whole mountain spurs, fleck sweeping slopes, and envelop trails and streams. Mountaineers call rhododendron and laurel thickets "slicks" and "hells." Indeed, the plants grow in such tangled masses in some areas that only wilderness animals can get through them.

Huggins Hell, covering about five hundred acres, is one of the largest rhododendron and laurel thickets. It was named for Irving Huggins, a mountaineer who sought to drive his cattle from one mountain to another. On the way he was trapped in the Huggins Hell area. It took him several days to find his way out. Mountaineers avoid the "slicks," identified by such colorful names as Devil's Tater Patch, Devil's Courthouse, Woolly Tops, and Breakneck Ridge.

Keeping Up With Science

By Science Service

Even if Dice Are Not Loaded, You'll Lose in the Long Run

Gambling Odds Figured Out by Mathematician

Princeton, N. J.—Prof. John Von Neumann, Institute for Advanced Study mathematician, even applies his science to the gambling table.

He has warned Princeton students in a lecture that it is impossible to win at dice over long periods, whether the "ivories" are loaded or not.

The magic "seven-eleven" combination is by far the most frequent thrown, he said, but if it doesn't turn up on the first cast, the chances are reversed, and the stakes are as good as lost.

"That leaves a .490 winning average, so the game is not fair," he declared

"Stone-paper-scissors," a form of gambling that originated among bored convicts and is as old as chess, is Prof. Von Neumann's specialty. This well-known game is won by making each play the same number of times, but at random, and your opponent will lose in the long run."

He termed the intellectual pursuit of chess to be merely a game of chance, and said that "white," which has the first move, can always win, although "if 'black' is wise to the theory, he can play defensively and tie 'white.'"

Two Kinds of Games.

Prof. Von Neumann divided "games of chance" into two categories: those like dice where explicit hazards are introduced by rules, and those like chess, poker, and "stone-paper-scissors," where chance is introduced by what the opponent does.

"In the latter type intellectual reasoning is sometimes needed, while in the former no decision is required except whether to bet," he pointed out.

In the case of dice, he showed that since 7 can be thrown in six ways and 11 in two, while 2, 3, and 12 result from only one or two combinations, the conditions are favorable to win on the first throw. But if "seven-eleven" is missed, repetition of the first throw is unlikely, and the seven is now working against the player. The net effect is against the player.

In poker, which he had to simplify considerably to be able to analyze, Prof. Von Neumann stated that chances are one out of 300,000,000 to obtain any certain combination of five cards.

Earthen Jugs Were Coffins for Women of Ancient Russia

Baku, U. S. S. R.—Finding a cemetery in which women, in all their finery, were thrust into huge jug coffins when they died almost two thousand years ago, is reported on the Kura river by workers building a dam.

That earthen jugs served as coffins sometimes in this far southern region of Russia, has been known. But the new discovery reveals what the ancient people and their burial rites were really like, reports Tass.

It is now believed that the jug coffins were for women only, or almost entirely so. Men were simply buried in the ground with no shelter. The cemetery dates from the first to third centuries of the Christian era.

One Girl's Fine Garb.

One young girl found in a jug was wearing red leather shoes and belt, cloth trousers clasped at the ankle with bronze anklets, a skirt and blouse and a load of beads around her neck and bracelet on her wrists. Dishes for food were in the jug, and small clay cups and saucers believed to be toys for playing house were put in the jug with her.

The jugs, over 40 inches high, were closed with a large stone stopper and laid horizontally in the ground.

Ants Help to Build Roads in Algeria

Algiers.—On the French African motor road, one of the longest in the world, the ingenuity of construction engineers is being combined with the industrious nature of the ant.

Ant hills 10 feet high and scattered freely through that region contain a hard gritty material which makes an excellent road surface. Only a part of each hill is dug away for the road, experience having shown that the ants will then quickly replace the used material.

Writing Invented in Sumeria to Handle Priests' Business

Earliest Examples Are Office Files

By EMILY C. DAVIS

WHEN man could no longer do without writing, he invented it. Imagine priests in a Mesopotamian city in a busy temple, taking in herds of sheep as offerings, buying lands for the temple estates, making loans to hard-up devotees who can't afford to pay just now.

It is a science of big business in its earliest form, in the southern Tigris-Euphrates valley over 3,000 years before Christ. The growing problem of handling so much wealth has the temple staff dizzy remembering who paid, how much, what is promised, what is due—

Writing has to be invented. And so, it is.

Archaeologists have been able to trace writing back to its start in these cities of Sumerian people in southern Mesopotamia, because buried in the ruins are hard, baked clay bricks inscribed with temple accounts. The oldest writing preserved in the world is baked into the oldest and crudest of these tablets of clay.

Other Early Systems Lost.

Whether these Sumerians were the world's first literate people may never be known. Other ancient peoples who had writing systems apparently began by using less durable writing materials, and therefore their early efforts have not survived.

Writing was a city man's invention, in Sumeria. It was the development of city life that brought so much complicated finance to the temples.

That the invention of writing was probably inspired everywhere by the peculiar, practical needs of urban economy, is the view taken by Dr. V. Gordon Childe, professor of prehistoric archaeology at the University of Edinburgh.

It is no accident, he explains, that the world's oldest writings turn out to be bookkeeping accounts and dictionaries. The accounts are office files. The dictionaries are schoolbooks used in teaching young scribes to write. And if Egypt's earliest writing had been preserved, it would, he believes, be of some such severely practical nature.

Curb Service for Banks Provided by New Invention

Washington.—Curb service by banks, department stores and other places of business, whereby customers would pull up in their cars, make their deposits or purchases without taking a single step out of the car and without the attendant stepping out of the building, is described in a patent granted here to W. E. Lindsay of Denver, Colo.

It works this way: You pull up along side a gasoline-pump-like stand on the curb much as you would to get gas for the car. The stand is provided with a small door at car window level. There is also a telephone, or a microphone and loud speaker. Between the stand and the bank or store building, a tunnel or conduit extends underneath the sidewalk.

Attendant's Peephole.

From a special window inside the building the attendant can observe and identify the people pulling up to the stand. By means of the telephone, he can talk with the customer. A conveyor runs from the stand through this tunnel to the attendant's desk.

When you pull up, you pick up the phone and tell the attendant what you want. Suppose it is to make a deposit. When he identifies you, he presses a button and the door of the stand opens up. Into a box carried by the conveyor you now place your check, money, deposit slip or passbook.

Road Magnets Reap Curious Metal Crop

Washington.—Magnetic road sweepers or "nail pickers" used on gravel roads pick up a curious assortment of potential puncture makers, and save the motorist a considerable sum of tire expense.

But in addition to saving money and time, this type of maintenance is considered an important safety measure. These electro-magnets will draw a nail through about three inches of loose dirt, and pick up as much as 12 pounds of metal per mile.

Here is what one pound of metal is reported to have contained after the magnet had passed over a North Dakota highway: 102 large nails, 187 small nails, 30 tacks, 23 pieces of tin, 8 brads, 11 bottle caps, 5 washers, 38 pieces of wire, 2 screws, 5 garters, 1 needle, 1 hairpin, 1 bolt and 1 razor blade.

Farm Topics

SWEETCLOVER THAT IS REALLY "SWEET"

Strain Under Observation of U. S. Specialists.

Supplied by the United States Department of Agriculture.—WNU Service.

A sweetclover that is really "sweet" is under observation of forage specialists of the United States Department of Agriculture.

The common yellow blooming and white blooming sweetclovers in the United States both contain a bitter substance known as coumarin. It is believed this substance poisons live stock when they are fed improperly cured clover hay.

Two plant explorers of the department, W. J. Morse and P. H. Dorsett, seven years ago sent back a specimen of a new sweetclover from the Chihli province of China. It was an annual. Since then 27 lots, all biennials, have been obtained from central Europe, Russia and Mongolia. None of them are bitter.

Repeated tests with the new sweetclover have convinced the forage men it does not contain coumarin, reports Dr. E. A. Hollowell, clover specialist of the Bureau of Plant Industry.

Preliminary work at the Wisconsin experiment station shows that live stock prefer the new sweetclover to the common varieties. Spoiled hay of the clover has been fed to rabbits and calves without ill effects.

The new clover is shorter than American varieties and produces fewer leaves. The forage specialists are trying to cross the nonbitter clover with domestic strains to lower the coumarin content of the domestic strains. Attempts thus far have been unsuccessful.

Appearance as Guide in Telling Age of Animals

General appearance is the best guide for age in hogs and poultry. With horses, cattle and sheep, their age may be told with a fair degree of accuracy by their teeth; however, this requires experience and various factors, states a writer in the Rural New-Yorker.

With horses the first pair, upper and lower, of their front teeth are up and in wear at from two and one-half to five years of age. The other two pairs of incisors come in one year later for each pair, so the horse is full mouthed at five years. The cups indicate the age from then on, starting with wear at six years for the lower, center incisors and advancing progressively one year for the others. General appearance, slope and shape of the surface are of importance also. The horse's teeth are egg-shaped, from side to side, when young; at nine the surface is about round, and then becomes elliptical from front to rear. After eleven years general appearance is the only guide.

Gizzardless Chickens

Chicken specialists in the Department of Agriculture seem to have settled the question as to just how useful a chicken gizzard is, at least to their own satisfaction. They operated on a number of chickens, removed their gizzards, and sewed them up again. Put through feeding tests with normal birds the gizzardless chickens have done well on finely ground feeds, but failed to digest coarse feeds efficiently. A hen operated on in 1934 is still laying eggs and a gizzardless rooster has lived happily since 1933. This is interesting but of no great practical importance. To our mind it would be much better to eliminate the vocal cords from a few old roosters we know.—Country Home Magazine.

6,000,000-A. Legume Gain

One of the major changes in American agriculture in the last five years is a 6,000,000 - acre increase in annual legumes planted alone and a gain of nearly 3,000,000 acres of annual legumes planted with other crops, according to a federal analysis, says Capitol News.

Shrinkage of Stored Oats

Tests at the Ohio experiment station show that wheat and oats stored in bins in good condition and kept free from rodents shrank very little in storage. Over a five-year period, the average loss from shrinkage in wheat was seven-tenths of one per cent. Average shrinkage with oats was less than two-tenths of one per cent. The moisture content of the grain varied slightly from month to month, depending on the weather.

Bromegrass

Bromegrass, which is perhaps the most drouth-resistant grass, according to a writer in the Prairie Farmer, should be seeded early in the spring when there is an abundance of moisture, or in late summer if sufficient moisture is present to give it a good start before winter. The rate of seeding is 20 to 25 pounds an acre. It may be seeded broadcast with red clover, alfalfa or sweet clover, but it tends to crowd out the legumes.

'Way Back When

By JEANNE

DICTATOR ONCE DEPENDENT ON CHARITY

YOU may not agree with the principles advanced by Adolf Hitler, or you may be an enthusiastic admirer of his. In either case you will be interested in looking at the man and his life to see what lesson we may learn. Perhaps the greatest inspiration to be drawn from the German dictator's life is a word of encouragement for those whose early lives may seem failures.

Adolf Hitler was born on the Bavarian frontier of Germany in 1889, the son of a customs official who had political ambitions for him. The boy developed a desire to be an artist. His father opposed him, so Adolf refused to study in school. He was the despair of his father and mother. When he was eighteen, he went to Vienna and applied for admission to the Academy of Art. His art was too poor to qualify

and they directed him to the architectural school, but his loafing in early grades made it impossible for him to pass entrance requirements there.

For three years he slept in a cheap men's hotel in Vienna, getting his meals at a monastery and occasionally begging from passers-by. In the winter he shoveled snow to make a living. Whenever he earned a few kronen, he stopped work and went to some cheap cafe to deliver political speeches. He painted poor water colors which a friend peddled for him, he painted picture postcards, and when hungry enough was a house painter. During the war he was a corporal.

Here was a man in his thirties who had never shown any real promise in anything he did. Then, Adolf Hitler formed an ideal of government.

* * *

FATHER DIVINE WAS A HEDGE TRIMMER

WHAT are the limits of human credulity? To what heights may not the spell-binding orator rise? For thousands of simple blacks in that section of upper New York city known as Harlem, the answer to those questions is "God! Only God is the Limit!" For George Baker, once a Baltimore hedge trimmer and dock worker, who is reported to have served 60 days on a chain gang, is the negro who claims to be God.

Early records of his life have not been found and George Baker, who now calls himself Father Divine or God, will not talk. It is known that he came from the South, and that he worked at odd jobs in Baltimore in 1899. Starting as a Sunday School teacher, he established a new cult, and moved to New York with a few followers who believed him to be God. New disciples joined

him and were provided with food and lodging, while he found jobs for them and collected all their earnings. In 1919, he changed his name to Father Divine (God) and conferred the title of Angels on all who turned their possessions over to him. Thousands of dollars became his in return for new, more glamorous names, such as Ruth Rachel, Hozanna Love, and Frank Incense. Today Father Divine's Angels number about 1,000 and there are 3,000 "Children" or followers who retain some of their possessions, living in apartment houses and flats of Harlem. Heaven is his headquarters, where meals are served and where about 75 Angels sleep. He has established Extension Heavens now in Bridgeport, Jersey City, Newark, and Baltimore; and he owns profit-making stores and shops throughout Harlem. It has been estimated that his income is $10,000 per week, but no property is held in his own name.

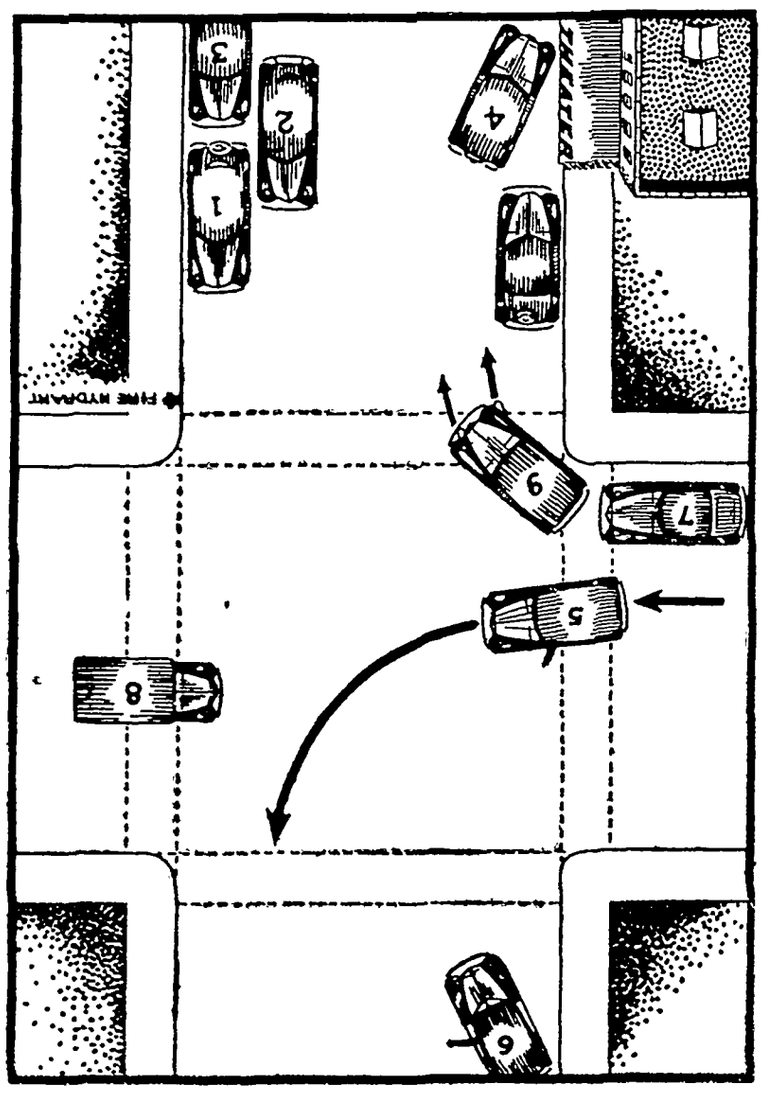
Park Properly, Prevent Accidents



PARKP ROPERLY, PREVENT ACCIDENTS

Perhaps you have driven around and around the block looking for a place to park and gnashed your teeth each time you passed a theatre or other public building Don't yield to temptation and park there The reasn for resricting parking in front of public buildings is not as a persecution of the motorist but as a measure of safety. In case of fire or accidents fire trucks and ambulances must have access to the building front

Parking is prohibited for a distance of fifteen feet from any street intersection or fire plug Parking to close to a street intersection obstructs the vision of oncoming traffic. In case of fire firemen need room to connect and lay their lines. If a car is parked beside the fireplug their work is hampered. A few seconds delay unnecessarily endangers life and property

Double parking, as shown by car No. 2, is a dangerous practise The reason is so obvious it is needless to discuss it. Parking on cross walks forces pedestrians to walk in the traffic lane, thus endangering their lives.

In business districts of some cities and towns parking is restricted as to time Look for the signs "10 MINUTE PARKING" or "ONE HOUR PARKING" and obey the regulations. It is also forbidden to park in alleys.

When forced to stop on the highway never park on the pavement, always on the shoulders. Avoid parking on hills and curves at all times. BE COURTEOUS— PARK CORRECTLY.

(Copyright 1937 P. L. Cummings, Des Moines, Iowa.

QUESTIONS

1. Is car No 9 parked correctly?
2. How close to a fire plug is parking permitted?
3. Why is parking restricted in front of public buildings?
4. Is car No. 6 driving correctly?
5. Is car No. 8 in correct position?
6. Name two violations committed by car No 4?
7. Why is car No. 7 parked incorrectly?
8. What charges should be filed against driver of car No. 2?
9. Is driver of car No. 5 observing safety regulations?
10. Why is parallel parking to the curb generally adopted by cities and towns?

ANSWERS

1. Parking on a cross walk is forbidden.
2. Fifteen feet minimum.
3. To provide space for emergency vehicles
4. Driver No. 6 should not make a left hand turn from the curb
5. Not unless he expects to turn left. Then he should signal
6. Parking in front of a public building; parking at an angle to the curb
7. Parking within fifteen feet of a street intersection is prohibited.
8. Double parking; obstructing traffic.
9. Yes. Car No. 5 is in left hand traffie lane. Driver using hand signals
10. This method provides more roadway for traffic.

COMPOSTING MANURE IS HELP IN FLY CONTROL

Keeping It In Compact Rectangular Stacks Is Best Unless It Can Be Hauled To Field Often

The secret of control for all species of flies is largely in seeing that no material is left about in which they may breed, suggests C. H. Richardson, Iowa State College entomologist.

Keep all kitchen refuse in covered garbage pails or cans, if you have nothing to feed it to, and empty these cans at least two or three times a week.

Barns, sheds and yards need to be kept as free from manure as possible Hauling the manure to the fields two or three times a week will aid immensely in holding down the number of flies.

The most practical method on many farms of handling manure during the fly breeding season is to compost it, Mr. Richardson believes. He suggests the following proceedure.

Put the manure in compact, rectangular stacks, the sides of which are compressed by beating them with a shovel or some such instrument. Place loose straw around the base of the stack about a foot from the edge

The heat and gas from the fermenting manure will drive out the fly maggots and these may then be scooped up and burned or buired in a hole in the hot, fermenting part of the stack beneath the top layer of manure.

It is essential to keep the stack compact at all times. As additional manure accumulates it may be put in new stacks. Wire netting will aid in shaping the stack and keeping the manure compact.

Those who desire additional information on fly control and regarding the different species of flies may get it from Bulletin 345, "Flies as Household Pests in Iowa." This publication may be found in any county agents office, or it may be obtained from the Bulletin Office, Iowa State College.

KLEMME LOCAL NEWS

Mrs Henry Lewis has been on the sick list this week

Mrs Lena Schroeder and Miss Dorothy Croner were Garner guests Tuesday afternoon

Mr and Mrs Carl Anderson and Delores visited at Clear Lake Sunday evening

Mrs Charles Priebe is reported as being very sick this week. A daughter and her husband are here visiting

LaVohn Larson, Nellie Strome Bob Schneider and Roy Arnold are all home from Ames to enjoy the summer vacationm

Mr and Mrs E F Jacobs drove to Maquoketa, Friday and visited until Tuesday with relatives and friends

Florence Woodhouse of Mason City came Saturday evening to spend Sunday visiting at the W F Pavey home

Joe Johnson was seventy-two Tuesday and in honor of the occasion Mr and Mrs Art Kudje entertained all of the children living close enough to be present to a pic nic supper

Mr and Mrs. Verner McLaughlin of Belmond and Marvin and Marjorie Lemke spent Sunday visiting with their mother, Mrs. Daisy Lemke. Marjorie remained in Klemme for the week.

All the Standard Bearer Girls will leave next Wednesday for Lake Okoboji where they will enjoy an outing until Friday evening Mrs Earl Schaeffer will chaperon the girls.

Mrs Herman Bridges and children enjoyed a fish supper at the home of Mr and Mrs. Elmer Beier Monday evening. It was Robert's birthday and they were there to help him celebrate it.

Mr and Mrs. W. C. Keraus; C G. Waterman and family; and Mr. and Mrs Tom Mitchell of Swea City had dinner Sunday with Mr. and Mrs C F Keraus at their cottage at Ventura.

Those who drove to Des Moines Monday to attend the paper carriers convention were Mr. and Mrs. Lester Stille and daughters, LaRayne and Kieth Stille, Mr and Mrs Geo Buseman and son, Wayne

Mrs. Walt Thada, Mrs. C G Waterman and Mrs. R. A Jorgenson visited at the Art Schoenwetter home Friday evening Mrs Schoenwetter has hundreds of flowers and they are at their best now.

Mr. and Mrs. Herman Beek and son, of Davenport came Saturday and were dinner guests at the W F Pavey home They went to Ventura for several days visit and will return the latter part of the week for another visit with Klemme friends

Mr and Mrs. John Chambers drove to Ames Saturday and attended the Alumni banquet Saturday evening John was a member of the class of 1907 There were two present who received medals for having graduated over fifty years ago The first class was graduated in 1872

Mrs. P M Wilson, Mrs. C G Waterman Mrs A. H Dulmes, Mrs. R. A Jorgenson and Mrs Russ Gray of Rockford were guests at a one o'clock luncheon at the home of Mrs Art Wille, of Garner, Wednesday Mrs Gray won high prize, Mrs C V. Hamilton, second high, and Mrs P M Wilson the average score prize.

Mrs. C C Kilgore left Saturday for Minneapolis to attend the graduation exercises on Monday, as her son Clair, will receive his Bachelor of Arts Degree Clair will graduate in an accounting course, with a "B" average for his University work, having won straight "A's" for the past quarter's work Clair is to be complimented on his success in his University work, and he is one to prove to other boys and girls that you can work your own way through college if you have the determination.

Alfred and family arrived home Saturday from California. Richard expects to return their in the fall to take up his school work again.

Children's Day was observed in the U B Church Sunday A fine program was given by the children which was enjoyed by a large audience.

Miss Gertrude Cashman who has been attending College at Iowa City is home for a few weeks vacation. She plans to attend summer school there

Mr and Mrs. Sylvester Cashman of Chicago returned to their home after having spent the past two weeks with his mother and other relatives here. Sylvester's work will take him to Mexico for three months stay

Mr and Mrs Jay Griggs received word that their daughter. Lila, who is an accountant for the Town Mutual Dwelling Insurance Co in Des Moines has returned from her vacation trip to Portland, Maine and Washington D. C She enjoyed her trip very much

Mrs. Mary Dominy and niece, Josephine. and Eula Veenstra accompanied the former's niece, Marion Dominy to her home in Illinois. Marion had been visiting with her sister, Josephine. and her brother, Howard While here she and Howard visited relatives in Missouri

The storm Saturday night tore the Cupola from W. L. Sherwood's barn, uprooted some large trees for O Evenson, moved H Busse's barn several feet also his well house and slightly moved the house and also uprooted several large cottonwood trees at the Tom Roths home

AVERY-TWIN LAKE

Mr. and Mrs. Francis Buseman of Waterloo visited Sunday at the Henry Buseman home.

Clara Neuhring assisted witn house work at the Will Sherriff home near Belmond a few days the fore part of the week.

Miss Lucille Kraus was a Sunday dinner guest at the Mrs. Dick Swalve home

Mr and Mrs. George Albers Jr. and daughter, Connie, and Mr. and Mrs Will Reuben and daughters were Sunday dinner guests at the John Albers home

Mr. and Mrs. John Wessels were Garner callers Sunday afternoon.

Mrs. Dick Swalve visited at the Harm Rust home in Goodell Thursday.

OLDSMOBILE CHEVROLET

WHY DID THE HINDENBURG CRASH?

Cause Is Still Uncertain, Though Use of Helium Would Have Prevented It. But Uncle Sam Owns All the Helium!

By WILLIAM C. UTLEY

"THERE must be no more flying with hydrogen. We must make an about face. We must use helium."

Thus spoke Dr. Hugo Eckener, he who is known as the world's greatest authority on lighter-than-air craft, after being informed that Germany's proud Hindenburg had crashed spectacularly upon completing her maiden 1937 Atlantic crossing at Lakehurst, N. J.

There have been several theories advanced as possible causes of the disaster, but no one is yet sure which is the correct one, and it is doubtful if anyone ever will be.

Sabotage was suggested, merely that no possibility be overlooked, and immediately rejected.

It might have been static electricity which set off the highly explosive hydrogen gas. All aircraft are apt to accumulate it, especially when flying through or near a thunderstorm. But this seems unlikely in the case of the Hindenburg, for her ground lines had been down three minutes before the crash, and presumably all charges of static electricity would have passed into the earth.

Spontaneous Combustion?

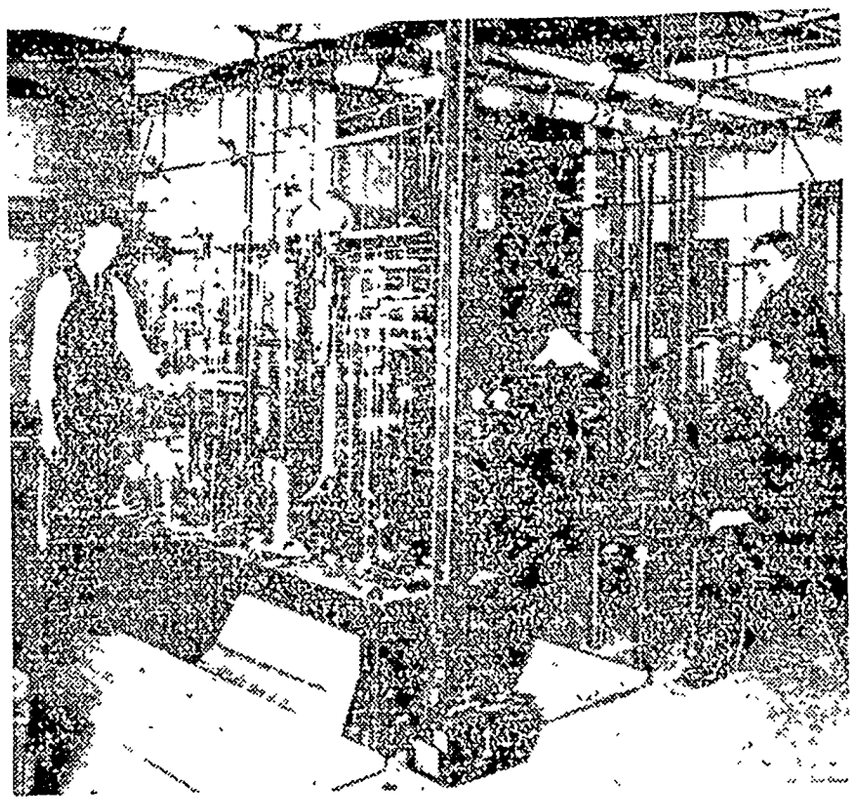
Another theory, more complicated than the others, was that of Prof. Otto Stern, of Carnegie Institute of Technology, and formerly connected with the Zeppelin works in Germany. Professor Stern expressed wonderment that the accident had not happened sooner, due to peculiar action of the proton of the hydrogen atom.

The hydrogen proton, he explained, is charged with positive electricity, which is offset by a charge of negative electricity in the electron, which covers the proton like a shell. When the gas is leaking under presssure, many of the protons lose their electrons, and race madly about seeking new ones. This causes spontaneous combustion.

So rapidly did the flames engulf the ship, the versions of witnesses as to the cause were varied (fire swept from one end of the Hindenburg to the other in 32 seconds). Several insisted, however, the rear port engine was throwing sparks from its exhaust as the ship came to the mooring mast. The theory considered most probable at the time of this writing is that these sparks, whipped by the wind, perhaps, ignited hydrogen being valved out as the ship came down. It is customary to valve gas in landing.

Whether one of the conditions cited in this brief review was the cause of the explosion, or whether the true cause has not yet even been suggested, one thing is certain: An explosion of the highly inflammable hydrogen gas wrecked the airship. And no such explosion could have occurred had the Hindenburg been filled with inert, non-inflammable helium gas. Thereby hangs a tale

The Germans are the only nation which has continued to make progress with lighter-than-air craft. The United States abandoned it when a series of dirigible crashes culminated in the loss of the Macon off Point Sur, California, February 12, 1934. Great Britain said, "No more dirigibles!" when the R-101 crashed October 4, 1930, with 46 on board, including prominent ministers, at Beauvais, France France forsook airships when the Dixmude disappeared December 21, 1923, presumably having been destroyed by lightning over the Mediterranean.



Employees of the United States bureau of mines at work in the cryogenic laboratory, where research data necessary for helium production and purification are developed.

U. S. Owns All Helium.

But the Hindenburg accident has convinced the Germans that they can no longer operate their ships with hydrogen. And where are they to obtain helium? The United States has a monopoly on all the world's helium! Only in American natural gas does helium exist in sufficient quantity to extract and fill airships. On the present basis our government is not permitting other nations to buy its helium, despite the fact that our navy is without airships to use it. The only airship we have left, the Los Angeles, which Germany turned over to us as part of the spoils of war, is over age, decommissioned and in hangar at Lakehurst.

Hydrogen, the lightest gas known, is the most practical for airships, except for the fact that it is also one of the most explosive things on earth when mixed with air in the right proportion. Helium has not quite the lift of hydrogen, but it is safe.

Dr. Hugo Eckener, Zeppelin expert, who says all airships must now be inflated with helium.

"He 4," as helium is known by its chemical formula, is described as "an inert, non-oxidizable, colorless, gaseous element of density 1.98." Sir Norman Lockyer was the first to discover it. During the eclipse of 1868 he detected its existence in the sun; it was a bright yellow line in the solar spectrum which could not be associated with the spectrum of any element then known. He suggested the name for the element, which is taken from "helios," the Greek word for sun.

In 1895 Sir William Ramsay found that when the mineral uranite was decomposed by acid it gave off a gas which would not combine with oxygen to "burn." Further, when examined spectroscopically by means of an electric discharge, it showed a bright yellow spectral line which Sir William identified with that which Lockyer had found in the solar spectrum. He assigned to the new element the name which Lockyer had suggested for it.

Germans Lucky in Past.

The United States, with her plenteous supply of helium, has used it in operating her airships, but the Germans have always been slightly skeptical about the American enthusiasm for the gas. It is, next to hydrogen, the lightest gas known, yet its pay load efficiency is 20 per cent less. Despite this fact, hydrogen costs about $2.50 per 1,000 cubic feet as against many times that amount for helium. At that rate it can't be wasted cheerfully in maneuvering a ship.

Up to the time of the Hindenburg crash, the Germans had been very expert—and not a little lucky—in handling their many airships without losses due to fire and explosion. The Hindenburg was the 129th of a noble line (the official number of the ship was LZ-129). Of her predecessors, 10 were never completed, 25 were lost by storm and accident, 6 by causes unknown, 21 were dismantled, 46 were wrecked by the war, 11 were turned over to the Allies after the war and 7 were sabotaged that they need not be surrendered. The Graf Zeppelin and the Los Angeles are the only ones left. The old Graf carries on like the veteran she is, her comings and goings between Germany and South America hardly occasioning comment any more. She landed at Frankfort from Rio de Janiero the day after the disaster, with 23 passengers, and was immediately grounded indefinitely. She will not take off again without helium.

Before the World war helium was worth hundreds of dollars per cubic foot. It was obtained from minerals such as cleveite, fergusonite, monazite, thorianite, and other radioactive minerals, as well as the uranite used by Ramsay. But it was not until war-time that the United States bureau of mines solved the problem of producing it from natural gas in quantities sufficient to inflate giant airships. The victory of the bureau is considered an epic of science.

The first war-time helium plant was at Petrolia, Texas, but the compressors and other apparatus for extraction were later moved to Amarillo, a better location. Here the government has a complete plant producing helium from a gas field which is one of the world's richest in the inert, non-inflammable gas.

Nazis Never Enthusiastic.

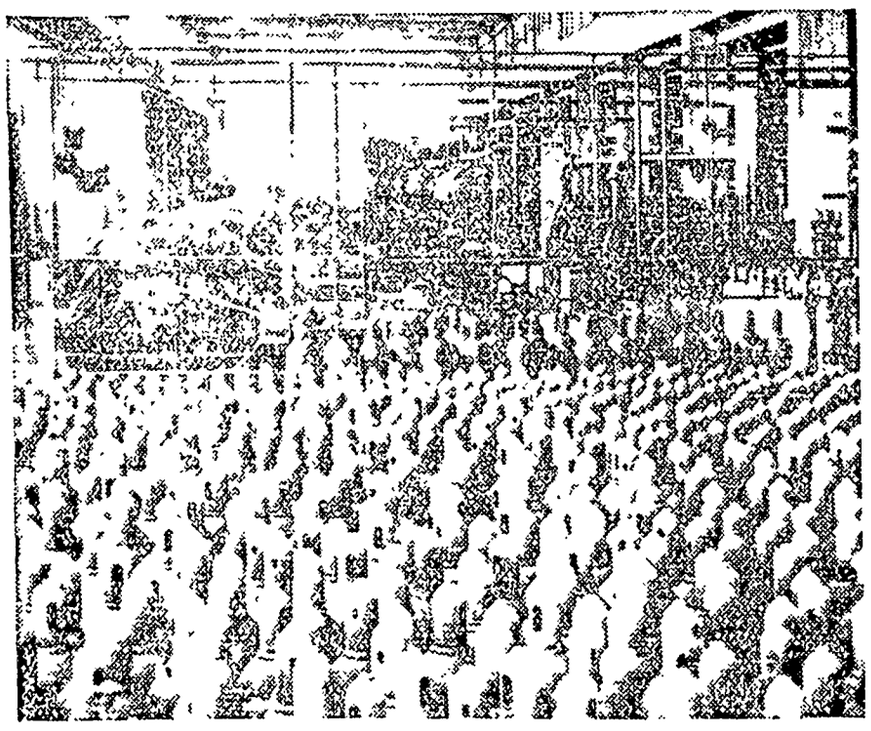
In addition, far-sighted Uncle Sam has established helium reserves in just the way that he has oil reserves.

In the past steps have been taken to permit the sale of Uncle Sam's helium to Nazi Germany, to insure the safety of airship flight, but Germany had never been overanxious or insistent. Indeed, one version has it that the United States offered helium to the Zeppelin company, but certain German experts considered the expense of the safer gas too great for commercial use and, furthermore, cited the greater lifting power of hydrogen.

The President has been given discretionary power to sell helium to a foreign nation, if he has the recommendation of the secretaries of interior, war and navy.

According to Watson Davis, director of Science Service, to whom the writer is indebted for much of his information, "There is admittedly a war angle to this question of whether America should relinquish even to a limited extent its nature-given monopoly of helium. But there was a growing feeling that the airship line across the Atlantic shqould be made as safe as possible. That would mean extending to Germany the courtesy of helium, just as the navy has given them the facilities of its Lakehurst airship station, the only suitable landing field for airships in eastern United States."

© Western Newspaper Union.



Interior of the compression building of Uncle Sam's helium plant at Amarillo, Texas. Each of the cylinders in the foreground holds about 1½ cubic feet. The capacity of the Hindenburg was 3,700,000 cubic feet. Imagine the number of cylinders it would have taken to fill the airship to capacity!

Wide Use of Prints for Sports Togs

By CHERIE NICHOLAS

WHEN the world takes a holiday at the beach, tennis court, golf course, aboard ship or wherever vacation lures the playful, watch prints. We promise you that you will see prints this summer such as you have never seen before, armies of them, droves of them, processions of them!

It would seem as if style creators are just discovering that if there is one place more than another where riotously gay prints lend themselves dramatically to the picture, it is at the beach and its environs. The vibrant blue and green hues of the sea, the vast dome of a glamorous opalescent sky, the bright glare of the sun, the stretches of golden sand call to the colors, and to more color and more in the fashion parade.

So it is that prints for beach and for swim wear have become a hobby with designers this summer. Needless to say, for the most part it's linens and cottons that "steal the show" when it comes to rollicking, frolicking beach and sea-going costumes. The grand thing about the spectacular printed linens and cottons that are so thrillingly enlivening the pageantry of fashion where sea-breezes blow is that you can wear them with all confidence, knowing that they have been scientifically processed so that they won't shrink and they won't lose their high color no matter how wet the water, no matter how many duckings they get, no matter how relentlessly scorching sun rays attack. This assurance of non-shrinkage and of color endurance that goes with modern wash materials has, as a matter of fact, proved persuasive in encouraging the movement that is now on of featuring tub prints in a big way for beach fashions and also for swim suits.

As to whether you don linen or cotton in the existent orgy of prints that is being staged on land or sea is entirely a matter of choice since one is declared as good style as the other. A truly amphibian suit done in the modern spirit is worn by the exultant water nymph centered in the accompanying picture. A swim suit of this type, made of print, the patterning of which is as smart and distinctive as is this patterning and which is guaranteed sanforized shrunk as is this print, will do honor to even the most ultra-of-ultra cruise wardrobes.

Any girl would look pert and modern in the clever sport pajamas here shown. It is one of the newer prints that have so much swank and at the same time so many practical advantages not only for beach wear but for house wear as well. This gaily patterned linen washes like a hankie.

And do for fashion's sake see the cunning play suit to the right in the group. Yes, you can have a costume exactly like it, buy it already made or get the material and sew your own. The new Hungarian cotton prints such as have been used for the making of this fetching outfit are selling as fast as they can be measured off on the yard-stick. The colors are rich and glowing and the prints faithfully reproduce original old-world fabrics. The trick is to make them up in keeping with their quaint design, in just some such peasant manner as here shown. Full skirt of course and rather short is according to the prescribed formula. Tune it to practical active sports wear by choosing a divided-skirt pattern. Let the bodice be backless for comfort and for "style" on a hot summer day. And to the entire add a smart bolero to give it that picturesque peasant flavor which fashion thinks so well of this season.

© Western Newspaper Union.

TIPLESS GLOVES

By CHERIE NICHOLAS

Here it is, the latest step toward chic and toward greater freedom—the tipless glove, cut to show brightly polished nails. The open-air fever, starting with toeless shoes and crownless hats, has gone to the fingers. If your gloves are copper red as gloves and accessories are apt to be these days it's robin-red nail polish you'll be wanting. The suit is of horizon blue, softest featherweight woolen. The wide revers, the modified umbrella skirt, the squared shoulders and the boxy jacket with its jaunty swing make this smart street-and-travel costume as modish as it is practical.

PASTEL LACES FOR WEDDING DRESSES

By CHERIE NICHOLAS

Pastel laces for the wedding gown, as well as the bridal party's dresses are a new note this season, and one that bids fair to gain in popularity through the season. Very pale pastels are used, so pale that they are almost white, and yet have a special shimmer that would not be attained by plain white. One of the loveliest of these pastel wedding gowns that we have seen is of palest blue linen thread, and the edge of the train, and the edge of the slit skirt, are scalloped with the scalloping accented by tiny-pleated net in the same blue. The neckline, too, is edged with the fine net pleating.

Net, as well as lace, ranks highly for bridal gowns this season. Silk net, particularly, is adapted to molding the figure, and when cut on a princess line, accenting the slender figure, it makes a truly beautiful bridal gown. And whereas net veils are prevalent over lace bridal gowns, a net wedding dress is best set off by a lovely lace wedding veil. One veil that we have seen, over a net gown, was of lace, and very short. A bertha collar of lace was attached to the net train, the lace forming borders on the sides of the train.

Summer Velvet

Summer velvet is taking its place in the sun. The sheer quality of the fabric with its rich velvet pattern adapts itself particularly well to summer wedding clothes.

Gloves

Gloves deserve a whole chapter in themselves. They mirror fashion trends as clearly as clothes. Femininity is uppermost.

Flowers Everywhere

Flowers are everywhere. It is newest to wear two boutonnieres, one on each lapel of your suit.

Quick to Make; Smart to Wea

Here's a pattern for an ent apron, its yoke, border and pos to be done in contrasting m terial. Cut flowers for applic from colorful scraps. In patt 5800 you will find a transfer p tern of the apron with the m 7¼ by 9¼ inches (including pock correctly placed, a motif 4 by

inches and applique patte pieces; color suggestions; m rial requirements; illustration all stitches used; directions making the apron.

To obtain this pattern send cents in stamps or coins (c preferred) to The Sewing Ci Household Arts Dept., 259 Fourteenth St., New York, N.

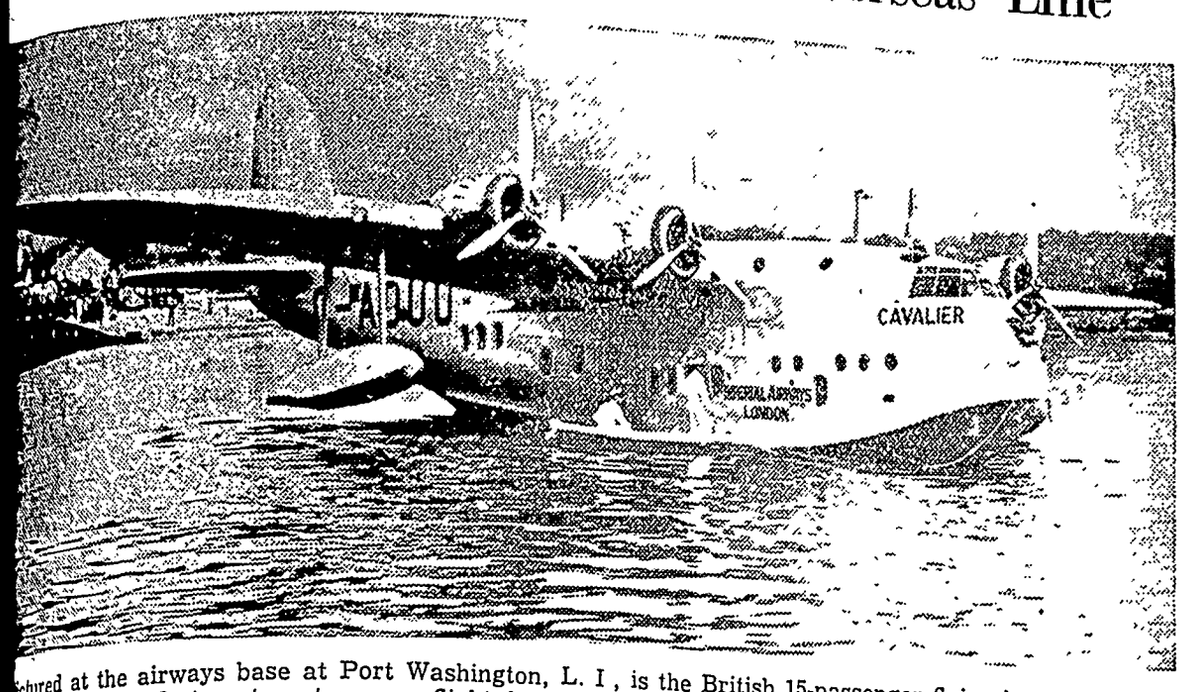
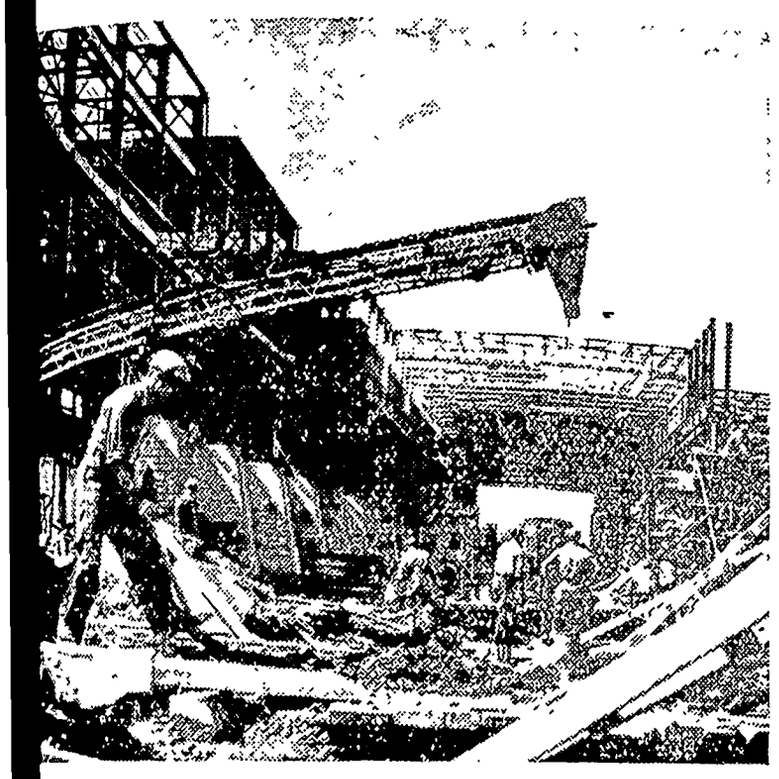
British Plane Blazes Trail for Overseas Line



Pictured at the airways base at Port Washington, L. I., is the British 15-passenger flying boat "Cavalier" completing the first east-west survey flight from Bermuda. These survey flights are in preparation for eventual trans-Atlantic passenger service which will be jointly operated by the Imperial Airways and Pan-American Airways. Simultaneously with the Cavalier's flight, a Pan-American Sikorsky clipper made the east flight to Bermuda.

Ohio Will Have a "Little Ruhr"



The new "little Ruhr" is rising seven miles up the Cuyahoga river Cleveland, Ohio, which will mark it as America's meeting grounds for ore and coal. The development is part of the Republic Steel Corporation's program of expansion. A $15,000,000 plant, shown above, is under construction, which, when completed, will be the world's most modern strip mill.

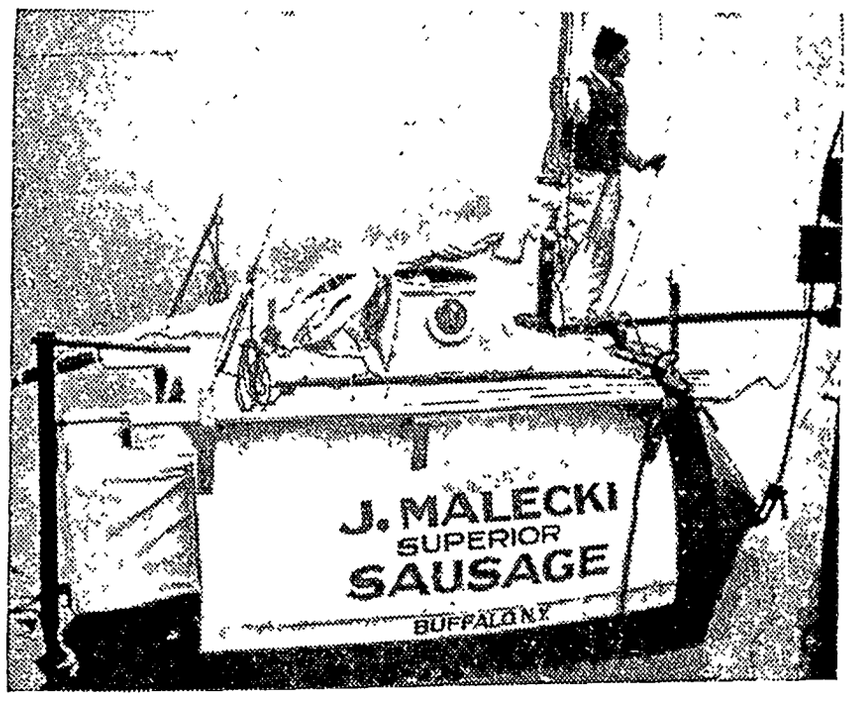
BREAKS NARCOTIC RING

Miss Joyce McAllister, twenty-seven-year-old former Santa Barbara, Calif., college student, whose under-cover detective work is credited with leading to the arrest of seven Chinese and a veteran federal agent in raids on night clubs in the Chinese quarter of Reno, Nev. The sheriff's office and the federal narcotics bureau provided her with $1,000 with which she bought narcotics, thus obtaining information leading to the arrests.

BLIND LECTURER

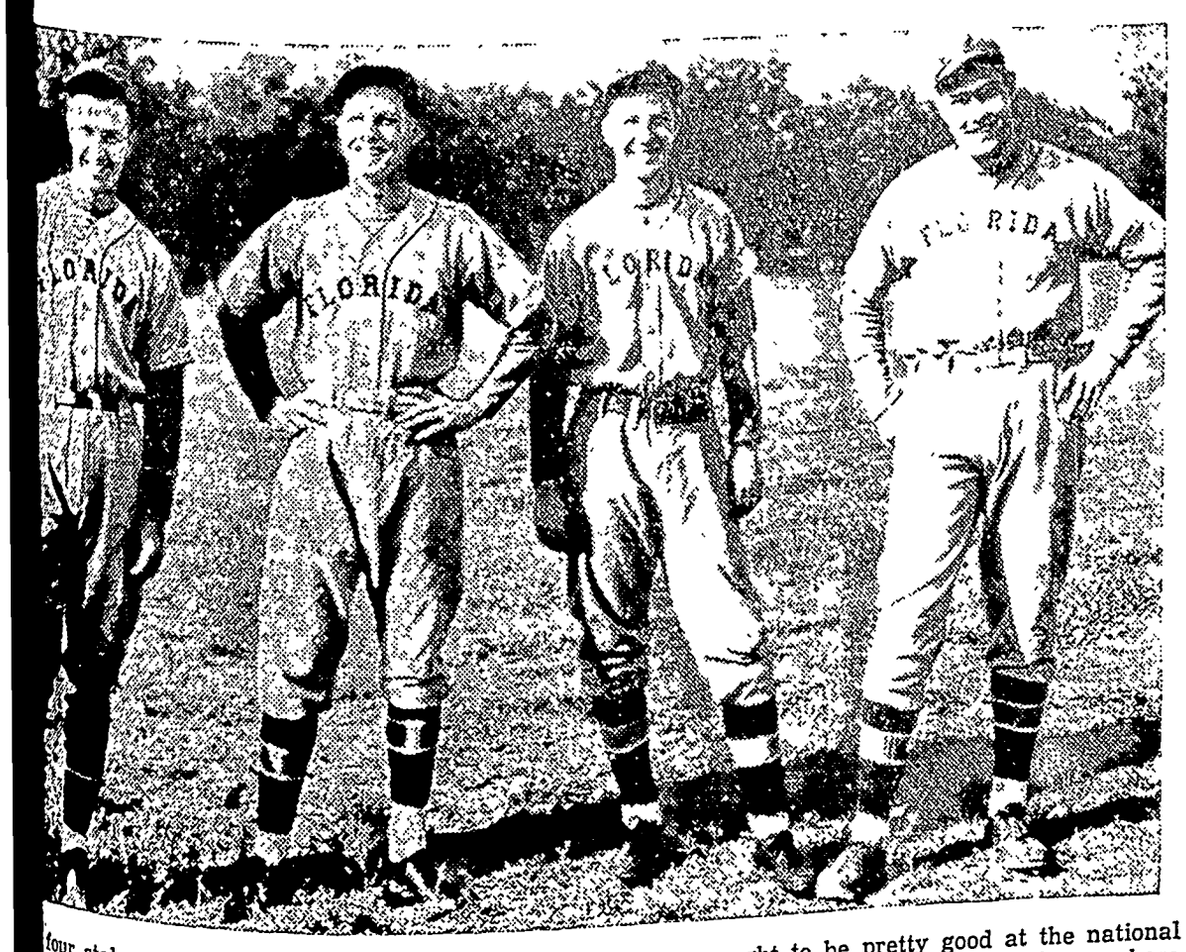
Hazel Hurst, blind lecturer, being led up the gangplank of Atlantic liner by her "seeing companion, "Babe." Miss Hurst with the aid of "Babe," was to sail to France.

Mariner Plans Sea Cruise in Tub



Ernest Biegajski of Buffalo, N. Y., evidently believes in safety first, for he has put on a life preserver before hoisting sail and moving out into Lake Erie in his remodeled pickle barrel schooner in which he plans to go to Europe this summer if present experiments prove successful. This is the second such boat he has built with his soldier's bonus money. The 1936 model leaked so badly that only the timely arrival of the coast guard prevented its maiden voyage from turning into a tragedy.

Sons of Diamond Daddies Good at Baseball



The four stalwarts of the University of Florida baseball team ought to be pretty good at the national game if there is anything in the theory of heredity. All are sons of famous major league fathers, whose names are household words a few years ago. Left to right are Ed Manning, twenty, son of Ed Manning, pitcher for the St. Louis Browns; Lee Meadows, Jr., nineteen, son of Lee Meadows, old Pittsburgh Pirate ace; Jimmy Shotton, seventeen, son of Bert Shotton, a former St. Louis Cardinal, and Wilbur Steen, whose father once played third for the Chicago White Sox.

Lesson for June 20

JOSEPH'S KINDNESS TO HIS KINDRED

LESSON TEXT—Genesis 46:1-7, 28-30; 50: 24-26.

GOLDEN TEXT—And be ye kind one to another, tenderhearted, forgiving one another, even as God for Christ's sake hath forgiven you. Ephesians 4:32.

PRIMARY TOPIC—When Joseph Saw His Father Again.

JUNIOR TOPIC—Joseph Honoring His Father

INTERMEDIATE AND SENIOR TOPIC—Kindness in the Family.

YOUNG PEOPLE AND ADULT TOPIC—Mutual Helpfulness in the Family.

A happy ending—yes! Modern writers may look with disfavor on it (and perhaps rightly so, for most of them write about life apart from fellowship with God) but to those who trust God and who seek his will, the story of life has a bright and joyful conclusion.

But someone may object that the lesson for today closes with the last words of the book of Genesis, which are "a coffin in Egypt." Is that a happy ending? It is, because even that forbidding emblem of death pointed in faith toward the day when God was to keep his promise and bring his people into the promised land.

Our lesson centers around the last of our patriarchs, Joseph, and his kindness to his father and his family. The highest official in the land of Egypt (save for Pharaoh himself) proves his inherent greatness by forgetting position and power, except as they enable him to be a loving son and brother. We consider his kindness as it is centered in his devotion to God, shown forth in thoughtful provision for others, expressed in affectionate deeds, and as it imparted itself by faith to others.

I. Founded on Fellowship (Gen. 46:1-4).

Jacob, having heard from his sons that Joseph was in Egypt, and having thus learned of their treachery and deceit, came at last to realize that his beloved Joseph is alive. He has been urged to go to Egypt but he hesitates about leaving Canaan. How shall he know whether to believe in and respond to Joseph's invitation. He asks God, the One who is the joy and center of Joseph's life, and of Jacob's as well, and he has his answer.

Real family life and devotion center around a mutual fellowship with God. There may be little else to share, but "little is much when God is in it." Has God been honored in your home? Has He been made the center of family life? These are vital questions.

II. Evidenced by Thoughtfulness (vv. 5-7).

Joseph had arranged for Pharaoh to send wagons to bring his aged father, the women, and the little ones.

Many men in our day glory in being "hard-boiled." In their relentless pursuit of fame and riches they ignore and even trample on the members of their own families. They are ashamed of the broken bodies, the humble apparel, the uneducated speech of their parents, fearing lest their new-found friends in the circle of wealth and position may ridicule them. There is a crude but apt expression that describes such persons as "stuffed shirts."

III. Manifested in Love (vv. 28-30).

Joseph kissed his father whom he had gone out to meet, and held him close and wept for joy. Again he showed his true greatness by being his natural self.

We are not all demonstrative in showing our affection. Furthermore, we would not plead for more of that sham public expression of affection which is so distasteful to right-thinking people. But may we not suggest that there is room for improvement in our loving consideration for our kindred. Let us ask ourselves how long it is since we did something to show that we really love our mother, our father, or a faithful wife, son, or daughter? How long is it since you wrote home to mother, or went home to visit?

IV. Imparted by Faith (50:24-26).

Jacob had been gathered to his fathers; time had gone on its relentless way, and Joseph is about to die What shall be the heritage to his family? Money, property, position? No; he leaves them something infinitely more valuable—a forward-looking faith that will keep alive in their hearts the expectation that God will in due season bring them into their own land. Joseph had spent most of his years in Egypt, he had attained high position and great honor, but he never lost his vision of the promised land. He imparts to them by faith that hope.

Hope

Ah, what thoughtful, loving provision God hath made for us in the gift of the angel of Hope! There is no path so dark but we may see the glimmer of her shining wings, no misfortune so heavy but her helpful hand is outstretched to us, and her smile still ready to cheer and encourage us.

The Natural Tone

Peace is the natural tone of a well-regulated mind at one with itself.—Humboldt.

Correct Vacation Toggery

VACATIONING they will go—Vera, Mom and Flo. And they will enjoy themselves the more because their wardrobes after Sew-Your-Own are just exactly right.

Mother in this model will be mistaken for daughter many a time because her design and dots are so very youthful. She will have various frocks in various materials developed on this theme, and in one of them, at least, the dots will be red.

Dates for Dancing.

Vera, to the right, has a date for dancing and when her escort admiringly effuses some such nonsense as, "That gown must have come on the last boat from Paris" she will toss her dark head and say, "No foreign frocks for me. I Sew-My-Own." Her dress of soft flowered material with demure braid at the neck and hem almost makes a sweet old-fashioned girl of her, but the tailored collar and trim cut label her the sophisticated young thing that she really is.

Collegiate.

Only a snappy sophomore can fully appreciate just how smart are those buttons down the back of the model to the left. Her yoke and neckline are "Oh, so new, my deah"; her plaid as British as she would like her accent to be.

Best of good vacation wishes to the three of them from Sew-Your-Own.

The Patterns.

Pattern 1297 is designed in sizes 14 to 20 (32 to 42 bust). Size 16 requires 2⅞ yards of 35-inch material plus ½ yard contrasting.

Pattern 1998 is designed in sizes 34 to 46. Size 36 requires 4⅔ yards of 35-inch material. With long sleeves 4⅞ yards of 35 inch material is required.

Pattern 1307 is designed in sizes 12 to 20 (30 to 40 bust). Size 16 requires 3⅞ yards of 39-inch material. For trimming 7½ yards of braid or ribbon is required.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

Household Questions

When Scaling Fish.—A dull knife will be found best when scaling fish.

* * *

Cleaning Unvarnished Wood.—A solution of soda and warm water will remove grease from unvarnished wood.

* * *

When Meat Appears Tough.—Add a tablespoonful of vinegar to the stock or water in which it is cooked, and simmer slowly.

* * *

When Food Is Scorched.—Place the pan containing the scorched food into a large pan of water and the food will lose its burned flavor.

* * *

To Clean Varnished Floor.—Clean off well with steel wool and benzine and, when thoroughly dry, re-varnish.

* * *

To Remove Lettering.—When making tea towels or the like from cotton sacks, soak the sacks for several hours in kerosene before washing, to remove lettering.

* * *

Topping for Sundaes.—Extracted honeys make excellent toppings for ice cream sundaes.

CONCRETE HOMES

You get full measure of all the precious things that make a home when you build with concrete—

Beauty that adapts itself to any architectural style; that gives you choice of color and surface texture.

Cool comfort under the sun of summer.

Security from the attacks of fire and storm, of termites and decay.

Trouble-free livability—no sagging floors, cracked walls, or sticking doors and windows.

Of course you can have concrete. The first cost is surprisingly low and upkeep is lower than for any other kind of home. Concrete floors, too, are moderate in cost. They're quiet, firesafe, and they take any type of covering—carpet, wood, linoleum, or simply colored and waxed.

FREE DESIGN IDEAS
Mail the coupon for beautiful new booklet.

TELL YOUR ARCHITECT you want a concrete home. Before you build, ask a concrete contractor or concrete products man to estimate your house with firesafe concrete walls and floors. Be sure that your architect and builder are familiar with the new concrete technique.

PORTLAND CEMENT ASSOCIATION

Dr and Mrs Missman visited at the home of Dr. and Mrs Parsons in Belmond Wednesday evening.

Denzel H. Tompkins of Garner graduated with the Highest Honors of his class at Drake University. He is the son of Mr. and Mrs. Chas. Tompkins of Garner, who at one time was Superintendent of the Klemme Schools. In addition he won highest honors in mathematics and also, he won a Phi Beta Kappa key, national honorary scholastic fraternity He started work in the supervisory department of the Des Moines Register and Tribune on Monday.

FISHING TRIP
Continued From Page One

and the waters are so deep they look inky black and the reflections in the evening and early morning are awe inspiring The islands and mainland are all covered with beautiful pine, cedar, birch, poplar and other northern trees. The whole country is a sportsman's paradise. Big game is seen frequently and in our ramblings we sighted many deer The writer got close enough to a bear to get a good picture before he discovered us and ran up into the timber. Moose are not as easily seen but we saw four old moose and a pair of twin calves. We spotted the calves twice They were on a little island where their mother leaves them while she feeds on the mainland We saw her swimming away from the island one morning. Another moose we saw feeding in a swamp and at the same time a deer came down to the water's edge to drink.

We got a big thrill late Saturday afternoon when we were coming off of Little Berry Lake and coming up through a creek and swamp to get to the highway. As we were rounding a point we started a big bull moose feeding on roots at the edge of the creek. He made a wild lunge into the creek and went clear out of sight in the water, scrambled up on the other side and went crashing through the brush and into the woods. The old fellow was plenty big and his horns looked like a hay rack to us. We thought it was a great sight and cussed because we did not get closer to get a good kodak picture, but Gaudry informed us it might not have been so funny as at this time of the year it's about a fifty-fifty chance that the old bull might have charged us and that might have been a serious matter.

Both of us had a wonderful time and the four days we spent in the lake country was an experience we will never forget. We had p of thrills and lots of funny e ences that we have not the sp tell about. To get away some enty-five miles from the n town, and twenty-five to miles from the nearest road probably no other human b within miles of you is some we will long remember

And we know of someone will sell a horse darn cheap!

Get the **COMBINE** that CAN Handle Them ALL

THE OLIVER GRAIN MASTER..
SURE GRAIN-SAVING ...
STRAIGHT-IN-LINE THRESHIN
POWER TAKE-OFF OR MOTOR DRIVE

● The straw is rank ... the season is late and damp. Today, it looks as though you may have to harvest your *high-priced grain* from down and matted fields.

Don't take a chance on loss! With an Oliver Grain Master Combine you are sure of saving that crop ... harvesting it clean and threshing it clean from the heads.

Remember that the Oliver hinged and balanced header is mounted independently of the separator—easily adjustable from the tractor seat. It follows the ground, gets the down grain. The "hinge float" feeder house raises and lowers with the header. It keeps the straw feeding uniformly "heads first" into the full-sized cylinder.

The full-size threshing machinery of the Grain Master is the result of 90 years of threshing experience. It is "heads first" all the way—straight-in-line threshing with straw carriers and beaters, all operating to get the grain from the rank and tangled straw. There are no corners or crooks to "ball up" the straw ... to cause plugging, and leave uncut grain on the ground, or unseparated grain in the straw.

Some people may have told you the Oliver Grain Master is overbuilt. This year nails that story. The Grain Master is built to save your grain under all conditions, even the tough ones you are facing now.

Like most small combines, the Grain Master is power take-off driven. But when the crop is heavy or conditions bad, you can get from Oliver, independent motor drive, built for the Grain Master, quickly and easily installed. Get the mach that will save your crop this year—t another year, with a lighter crop, can easily convert the Combine to your conditions. But make sure of ing your grain this year!

Be independent of worry about vesting conditions. Have an Oliver G Master on your place, and know you ready for the worst from wind weather. Come in and see us.

Klemme Farmer's Back Is Broken In Fall From Roof

TWO OTHERS INJURED AT THIEMANN FARM MONDAY FORENOON

Henry Thiemann In Hospital With Broken Back; G. Thiemann's Leg Broken; C. J. Wille, Broken Heel

Three farmers were seriously injured Monday forenoon while shingling a large corn crib being built at the George Thiemann farm east of Klemme

Henry Thiemann and George Thiemann, brothers. Ed Thiemann a nephew and C J. Wille were all working on the roof laying shingles when the scaffolding they were working on gave away and the men slid off the roof to the ground. falling some fourteen feet. In the fall Henry Thiemann's back was broken; George Thiemann's leg was fractured and the other badly cut and C. J. Wille's heel bone was fractured. Ed. Thiemann managed to cling to the roof until rescued.

Schuldt & Schuldt, local contractors had some of their men working on the other side of the building when the accident took place.

The injured were taken to the hospital for X-Ray examination and treatment. C. J. Wille was taken to his home the same day. Both of the Thiemann men are at the Mason City hospital.

BEGIN PROGRAM NOW OF KILLING NOXIOUS WEEDS

A cultural method of eradicating noxious weeds, which will at the same time give a good crop return and also gradually destroy the weeds may be practiced with good results suggests R. H Porter of Iowa State College

The best proceedure with large areas of such noxious weeds as perennial sow thistle, Canada thistle, horse nettle and perennial upper grass is to plow now and surface cultivate until August. Then alfalfa is sown as a smother crop. Alfalfa is the best smother crop to use in Mr Porter's opinion, but if it is to be used one must be sure the soil is sufficiently sweet.

Instead of following the above practice, the weed infested area may be plowed and sorghum drilled in rows at once The sorghum should be surface plowed as long as possible. Sorghum or millet may be broadcast or drilled solid and cut for hay in the fall. When grown for hay these crops keep down weeds by smothering them. The smother crop is particularly effective in eradicating the perennial noxious weeds and field bindweed. A fourth method that some farmers use in an effort to "beat the weeds to the punch" is that of plowing at this time as with the other methods—and then surface cultivating the area until September 1st. when winter wheat or rye is sown.

This is a good control measure for field bindweed and also for thistles. horse nettle and leafy spurge. The winter wheat or rye may be pastured in the late fall and next spring, removed as a grain crop next June, and the whole process repeated over again. If followed for two or three years many of the noxius weeds should be destroyed.

The value or strategy of fighting weeds now lies in the fact that from early spring up to about the middle of June the weeds are, during flowering time. drawing from their stored food reserves in their roots, and are at a particularly low ebb in vigor Consequently chances of weakening them and ultimately destroying them are greater. Also says Mr. Porter, this is the time to begin fighting weeds in ernest as many are maturing seed and there is danger of additional seed production.

GARNER WILL HAVE CELEBRATION ON SATURDAY, JULY 3RD

Klemme Junior Legion Team Will Play Garner Juniors At 1:00 P. M.

Garner announces their big celebration for Saturday, July 3rd. starting off with a big parade of floats in the forenoon, several free acts for afternoon and evening, a free pavement dance and a carnival attraction.

The Klemme Junior Legion team will play the Garner Juniors at 1 00 p m and another game is scheduled between Garner and Titonka at 3:00 p m.

Music will be furnished by the Garner Band, Drum Corps and the German Band.

STATE DEATH TOLL FROM ACCIDENTAL CAUSES

One thousand eight hundred and seventy seven persons were accidentally killed in Iowa in 1936! Between sunrise and sunset of each day last year an average of five persons were fatally injured in this state. Home accidents, motor vehicle accidents, occupational and other accidents took their tragic toll from the strength and manpower of Iowa communities.

Home acidents that ended fatally occured in 802 instances in Iowa last year. Of this number, 507 or 63 percent were caused by falls. Conflagrations, burns and explosions were next in line and took a toll of 116. General surveys show that these are primary causes of accidental deaths in other parts of the country, also.. Slipping on the floor, rug. or stairs has been found to be the most frequent cause of deaths by falls and slipping while getting in or out of bed ranks next. Fires in the home, scalds, and chemical burns are major causes of accidents traced to conflagrations and burns

The motor vehicle accident total was 553 "Collision with other motor vehicles" and "collision with pedestrians" headed the list, causing 216 and 169 fatalities respectively. These figures follow the general frequency of such accidents as seen in similar records of other states

Two hundred and eight occupational accidents resulted in death. Surveys show that of this number. the most frequent occurence is found in agricultural acciden's whih totaled 74 Mining and quarrying accidents were next in frequency although they occured a ilttle less than half as often. Research indicates that farm accidents are to be traced, for the most part, to farm machinery. Tractors were responsible for injuries to a great extent, although other implements contributed their share to the fatalities.

Eighty-two were killed in railroad accidents in Iowa last year, 66 were killed in falls in buildings or other public places, and 59 drowned.

METHODIST EPISCOPAL CHURCH

William Zabilka, Pastor

Klemme Church:

Couple Married At Thornton Sunday Will Reside In Klemme

YOUNG KLEMME BUSINESS MAN MARRIES GIRL AT MESERVEY

Couple Will Make Their Home In Klemme After Honeymoon Trip

Miss Vera Guldberg, Thornton daughter of Mr and Mrs. E N Guldberg Meservey. became the bride of Stanely Thada, Klemme, son of Mr and Mrs Herald Thada, Thornton at the home of the bride's brother and sister-in-law, Mr and Mrs Leland Guldberg, Sunday. The Rev W F Mueller, pastor of the English Lutheran Church at Thornton, officiating Mr and Mrs. Leonard Guldberg, Waterloo, brother and sister-in-law of the bride were their attendants

Preceding the ceremony Miss Bernice Thada, sister of the groom, sang "O Promise Me" and "I Love You Truly," accompanied by Miss Margaret Karl who played "Mendelssohn's Wedding March Immediately following the ceremony luncheon was served.

Both are graduates of the Thornton consolidated school The bride has been working for the past year at the Wenzle Cafe The groom is employed at the Walt Thada store at Klemme.

After a week's wedding trip to Minnesota they will be at home at Klemme

ANNUAL REFORMED BIBLE SCHOOL PICNIC AND PROGRAM FRIDAY

A picnic and program Friday will mark the close of the summer Bible School of the Klemme Reformed Church

Pupils of the Bible School will give their program beginning at 10:00 a m. This will be followed by the big annual picnic. Members and friends of the congregation are invited and are requested to bring enough sandwiches for their own family, and also two covered dishes.

There will be entertainment and sports during the afternoon and there will be fun for both old and young.

32 kinds of pneumonia germs. But now scientists have found chemical germ-fighters that may destroy them all. An interesting article in the American Weekly, the magazine distributed with next Sunday's Chicago Herald and Examiner.

Standard Bearer Girls In Camp At Okiboji

The Standard Bearer Girls left early Wednesday morning for Lake Okiboji where they will be camping until Friday evening of this week. They will be busy most of the day attending instruction and study work However, we think they will find time to have several swims while there. Those who went are Mrs. Earl Schaeffer, Miss Ruth Bailey, Elsie Ward. Arlene Blickenderfer, Juanita Pavey, Evelyn Arnold. Ruth Blickenderfer, and Novella Bredbenner.

CRAPPIES

The crappie season opened on June 15th with the daily catch limit fixed at 15 and the possession limit 30 Warmouth bass, rock bass, sunfish and blue gills also may be taken from June 15th to November 30th. The minimum length on crappies is fixed at 7 inches The minimum length for Warmouth bass, rock bass and blue gills is 5 inches with the catch and possession limit fixed the same as on crappies.

"CANDID" PICTURE

Art Wille, who with the writer, went on a fishing expedition in Canada, lay awake nights figuring out what sort of revenge he was going to use against our plot to print the story of his horse trading venture in the north woods.

Art possesses a camera, just an ordinary $2.00 box camera, but the darn thing proved a thorn in our flesh. With it he sneaked upon us one sunny morning and snapped what might be termed a "candid picture." We have not seen the picture, but everybody else around Klemme and Garner has been giving us the ha, ha!

One, C. G. Waterman, Klemme, has been active in circulating the damaging picture around here and Art has been busy in the town north. We have both those cookies on our list for early revenge, and our first thought was to fry them in hot oil. . . . but that is too tame, we seek more painful revenge.

. . and they don't hang mail order house catalogs in the "smoke houses" in Canada! Pine cones are more permanent.

Funeral Services Held Sunday For Mrs. Haupt

HAD BEEN A RESIDENT OF THIS COMMUNITY FOR MORE THAN FIFTY YEARS

Husband Preceded Her In Death About Ten Years Ago

Funeral services were held Sunday afternoon at the Klemme Reformed Church for Mrs Henriettee Haupt. who died at the home of her daughter, Mrs Elmer Schlei in Twin Lake township on Thursday evening, June 17th

At the services Harvey Barz, Mrs. LeRoy Johnson. Miss Ethel Barz and Raymond Barz sang "No Disappointment in Heaven," "Fuhr Uns An Deiner Hand," and "Going Down the Valley"

Rev Grosshuesch used as his text. "Cast Thy Burden Upon The Lord And He Shall Sustain Thee," found in Psalm 55-22.

Pall bearers were Wm. Wenz, Henry Buseman, Clarence Kluckhohn, Sr., Dr. D P Anderson, Fred Barz, and Lew Griffen Mrs Haupt was buried beside her husband, Fred Haupt, who died October 11, 1927. Interment was made in the Ell Township Cemetery

Obituary

Henriettee Haupt, nee Priebe, was born February 14th in the year of our Lord 1861, at Redlien, Covlen, Pommern. Germany She was baptized in the Lutheran Church and received her christian training in this same church. She was admitted to the membership of the Lutheran Church by confirmation At the age of 20 she came to America with her parents Their first home was in Milwaukee, Wisconsin, where father Priebe intended to follow his occupation as tailor. He soon decided to take up farming and with his family he moved to Hancock County in Iowa.

On the second day of April 1885, she was united in marriage to Fred Haupt, by Rev Matter, pastor of the Ell Town Reformed Church. The young couple lived on a farm near Belmond, then moved to another farm near Garner, and then purchased a farm two miles southeast of Klemme Four children, one son and three daughters were born in this family. The only son died in infancy One daughter, Mrs. Herman Schuldt, preceded her mother in death August 29th, 1932.

The home life of this family was founded on christian principles. Both Mr. and Mrs. Haupt were charter members of the Klemme Reformed Church Mr. Haupt served many years as Superintendent of Sunday School, as Deacon and as Elder. Mrs Haupt was one of the founders of the Ladies Aid and for many years its president. Both were faithful in church attendance, and in directing their children in the way of life.

Twenty-four years ago Mr. and Mrs. Haupt retired from active farming and moved to Klemme. Mr. Haupt died October 11th, 1927. About four years ago Mrs Haupt became ill In the fall of 1932 she made her home with her daughter Edith of Kanawha, where she received the loving care of a daughter throughout her trying sickness. In December of last year she suffered a light stroke from which she never fully recovered. Last week she was taken to the home of her daughter Bertha, Mrs. Elmer Schlei, where she became seriously ill. In answer to her own prayer that the Lord might relieve her of her suffering, she fell asleep Thursday evening, June 17th, 1937 Throughout her illness the Bible Passages and Christian Hymns that she had memorized were a great source of comfort to her She died at the died at the age of 76 years 4 months and 13 days.

The two surviving children are: Mrs Elmer Schlei of Klemme and Mrs. Erwin Haupt of Kanawha.

The three grandchildren are: Mabel Schuldt. Dale Schlei and Paul Schuldt.

The one sister and three brothers are: Mrs. Henry Josten, Chas Priebe, Julius Priebe and Herman Priebe, all of Klemme.

WORK ON NEW BUILDINGS IN KLEMME PROGRESSING RAPIDLY

Work on both the new hardware building for Jacobs, and the cold storage locker system for C. A. Larsen, is progressing at a fast pace

By Saturday John Suckow and his men had all the floor joists and the sub-floor laid for the new hardware store.

Work is snapping right along on the Larsen plant Most of the cork insulation had been installed by Saturday night and other work going right along

LAU BABY WAS BAPTISED AT FORT DODGE SUNDAY, JUNE 6

Services Held In Sign Language So That Deaf Could Understand

Sunday, June 6th, Mr. and Mrs. Leonard Lau and their infant son. Aaron William, and Miss Dorothy Brown drove to Fort Dodge where the Lau baby was baptised. Services at the church were held in the sign language so that the deaf people who attended might understand. After church services a picnic which was attended by deaf people was held at Dolliver Park near Fort Dodge

SENIOR CLASS OF '36 HAD PICNIC AT C. L. STATE PARK

The Class of 1936 of the Klemme High School held a reunion and picnic Sunday afternoon and evening at the Clear Lake State Park, with nearly all members present

Swimming and hiking were enjoyed in the afternoon and a picnic supper was served. After supper the class took in a picture show.

The Class of '36 expect to make their picnic an annual event.

There will be a S S. picnic dinner in the Church basement Tuesday, June 29th at 12:30 and the games and general good time will be on the school grounds in the afternoon.

The Public Is Always Welcome Here.

Since the repeal of prohibition (and "the return to national prosperity which followed it") the business of the Keeley Institute has increased Fifty-one per cent. The youngest patient admitted was twenty-one and he oldest seventy-eight.

DID YOU KNOW

That when you measure a fish to determine its legal length, the measurement shall be taken in a straight line from the tip of the snout to the umost end of the tail fin?

That any fish caught that is less than the lawful minimum length or weight shall be handled with wet hands and released UNDER water immediately with as little injury as possible?

That is unlawful for any person to buy, sell, barter or offer for sale any black bass or part thereof whether taken within or without the state?

CLEVELAND FAIR OPENS ALL NEW

Great Lakes Exposition Solves Honeymooners' Crucial Problem; Delights and Surprises Early Throngs of Visitors.

By WILLIAM C. UTLEY

SOME 160,000 enthusiastic fair-goers thrilled to the fun and fascination of the Great Lakes Exposition in Cleveland when the curtain parted on its new 1937 edition on a recent week-end. The visit of two of these was purely accidental, but the very incident which brought them within the gates illustrates the element of surprise and delight which is the stuff great expositions are made of, the magnet that draws millions from the far corners of the land.

The two were newlyweds en route through Cleveland on their honeymoon, and this is how this story comes to be

"Darling," she purred. "I want some orange blossoms. Don't you think I should have them? Do you think a bride is complete without orange blossoms?"

"Uh-huh. Huh-uh," he answered her questions in order.

"Then why don't you get me some?"

"Haw! We'll get you orange blossoms, honey. Thousands of 'em... er...some day."

He Learns About Women.

"But I don't want them...er... 'some day.' I want them now, while I'm in the mood. If you loved me, you'd get me orange blossoms."

Women were like that. He'd find out, the fellows had told him. Well, he was finding out. He dropped baby-talk momentarily.

"But whereinell am I going to get orange blossoms now? This is Cleveland—not California or Florida." She merely wrinkled her nose, not as if she had been whiffing the delicate perfume of orange blossoms, either. But a word had stuck in his mind. "Florida . . . hm! I've got a hunch. Maybe we'll get your orange blossoms after all. And don't say your hubby can't produce, if we do."

Ten minutes later a dollar had been sliced from that section of the budget labeled "miscellaneous"

Warm days mean nothing to the Winterland show (above) for there ice and snow are found all the time. Stars of Billy Rose's Aquacade are Johnny Weismuller (left) and "Stubby" Krueger.

ing in the lake breeze, the sparkling sunlight of a midwestern summer day, the lively music from dozens of entertainment palaces, the good-humored banter of the "barkers," the verdant landscapes — all combined to lift the heart and lighten the step.

For the Great Lakes Exposition of 1937 is that kind of fair. It is designed to let people have a good time, in fact to make them enjoy their stay whether they've a mind to or not.

Exhibits are found chiefly in the vicinity of the main entrance, which is on the hill above Lake Erie and within two blocks of Cleveland's public square. One of the great halls, housing a group called "The Making of a Nation" lies underground, being built into the side of the sharp slope Here, as in the Varied Industries building and the Hall of Progress, virtually all of the exhibits are brand new; little has been held over from last year.

In the constant subterranean coolness is a fascinating maze of working models, dioramas, animated maps and striking murals depicting the marvels of science and industry which make the nation what it is. Stress has been laid in letting the visitor help in the operation of many exhibits; things happen when he presses buttons in some displays; in another he may enter a locomotive cab and play engineer; or he may follow the manufacture of automotive oil from the ground to the can in an accurate moving scale model.

Outdoes Broadway.

Honeymooners deal more in entertainment than education perhaps, and the ones we are concerned with found entertainment in satisfying measure. First, of course there is the largest exposition show ever produced, and the outstanding new feature of the 1937 exposition. This is Billy Rose's Aquacade, which combines the elements of theater, restaurant, night club, water show, operetta and musical comedy.

The Aquacade is bigger than anything Broadway ever saw. The gigantic stage, which floats a little way out into Lake Erie for the water carnival which is part of the show, is a block long. There are 500 in the cast, including Johnny Weismuller, famed swimmer and the heroic "Tarzan" of the movies; Eleanor Holm Jarrett, beautiful Olympic swimming star; Aileen Riggin, "Stubby" Krueger and other favorites. So extravagant are the spectacles they do justice to the $500,000 investment that made them possible.

Running neck and neck with the Aquacade for top honors is an exposition spectacle called Winterland, which presents the outstanding figures of winter sport.

Here one can forget the summer's heat in watching an elaborate musical revue of a fantastic land of eternal winter. The charming plot romance of the Winter Prince and the Spring Princess serves as a background for an ice carnival unsurpassed in show business. The Stars are Evelyn Chandler, America's Maribel Vinson, former national champion recently turned professional; and Duke and Noble, for 16 months stars of the famed ice show at the College Inn, Chicago.

Visitors find free entertainment aplenty, too. In a vast amphitheater that spreads before a large band shell, national chain radio broadcasts, musical recitals and vaudeville acts are in progress almost constantly. Fireworks on a true exposition scale are a nightly feature.

Gardens Charm Throngs.

When twilight comes there are nine chances out of ten that you'll find any honeymooning couple in the vast horticultural gardens that beautify the slopes down to the water's edge. From a pergola-dotted walk that winds 500 feet along the top of the hillside, the evening stroller looks down upon an enchanting vista of formal gardens representative of many lands; upon a waterfall that bubbles merrily over rock formations on its way to join Lake Erie, and upon a reflecting pool and fountain. The fountain is electrically lighted, and the colors and lacy water formations constantly change in a symphony of loveliness

Here is a fine place to pick out a love seat and rest, contemplating the pleasant incidents of a day at the fair, waiting for the evening to turn into the darkness of night.

For, once more entering upon the streets of the fair after darkness has set in, the visitor is greeted with one more magnificent surprise—greater, probably, than any other the fair offers. For the exposition's boast that it is the best-lighted fair in history is not an idle one.

As night falls most of the throngs find their way to the carefree Midway area, where the side shows, cabarets, theaters and rides by the score are by that time operating to capacity. Here you can go up in a blimp, whirl dizzily in a "stratoship" or go below the surface of Lake Erie in a submarine. You can play at games, dine in unusual restaurants, see the queer things of the world in Ripley's "Believe It or Not Odditorium" and other fantastic exhibits.

Easy on Feet, Pocketbook.

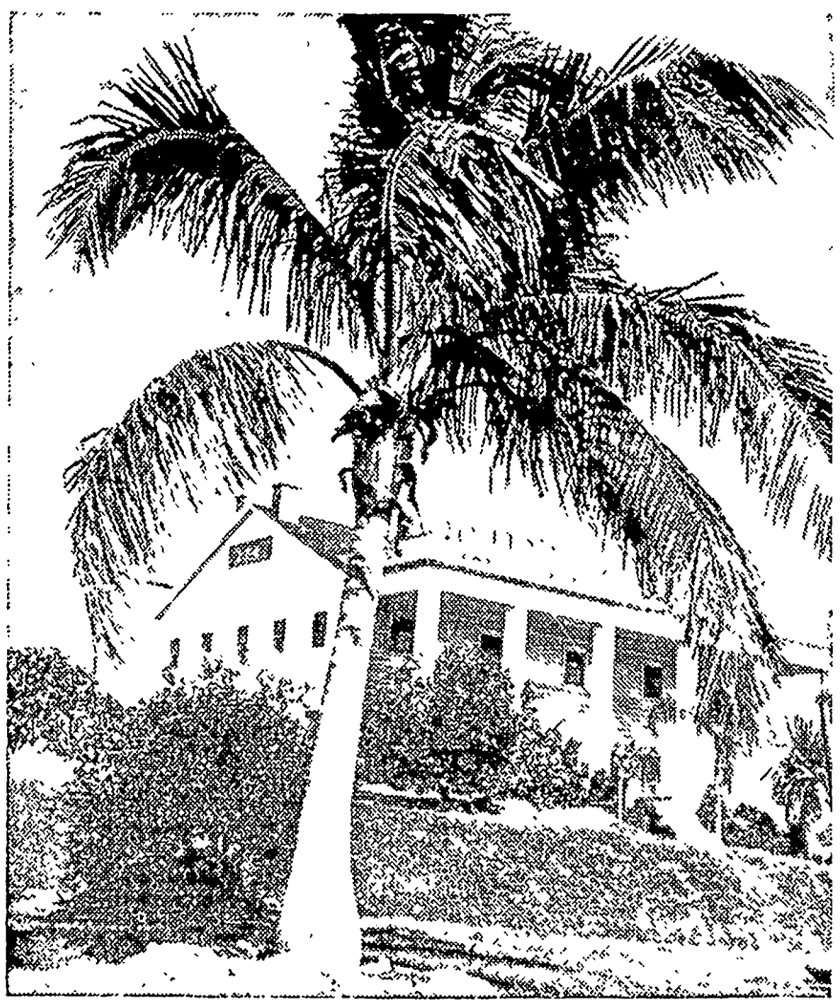
As the night grows on, the gayest throngs find their way to the "Streets of the World" where in the space of a few acres you can find scenes and people from nations scattered the length and breadth of the earth. There is always merriment here, for the recreations of a score of countries are brought to America in the many night clubs and showhouses of the area. The "Streets of the World" provide the charm and fun of the many "foreign villages" which were the hit of Chicago's Century of Progress exposition, without making it necessary for the visitor to walk to the far corners of the fair to see them.

That is characteristic of Cleveland's exposition. It is compact, convenient, easy on the feet. It is possible to see the whole exposition thoroughly in a week-end—yet in content, if not in area, it ranks with any of the expositions of recent years. Best of all, the visitor may see everything in it, including all concessions, for $9.61.

"That," said our bridegroom to his new spouse, "makes it easier all the way 'round. It's a swell way to spend a honeymoon. It won't be necessary to pad my expense account very much at all."*

*EDITOR'S NOTE: This is a darn lie. About the expense account, that is. You should have seen that expense account. We speak with authority. For the bridegroom was none other than William C. Utley, the writer of the above article, and the bride the former Mildred Moses, of Chicago.

© Western Newspaper Union.



Tropical fruits grow on the shores of Lake Erie in the elaborate Florida exhibit at the 1937 Great Lakes Exposition in Cleveland. The central building is this great white southern mansion.

and they were inside the gates of the Great Lakes Exposition. They climbed into one of those double roller chairs built snugly enough for honeymooners and he gave the order: "To the Florida exhibit."

As they approached the great white mansion which is the central building of a group housing exhibitions of Florida industries, agriculture, recreational facilities and wild life, they saw what he had suspected they might—real orange trees, in full bloom, growing on the shores of Lake Erie. By the wits of her husband (who happens to be a pretty smart guy, anyway) and the generosity of Earl Brown, hospitable manager of the Florida show, the bride was wearing orange blossoms in her hair quicker than you could say "Tallahassee."

It's a Good-Time Fair.

It was too hard to resist the temptation to stop over and take in the rest of the fair. The very gaiety of the place flattered the joy in their own hearts. Nowhere are you likely to find so companionable, so cheerful a crowd as within the bounds of a successful exposition. A glance around was all that was necessary to prove that here folks were bent on having a good time and were having it.

The brilliantly-hued buildings, the million multi-colored pennons danc-

STAR DUST

Movie • Radio

By VIRGINIA VALE

ALWAYS a dauntless trail blazer, Sam Goldwyn has just announced that in future all of his productions will be filmed in Technicolor.

Where Sam leads, others feel that they must follow, and the chief drawback is that it is going to be very expensive, because Technicolor film costs considerably more than black and white. First of the Goldwyn Technicolor films will be "Follies" with Helen Jepson, the Ritz Brothers, Zorina, the great Russian ballerina, Virginia Verrill, beloved of radio fans, to swing those blues and a vast array of comics.

—★—

Robert Young got a wonderful break when M-G-M loaned him to play opposite Claudette Colbert in "I Met Him in Paris." His own studio officials who lately had been treating Bob rather like a comfortable old shoe, went to the preview and came out raving about him as if he were a new discovery. Right away they went out and bought the screen rights to a grand story called "Witness to a Murder," and presented the star role to Bob.

Robert Young

—★—

There is a pretty thrilling story of grit and courage connected with the Hal Roach picture "Pick a Star." A blonde beauty named Rosina Lawrence who sings and dances light heartedly in that and in "Nobody's Baby" was paralyzed as a child as the result of a back injury. After months of consultations, her mother located a doctor who thought he might improve her condition by giving her exercises. Now she is strong and healthy and agile—much more so than other girls who did not have to fight for a chance to walk and dance.

—★—

There isn't a busier girl in all Hollywood than Dorothy Lamour, which is a break for film fans, but bad news to the many radio fans who have been wishing she would find time to sing regularly on a radio program again. She has just finished roles in "High, Wide, and Handsome" and "The Last Train From Madrid" and will start any day now on "Her Jungle Love." Her first big success, you will recall, came when she played "The Jungle Princess" and Paramount has been looking for a sequel to it ever since.

—★—

Connie Boswell is the latest radio singer to succumb to the pleas of motion-picture producers. She will warble in Paramount's "Artists and Models." But the most exciting news on the Paramount lot is that Mary Livingstone, the giddy comic of Jack Benny's program and in private life, his wife, is such an inspired screen comic in her first picture that all her supporting players are sulking. The picture, called "This Way Please," was supposed to star Shirley Ross and Buddy Rogers, but Mary is just romping off with all the scenes.

—★—

It looks as if Kenny Baker of the air waves will be a strong rival of Bing Crosby's on the screen just as soon as "Mr. Dodd Takes the Air" is released. Walter Wanger, who has been searching for a good-looking young singer to play the lead in "52nd Street" persuaded Mervyn LeRoy to let him see as much of the picture as has been filmed. Immediately, he decided Kenny Baker was just what he had been looking for. Kenny Baker will have Pat Patterson, wife of Charles Boyer, playing opposite him in the Wanger film. That's a break for him, because she is one of the most utterly charming young women in all Hollywood.

Bing Crosby

—★—

ODDS AND ENDS... Screams of rage and violent protests broke loose on the Paramount set for "Artists and Models" when he-men like Richard Arlen and Rube Goldberg, the cartoonist, found they had to get all prettied up in knee breeches and lace ruffles for a masquerade scene . . . Motion picture producers are trying to argue Barbara Stanwyck and Robert Taylor out of galloping through mountain passes on frisky horses. Barbara took a nasty fall the other day—with the horse landing on top of her She wasn't seriously hurt, though . . . Motion picture stars can get into accidents anywhere, it seems, because Sylvia Sidney took a header on the slippery floor of a beauty salon and cut her face quite badly . . . Ginger Rogers and Harriet Hilliard have more fun on Sunday when streams of tourists are haunting all the well-known Hollywood cafes. They pack a lunch and go picnicking, and nobody recognizes them.

MEN WANTED!

We're looking for car owners who lay down the law when it comes to tire quality and safety. To them we recommend CORDUROYS ... the safest tires in America, because they're made from extra quality materials and are always FACTORY FRESH with tougher, more resilient, more durable rubber. So good that they're backed by an unusually strong Performance Contract against Road Hazards. CORDUROYS are sold only by independent neighborhood merchants.

TO TIRE DEALERS IN OPEN TERRITORIES

If you are boss of your own business and interested in handling America's most outstanding tire values plus taking on a direct-from-factory connection that will prove permanent as well as highly profitable, write for CORDUROY'S special proposition. If your territory is still open, we will mail full details.

Mrs. Thaden Sets New Women's Air Speed Record

Mrs. Louise Thaden, winner of the Bendix and Harmon trophies last year, beside the plane in which she set a new speed record for women at the air show held at the Lambert-St. Louis airport here May 29, when she flew a 100-kilometer (62.5-mile) course at a speed of 197.9 miles an hour. The former record was 175 miles an hour, held by Amelia Earhart.

'Way Back When

By JEANNE

AN OIL DRILLER

CLARK GABLE was little different from any other small town boy. Born in Cadiz, Ohio, in 1900, and later living in Hopedale, Ohio, population 500, Clark Gable was a regular American boy, fond of the outdoors and all sports. Motherless from the time he was seven months old, he was raised by his grandparents until his father remarried. He held a deep love and respect for his stepmother.

Like any other normal American boy, Clark Gable was not sure what position he would like to hold in life. He thought for awhile that he might be an architect, and later he studied medicine at night school. Ambitious but poor, he had to work

from the time he was seventeen years old, and his jobs were as varied as his opportunities. He was time-keeper in a rubber factory, call boy in a theater, an oil driller, a telephone linesman, a surveyor's assistant and a lumberjack. Clark Gable might have been anything but a motion picture actor.

He became a star by traveling the hard road of theatrical stock companies and motion picture extra, overcoming many disappointments, until he reached the pinnacle in "It Happened One Night," which won the Motion Picture award for the best picture of 1934.

* * *

CARL SANDBURG NEVER WOULD SETTLE DOWN

HOW many times have you heard someone say, "I don't know what to do about that boy of mine; it looks like he never will settle down"? Carl Sandburg was like that. A boy who skipped from job to job, and gave his simple Swedish immigrant parents many a worried hour! He was born in 1878 in Galesburg, Ill., of people who were uneducated and kindly, simple and poor. Forced by poverty to go to work when he was thirteen, he began the seemingly endless series of jobs that gave him such true understanding of the common people.

He drove a milk wagon in Galesburg and he blacked boots in a barber shop. If you could have looked into the future and said that some day Carl Sandburg would be a great poet, they would have laughed you out of town! He became a scene shifter in a cheap theater, a truck handler in a brick yard, and then a turner's apprentice in a pottery shop. Cheap manual labor, nothing skilled about most of it! He worked as a dish-washer in

mid-western hotels, a harvest hand in the Kansas wheat fields, and a carpenter's helper.

Carl Sandburg was learning the painter's trade when the Spanish-American war broke out, and he enlisted. A comrade persuaded him to go to Lombard college and he worked his way through as a bell ringer, gym janitor and college correspondent for the Galesburg Daily Mail. In college his literary ability developed and he became editor of the school publications. After graduation he supported himself as advertising manager of a department store and sales manager of a business machines firm.

He entered politics, became a reporter, and in 1917, Carl Sandburg joined the staff of the Chicago Daily News, where his work has been outstanding.

A rolling stone, a restless jack-of-all-trades has been Carl Sandburg, but from the time of his literary awakening in college, he has written steadily stories for children, a biography of Lincoln, and hundreds of poems about the mass of people.

So, if that boy of yours is restless, if he skips from place to place, be patient. Carl Sandburg gained fame by knowing many people, many jobs, many problems.

Clothes That Look the Part

NOW, Milady, that you've seen all three, which will you choose, the lovely dance frock, an easy-to-sew runabout model, or a slick all around the clock dress to flatter your every move and moment? It's a personal question but one you'll surely want to toy with since Sew-Your-Own makes the answer so easy.

Any Time After 8:30.

The romantic fashion at the left will make memorable occasions of your summer parties as only a lovely appearance can. Its two pieces are young, cool and streamlined. For the Miss whose interest centers about matinee goings-on, there's a dashing shorter style—it differs only in length, and either will be picturesque in marquisette, dimity, or organdie.

A Tip for Tea Time.

When you're keeping up with the Joneses, wear this stylish all occasion dress. It will do great things for you socially, and, figuratively speaking, it will cut inches from those high spots and make you feel pounds lighter. Think of what that means to chic and comfort when things get hot out your way. Dark sheer crepe is the material that lends top charm to this creation.

Fore and Aft.

Easy to sew and always ready to go is this new spectator frock for young women and those who want to turn back the clock. With this number handy there's no need to pause for reflection about what to wear. And that holds good whether you're bound for sports, business, or society. It is becoming as a sun tan, as simple to sew as a dress can be, and a cinch to launder. Why not make a carbon copy for the morning after? Remember summer chic depends upon the company your wardrobe keeps. Be sure it's amply supplied with cool convenient Sew-Your-Owns!

The Patterns.

Pattern 1291 is designed in sizes 12 to 20 (30 to 38 bust). Size 14 requires 6 yards of 35 or 39 inch material. Size 14, walking length, requires 5½ yards.

Pattern 1847 is designed in sizes 36 to 52. Size 38 requires 4¾ yards of 39 inch material.

Pattern 1279 is designed in sizes 32 to 46. Size 34 requires 4¼ yards of 35 inch material. Ribbon for belt requires 1 yard.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

Purpose of Education

ONE must realize that the main purpose and benefit of education is first the mental and moral betterment of himself, and only secondly a qualification.

The leading positions are few, and do not of necessity bring happiness. The subordinate positions are many, and the man who cheerfully and contentedly does his duty in the ordinary routine of life need never regret that leadership has not come his way. A nation composed of citizens who are doing their best will never become decadent.

Household Questions

Brightening Piano Keys—Discolored piano keys can be brightened by rubbing with a soft cloth dampened with alcohol.

* * *

Tinting Milk—When small children refuse to drink their daily milk requirements, try tinting the milk with vegetable coloring.

* * *

Storing Tea and Coffee—Home supplies of tea and coffee will keep their flavor longer if stored in stone jars.

* * *

Cleaning Rubber Rollers—The rubber wringers on washing machines can be kept clean by washing with kerosene.

* * *

For Blacking Stoves—An old shoe polish dauber is an excellent tool for blacking stoves.

* * *

Boiling Sirup—If the saucepan is well buttered around the top sirup that is being boiled in it will not boil over the top of the pan.

* * *

Cabbage Cooked with Milk—Two cups milk, six cups shredded cabbage, one-third cup milk or cream, two tablespoons melted butter, two tablespoons flour, half teaspoon salt. Heat milk and cook cabbage in it two minutes. Add milk or cream, flour blended with butter and salt. Cook for three or four minutes, stirring constantly.

Sentinels of Health

Don't Neglect Them!

Nature designed the kidneys to do a marvelous job. Their task is to keep the flowing blood stream free of an excess of toxic impurities. The act of living—*life itself*—is constantly producing waste matter the kidneys must remove from the blood if good health is to endure.

When the kidneys fail to function as Nature intended, there is retention of waste that may cause body-wide distress. One may suffer nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—feel tired, nervous, all worn out.

Frequent, scanty or burning passages may be further evidence of kidney or bladder disturbance.

The recognized and proper treatment is a diuretic medicine to help the kidneys get rid of excess poisonous body waste. Use *Doan's Pills*. They have had more than forty years of public approval. Are endorsed the country over. Insist on *Doan's*. Sold at all drug stores.

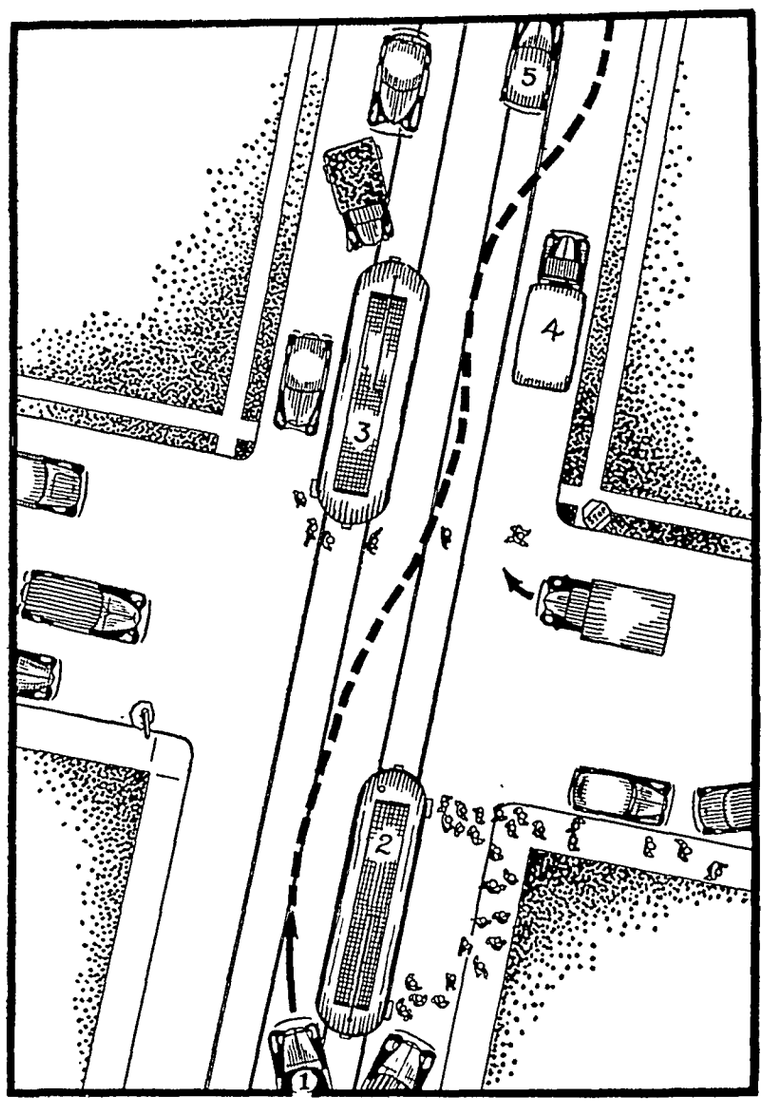
Don't Weave Through Traffic



Safety rules are definite on the subject of passing other vehicles, stating that all vehicular traffic must be passed on the left This rule confuses many motorists when driving in city traffic and attempting to pass a car Never pass a street car on the left always on the right. It is also contrary to safety regulations and motor vehicle laws to pass a street car when it is loading or unloading passengers, except at an established safety zone Most city ordinances forbid driving along side a street car when it is stopped Vehicular traffic should stop five feet to the rear of a street car

The driver of car No 1 is headed for a hospital and traffic court Weaving through traffic is unnecessary for a good driver If you must be in such haste that you can't observe these simple regulations your case will be handled sooner or later in the traffic courts and in case of personal injury a possible civil suit for damages

The skillful driver is not the driver to first reach his destination To drive under any and all traffic conditions without accident is the mark of a good driver Set as your goal for the ensuing year the observance of all traffic regulations; use hand signals as habitually as you shift gears, drive at a moderate rate of speed If every motorist would do this a definite decrease in automobile fatalaties would be noted in 1937

Copyright 1937 P L. Cummings, Des Moines, Iowa

QUESTIONS

1 What violations are committed by the driver of car No 1?
2 Why is weaving in traffic dangerous?
3 Is it permissible to pass a street car when loading passengers?
4 If car No 1 collide with car No 5 who is responsible?
5 If car No 1 collides with car making right hand turn who is responsible?
6 Should a motorist drive along side a stationery street car?
7 Is it ever permissible to pass a street car on the left?
8 Name three simple safety rules
9 Should unsafe vehicles be permitted on the highways?
10 Is truck No 4 parked correctly?

ANSWERS

1 Passing a loaded street car on left, weaving through traffic passing a vehicle on the right
2 "Weaving" confuses other motorists Also induces skidding
3 Only at established safety zones
4 Car No 1
5 Car No 1
6 No stop five feet to the rear
7 Only upon direction of traffic officer
8 Use hand signals drive slowly, observe traffic conditions
9 Only cars with adequate brakes and proper signalling devices with good lighting equipment should drive on the highways
10 Yes Truck No 4 is parked parallel to curb over fifteen feet from intersection

PHEASANT NESTS

Reports from northern Iowa are that nesting conditions for pheasants have been good this year in most parts Heavy rains in some localities did some damage to nests while they were beneficial to others, causing heavy growths of vegetation and ideal places to nest.

GO PICNICKING

Most State parks recommended for picnicking are equipped with tables, stoves, pure water and toilets. Picnic grounds are usually located in shaded, cool sections of the park, offering exceptional vistas over the surrounding terrain. In most parks wood is provided near the stove, but, in a few instances, a small charge is for an adequate bundle of which may be obtained from custodian.

EMPLOYMENT OF WOMEN

It may be surprising to some to be told that for nearly 100 years after the Declaration of Independence no women were employed by the government but such is the fact according to a statement by the president of he Civil Service Commission

The first law permitting the employment of women as clerks in Federal government offices was passed in 1870 Today more than 25,000 women are employed in such offices in Washington alone nearly 60,000 or more are employed outside of the capital city

Women are being appointed to such government positions as bacteriologist, biologist, botanist, chemist, economist educationist, patent examiner, pharmacologist physicist, statastician, zoologist and technologists of various kinds and many women hold postmasterships A woman is Secretary of Labor and several are court judges

The employment of women in private business has shown a steady increase also the number of women wage-earners being nearly ten million

Whether this increasing activity of women in industry business and the professons is an indication of an improved civilization depends upon one's view-point However that may be women have shown ther ability to engage successfully in nearly every vocation under the sun, and that they will continue to do so can not be doubted

WHO LIKES HIS JOB?

Several instances have come to notice recently which seem to discredit the old theory that in order to be a success one should follow a congenial line of work

It is said that the late Joseph Conrad, the most famous of recent authors of sea stories, hated the sea and detested writing

O O McIntyre tells of a leading and successful New York theatrical producer who has a deep antipathy to actors and actresses and despises the theater, also of a man who has made a fortune as a florist, but who does not care for flowers and is nauseated by their perfume

Now comes Irving S. Cobb, one of America's most famous writers and humorists, with the statement that he utterly dislikes writing, but keeps at it because he desn't want to be a loafer, or words to that effect.

The average newspaper man will tell you that he loathes the eternal grind but somehow you could not drive him out of it Many musicians suffer mental torture when before an audience—and so it goes

These may be exceptions to the rule, but the lesson to be drawn from the instances noted is that determination to do good work will develop ability and bring success, whether one likes his job or not.

GRASSHOPPERS ARE BEGINNING ON ALFALFA IN WESTERN IOWA

"Gasshopper damage is beginning in western Iowa"

A D Worthington, entomologist at Iowa State College, makes this report, stating that damage is especially severe to new seedings of alfalfa with some damage to new seedings of clover and to small grain.

Woodbury county is sending out 300 sacks of poison bait daily, Pottawattamie, 150 sacks, while the other counties are using 25 to 50 sacks every day

While the recent rains have been helpful m decreasing possible damage from grasshopper infestations, the hatch is continuing and the 'hoppers still present a major menace to Iowa crops.

CONTROL POTATO PESTS WITH SPRAYINGS AT PROPER TIME

The two insects which potato growers in Iowa must combat are the Colorado potato beetle, commonly known as "potato bugs," and the other is the potato leaf hopper.

Both may be controlled by applying proped spray materials at the right time and in the right manner. The following treatments are recommended by C H Richardson, entomologist at Iowa State College.

For leaf hoppers, spray two or three times during June and July whenever the insects are as thick as six to the leaf Use bordeax mixture, which contains 4 pounds of lime and 4 pounds of copper sulfate per 50 gallons of water The spray should be applied to the under sides of the leaves where the young hoppers feed

The common "potato bug" may be controlled by dusting with 1 part of calcium arsenate to 10 parts of lime or with a spray made of 2 pounds of calcium arsenate to 50 gallons of water If calcium arsenate is added to bordeaux both the leaf hoppers and Colorado potato beetles may be controlled with the same spraying

It usually takes a number of sprayings to control the Colorado potato beetle

When Some of Our Slang Was Started

We take it that Charlie Knouse, former boy scout executive at Mason City who is now publisher of the Lehigh Independent Argus, maintains a research department If not how would he have been able to present the following information concerning the origin of numerous idioms and slang expressions that are popularly used today?

DEBUNKING NOAH

Many of the important personages of history have been shorn of much of their supposed greatness by modern historians and near-historians It was inevitable that old Father Noah should get his debunking in due time, and so it has happened

Dr C Leonard Woolley, noted archeologist and field director of the joint expedition of the University of Pennsylvania and British Museum in Mesopotania, is the debunker He declares that excavations along the Euphrates show that the Flood of Noah's time mentioned in the Bible, was only a local condition, and that many of the inhabitants of the region escaped to safety in the hills

The presence of Noah at the scene is doubted by Dr Woolley, who places the date of the flood at about 400 B C., while the Jews first came to Mesopotania some 2,000 years later. The archeologist believes that the Jews heard the legend of Noah, the ark and the dove from the Assyrians and adopted it as their own In support of this view he pointed to Assyrian tablets which portray the story.

Anyway, 6000 years is a long time back, and while most archeologists agree that the popular idea of the flood is greatly exaggerated, it is doubtful whether we shall ever know just what happened around the Euphrates valley in that distant day.

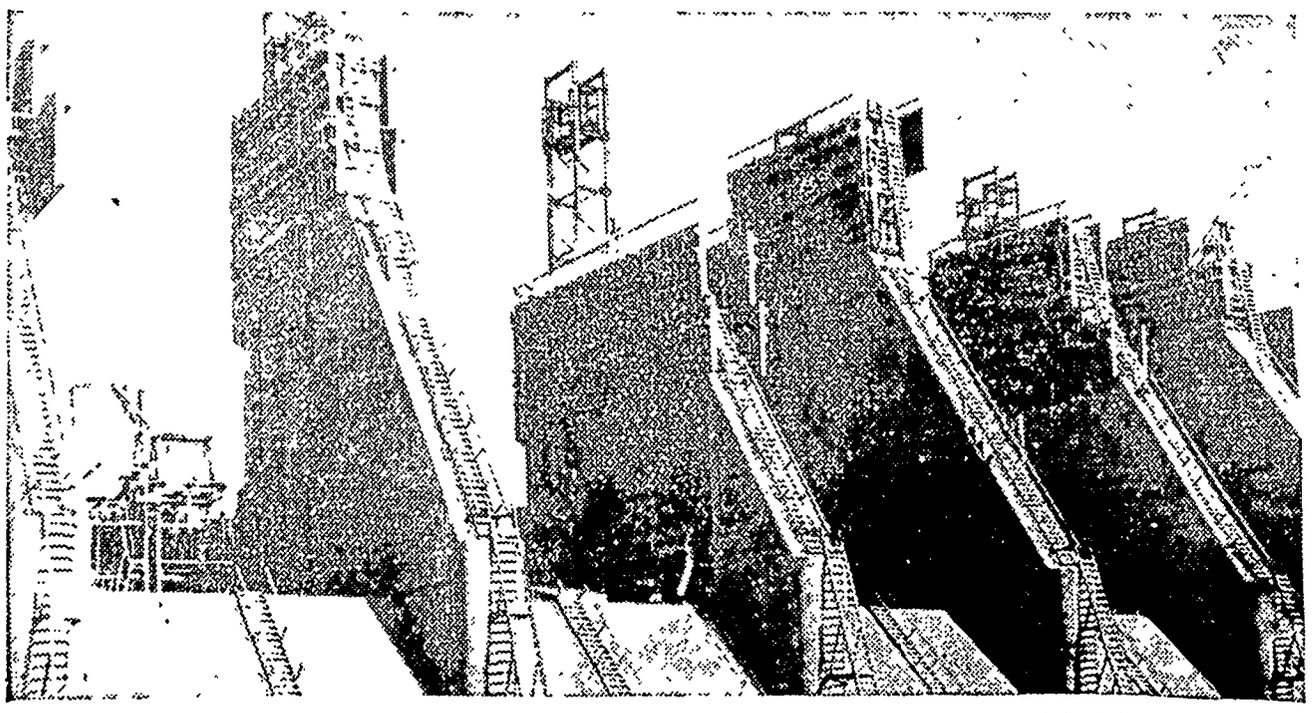
Construction Speeded on New Unit of TVA



Like bones of some huge prehistoric monster the skeleton of the TVA dam at Pickwick Landing on the lower Tennessee river rises into the air, showing the recent progress of the work.

FARM TOPICS

TURKEY PROSPECTS PUZZLE BREEDERS

Too Early to Figure Cost of Feed for Poults.

By E. Y Smith, New York State Agricultural Extension Division.—WNU Service.

A fair price for poults which will enable breeders to break even and perhaps make a little money in spite of high feed prices is the first point in the turkey outlook.

The outlook applies to those who buy poults from New York state breeders. Cornell veterinary college has found that pullorum disease is not important in the state's turkey flocks, and those tested have been found free of this disease. According to authorities in some other states, pullorum infestation is serious.

Second point in the outlook is that commercial growers will probably face higher feed prices for poults the first part of the growing season, which is not so serious because total consumption is not large during the early part of the season.

Finally, if the expected good wheat crop develops, together with a good corn crop, the probabilities are that turkey rations will be considerably lower from July on through the growing season. Since that is when turkeys eat the most feed, a reduction in price is more important at that time.

These facts indicate a "more favorable" condition for the 1937 turkey grower, though not a "particularly favorable" one.

Portable Brooder House Favored by Specialist

A round - roof portable brooder house, lighter in weight and easier to move than the ordinary shed-roof type may well be one of the factors in the success of the farm poultry enterprise in 1937, according to Cora E. Cooke, extension poultry specialist, University Farm, St. Paul.

Besides being more portable, the house is easier to heat, because of the smaller amount of head space. Another advantage is the window arrangement, for on all four sides there are two windows of barn-sash size. The windows distribute light over the floor evenly, preventing crowding and the development of too much heat from the sun in one place. The window arrangement also provides ventilation to fit all weather conditions. In hot weather windows on the four sides may be opened to allow for excellent cross ventilation.

A double floor, which protects the young poultry from cold, is 12 by 14 feet—large enough to accommodate 400 baby chicks or 250 young turkeys. The matrix, or form, for the round roof is easily made by fitting 1-inch material together.

Sloping roosts are constructed along the sides. A 500-chick brooder stove may be used in the house.

Feeding porches, 12 by 14 feet, may be attached to the house. For chicks, 1-inch mesh wire should be used, for turkeys, 1 by 2-inch mesh.

Discing for Lespedeza

Korean lespedeza may be seeded safely in oats by discing or drilling the seed into the soil with the oats or after the oats have been seeded. The method of seeding may be similar to that of red clover in wheat, with oats or in thin pastures, says the Indiana Farmer's Guide. Most seedings are broadcast and covering more than an inch in depth may prohibit germination of the lespedeza. If the seed is to be disced into the ground with oats, cover as lightly as possible.

Raising Broiler Birds

The cross of Rhode Island Red hens and Barred Rock males is a popular broiler bird. It is said that they grow faster and are easier to raise than most pure breeds. Broilers are started on a chick starting ration and can be given hard grain after a short time or raised on an all mash feed. A special broiler ration gives well fleshed birds. The loss in dressing broilers ranges between 13 and 14 per cent.

Down on the Farm

The estimated 1936 production of hay in the United States is 70,165,000 tons.

* * *

Approximately 4,000,000 acres of Texas land were terraced or contoured in 1936.

* * *

Wool increases greatly in value, the same as any farm product, when it is properly grown and prepared for market.

* * *

Any large-scale war against rats should be started with poison, gas, or blocking; never with traps.

* * *

There are two kinds of soil erosion—that caused by wind and that caused by water.

* * *

Good pasture reduces the cost of feeding live stock. Agronomists at Ohio State university say that money spent for pasture improvement should be classed as an investment rather than as an expense.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG. WASHINGTON, D. C.

Washington. — It nearly always happens in the second term of any President that the congress begins to show signs of asserting its own will.

Congress Balks

This is perfectly natural. Members of the house and senate recognize, or have recognized in the past, that when a President enters onto his second term he has little more in the way of trading to offer them. That is to say, the President has about exhausted political appointments and, except for special pieces of legislation, the Chief Executive cannot compensate house and senate members with political plums.

The New Deal congress in Mr. Roosevelt's first term was subservient, indeed. It gave him everything he asked. But now there are encouraging signs of a more independent attitude on the part of congress. I use the word "independent" to mean that congress has begun to examine legislative proposals from the White House in the light of the viewpoint of individual representatives and senators instead of an examination solely in the light of the argument of the President.

The Supreme court reorganization proposal brought the first sign of independence by congress. This sign broke out in the senate and there are many who believe that the senate will never yield on the President's proposal to pack the court with any additional justices of his own choosing. It is possible that, as we view history from, say ten years hence, the Supreme court reorganization plan will be shown to have been the straw that broke the President's control over a congress in which his party has more than two-thirds of the members.

Several other legislative proposals from the White House have met or are meeting real difficulties. One of them that must be regarded as important is the relief fund proposition. I imagine that, in the end, the President will get the full billion and a half that he has requested for relief purposes but the controversy over relief funds is significant.

For instance, and as an example of the undercurrent of feeling in congress, the house took a nasty slap at Relief Administrator Harry Hopkins. The house did it in a way designed to make Mr. Hopkins peevish. It cut his salary as relief administrator by two-thousand dollars a year. Now, a cut from $12,000 to $10,000 probably is unimportant as far as the monetary affect is concerned, but it was the same thing as if the house had turned Mr. Hopkins across its knees and had given him a couple of good spanks. What it does, actually, is to show Mr. Hopkins that the house is still its own boss and it demonstrates as well the house has some spunk left.

In addition to the relief fund controversy, congress is giving evidence also of more constructive opposition to control from the White House over all national policies. For example, the new farm bill is undergoing very critical analysis by the house agriculture committee. While this measure to establish what Secretary Wallace calls the "ever-normal" granary and to revive control over important farm groups was not sent to congress from the White House, everyone understands it has White House indorsement. House leaders accept it, at least, as representing the principle of AAA and, therefore, as being representative of the President's ideas.

Leaders of the farm bloc in the house are quite skeptical of the plan. Naturally, it is too early to forecast what is going to happen on this piece of legislation but it is important to note that the house is giving close and independent study instead of rushing the legislation through merely because the administration announced it was favorable to the proposition.

There is discontent in the senate also. Mr. Roosevelt's far-flung government reorganization bill has touched so many sensitive spots that some doubt actually exists whether it will get through at all, even after revision.

The feeling in the seante on this matter is so widespread that Democratic Leader Robinson made a statement the other day to the effect that "failure of the senate to pass the bill will be no public calamity." If their skepticism leads to a more systematic and thorough scrutiny of this bill and other pieces of legislation, it seems likely in my opinion that some costly blunders may be avoided.

* * *

The trouble with congress, however, when it gets into the humor we now observe, is that many times it does things the wrong way. After all, members of the house and senate are human and they flock together behind the bell cow, if that bell cow succeeds in stirring up enough excitement.

Follow Bell Cow

Take the controversy over the relief funds, as a case in point. It is plain that the house feels that Mr. Roosevelt does not requi and a half in new money But the house apparentl have the courage to take out position in accordan conviction. So it is tryin the real issue by holdin provision in the bill that aside half a billion of th use exclusively on perm lic works under Secretar public works administrat tary Ickes and Relief A Hopkins long have been each other.)

To get down to case relief fund controversy, happens that the real a on the side of Mr. Roose he needs the whole amo lief or he does not and th sense in the house tak around the rosebush to c ing of revenge. Thus, th shown in a rather bad lig spunk enough to spank M and if it does not believ President needs the full has requested, then why the house approve of onl and stick to that positio

There is another pha house revolt on relief ought to be examined. I earlier that the membe house and senate no long ed political plums from House. Now they are try close to the political p in another manner. If th part of the relief funds for permanent public w have their snouts in th trough of the old pork

There is a natural re politicians when money passed out and the house displaying that reaction t est on the relief funds. Th tion, simmered down, is, that the time has long pa pork barrel methods can ed in congress. It is no principle of representativ ment and it is not econo

On the other hand, it se that Mr. Roosevelt cann responsibility for revival o barrel custom. Throughou term, he allowed congress pork barrel packages and he is attempting to stic his own ideas without pro usual sop for congress, cians resent it.

* * *

While the congress has ing and fuming over legi downtow ington, t ury is job more difficult. Last week, Secre genthau found himself in where he had to go into t market for an additional dred-million dollars. He o government bonds in tha and from the proceeds of he will have in the Trea cient funds to keep the go going. Incidentally, this will put the national debt thirty-six billion, the hug in all history.

Treasury in Trouble

The Treasury's latest of new money caused prise because it had bee that the June 15 income ments would put the Trea ance sufficiently high to government for another two. Notwithstanding M evelt's declarations tha ment expenses must be are continuing to expand sequently, it has been nec borrow more money in keep the machinery of g operating.

It is impossible to discu test Treasury loan witho to it the question of th istration's gold policy and possible to mention the g without relating that th States now has more tha billions in gold. The Uni thus has approximately o all the gold in the world. seem to make our nation in the world, but having gold stock is a very expen osition under the admin gold policy.

No one seems to know administration will untan from the gold policy If t States continues to ma present price of gold, jus will other nations ship g shores of America We gold entering the United the rate of sixteen milli a day for some days Of co is an abnormal rate but th have been so high that if the present pace is m we will have all of the go value will be questionable tor in trade.

From foreign source rumors that many of th interests abroad are perf ing to unload the bulk of on the United States. In they put themselves in to bargain effectively with ed States whenever the ti for world nations to discu stabilization.

Nearly Everything Can Be Purchased in Small Packages

Offered Public in Single-Use Tubes

By WATSON DAVIS

THIS is a package age. Often we buy things because we like their containers, whether we need the things themselves or not.

Beer cans, after a spectacular entrance into an old field, have become almost commonplace. And paper cups, glass containers for food that we are proud to use as dinner ware, motor oil in non-refillable cans, have made a place for themselves.

Now an even larger use of single-use containers is predicted. Arthur D. Little laboratories foresee what they call the "toothpaste cocktail," which will do away with losing the top off the toothpaste tube because you will use it once and throw it away. Hermetically sealed containers are soon to come into use for the dispensing of hair tonics, flavoring extracts and even alcoholic beverages in "one-dose" quantities.

Tubes of Coffee and Paint.

It is predicted that there will be made this year some 25,000,000 single-use tubes for holding the makings of as many cups of soluble coffee. A paint manufacturer has greatly simplified his problem of providing a bright spectrum of many colors of paint. Uncolored or white paint only is sold in the familiar cans. But single-use tubes of colored pigments in oil are squeezed into the can by the user to make any color desired. The dealers reduce the cans on their shelves to a seventh of the usual inventory.

Envelopes are made not only of paper these days, but also of tin and other metals as well as transparent cellulose sheeting.

Reasons for Small Packages.

There are two motives in making smaller packages. One is convenience, which is the reason for the present American boom in small packages. The other is the fact that many people of low purchasing power must buy in small quantities even though that may be the most uneconomical way in the long run.

This finds an extreme in China. The American trade commissioner at Shanghai, in urging more suitable packaging of American goods, tells how an American raisin company recognized that its product must be brought into the buying range of the masses. It was content to package as few as five raisins in a stamp-sized envelope to be sold for the lowest unit of Chinese copper currency.

Obsessions Result From Changes in Brain Structure

Pittsburgh.—Changes in the brain structure itself are responsible for obsessions, Dr. Paul Schilder of New York told members of the American Psychiatric association here.

The kind of obsessions to which Dr. Schilder referred are a form of mental disorder in which certain thoughts and ideas keep going through the patient's mind against his wish and in spite of himself.

One patient cited by Dr. Schilder got the idea, from her sister's criticism, that she had always been lazy. She resented this very much, but could not stop thinking and saying that she had always been lazy. Her husband tried to help her overcome this difficulty which worried her by telling her "to send the cock-eyed world to hell." After that, she could not get out of her mind the idea that she had to do this.

Another patient complained of seeing dirt everywhere and had to clean her house continually, although she was convinced there was no dirt in it. These patients are not really thinking, Dr. Schilder explained, but are in a state in which one idea persists in their minds.

Titanium and Bromine Are Made Radioactive

Washington. — Another element rendered strongly radioactive by atomic bombardment was reported to the meeting here of the American Physical society by Dr. Harold Walke of the University of California.

Significant is the fact that much of the radio-activity comes in the form of gamma radiation such as radium gives off. Titanium was the metal bombarded and the radio activity is believed caused by the formation of isotopes of titanium and vanadium. One radioactivity decay had a half life of nearly sixteen hours and another over 16 days.

Dr. Arthur H. Snell of the same laboratory of Prof. E. O. Lawrence at the University of California also reported bombardment of bromine with deuterons. A radio-active form of this element which had a half life of 35 hours was disclosed, that was accompanied by the liberation of gamma radiation.

IMPROVED UNIFORM INTERNATIONAL SUNDAY SCHOOL Lesson

By REV HAROLD L. LUNDQUIST. Dean of the Moody Bible Institute of Chicago.

© Western Newspaper Union.

Lesson for June 27

LESSON TEXT—Hebrews 11.3-10, 17-22.

GOLDEN TEXT—These all died in faith, not having received the promises, but having seen them afar off, and were persuaded of them, and embraced them, and confessed that they were strangers and pilgrims on the earth.—Hebrews 11.13.

PRIMARY TOPIC—God's Honor Roll.

JUNIOR TOPIC—God's Honor Roll

INTERMEDIATE AND SENIOR TOPIC—Heroes of Faith

YOUNG PEOPLE AND ADULT TOPIC—Faith Tested and Triumphant.

The great "heroes of the faith" chapter, Hebrews 11, provides an excellent review summary of the messages in Genesis, which we have studied during the last three months. Fittingly, the entire account, from the Creation to the hope for the future expressed by Joseph, revolves around the word "Faith." The patriarchs had many noble qualities but these were all rooted in the fundamental of all virtues, namely, that faith in God without which "it is impossible to please him" (v. 6).

Our study may well attempt no closer analysis of the text than to note the results of faith as they appear in the verses of our lesson.

I. Understanding (v. 3).

Philosophy and human research frequently bog down in the confused bypaths of unbelief and partial knowledge, but faith cuts right through the clouds and the confusion and "understands" that God is the creator of all things. If you want to know, believe God.

II. Worship (v. 4).

The world abounds with cults and religions of almost unbelievable diversity, and of appalling insufficiency for the needs of man. Only when man does as did Abel, and worships God in accordance with God's holy law will he obtain "witness that he" is "righteous."

III. Fellowship (v. 5).

Here again faith triumphs. The societies and associations of man fumble around trying to establish "good will," "fellowship of faiths," and what not, only to fail. But when a man knows God as Enoch did, then he is ready for true fellowship with his brother.

IV. Assurance (v. 6).

When a man trusts God implicitly the uncertainties of life vanish. It is an easier thing to talk about than to do, but, thank God, it can be done. We must believe not only that God is, but by faith we must recognize him "as the rewarder of them that diligently seek him."

V. Salvation (v. 7).

Saved by faith—that is the story of the Christian, even as it was the story of Noah. The ark is typical of Christ. Only in him is there salvation.

VI. Obedience (vv. 8, 9).

The world has a ribald saying, "I don't know where I'm going but I'm on my way," which represents a dangerous philosophy of life. But faith in God enables one to go with Abraham who "when he was called went out, not knowing whither he went." He knew God and that was enough to call forth unquestioning obedience.

VII. Vision (v. 10).

Men of vision—that's what we need, we are told. Well, then we need men of faith who can see the unseen, who can see "a city which hath foundations" even in the midst of the wilderness.

In the fields both of secular and spiritual achievement vision has marched before victory. Carey, Judson, Livingstone, every great missionary, dreamed dreams and saw visions before they achieved lasting victories in distant lands.

VIII. Resurrection (vv. 17-19).

God gave a promise and the only means of fulfilling that promise was about to be taken away, but Abraham did not hesitate for he believed that God was able and ready to raise the dead if necessary to fulfill his promise. Have all our prospects been dashed to the ground? Is everything hopeless, humanly speaking? God is both willing and able to make all things work together for good and for his glory.

IX. Hope (vv. 20-22).

The forward look—that is the look of faith. Isaac's blessing concerned "things to come." Jacob, too weak to stand alone, leaned on his staff and worshiped, and passed on the covenant blessing. Joseph gave commandment concerning his body, looking forward to God's fulfillment of the promise.

Christian hope is not a wishful desire that an unbelievable thing may somehow occur. That is an unbelieving misuse of the word "hope." To a child of God hope means a well-grounded assurance that God will keep his word.

Right and Wrong

Conscience is that faculty which perceives right and wrong in actions, approves or disapproves them, anticipates their consequences under the moral administration of God, and is thus either the cause of peace or of disquietude of mind.

Opportunities

There are people who would do great acts, but because they wait for great opportunities, life passes, and the acts of love are not done at all.—F. W. Robertson.

Ask Me Another?

A Quiz With Answers Offering Information on Various Subjects

1. Where was the first session of the United States Supreme court held, and how many justices were present?
2. Are the authorized version and the King James Bible the same?
3. What animal is the fastest runner?
4. How big is the standard parachute?
5. [illegible] the federal income [illegible]?
6. What state has furnished more Presidents than any other?
7. How many counties in the state of Delaware?
8. How many kinds of time in use in the world?
9. Who wrote, on the eve of battle, "If I survive, I shall soon be with those I love: if I fail, I shall soon be with those I have loved"?
10. How many snapshots do amateur photographers in the United States take a year?

Answers

1. The first session of the United States Supreme court was held in the Royal Exchange in New York, February 1, 1790, with three of the six justices present.
2. They are. The King James Bible became known as the authorized version, probably because it bore the line "appointed to be read in churches" on the title page.
3. The cheetah in short distance runs. It can run down a deer or antelope for a short distance.
4. The standard airplane parachute has a spread of 24 feet when open.
5. In the year 1916.
6. Virginia.
7. There are but three counties in the state of Delaware.
8. Sixty-three kinds of standard time are used in the world.
9. This sentiment was contained in a letter written home by Sir Charles Napier, a distinguished British general.
10. Amateur photographers in the United States take 500 million snapshots a year to use up 3 million pounds of film and 14 million pounds of printing paper annually, according to the Literary Digest.

Science and the Home

EAST, West, home's the best. And our enjoyment of home life certainly owes a lot to modern science. Consider our modern comforts. The radio which entertains us, the newspaper which keeps us informed. . . the modern household appliances, and the first aids and home remedies standing by in our medicine cabinets to help us in minor emergencies. All are achievements of modern scientific research brought to us by our local merchants.

Foreign Words and Phrases

Laissez qui je vous responde (F.) Allow (permit) (suffer) me to answer you.

Furor arma ministrat. (L.) Fury provides arms.

Dehors. (F.) Outside.

Uberrima fides. (L.) Superabounding faith.

Une nuit sans sommeil. (F.) A sleepless night.

Hablen cartas, y callen barbas. (Sp.) Let writing speak, and beards (that is, mouths) be silent.

Uncle Phil Says:

Successful Failures

Some of the greatest successes are wrong from beginning to end. Napoleon was.

A wolf lives only 10 years. That comes of living a life of fury.

If there were more women paragraphers you'd see the men's hats made fun of, too; and never has it been explained why there are so few women paragraphers.

Determination Has Inning

Hanging on to a forlorn hope results in success as often as it results in failure.

Some of the big words he afterward uses, a boy gets from a circus poster.

Those who live by free speech must expect to suffer by it.

To say the world is moving in cycles is supposed to soften the blow.

Independent Indolence

Sometimes, one may feel indolent enough not to want Opportunity to knock. After all, one may be able to shape his own course, without outside aid.

There is little music in a robin's chirrup, but a great deal of cheer-you-up.

Few people are familiar enough with money to call $1,000 a "grand" in that offhand way.

The really congenial people are the good-natured. Struggle to be one.

A Moral Success

The highest needs must have most care, and the lower needs the least care, and we must so train ourselves that hunger for the ideal things shall chasten and subdue every worldly hunger, fulfil the true ideal of men and women, and make life a moral success and not a moral failure.—John Hunter.

FIRESTONE GROUND GRIP TIRES SAVE YOU MONEY

YOU SAVE in fuel costs. Tests made by leading agricultural colleges prove that Firestone Ground Grip Tires save up to 25% in fuel.

YOU SAVE in time. Ground Grip Tires enable you to drive your tractor faster with greater comfort and efficiency. You save up to 25% in time.

YOU SAVE by reducing breakage and repairs. Ground Grip Tires cushion tractors and farm implements, reduce jolts and jars.

YOU SAVE by doing better work. Ground Grip Tires will not pack the soil and do not injure plants.

YOU SAVE with Firestone Patented Construction Features. *Gum-Dipping* saturates and coats every cotton fiber in every cord in every ply, counteracting internal friction and heat and providing the extra strength necessary to stand the tremendous stresses and strains of traction pulling. *The patented construction of Two Extra Layers of Gum-Dipped Cords under the Tread* binds the tread and cord body into one inseparable unit. *The patented tread design* with deep cut, rugged bars is self-cleaning, providing greatest traction and drawbar pull.

YOU SAVE with the Firestone Cut-Down and Change-Over Wheel Program. By this plan your present implement wheels can be cut down and flat steel rims of uniform diameter welded to the ends of the spokes. Then by use of Firestone Demountable Rims the tires can be taken off one machine and put on another. You need only a few sets of tires to put all your farm implements on Ground Grip Tires.

YOU SAVE in buying NOW as tire prices are advancing. The price of crude rubber has gone up 110% and cotton more than 25% during the past two years. Call on your nearest Firestone Implement Dealer — Tire Dealer or Auto Supply and Service Store today.

THE GREATEST TIRE EVER MADE TO SELL AT THESE LOW PRICES

Come in, examine a cross-section cut from a Firestone Standard Tire. See for yourself how much extra value you get in the deep-cut, non-skid tread. You will agree that never before have you seen so much quality, so much built-in mileage and so much safety at so little cost. The Firestone Standard Tire is made safer from blowouts with the Firestone patented process of Gum-Dipping. The wider, flatter tread with more rubber on the road gives longer mileage and greater protection against skidding. Firestone can give you all these extra values because Firestone Standard Tires are built in such large quantities that great savings are made in production.

Don't drive another day on thin worn tires that are dangerous and may cause an accident. Join the Firestone *Save A Life* Campaign today by equipping your car with Firestone Standard Tires — *First Grade Quality at Low Cost.*

DON'T RISK YOUR LIFE ON THIN WORN TIRES

Protect yourself and your family from the danger of driving on thin worn tires which may cause a serious accident.

DO YOU KNOW

THAT last year highway accidents cost the lives of more than 38,000 men, women and children?

THAT a million more were injured?

THAT more than 40,000 of these deaths and injuries were caused directly by punctures, blowouts and skidding due to unsafe tires?

Section of smooth worn tire which is more susceptible to punctures, blowouts and skidding.

Section of new Firestone Tire. Note protection against skidding, punctures and blowouts.

Listen to the Voice of Firestone featuring Margaret Speaks, Monday evenings over Nationwide N. B. C. Red Network

JOIN THE FIRESTONE *Save a life* CAMPAIGN TODAY!

FIRESTONE AUTO SUPPLIES GIVE YOU GREATEST VALUE FOR YOUR MONEY

SEAT COVERS
Available in cool fiber. Attractive.

AUTO RADIOS
Firestone Stewart-Warner 6 All-Metal tubes.

BATTERIES
Power and dependability. Patented All-rubber separators insure long life.

BRAKE LINING

The Klemme Reformed Church le School came to a close Fri- with the annual school pro- m given by the pupils after ich a big picnic was enjoyed by pupils, their parents and mem- s of the congregation.

Large Enrollment

There were 102 pupils enrolled the course this year and average ly attendance was 96. Eight pu- s graduated from the course s year They are Adelia Wille, lene Schmidt, Louise Albers, I- e Becker, Dorothy Baack, Cer- ld Grosshuesch, Allen Barz and edenck Bell.

Leaders Are Given

The First Year Leaders were ie Thiemann, Marie Schmidt, lla Kaduce and Winton Etchen. cond Year Leader, Irene Suck- , and Third Year Leaders, Avis rz and Gladys Griffen.

OWNINGS CAN BE REDUCED

Almost every newspaper we d carries a story of one or more wnings. It seems there are too ny We live in a civilized age d in a civilized country where teracy is almost nil. There will accidents, to be sure. But are sure all drownings are acci- nts? If so we have too many ac- lents. Most accidents are attrib- d to carelessness and we, a civ- ed people, can recognize care- sness. There is no excuse for relessness. Consequently we have excuse for most drownings.

The number of drownings in Io- can be reduced, but it will take assistance of every person in state to do it. There are many ys and all will have to be ap- ed. First, we must educate our- ves that water is dangerous. It great for recreation, but what rt does not have its hazards? must recognize carelessness d then we must reduce it. We t learn how to swim if possible. ove all, we should learn how to e first aid to those who have d the misfortune of being under ter until life is apparently gone ery person who can read has d the opportunity to learn how resuscitate a person who is ap- rently lifeless from drowning.

Here is where the educational ogram should start. Every civic ganization, every club or group terested in the out-of-doors ould make life saving a part of eir program. The youngsters rtunate enough to belong to cer- in youth organizations get this aining—but how about the oth- s? They are equally important nd no doubt enjoy the water just much. Start such a program in our city or town and try, by rking together, as a civilized eople can, to reduce the number drownings in Iowa.

Farmers' Union Meeting Will Be Held In Liberty Township

A meeting of the Farmers' Uni- n will be held on Tuesday even- g, July 6th at Liberty school No. Mr. Henry Curvo, of Clear Lake, ill address the meeting to which he public is invited.

After the meeting the ladies ill serve home made ice cream nd cake.

LEAVE A CLEAN PICNIC PLACE

Did you ever see an ideal place to picnic along some stream, and upon closer examination find it strewn with litter, garbage, tin cans and flies? That is the way it looks to others when you leave your picnic site. Before leaving, stop and think Would you come back again after leaving the area in such condition? Clean it up, pick up the papers, burn the refuse and be sure your fire is out

In state parks, picnic tables benches and fireplaces are furnished for public use There are also refuse receptacles But you would be surprised at the condition in which some people leave a picnic or camp site in a state park. The tables and benches should be cleaned of crumbs and papers. The papers can be burned in the fireplace and the other refuse placed in the receptacle placed there for that purpose It takes very little effort to clean up the area.

Be fair wih your self when you go camping or picnicking You may want to use the same area again and it is more enjoyable if it is clean and inviting

W.F.M.S.

W.F.M.S. of the Methodist church will meet at the country home of Mrs C. A Arnold Thursday afternoon. The Little Light Bearers and their mothers will be guests.

Farming without soil. How ingenious scientists are proving vegetables and fruits can grow, with the aid of chemicals, in sand water or sawdust. An interesting feature in the AMERICAN WEEKLY, the magazine distributed with NEXT SUNDAY'S CHICAGO HERALD AND EXAMINER.

Card Of Thanks

We wish to take this means of expressing our sincere thanks to the friends and neighbors who called to give us assistance during the illness of our beloved one We also want to thank those who gave flowers and otherwise expressed their sympathy, and thanking the singers who assisted in the services.

Mr. and Mrs. Elmer Schlei and Dale,
Mr. and Mrs. Irving Haupt, Mabel and Paul Schuldt.

STRIKES COST MONEY

That salient fact must be overlooked as violence steals the headlines But as dangerous as it is when mobs run rampant through the country halting mail trucks and interfering with other people who want to work, the long term factor that strikes are costly cannot be overlooked.

First they are costly to the minorities who decide to strike Secondly they are costly to the greater numbers who are forced out of employment in their own plant or who are laid off because a customer plant has been closed or a source of supply cut off They are costly to the shopkeeper, the doctors, lawyers and candlestick makers in every community With losses running into billions of dollars, they are cutting heavily into the national income, out of which comes the living standard of all the people

These factors are felt immediately by the various groups directly affected But the toll that the present wave of strikes and compulsory wage increases will take in the future of the buyer of manufactured goods cannot be calculated

Let's look at it calmly From 70 to 80 per cent of the cost of manufactured products is labor cost As these costs go up and up, the selling price of goods must go up too That is when the consumer begins to feel the effects of an economy dictated by violence rather than by peaceful consultation And the farmer, caught in the squeeze, finds himself pinched as the goods he buys in the city become dearer and dearer

Iowa's Apple Crop Will Not Be Large, Say The Fruit Men

APPLE CROP TO BE ONLY 45 PERCENT OF NORMAL

That's Prediction Of S. W. Edgecombe of Iowa State College After State-Wide Survey

Iowa will have only a 45 percent normal apple crop this year

S. W Edgecombe, Iowa State College extension horticulturist, made this prediction this week after making a survey through the main aple sections of the state

"The 1937 crop," he explained, "appears to be much smaller than at blossom time when most authorities estimated a 70 percent crop

"Southeastern and eastern Iowa will have from 65 to 90 percent of a normal crop, but this is offset as a state-wide figure by prospects of only a 25 percent crop in south central Iowa and even less in the western section

"The reason for the low set this year is the weakened condition of the trees as a result of the cold winter and last year's drouth This was shown in three inspected orchards where trees top-worked with winter hardy wood had set many apples while unworked trees had only a few"

Another reason for the curtailed crop prospect is the apple scab epidemic

Choir Picnic Tuesday Evening

The M. E Choir held a picnic in the park Tuesday evening The Choir takes a vacation during the months of July and August and resumes duties again when school begins. The families were invited for the much enjoyed picnic supper, which was climaxed with home made ice cream and cakes. About thirt-five attended.

Auxiliary Meets Next Week

The Klemme Auxiliary meeting will be held at the home of Miss Berdice Schwichtenberg Thursday evening, July 8th, at eight o'clock.

Thunderstorms do not cause milk or cream to sour. But it is true that milk or cream will sour more quickly in humid, warm weather, which probably accounts for the old belief that storms were the cause of souring, suggests C. A Iverson of Iowa State College.

CUSTOMERS CAN DO SHOPPING BEFORE CELEBRATING JULY 4

Independence Day 1937

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

With a spirit of reverence, as well as of patriotism America observes this year the 161st anniversary of the Declaration of Independence

At the same time it commemorates the 150th anniversary of the United States Constitution

Between these two celebrations there is a close relationship Together they commemorate the fact that our nation was created and constituted the Land of Freedom

It was the Declaration of Independence that proclaimed to the world that all men are created free and equal, that they are endowed with certain inalienable rights, that to secure these rights governments are instituted.

It was the Constitution of the United States that gave those principles strength and permanence.

Without that Charter of Liberties, the freedom won by the courage and the self-sacrifice of our fathers would have perished

To the men who, through those two historic documents, gave substance to our national ideals, all Americans owe a debt of gratitude today

To realize what they established for us, it is necessary only to consider the growth in area, in prestige and in the well-being of its people that America has achieved.

To realize from what they protected us, it is necessary only to observe the repression of human rights and of the human spirit which today afflicts so many nations abroad.

Independence Day, 1937, thus becomes a dual anniversary It commemorates our birth as a nation, and it demonstrates that only through the power of human liberty and through government instituted to secure such freedom, can a country progress and endure.

On us rests the responsibility of keeping that spirit alive.

College Graduates Had Reunion And Picnic

Klemme People Attended Reunion Of Former Charles City Students

A reunion of former students of Charles City College was held at the Wild Wood Park, Charles City, Sunday A picnic dinner was enjoyed by the former students and a program was given after dinner. Mr W G Henke, Charles City attorney, gave the address. There were some over two hundred persons at the reunion

Those from here who attended were Mr and Mrs. E J Arnold, Miss Minnie Lenz, Mrs. C A Arnold and Arthur Wellemeyer and daughters, Ruth and Nora There were several former teachers of the college who were present

Quite a number of people from this part of Iowa attended the Charles City College which later was merged wih Morningside College at Sioux City.

ACCIDENT VICTIMS MAKING RECOVERY AT HOSPITAL

Henry and George Thiemann, who were seriously injured a week ago when they fell from the roof of a corn crib they were shingling, and who are patients at a Mason City hospital, are making a good recovery from their injuries

George Thiemann, whose leg was fractured in the fall, will be brought home this week. Henry Theimann, who has a fractured vertebra, is making a satisfactory recovery and will be brought home soon.

C. J. Wille, whose heel bone was fractured, is getting along fine at his home east of Klemme.

Mr. and Mrs. Herman Back and family visited at the Nels Back home Sunday afternoon.

Special Entertainment Planned For Evening

KLEMME STORES WILL OPEN AS USUAL FOR SATURDAY'S BUSINESS

Will Be Closed Monday, July 5th Which Is A Legal Holiday

At a meeting of a representative group of Klemme business men it was decided to keep all Klemme places of business open this week Friday evening, July 2nd By opening the stores on Friday evening of this week it will give customers an opportunity to do their trading in the event that they would want to take in a celebration some place on Saturday This will give farmers a chance to do their week end trading in Klemme on Friday evening and thus be all ready for a week end celebration if they so desire.

Entertainment Being Planned For Friday Evening

To provide entertainment for Friday evening, July 2nd, the open-air movies will be given. Mr. Rasmussen, proprietor of the show agreed to make the change in dates and also has a special new feature for Friday night's showing. He has been able to obtain a picture of the northwest, a feature which has been showing in Mason City recently In addition to the main feature, there will be a good comedy that all will enjoy.

Come to town early Friday evening. Do your week end shopping and an enjoy an extra good talking picture.

Klemme Business Places Will Observe Legal Holiday

Monday, July 5th being a Legal Holiday, Klemme business places will be closed on that date. Plan to do your week end shopping in Klemme on Friday evening, or on Saturday and Saturday evening as usual Remember. Klemme's business places will all be open for the convenience of customers on Friday night, July 2nd, and on Saturday, July 3rd as usual.

Big Celebration In Fall

Klemme in not celebrating the 4th as the business men are going to "shoot their wad" by having a big two day celebration in September when the Jay Gould Co will again be here The attraction staged here last fall was the best in North Iowa, and this year the fall festival will be bigger and better than last year.

Lots Of Entertainment

With one of the best talking picture outfits that can be obtained for open air movies, here each Saturday night, and with an excellent band concert on Wednesday night, and with the coming fall festival, the business men want you to feel that the entertainment they are giving this summer is in appreciation of your trading in Klemme.

Open As Usual Saturday

Remember, however, that the business places in Klemme will be open all day and evening as usual on this Saturday. The stores will be open Friday evening for your convenience.

YOUR VACATION

A summer vacation getting acquainted with your own state and many scenic and historical places and state parks will prove one of the most enjoyable summer vacations you ever spent in Iowa.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building Washington, D. C.

Washington.—As it becomes more painfully apparent that there is no basis upon which to expect present returns of federal taxation to produce sufficient funds to maintain the administration's rate of spending, the President and the Treasury are peeping into every corner for new sources of money. They have already recommended to congress that the present nuisance taxes be re-enacted to bring in some five hundred million a year and they are casting their eyes elsewhere for other tax receipts.

Seek New Tax Sources

In addition, and as a part of the general pinch that the Treasury now feels, Mr. Roosevelt has asked congress to revise certain provisions of income tax law to close up loopholes and prevent escape from taxation. The President's message to congress on this point was quite bitter and, many observers thought, rather unfair but, nevertheless, he told congress that it was up to the legislative branch to see that there was no tax avoidance.

The President's message dealt with an alleged moral phase of tax avoidance and that part of his message has provoked much criticism of the Chief Executive's attitude. He sought in his statement to the congress to make it appear that many wealthy persons had avoided taxes and that, by so doing, they had sinned.

Now, the President's view is entitled to consideration and his charge that there is tax avoidance is correct. Indeed, I believe no one can successfully dispute the charge that there is tax avoidance of a wholesale character in the United States. But when the matter is placed in the category of a moral issue, it must be examined in a different light. The President did not talk about tax evasion in his message; he talked about tax avoidance. Tax evasion is illegal and immoral. Tax avoidance is purely and simply the arrangement by an individual so that he pays the lowest tax he can and still complies with the law.

I am inclined to side with those in congress who have criticized the President on the attitude he assumed. As long as congress tells an individual, through the language of a law, that he must pay so much tax and prescribes the conditions, if that individual complies with that direction of congress, he does not commit a crime when he pays only that much tax.

I am constrained to support my view in this instance with the language of the late Mr. Justice Oliver Wendell Holmes who, as a member of the Supreme court of the United States, gained probably as much respect as any man who ever sat on the highest bench. Mr. Justice Holmes said in a decision of the court 21 years ago and now strangely apropos the following words:

"We do not speak of evasion, because, when the law draws a line, a case is on one side of it or on the other, and if on the safe side it is none the worse legally that a person has availed himself to the full of what the law permits. When an act is condemned as an evasion, what is meant is that it is on the wrong side of the line indicated by the policy, if not by the mere letter, of the law."

Again and again, courts have held that a citizen may employ "any legal means" available to him to diminish the tax which he must pay. It would seem then that Mr. Roosevelt's message used rather ill chosen and ill advised language when, in dealing with questions of tax avoidance, he sought to make it appear that it was wrong for a citizen to try to save his own money.

* * *

It has been rather interesting to note the type of outbursts, editorial and verbal, that has come as a result of Mr. Roosevelt's tax message. These outbursts have continued partly because the President asked congress to make an investigation of tax avoidance where some very large taxpayers are involved. Of course, congress is going to do that because it will give congress, or at least certain individual members, an opportunity for publicity. And they do not overlook opportunities for publicity.

Message Causes Stir

Since the discussion of tax questions has continued on the basis of the projected investigation, it has given plenty of writers an opportunity to express their opinion in detail. Many of these critics have become quite personal in their assault upon Mr. Roosevelt and their biting observations are doing him no good politically at all. In fact, I have heard some rumblings beneath the surface to the effect that his tax message has hurt him as much politically as his proposal to add six new justices of his own choosing to the Supreme court of the United States.

Probably the worst of these criticisms appeared in the Washington Evening Star, a newspaper that seldom takes a bitter stand on any question.

The Evening Star called attention to regulations of the bureau of internal revenue which prescribed that a person must count as income anything taken in payment of services, whether that thing be money or some other thing of value. It cited the fact that the President occupies the White House without payment of rent and that he has available a large staff of servants who man that institution; that he is provided with automobiles and yachts and various other services and circumstances without cost. Editorially, the newspaper then goes on:

"Has the President of the United States, unwittingly, failed to include in his income tax the value to him of the residence provided by the government which pays him his salary? Under these regulations it would appear that even the automobiles and the yachts provided by the government should be considered in making out an income tax return. There is no publication of income taxes and therefore the public is not informed as to whether the high officials of the government who are provided with residences, as some are, or with automobiles, as many of them are, take these things into consideration in reporting their income taxes. It would scarcely be an argument to say that residence provided for a public official is not part of his pay. Cabinet officers, for example, are not provided with residences by the government. They must provide residences themselves, at considerable cost. It is obvious, therefore, that a residence given a government official is part of his pay."

* * *

When the President proposed the tax investigation, he said that he believed there were a good many millions of dollars that could be forced into the federal treasury as a result of such inquiry. His action followed sweeping orders issued to internal revenue agents and auditors to review every income tax return with the utmost care. The agents and auditors, of course, will go over the returns filed by the entire list of income tax payers, little as well as big, but the congressional investigation will be devoted only to some of the men called by Mr. Roosevelt, "economic royalists." It is obvious that congress cannot go into all returns so congress will pick on the big ones because those men will have names out of which good headlines in newspapers can be written.

Pick on Big Ones

The Treasury had a different idea about the investigation which congress undertook at the President's request. The Treasury's plan contemplated a number of secret hearings, star chamber sessions, and I believe everyone knows what can be had in a star chamber session with bureaucrats operating with all of the powers they possess in our government.

Word of the Treasury's ideas did not please congressional leaders and they very quickly put their foot down on the scheme. Of course, members of the house and senate figured they would not share in the political benefits unless they did the investigating. I hear much comment to the effect, however, that an investigation in the manner congress had decided to make it is much preferable to the star chamber proceedings which the Treasury proposed.

I mentioned that the congressional committee is dealing only with "big names." The reason for this is plain. It would do no good at all in a publicity way for the congressional groups to call in some small taxpayer who, by availing himself of the privileges of the law, had been able to reduce his total tax to a comparatively few dollars. On the other hand, if a big business man, an economic royalist, claims all of the exemptions and deductions that the law specifies and thereby cuts down his tax, he becomes the subject or the target for much ballyhoo about tax avoidance. I do not see the difference.

* * *

Since the President finds himself in a deadlock with congress on his proposal to add six justices of his own choosing to the Supreme court of the United States, he has turned to a new approach in dealing with the legislative situation. He has suddenly loaded congress down with work. This is to be distinguished from the course he has followed in his earlier years of his tenure when he submitted only one legislative suggestion at a time.

Piles Work on Congress

Now, in addition to the court reorganization proposal, there is before congress the far-reaching governmental reorganization plan, the billion dollar slum clearance and house building, farm tenancy bill and a highly controversial piece of legislation proposing to establish minimum wages and maximum hours for labor. These are, in addition, of course, to the tax revision proposition I have discussed above and the annual appropriation bills with the billion and a half relief fund measure.

FOUR MEN AND DOG AT THE POLE

They Are the Pioneers in Russia's Grand Scheme to Establish Air Routes Over Vast, Shifting Fields of Arctic Ice.

By WILLIAM C. UTLEY.

SOMEWHERE in a vast blue and white desert of eternal ice and snow there drift today four men and a dog. For a year they will seek to keep alive, indeed to accomplish important scientific work which will make history, in the shadow of the north pole.

The four are led by Ivan Papinin, grizzled veteran explorer of the Arctic. His companions are Ernest Krenkl, radio operator who will be their only means of contact with the world outside, and who accompanied Admiral Richard E. Byrd to the Antarctic in 1929; Pyotr Shirshov, hydro-biologist who was marooned with 101 others aboard an ice breaker in the Arctic in 1934, and Eugene Feoderov, magnetologist who has been studying the magnetic waves of the north region for three years.

They are one of the most vital—and certainly one of the most dramatic—components of a fantastic, but possibly practical, scheme of the Russian communistic government to remap the polar regions with air routes that will cut thousands of miles and many hours of travel between northern Europe and Asia and North America.

The plan necessitates the establishment of an airplane base somewhere near the pole, a base that would involve international complications of vast proportions in the years to come, if it is successful. The Russians are certain that some day it will be. But first of all there are a great many facts to be discovered about the polar basin, particularly concerning weather conditions, existence of solid ground and the drift of the great ice floes. It is up to the four drifting heroes to find these facts insofar as they are able.

These are the four men who will live for a year on an ice floe near the North pole to observe weather conditions for Soviet Russia: 1. Ernest Krenkl, radio operator. 2. Pyotr Shirshov, hydro-biologist. 3. Ivan Papinin, leader. 4. Eugene Federov, magnetologist.

Dog Warns of Bears.

It is hard to imagine more utter desolation than that which the scientists face. They live in tents reinforced with snow walls on a field of ice three or four meters thick. Their quarters are hardly spacious, for they have kept with them a great mass of equipment, including apparatus for observations of weather, ocean depth, physiography, magnetism, currents, etc. For food they have four tons of powdered chicken and other concentrated foods, brandy, tea and caviar. There are also a windmill to generate electric power, skies, wolf-pelt sleeping bags, guns, sledges, a phonograph with 15 records, a radio, chess set, cigarettes and cigars, cameras and books. The dog is included in the party to warn them of approaching bears.

The Russians were left on an ice floe about 70 miles from the pole by Dr. Otto T. Schmidt, chief protagonist of Russia's development of the Arctic, and his convoy of airplanes. If they are to remain near the pole they will have to do some moving around before the year is out. It is impossible to predict the direction in which they are most likely to drift.

Russians, according to a report from Moscow, believe that the ice moves in a circle about the pole, but this does not agree with the observations of others. When Nansen crossed the polar basin, his ship drifted across it in nearly a straight line, a short distance from the pole.

Even in winter the marooned scientists will face the grave danger of the ice floes breaking under them, for they are always moving. If a split in the ice appeared suddenly they would stand the chance of losing much of their valuable equipment. The loss of a considerable part of their food supply would probably be fatal, for seals and bears do not ordinarily live that close to the top of the world.

If their food supply ran short in the cold and dark periods of winter, their chances of rescue would be rather slim. However, the Russians 12 years ago, in the Chelyuskin disaster, proved their ability to go to the rescue of unfortunates marooned in the Arctic, and airplanes and radio communication have improved by leaps and bounds since that time.

Landing Planes Is Tricky.

Conditions as they are known today do not permit a satisfactory airplane base in the vicinity of the pole. The pole itself is merely a mathematical spot; the area in which the spot is located is a broken field of ice. One year it may remain thick and solid when winds from the south force the ice together. In another year local storms may scatter it crunching and jamming for many miles in any direction. When leads are opened up heavy fogs, through which aerial navigation is all but impossible, loom. And as yet little is known about the ocean current which also may affect the movement of the ice.

It takes a skillful—and lucky—pilot to land and take off on the broken, jagged surface of the polar basin. When two of Amundsen's planes were forced down 100 miles from the pole in 1925, it took the men three weeks to get themselves out.

It is entirely possible that there may be some small islands which are yet large enough to support an air base. It is certain now that there is no such thing as an Arctic continent. But for transarctic flying, which is sure to come some day, the observations of Russia's floating weather station should be invaluable.

If an air base could be maintained at the pole—and who can say, looking back over the aerial accomplishments of the past score of years, that it cannot?—the United States and Canada might well be grievously concerned. Russia seems bent on continuing the development of what is already, in numbers at least, the most powerful air force in the world. A base at the pole would bring the industrial centers of the United States and Canada within reach of even the present day bombing planes, and perhaps within a day's pleasure jaunt for the bombers of ten years from now.

Canada's most valuable mineral properties are within 2,000 miles of the pole, and her principal cities only another 500 miles south. The distance from the pole to New York city is about 2,500 miles, to Chicago even less. San Francisco is 3,000 miles away. It would take today's bombing planes 10 to 15 hours to cover this distance, although they would have to refuel before going back. But the plane of tomorrow may well be able to make the round trip.

Commercial Aspect Vital.

There are rumors in the news columns—they may be nothing more than just rumors—that the governments of the United States and Canada already are concerned with the possibility that their nations may be dominated by a Soviet air base at the pole. The rumors continue that these governments are preparing to demand that should such an air base be successfully constructed it must be subject to strict and impartial international control.

These are scary conjectures, however. It is probable that the Russians are far more interested in the commercial possibilities of the Arctic air routes.

Seeking new economic frontiers, the Communists turned quite naturally to the north. Here were great reserves of timber, fur, gold, oil and metals to fill the needs of modern industry. The modern pioneers laid out towns, dug mines, erected cities containing mills. The great market for their products lies in America. The shortest route to America is over the vast wastes of ice. Development of air routes seemed the plausible answer.

Internal air routes over the polar regions are almost equally important, for they can drastically shorten the distances between the eastern and western extremities of the vast Soviet empire. Flying by the curvature of the earth's surface from Leningrad to the new Pacific industrial and military stronghold of Khabarovsk, the distance is about 5,500 miles; via the pole it is less than 4,000 miles. If a polar aerial base sould be established, commercial craft could make the hop from any large industrial city of central Russia to New York or Chicago in 25 to 30 hours.

Air Travel Now Heavy.

The reduction of the flying distance from one end of the Soviet empire to the other is of significance in another way. The two nations the Communists fear most are Germany and Japan, one at one end of the empire and the other at the other end. The precious saving of time in the transfer of planes and other aviation equipment would be sorely needed in time of war.

Russia already has made important transportation advances in the north country which is already settled. The northeast passage has been opened up along the Siberian coast; last summer, with the aid of icebreakers, 14 ships made the passage. Strategic commercial points have been connected with more than 11,000 miles of airways. Over these there were 267,000 miles flown in 1934; the figure estimated for 1937 is 1,389,000 miles.

The Russians want to know in advance what the conditions will be when they are ready for the transarctic air lines, what the upper air currents will be, what moisture, temperature and winds may be encountered, what the effect of the Arctic centers of cold will be on the weather to the south. That is the reason four men and a dog are adrift with tons of scientific equipment in the Arctic today.

Chief Pilot M. V. Vodopyanov (right) and his navigator, I. T. Spirin, pictured just before they took off on the flight which carried to the polar basin the four men and dog who will live there for a year.

STAR DUST
Movie • Radio

By VIRGINIA VALE

FIVE small boys have just about disrupted Hollywood. They are the youngsters who played on the stage in New York in "Dead End" and who now are in Hollywood playing the same roles in the picture.

They don't like Hollywood, they think acting in movies is pretty silly, and their complete lack of reverence for glamorous stars frequently makes the girls furious or tearful. One of them will go up to a famous star, and out of kindness let us call her "Miss X," and say politely, "Is it true that you get paid two thousand dollars a week?" At her nod of assent, the little tough will look her over critically from head to foot, and say "But why?"

—★—

"This Is My Affair," a Twentieth Century-Fox picture, has Barbara Stanwyck and Robert Taylor as its stars, which is enough to cause a stampede at the box office any time, but in addition this has some gripping historical scenes. It must be thrilling enough to the old folks who can remember Teddy Roosevelt and Admiral Dewey to see them represented on the screen, but for those to whom these two great historical figures are just a legend, it is downright throat-choking. Barbara, as usual, gives a beautifully sincere and moving performance. As for Taylor, he is his usual charming self.

Barbara Stanwyck

—★—

If you like Navy pictures with lots of gold braid, humming engines, wonderful marine views, and terrific drama, there is "Wings Over Honolulu" for you. It is a Universal picture with Wendy Barrie, Ray Milland, and Bill Gargan and it is so exciting that I just had to stay and see it a second time and any day now I may go back again.

—★—

Incidentally, Bill Gargan is now making a picture on the Universal lot called "Reporter Missing" and he has been taking the thrills of the picture so seriously, that when a burglar-alarm salesman walked into his house he found Bill a willing customer. Bill had an electric eye also installed so that anyone entering the house in the dark late at night would pass it and set gongs and bells to ringing an alarm.

—★—

Any week now Don Wilson may have to break down and sing a few songs on the Jack Benny radio program. When Jack had to bow out of his usual Sunday night radio appearance because of flu, Wilson subbed for him and threatened to sing. Phil Harris, Kenny Baker and the rest implored him not to—and a few days later protests by the bushel poured in from Detroit listeners. They didn't realize it was all kidding and they resented it. They remember, you see, that Don Wilson used to sing with a vocal trio at a Detroit station and they know that he has a glorious voice.

—★—

When Fred Astaire goes off the air for the summer, Trudy Wood, his singing partner, will stay on with the new program, which includes barytone Jimmy Blair and a sixteen-voice rhythm choir. Trudy is only twenty-one years old, so you can't blame her for being so happy she went home to sing and shout for hours the day the contract was signed.

—★—

Gracie Allen has a perfectly wonderful idea for raising a lot of money for charity. She wants to send her husband, George Burns, and his bridge-playing cronies, Tony Martin, Bert Wheeler, and Benny Rubin on a tour of the country to stage bridge games in public. She maintains that they play the worst, the loudest, and the funniest bridge and that everyone ought to have a chance to see and hear them.

Gracie Allen

—★—

ODDS AND ENDS . . . Folks who scribble on the tablecloths in the Paramount studio restaurant are now fined thirty-five cents. Jack Benny's debt ran so high that Mary Livingstone gave him a few old tablecloths from home to use on his table at the studio . . . When Dick Foran was given a new contract and told that he was going to graduate from Westerns into big, spectacular, expensive productions, he asked wistfully if he couldn't make a Western now and then. "Don't you want to be a big, important star of the best pictures?" he was asked. "No," he said, "I want to ride my horse" . . . Big Boy Williams shudders when he thinks of the jeering fan mail he is going to get soon. He had to eat 18 cream puffs for a scene in "Let's Talk of Love."

Missing Instruments Supplied by Novel Electrical Device

Plays Any Scale and Has Great Volume

Swarthmore, Pa.—When Dr. W. F. G. Swann, the well-known scientist who is director of the Bartol Research foundation here, lifts his baton in his extra-curricular job as conductor of the non-paid Swarthmore Symphony orchestra he can call into service two novel electrical musical instruments used nowhere else in the world.

Like most non-paid musical units the Swarthmore orchestra finds difficulty in obtaining a full complement of instruments to render standard symphonic works.

But ingenuity, in the person of the Bartol scientist, Dr. William E. Danforth, has devised electrical apparatus that can pinch-hit for the missing French horn and bass clarinet. A simple elongated box that one holds on the left forearm and plays by moving the fingers on two metal strips does the trick, when linked to radio amplifying apparatus and a loud speaker.

Slight pressure of the right forefinger on one of the strip causes the loud speaker to give a tone controlled in a fashion similar to the fingering of a violin. The loudness of the tone produced is controlled by moving a small lever with the left thumb. The other fingers of the left hand control the range of pitch of the instrument.

Dr. Danforth explained that while none of the principles used in the instrument are new to electrical science, certain features of design, ease of playing and "life" of the tone produced, are improved over what has previously been available.

How Oscillator Works.

Fundamental to the operation of the "oscillion," explained Dr. Danforth, is a gas discharge oscillator. When the finger is placed on the strip an electrical condenser starts charging up like a small water tank being filled through a pipe.

After a certain amount of electricity is stored up in this way the electricity is discharged through the gas discharge tube.

After the discharge, the condenser again begins to store electricity and repeats the process at regular intervals. Thus is produced a rapid succession of electrical pulses which are sent through a radio tube amplifier to a loud speaker.

"Banana" Diet for Ducks Supplied by Odd Water Plants

Grinnell, Iowa.—"Duck bananas," considered good food for water fowl, do not grow on banana trees or anything like them. They are the product of two kinds of water plants, one a water lily and one a gentian, explains Prof. H. S. Conard of Grinnell college, for many years a specialist on the water lilies.

The "duck bananas" are really little clumps of short, thick roots, that look for all the world like pigmy "hands" of bananas. They are rich with stored food materials, and ducks are believed to be very fond of them.

So widely is this doctrine accepted that persons interested in rebuilding our wild fowl population have been buying and planting them by the bushel.

It is commonly stated that "duck bananas" are borne on the roots of only one kind of plant, the Mexican water lily, which is hence called the banana water lily. However, Professor Conard has shown there are two distinct kinds.

The second kind is borne not by a water lily but by a quite unrelated plant known as floating heart, from the shape of its leaves.

Five Layers of Water Found in One Lake

Leningrad.—Five well-defined layers of water, each different from all the others, have been found in a lake on the Arctic island of Kildin, near the Murmansk coast.

From surface downward the layers of water are: fresh, brackish, strongly salt, red and sulphurous. The sulphur gases dissolved in the bottom layer are deadly to almost all forms of life, but the bacteria that give the fourth layer its red color feed on the sulphur and prevent any of it from poisoning the layers above.

Astronomers Hoping to Discover New Principle of Nature

Great Telescope May Solve Their Problem

By ROBERT D. POTTER

EITHER astronomers are soon to discover some new, hitherto unrecognized principle of nature or else telescopes, such as the 100-inch diameter instrument of Mt. Wilson observatory, are now looking about to the limits of the universe.

This is the choice which Dr. Edwin Hubble, Mt. Wilson observatory's noted astronomer, extends to his fellow scientists. As soon as the new 200-inch telescope being erected on Mt. Palomar, California, is in operation and studies on the light from the most distant nebulae are made with it, astronomy may have the answer to its present quandary.

Expanding Universe Theory.

The trouble is with the present theory of the expanding universe which accounts nicely for the shifting of the light from distant nebulae toward the red end of the spectrum. The expanding universe theory, one recalls, pictures some tremendous explosion in ages past which sent out matter that is still expanding. Just as the whistle of a train goes to a lower pitch as it rushes away from the observer so too, in the optical case, does the light from a nebula rushing away from the observer go to a lower "pitch," which, in the case of light, means a shift toward the red end of the spectrum.

The trouble with this interpretation of the "red-shift" is that it leaves one with a universe that is small, closed and dense; a universe whose outer limit is but little more than the present seeing limits of existing telescopes.

Astronomers Not Satisfied.

Frankly astronomers admit that they have yet no alternative theory which fits the observed facts so satisfactorily but many of them cannot help feeling that they are not now looking to the limits of space or anywhere near it and that the present region they observe is probably only a small part of a far vaster space.

Alternative solution is to avoid calling the "red-shift" evidence of an expanding universe and to visualize one that is static and far vaster in both age and volume. But before that can be done some scientist will have to discover, recognize and interpret the new principle of nature. Like a careful mountain climber, scientists do not jump off a time-tried, safe ledge of knowledge until they have a better one.

Sheep Bush, African Forage Plant, Grows Well in Arizona

Washington.—Karroo or sheep bush, one of the principal forage plants for sheep in the South African desert plateau areas in times of severe drouth, is now being propagated by the nurserymen of the United States soil conservation service for seed increase, since this plant has demonstrated extreme drouth resistant possibilities and adaptability to the American desert.

The original introduction of the karroo or sheep bush into the United States was made more than 35 years ago by Dr. David G. Fairchild, for many years head of the division of foreign plant introduction of the bureau of plant industry. First plantings were made from a packet of native African karroo seeds in the plant-introduction gardens at Chico, Calif. After that, for many years, little attention was given to the plantings.

Then came the recent drouth emergency, and a small amount of seed was furnished the soil conservation service for experimental planting under Southwestern arid conditions. So the sheep bush, along with some 30 or 40 other species of widely varying growth habits, was planted in the Arizona desert.

After a year or two all of the species thus planted had disappeared, with the single exception of the sheep bush. This is taken as a thoroughly convincing experimental result.

Timberline Shows Alaska Climate Grows Milder

Washington.—Timberline on the Arctic tundra gives indication that the climate of Alaska has been rapidly modifying for a fairly long stretch of years, states Prof. Robert F. Griggs of George Washington university, in Science.

Trees at the edge of timber growth are thrifty and prosperous-looking, as though they had grown in a favoring climate. There are no snags or dead trees among them. It is a new forest—apparently an advancing forest.

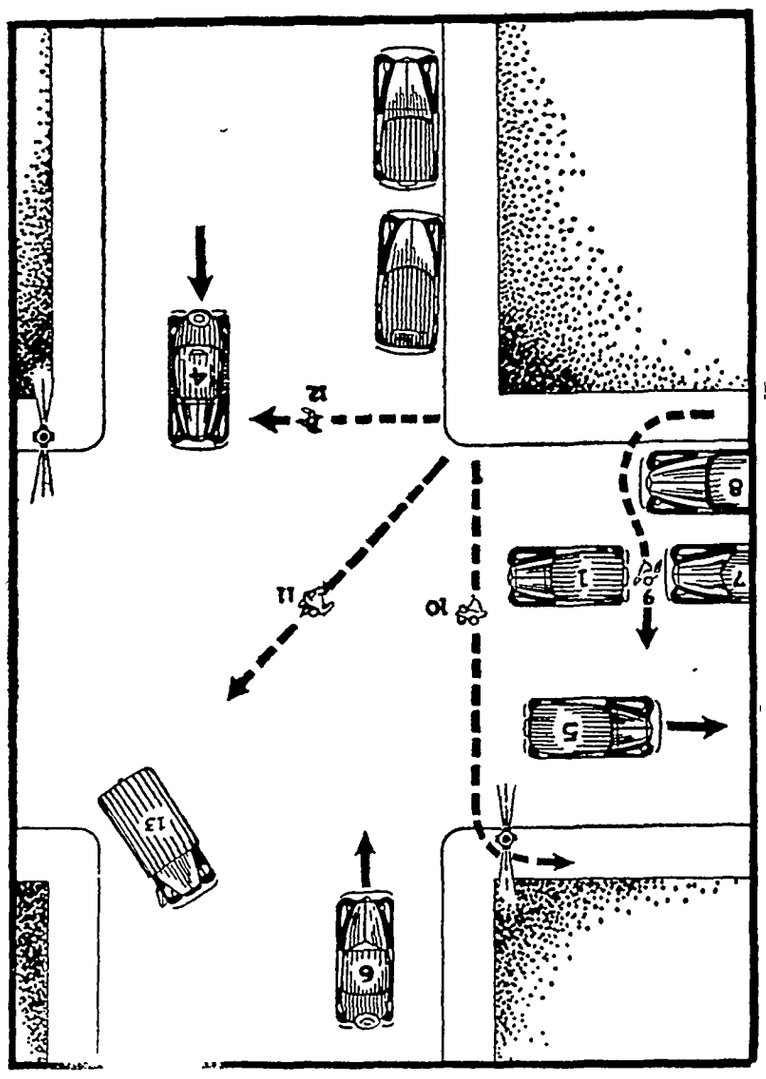
Jaywalkers Invite Disaster



Jaywalkers Invite Disaster

While 83% of all accidents involving motor vehicles occur at street intersections. 91% of all accidents involving pedestrians occur in mid-block. There is only one answer—jaywalking, that foolish suicidal practise prevalent among young and old Proper crossings are provided for pedestrian traffic yet, like Fig No 11 they are in a great hurry to get somewhere. That somewhere is usually the hospital Fig. No. 9 is committing a violation that is responsible for a great number of fatalities Ducking into the lane of traffic from in front of a parked car doesn't give the driver of car No 7 the slightest opportunity to sop his car and avoid an accident.

Traffic lights are not only for directing motor vehicle traffic, but pedestrian traffic as well. Fig No. 12, regardless of the fact the lights are against him, walks blindly across the street. Pedestrian as shown by Fig. No. 10 is the only one of the four who is following safety rules. Crossing at an established intersection, observing traffic lights, this pedestrian has a fair chance to avoid injury IF some careless and reckless driver doesn't run through the red light Until all motorists and pedestrians on our public streets and highways are educated to the fact that a red light means STOP it is a fact that accidents will continue to take a greater toll annually than all of the Americans killed and injured during the eighteen months of the World War.

Copyright 1937. P. L. Cummings, Des Moines, Iowa

QUESTIONS

1. Would driver of car No. 7 be held liable if he struck Fig. No. 9?
2. Which pedestrian is crossing the street correctly?
3. Would pedestrian Fig No 11 have recourse if struck by car No 4?
4. Should a pedestrian cross against a red light?
5. What violation is pedestrian No 12 guilty of committing?
6. If a pedestrian ran across a street would he be safer?
7. Why is the action of Fig. No 9 extremely hazardous?
8. When does a pedestrian have right of way over vehicular traffic?
9. Is education or enforcement the best means of increasing safety?
10. Would you say that Fig 11 was thoughtless or careless?

ANSWERS

1. Driver of car No. 7 would not be liable.
2. Pedestrian No 10 walking with green light.
3. Not unless car No 4 was operated in a reckless manner.
4. Never Always cross streets WITH the green light.
5. Crossing street against traffic lights.
6. No. Use caution. Don't run, but don't loiter.
7. Traffic could not avoid striking him.
8. When crossing with a green light.
9. Most authorities advocate education plus enforcement.
10. Thoughtless AND careless, as well as indifferent to his fate.

NEWS FROM GOODELL AND VICINITY

W. L. Sherwood and family and J. J. Cook and family and Eva Evenson attended the Recital given by Miss Brodie in Garner Monday night.

E. A. Strasberg, of Meservey, was a caller at the J. Griggs home Monday night.

Jule Cook went to Des Moines Wednesday to consult a specialist and receive treatment for poisoning on his hands and face.

LaVohn Sherwood accompanied the Luther Choir, of Waldorf College to Minneapolis Friday where they sang at a Lutheran Convention.

Quite a few baseball fans attended the ball game at Forest City Tuesday night between the House of Davids and the Forest City Collegians. Richard Carpenter pitched for the Collegians.

Jay Griggs was fishing at Clear Lake Wednesday.

Mr and Mrs Wm. Nelson, of Belmond, and the latten's sister, Mrs. Fanny Wyand, of California, were visitors at the Gus O'Krueg home Sunday

A group of ladies from Avery Center surprised Mrs. Leppo Wessel last Monday afternoon and informed her of her birthday. All present spent a pleasant afternoon.

The Old Settlers' Picnic was held in Laton Avery's Grove Sunday. A large crowd attended. This picnic has been an annual affair for a number of years.

Ray Clark, of Britt, spent Sunday at the Kearney home.

Donald Burk and Everett Evenson went to Des Moines Saturday morning and spent the week end there.

Ole Sandberg and family entertained the W. L. Sherwood, J. J. Cook, O. Evenson, and A. C. Carpenter families Sunday evening in honor of their wedding anniversary.

Mrs. Mary Deemer and daughter, of Freeport, Illinois, are visiting with relatives here. Mrs. Deemer was formerly Mary Christensen.

Mrs. Henry Grosz and son, Geo., and Mr and Mrs. Gus O'Krueg were Sunday evening visitors at the Jay Griggs home.

Tuesday the U B. Sunday School held their big picnic in the church basement.

Wm Johnson and family have been entertaining relatives from California.

J J Cooks drove to Rockford Monday to see Mrs. Walter Neuberger, who has been ill.

MUCH IOWA SMALL GRAIN WILL BE USED FOR HOGS

Best Results Will Be Had If It's Ground And Supplemented With Tankage And Salt

With corn gone or almost gone and the new crop far from ready, many a farmer is waiting the day until he threshes his small grain—oats, barley, wheat or rye—to provide grain for the pigs.

Pigs were farrowed about three weeks later than usual on the average, this spring a private survey has shawn, and at least one of the big reasons has been that empty graneries and corncribs were anticipated observes A L. Anderson of the Animal Husbandry Department, Iowa State College.

"The small grains can be used satisfactorily for growing out spring pigs or for carrying along fall pigs," Mr Anderson says.

Grind Small Grain

"Pigs will not get the most good out of small grain unless it is ground It need not be ground fine —medium to coarse is better It is best fed dry It may be fed wet if one desires to go to all of the extra trouble but it apparently has little in its favor

Although it is true that small grain carries somewhat more protein than corn it needs to be supplemented with some good protein carrier, such as tankage, Mr Anderson points out A pound of tankage, on the average, will result in saving of about 2½ to 3 pounds of corn when pigs are on good pasture and the same approximate saving may be expected from its use with small grain

Tankage Speeds Gains

But the saving of feed is only one reason for feeding tankage along with small grain one of the big advantages is that it will speed up gains, thus getting the pigs ready for an earlier market. Farmers are well aware that the price of hogs usually takes a healthy drop in the fall when the big runs of spring pigs begin

Of the various small grains, wheat is the most valuable, Mr Anderson says It is worth 15 percent more than barley and 25 to 30 percent more than oats on a weight basis Rye is worth about the same as barley for hogs, if it does not contain a lot of ergoty kernels

Ergoty Rye Unpalatable

Although some farmers think that hogs will not eat rye or that it is poisonous to them, such beliefs are not well founded, the animal husbandry and veterinary men at Iowa State College say Dr Charles Murray, dean of the veterinary school at Ames, says that no member of his staff has ever oberved a case of ergotism in swine in Iowa

It is true that rye often contains some ergoty kernels (these are black, enlarged, hard, abnormal kernels, which are caused by a fungus which develops in he kernel) Tests at the University of Minnesota and in Canada have shown that rye with many ergoty kernels is so unpalatable to hogs that it is difficult to get them to eat it unless they are starved to it. In these cases, the gains from rye are poor, probably in part because the pigs eat scantily, and it may have a slightly poisonous effect, but no losses from feeding it have come to the attention of the men at Ames.

Salt Only Mineral Needed

Scabby barley also must be fed with caution It will make pigs sick, causing vomiting and the pigs refuse to eat the grain if it is bad

Combinations of small grains will give better results with hogs than grains used singly

Pigs on small grain, tankage and pasture need salt at all times, but it is doubtful if any other mineral is needed, Mr Anderson says. Of course the minerals will do no harm, but usually their cost is not justified under these conditions.

OLDSMOBILE CHEVROLET

Silk Prints, Jackets and Big Brims

By CHERIE NICHOLAS

HERE'S giving you a very proper formula for smart spectator sports costumes to wear these summer days. The combination runs thusly—stunning silk print for the dress which must have a jacket, cape or coat of the same or of some other plain silk related to the ensemble, with matching print silk details, to which add headgear that makes a wide brim appear at its widest The fuss and furore being made over gay prints and wide brims is on the increase as summer advances.

The vogue started early in the season, at which time fashions at the Belmont racetrack set the pace for a colorful and luxurious summer costume program, that highlights silk prints in unmistakable terms. Then, too, the emphasis placed on big brims is becoming more and more apparent as fashions take a definite stand.

At outdoor events fashionables are adopting this formula of silk print costume plus a huge brim with greatest enthusiasm. Noteworthy among high-style gestures is the topping of one's print dress with a coat or a cape or a jacket of silk bengaline. The revival of bengaline is big news in the fabric realm, and it's good news for bengaline is so dependably wearable and has an air of gentility about it that ever appeals to discriminating taste.

In assembling your costume to be worn in the grandstand or to view what's going on from the club verandah the big thought to keep in mind is the importance that fashion attaches to matching or related jackets or coats or capes if your taste runs in that direction. If you like to do things notably "modern" you will see to it that your dress be monotone with your coat or cape or jacket done in spectacular print. The swank outfit to the left in the picture tells the story more dramatically than words. In this instance it is the coat that is of gay jockey plaid linen-like silk that tops a simple monotone sports frock. This type is a "last word" fashion in coats that are worn over either black or beige crepe dresses. The huge stitched silk cartwheel that completes this costume gives perfect style accent. Speaking of hats that are styled of silk, the most recent millinery collections feature them, particularly wide-brimmed types that are tailored of black or navy taffeta. A hat of this kind is considered good style worn with either the daytime tailleur or with the summery dainty lingerie frock.

The costume centered in the group makes twin print its fabric theme. It also stresses the voguish redingote silhouette. Royal rose printed silk crepe is used for the dress with printed silk chiffon for the sheer redingote that is worn over it. The redingote as here shown has a border of the silk crepe, thus bringing the costume into a perfect unit.

The idea of a jacket of contrasting material that is lined with the print that fashions the dress is nicely carried out in the costume illustrated to the right. The dress is of acajou silk crepon printed in powder blue. The jacket worn with it is of flannel identical to the blue in the print. It is lined with matching print. Note the large Spanish sailor brim and velvet bow on the hat.

If you favor the very smart red-and-white color scheme we would suggest a redingote of wine and white printed silk chiffon banded with a matching silk print of the same fabric as the dress. Wear with this charming redingote ensemble a white toyo sports hat trimmed with a wide wine colored band. Shoes and bag of wine colored gabardine together with gloves in matching wine tone will add infinite distinction.

© Western Newspaper Union.

BOLERO EFFECT

By CHERIE NICHOLAS

Rivalling the princess style in popularity in children's fashions is the dress with a bolero or at least with a bolero effect. The idea of a bolero is really a peasant trend, such as is wielding a widespread influence throughout juvenile styles this season. The cunning white pique frock pictured has a simulated bolero typical of the Dalmatian dress. Wee brass buttons go down the front and there is a dash of gay embroidery at each side of the front done in red, blue and yellow. The typical peasantlike pillbox hat sports a streamer tassel of pompons repeating the color of the embroidery on the dress.

ROMANTIC MOOD IS KEYNOTE OF SEASON

By CHERIE NICHOLAS

For the very formal evening gown the romantic mood is the keynote of the season. Crisp silk mousselines, silk nets and silk marquisettes or stiff silk taffetas make gowns with yards and yards of skirt fullness swirling and billowing about the ankles. Some are stiffened with cording like "Southern Belle" hoop skirts, others use several layers of the silks in contrasting or matching colors to give the bouffant effect. Exotic striped sheers over plain silk foundations sometimes have huge ruffles of self fabric around the hem to accent the width of the skirt.

There's romance in daytime clothes, too. Frills and furbelows in the way of ribbon-bow trimmings and neckwear, also blouses of the sheer face-trimmed fluffy-ruffle type add the feminine touch. As to romance in hats there's plenty of it in the way of large leghorn capelines, many having long ribbon streamers for dressy wear, while for wear with tailored suits there are immense black or navy leghorns that are banded with ribbon tying in a sprightly little bow.

New Evening Frocks Are Beau Catchers for Fair

The new evening frocks are regular beau catchers, and the dance floor looks just like a garden filled with beautiful, ethereal blossoms. Full-skirted frocks of chiffon or lace with matching, long capes, complete with dainty hoods, are selling fast. But they should be worn only by the very young woman. Then there is the marquisette dress and bolero, with short, high, puffed sleeves. This comes in delicate blue or rose and has the bottom of its full skirt strewn with tiny velvet forget-me-not clusters.

'Way Back When

By JEANNE

DREISER WAS A BILL COLLECTOR

IF YOU lived in Chicago, Ill., years ago, you may have bought carpet tacks or a can of paint from a young hardware clerk who looked like nobody at all to you. A few years later you might have rented an apartment from the real estate office where he clerked; a little later you may have seen a young man persistently ringing the doorbell of that neighbor of yours who was careless about her furniture installments. For Theodore Dreiser, famous in American letters today, was in his youth hardware clerk, clerk in a real estate office, and bill collector for a furniture house

He was born in Terre Haute, Ind., in 1871. A poor boy, he attended the public schools of Warsaw, Ind., quitting at the age of sixteen to go to work in Chicago at $5 per week. An ordinary young man, with an ordinary background, who could have foretold that some day he would produce a book ("American Tragedy") which would arouse

world-wide controversy, banned in some cities, required reading in some school systems?

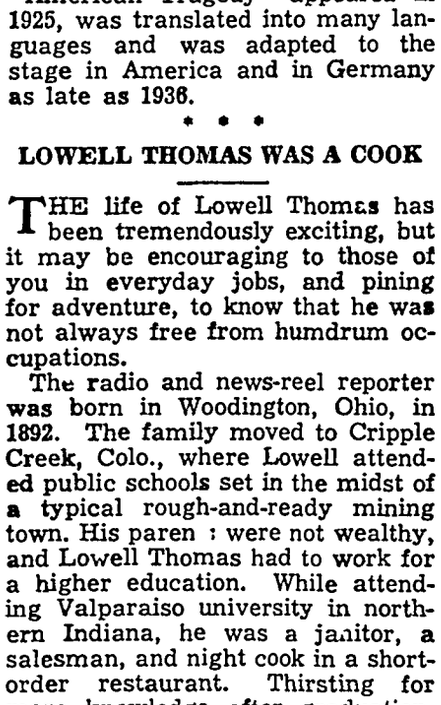
After the collector's job, persistent calling at the Chicago Daily Globe got him a job as a reporter. His rise was rapid as he developed a clear reportorial style, until 1898 he became editor-in-chief of the Butterick Publications which included Delineator Magazine. His first book, "Sister Carrie," was published in 1900 and immediately banned for its frankness. It was not until 1911 that his next, "Jennie Gerhardt," appeared; and it was followed at regular intervals by other books of the "call a spade a spade" type. "American Tragedy" appeared in 1925, was translated into many languages and was adapted to the stage in America and in Germany as late as 1936.

* * *

LOWELL THOMAS WAS A COOK

THE life of Lowell Thomas has been tremendously exciting, but it may be encouraging to those of you in everyday jobs, and pining for adventure, to know that he was not always free from humdrum occupations.

The radio and news-reel reporter was born in Woodington, Ohio, in 1892. The family moved to Cripple Creek, Colo., where Lowell attended public schools set in the midst of a typical rough-and-ready mining town. His paren : were not wealthy, and Lowell Thomas had to work for a higher education. While attending Valparaiso university in northern Indiana, he was a janitor, a salesman, and night cook in a short-order restaurant. Thirsting for more knowledge after graduation, the boy went on to the University of Denver where he took several degrees, working at odd times for a newspaper. During the summer months, he punched cows and pitched alfalfa. In Chicago Kent



College of Law, he studied law, and then took post-graduate work in English literature at Princeton. After that he worked as a teacher and on a newspaper.

His beginning did not promise excitement and adventure. But then came the World war, and Lowell Thomas went to the front with a staff of cameramen making official pictures! It changed his whole life. He joined D. H. Lawrence and his bedouin army in Arabia, emerging from that "revolt on the desert" with the exclusive story and pictures It was the beginning of his fame. Since then, he has met almost everyone of importance, seen everything of note, and reported his observations in newspapers, on the screen, and over the air in a graphic style that has gained him an audience to millions.

WHAT means this demonstration,
In home, in street, and hall?
What means this celebration
Joined in by great and small?
Why all this bunting floating,
And why these banners gay?
What are these things denoting?
It's Independence day!

What means the gay bells ringing?
Why do our hearts rejoice?
What means the children's singing?
Each one with heart and voice?
This yearly contribution,
Which ne'er shall know decay,
Tells of the Revolution—
It's Independence Day.

Fraternal thoughts engender
A country's love that stirs
That's why we all remember
The War of "Seventy-Six."
And so we come displaying
Our national love this way,
The Stars and Stripes are saying
"It's Independence Day!"

—Frank B. Williams

First FOURTH of JULY Celebration

FOURTH OF JULY first was observed as a holiday with a "public levee at the home of the President" in 1786, three years after the close of the Revolution, it is revealed in papers brought to light by the historical research department of the Carnegie Institution of Washington, states a writer in the Washington Star.

The first of these is a letter from Rufus King to Elbridge Gerry, both of whom were members of the Continental congress, then meeting in New York. It reads:

"D'r Gerry, In consequence of an order of Congress a public levee was held from 12 to 3 ocl'k at the House of the President at which were present the members of Congress, Officers of the Great Departments, Foreign Ministers etc., etc. the Cincinnati are in the highest prosperity. They celebrate the Day with a splendor exceeding any thing within the practice of Government—of course draw the Huzzas and admiration of the Multitude. the Chapter of these Knights appointed a deputation of four members to present the anniversary congratulations to the President and members of Congress. They attended the Levee, and I was witness to the degredation of Government in seeing them recd. etc. etc."

That same day the New York Daily Advertizer printed an account of the celebration:

"The morning was ushered in by the ringing of bells and a discharge of cannon. At 12 o'clock a grand procession (headed by city watchmen and closed by citizens) . . . to the house of his excellency the Governor—and from thence to the house of his excellency the president of Congress, where the compliments of the day were first paid to his excellency by the Governor, and afterwards by his worship the mayor, in behalf of the citizens of New York. From whence they returned to Corre's tavern, where a cold collation was provided by the corporation. And the day was closed by the ringing of bells and the firing of cannon."

There follows an account of the meeting of the Cincinnati at Corre's tavern in commemoration of the day, at which suitable orations were delivered by Cols. Hamilton and Walker. One of the 13 toasts was, "May the powers of Congress be adequate to preserve the General Union."

CONGRESS' FIRST SITTING

THERE were two reasons why the Constitution framers provided for such a long lapse of time between election of a congress and its first sitting. The chief reason was that the framers believed it unwise to have legislators take office soon after election because of the danger of hasty action. It was felt that time should be allowed for the heat of the contest to cool. The secondary reason was that considerable time was required for members to travel from distant parts.

Fourth of July Parade

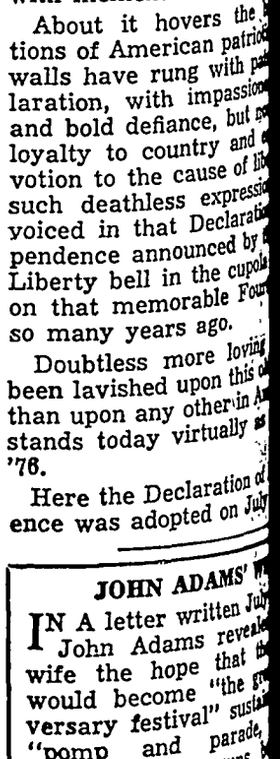
HATS off!
Along the street there comes
A blare of bugles, a ruffle of drums,
A flash of color beneath the sky:
Hats off!
The flag is passing by.

Hats off!
Along the street there comes
A blare of bugles, a ruffle of drums:
And loyal hearts are beating high:
Hats off!
The flag is passing by!

—Henry Holcomb Bennett.

Liberty Sacred ☆ Shrine

SCATTERED along the coast region from St. Augustine are countless old brick structures in the glamour of romance, adventure, of heroic sacrifice, earnest, patriotic devotion to country, but nowhere is one impelled to bare his head with more reverence so much as in Independence hall, where more than years ago a handful of men dared the wrath of George and declared for America. Even today one seems to feel the presence of those daunted men in the very atmosphere



Independence Hall Still Patriotic Inspiration

plain, old-fashioned room with mementoes of the days

About it hovers the tions of American patriotism walls have rung with proclamation, with impassioned and bold defiance, but ring loyalty to country and devotion to the cause of liberty such deathless expression voiced in that Declaration pendence announced by Liberty bell in the cupola on that memorable Fourth so many years ago.

Doubtless more loving been lavished upon this than upon any other in America stands today virtually as '76.

Here the Declaration of ence was adopted on July

IMPROVED UNIFORM INTERNATIONAL

SUNDAY SCHOOL Lesson

By REV HAROLD L. LUNDQUIST.
Dean of the Moody Bible Institute of Chicago.
© Western Newspaper Union.

Lesson for July 4

LESSON TEXT—Exodus 1:6-14; 2:23-25.
GOLDEN TEXT—Before they call, I will answer, and while they are yet speaking, I will hear—Isaiah 65:24.
PRIMARY TOPIC—A Prayer for Help.
JUNIOR TOPIC—In Need of Help.
INTERMEDIATE AND SENIOR TOPIC—What Cries Rise to God Today?
YOUNG PEOPLE AND ADULT TOPIC—God Cares When a People Suffers.

Independence day—and we are to study about a people in bondage! How much that is like life But, thanks be to God, no one need stay in bondage. The way to liberty is open and free. The Lord Jesus Christ opened it at Calvary's tree and anyone who is still the bond slave of Satan may make this a great and glorious Independence day by now declaring his faith in the deliverer of our souls!

We begin today a series of lessons in the book of Exodus which reveal the high and mighty hand of God working on behalf of his people. Many are the precious spiritual lessons and rich is the practical instruction for daily life to be received in the weeks just ahead. Let us not make the unfortunate mistake of many thoughtless folk who miss the blessing of Bible school attendance because it is a bit warmer than usual.

The family of Jacob—or, as the Bible calls them, "the children of Israel"—prospered in Egypt particularly as long as Joseph and the rulers who remembered him were alive. But they soon learned one of life's bitter lessons, namely, that—

I. Prosperity Often Brings Opposition (1:6-11).

The Hebrews were a peaceful law-abiding people. They were God's chosen people and as he blessed them they prospered, and thus innocently they brought upon themselves the hatred of the suspicious Egyptians.

Prosperity is never an unmixed blessing We as a nation know that to be true Not only does it lead to a certain softening of the sinews, but all too often it results in a weakening of the moral fiber, which makes man easy prey to the attack of the enemy of our souls.

The Egyptians made plans which appealed to their brilliant leaders as politic and wise, but they reckoned without God, and the burdens and afflictions they placed on the Israelites only served to bring further blessing.

II. Adversity May Bring Blessing (vv. 12-14).

The people of Israel did not know it and undoubtedly did not appreciate the fact that the bitterness of their bondage was a blessing in disguise. Note that—

1. It kept them separate as a people. Affliction often serves to keep God's people separated from the world.

2. It disciplined them and prepared them for the hardships of their wilderness journey. We too do well to remember that "whom the Lord loveth he chasteneth," and that if we are properly "exercised" thereby our sorrows may yield rich fruit in our lives.

3. It threw them back upon God. Many are the saints of God who have found that the fiery trial, the burden so hard to understand or some affliction of their body has caused them to bring their burden to the Lord. We have traveled far on the road of faith when we have reached the place where we learn that "Man's extremity is God's opportunity."

They had only one place to turn. They were hemmed in on every side but, as ever, they found that the way up no man can close. They called on their God.

III. Prayer Always Brings God's Answer (2:23-25).

Does God really know when his people suffer? Does he really care? Yes, he does. "They cried," and "God heard" and "remembered." That's all we need to know. The groanings of his people had already stirred God's gracious and tender heart. But he waited to hear their cry before he answered. Such is the law of prayer. May we not forget it. Far too often we turn to everyone and everything else, and finally, in desperation, to God. Why not turn to him first?

As we opened this lesson with an appeal for all who knew not Christ as Saviour to make this the day of their Declaration of Independence, so we close by appealing to all God's children to let him make their ears as sensitive as his to the cry of the oppressed, that this national holiday may find every Christian citizen tender in heart and liberal in deed toward the oppressed.

Conduct Through Life

I will govern my life, and my thoughts, as if the whole world were to see the one, and to read the other; for what does it signify, to make anything a secret to my neighbor, when to God (who is the searcher of our hearts) all our privacies are open?

Submissive Will

The will can only be made submissive by frequent self-denials, which must keep in subjection its sallies and inclinations.

Modern-to-the-Minute

AS RIGHT as rain, and as cooling, are these clever young modes for the woman who sews. Each is simple to make, pleasant to wear, and may possibly be the difference between a modern and a mediocre wardrobe for you this summer. Sew-Your-Own wants to help you look your best, to stamp you modern-to-the-minute, and therefore is anxious and proud to present today's trio.

A Two Piecer for Chic.

If he tells you you're just a nice armful you are the right size and type to wear the blouse 'n' skirt shown above, left. The waistcoat idea is very much the thing in blouses. The skirt is terribly young and figure flattering. What more could any little heart desire? You can have this smart ensemble for a song and a minimum of stitches. Think of the countless summer occasions ahead that all but specify this very outfit.

Not Smart Matron.

You should sue for slander anyone who calls you a Smart Matron when you don this gratifying new fashion (above center). You step into an entirely new size range when you step forth in this frock. So simple is its technique—merely a deftly designed feminine jabot, softly draped contours, and a meticulously slender skirt—yet so effective. It will thrill you in marquisette chiffon or lace, and it will keep you deliciously cool.

Play the net or the grandstand in the sports dress at the right and feel perfectly confident in any event. There isn't one among us who hasn't a real yen for a streamlined all-of-a-piece sportster that's on and off in a jiffy, launders easily, and comes up smiling time after time. You can concoct something clever of seersucker or pique and complete the whole thing in an afternoon. Why not order your size today and have all-summer benefit of a really companionable sports dress?

The Patterns.

Pattern 1302 is for sizes 14 to 42. Size 16 requires 2¼ yards of 39 inch material for the blouse, 2¼ yards for the skirt.

Pattern 1286 is for sizes 36 to 48. Size 38 requires 4⅜ yards of 39 inch material.

Pattern 1915 is for sizes 14 to 42. Size 16 requires 3⅛ yards of 35 inch material plus 3½ yards of bias binding to finish edges as pictured.

Send your order to The Sewing Circle Pattern Dept., Room 1020. 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

The Misses Carmen Kluckhohn and Elaine Buntenbach, and "Pete" Kilgore, of Klemme, and Verle Keraus, of Swea City, spent the day Sunday seeing the sights around Estherville

Mr and Mrs Harold Gruetzmacher and sons, Roger and Jimmie, of Carrol, Iowa, came Saturday afternoon and visited over night at the Frank Gruetzmacher home.

Mrs Lydia Lawhorn and daughter, Bernadine, of Cedar Rapids, spent several days last week visiting at the Henry Freie home. They were accompanied home by Henry Freie. Mrs George Lawhorn and Otto Freie

Mr and Mrs Dorance Day, of Mason City, accompanied by Miss Gracka Quandt and Byrnes Missman, of Klemme, drove to Mc Gregor Sunday where they had a picnic dinner and took in the many places of scenic beauty.

Mr and Mrs. Harlow Helps and family, Mr and Mrs Henry Helps, Mr and Mrs Ed. Becker, Mrs Eelko Buss, Miss Mary Becker and Eugene Haberkamp all enjoyed a picnic dinner Sunday at West Bend.

Henry Ludeke and son, Paul, of near Meservey, were Klemme business callers Saturday They dropped in at the Times Office and we enjoyed a fine visit with these former neighbors of near Klemme Paul graduated from the Meservey high school this spring

Milton Paul took his sister, Emily to Des Moines Saturday evening where they visited with their sister, Vella. From Des Moines Emily left Tuesday for St. Louis, Mo where she will spend the summer with relatives. She also expects to go to school there

Mr and Mrs. Harlan Trees and children and Mrs Daisy Lemke and daughter, Marjorie, drove to Belmond Sunday evening to see Mr and Mrs McLaughlin Mr. McLaughlin has been very ill and Marjorie remained at Belmond to help her sister with housework.

Mr and Mrs Sumner Trumbull and Mr and Mrs E. F Jacobs left last Friday morning for Minesota to spend a few days vacationing and fishing George Lawhorn is delivering the mail on route one during the absence of Mr Trumbull

Ray Nagle and family, of Urbana, Illinois, came Thursday for a visit with the former's father, Fred Nagle and wife On their return trip home, Tuesday, they were accompanied by Mr and Mrs Fred Nagle as far as Montezuma where the Nagles visited with Mr and Mrs Cleo Thompson

Sunday was the day set aside every year, for the relatives from Iowa Falls and vicinity to gather and spend the day with Mr and Mrs. C F Keraus at the Woodhaven cottage Mr. and Mrs W Keraus and Mr and Mrs. C G Waterman and daughter Marian, of this city, and Mr and Mrs. T F. Mitchell, of Swea City were also guests.

Otto Freie, of California, spent several days the past week in Klemme visiting with his father, Henry Freie and with his sister, Mrs George Lawhorn and husband Otto had taken the train to the factory and drove back with a new car which he was drviing to California

Mrs. Ben Coobs and Miss Lydia Bock attended the county meeting of the Legion Auxiliary held at Britt Tuesday. Officers for the year were elected. Scrap books were judged. Britt, Garner, Corwith, Crystal Lake and Klemme all entered scrap books. Britt won first and Garner second on their entries. Several ladies from Lake Mills acted as judges. Britt also received the prize for having the largest attendance at the county meetings throughout the year. Officers elected were: Mrs. Eva Horkhaus, county chairman; Mrs. Edna Endfield, Vice County Chairman; and Mrs. Lula Lawhorn, of Garner, Secretary and Treasurer.

C. C. Kilgore drove to Dodge on business Tuesday

Why The Nation Demands Civil Service

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

Again Congress has been asked to provide for selection of job-holders in various new federal agencies now under consideration, on the basis of merit and ability, rather than of patronage.

It is a familiar request It is a fair one, too Since the workers and earners of America foot the bill for our constantly expanding political payroll, it is only natural that they should ask a reasonable return for their money

In other words, the American people want what an equitable Civil Service System attempts to assure—public servants who understand that the people are their employers, and whose loyalty is therefore to them and to the country as a whole.

They want the public service geared to the wheels of national progress, rather than to the complex cogs of various political machines.

This is hard to achieve when a public job is granted on the basis of whom one knows, instead of what he knows. It is hard to achieve when politicians and officeholders use such jobs as a means of paying off old political debts, or buying new political power—all with other people's money

The spoils system is unfair not only to the people who pay the bills, but to any capable public servant, himself. There is little incentive to seek a career in government or to do one's best after the job is obtained, if the spectre of political patronage continues to haunt the roads to appointment and advancement and permanence.

A more thorough application of the Merit System would mean not only less waste in government, but greater efficiency and service to the public as well.

And the way for the public to get such service and efficiency is to continue to demand them.

COUNCIL PROCEEDINGS May 10th, 1937

Meeting called to order by Mayor Grange, with four members of the Council present

Minutes of previous meeting were read and approved

On motion the following bills were allowed

George Buseman	
April salary	$70 00
Wilbur Hanson	
11 loads of gravel	11 00
Melvin Buseman	
4 hours labor	1 20
Hancock Co Co-Op Oil Ass'n

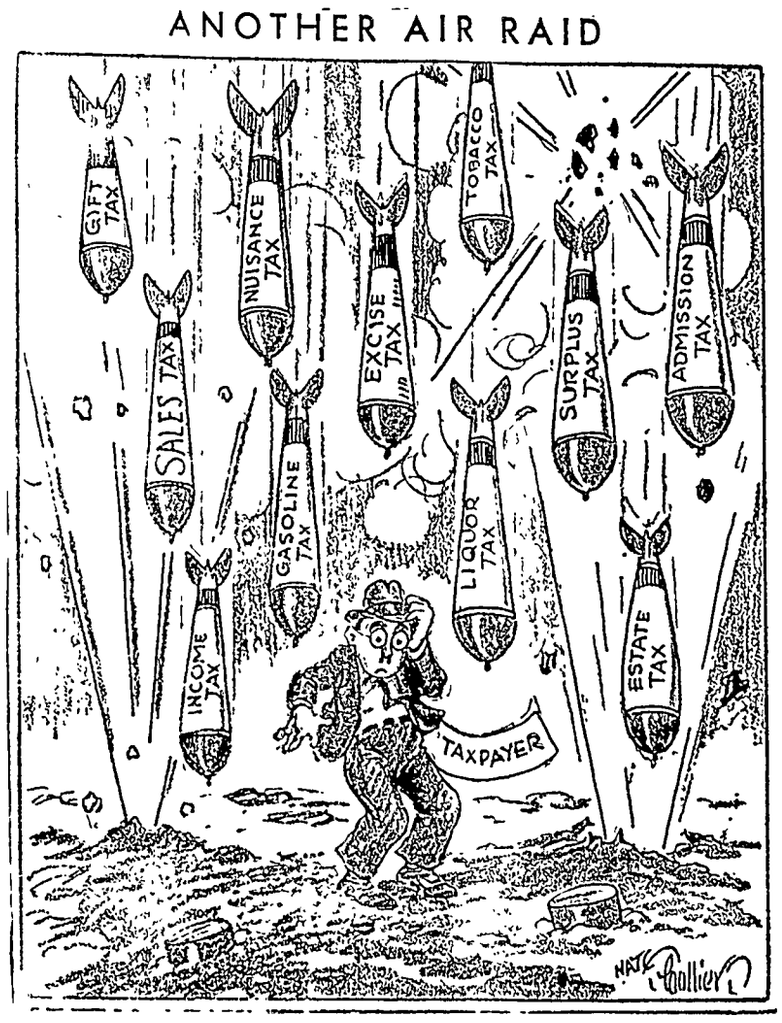
Barz Relatives Have Annual Picnic At Clear Lake Sunday

The Fourth of July is the date for the annual Barz picnic and family gathering, and so on Sunday the several Barz families and relatives again gathered at Clear Lake for the annual event. A big dinner was the feature of the gathering and the afternoon was devoted to sports and visitnig.

ANOTHER AIR RAID



If Things Were Made By Hand

Here are some other facts about what things would cost if made by other than mass production methods

A leading typewriter maker estimates the cost of a typewriter at $1,000 instead of slightly more than $100

An alarm clock would sell for at least $25, according to the vice president of a leading alarm clock firm

An electric refrigerator manufacturer states that refrigerators made experimentally cost approximately six times as much as those made on production assembly

Critics of the machine and mass production methods seldom consider what the machine has done in making more and better things available to the people

According to the National Machine Tool Builders' Association a large automobile manufacutrer recently estimated that cars selling at $600 today would cost at least as much as $3,500 if made by non-mass-production methods

It isn't hard to see what this would do to automobile production when we note that in 1935 in the above $3,000 wholesale price range, 2,428 automobiles were sold in the United States and Canada But of all price ranges somewhere in the neighborhood of 4,000,000 cars were sold this same year.

BELMOND MAN GIVEN TWO SENTENCES ON CONSECUTIVE DAYS

BELMOND—Francis Quigley of Belmond was arrested Friday night near Klemme for drunkenness He is also wanted in Belmond for forgery, the amount in question being $5 75. Immediately after the arrest Quigley was taken to Klemme ond sentenced by Justice Suckow to 10 days in jail at Forest City.

The next morning Quigley was taken before Justice of the Peace Fetrow in Belmond where he was sentenced to 60 days in jail. This sentence will be served at Clarion, the county seat of Wright county, as soon as he is released from Forest City. His wife, Mrs Oranna Quigley recently filed suit for divorce on the grounds of cruel and inhuman treatment and habitual drunkenness.

What we would like to know is how the fool gets the money from which he is soon parted in the first place.

BOTTLING FRUIT JUICES

Use home bottled fruit juice for hot weather drinks instead of imitation flavors. Iowa State College extension nutritionists recommend

Strawberries, currants, red and black raspberries, blackberries late cherries, loganberries and plums yield easily bottled juices So do grapes and apples

The acid these fruits contain makes it possible to use pasteurizing temperatures, which are considerable below the boiling point, and still have a product that will keep The method is simple A small amount of the fruit is mashed in a kettle then heated just to the simmering point and stirred to prevent scorching Less juicy fruits are cooked with a little water—a quarter cup to a pound of fruit—and for a longer time but at no higher temperature A rise from 185 degrees F causes some loss of the fresh-fruit flavor The juice is trained through a heavy jelly bag

Sugar helps to retain color and improve the flavor of some juices but is not necessary to preserve them. When sugar is used, best results are obtained by adding it just before reheating the juice for bottling and stirring until well dissolved The strained and sweetened juice after being reheated to the simmering point, is poured into hot sterilized bottles or glass jars, sealed and processed for 10 minutes at the simmering point

The bottles must be sealed tight before they are processed Dip the crown bottle caps in boiling water and adjust at once on the bottles by means of a bottle capper Clamps on glass jars are left up The jars or bottles should be placed on a rack or folded towel in the water bath and should not be crowded.

NO SERVICES WILL BE HELD FOR NEXT TWO SUNDAYS AT REFORMED

Auditorium Floor Being Refinished Other Work Done

The Klemme Reformed Church is being refinished on the interior and there will be no services held there for two Sundays.

The floor in the auditorium is being sanded down and refinished and the walls in the basement are being painted.

New porches are also being built on the east and south sides of the parsonage.

Watch this paper for futher announcement regarding church services and church activities.

Crops Are Looking Best Here In Several Years

National Birthdays

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

The United States has been described as "the only great country with a known birthday"

Many Americans undoubtedly recalled that famous statement as they participated in recent Independence Day celebration throughout the nation

And many probably wondered whether America, as a nation, was indulging on its anniversary in that bit of self-study and self-searching which a birthday usually inspires

Certainly July Fourth offered a splendid opportunity for America to compare its national spirit today with the hopes and the aspirations of its founders.

Does the spirit of liberty, we could ask ourselves, glow as brightly in our own hearts as it did in the breasts of the men who in 1776 pledged their lives, their fortunes and their sacred honor to its perpetuation?

Does a sense of personal responsibility for government still animate our citizens as it did those who made sacrifice after sacrifice, first to win, and then to build, a nation?

Does the fierce pride in democracy—in government by the people—still dominate our citizens' thought as it did the generation which faced death and privation rather than suffer despotic rule?

Those were the aims of our nation in its earliest youth. Are they still the dominant ideas of that nation on its more mature birthdays? Are we still fighting to preserve those high ideals?

If the answer is "Yes," then we can continue to count our birthdays with pride. If it is "No," then we are in the tragic situation of the man who wistfully recalls the dreams of his youth, only to realize how he has fallen short of all their splendid aspirations.

150 ATTEND PICNIC OF 2 CHURCHES AT ELL

The Zion Reformed Church in Garner and the Elltown Reformed Church united in an all day program and picnic in the country Thursday with an attendance of 150. The program was the conclusion of a five week term of Bible, catechism and hymn memorizing by three grades of children under the instruction of the pastor, Rev William Huenemann and five lay members.

FUNERAL SERVICES HELD TUESDAY FOR WILLIAM DUITSCHER, FARMER

Funeral services were held Tuesday afternoon at Goldfield for William Duitscher, 45 years old, who died at his home seven miles east and one mile south of Klemme on July 4th, Mr, Duitscher had suffered for several years with a heart ailment and this disease was the cause of his death.

He leaves, besides his wife, a son and a daughter

MISS CARRIE SWALVE AND SUMNER FULLER MARRIED

Miss Carrie Swalve, daughter of Mrs Dick Swalve, and Mr Sumner Fuller, son of Mr and Mrs S. G Fuller, were married at Belmond Saturday morning, July 3

Both of these young people are popular in this community and have a host of friends who wish them happiness and prosperity. The Times is informed that the young couple will make their home on a farm

Leave Your Car At Home

Klemme residents are asked to leave their cars at home on Wednesday and Saturday nights so that there will be more parking room for the farmers who come to town to trade on those nights. The business men will appreciate yur co-operation in accomodating visitors to Klemme

MOST CORN WAS OVER KNEE HIGH BY THE FOURTH OF JULY

Small Grains Are Well Filled; Alfalfa And Other Hay Excellent Quality

Many of our readers, former residents of Klemme and vicinity, but who now live in other states, are always more or less interested in Iowa crops.

Crops never looked better in North Iowa than they do right now We have had plenty of moisture during the spring and early summer and through this section there have been but few damaging storms.

Corn Is Over Knee High

"Knee high corn by the Fourth" seems to be some sort of slogan or measuring stick for estimating the worth of corn This year most corn fields register well above the well known mark for this time of season.

Early rains caused some damage in the corn crops by drowning out the plants, but in most places where the corn has been drowned out soy beans have been planted and this special crop looks good.

Small Grains Heavy

Present outlook is for a good small grain crop this year, and with harvesting but a short time away it now looks like a bumper crop Small grain stands high and is well filled out.

Lots of fine quality hay has already been put up and there will be more of this important crop to gather in during the next few weeks Farmers report an especially good crop of alfalfa this year Speaking of alfalfa, it is not many years ago that this crop was unknown in Iowa and it was thought impossible to raise alfalfa here. Now it is becoming the chief hay crop on many farms.

North Iowa is truly the garden spot of the world this year and everything is a rich green and plants are heavy producing

DAM PROJECTS ATTRACT TOURISTS

Huge Artificial Lake at Boulder Dam Proves Magnet; Uncle Sam to Capitalize on It; Bonneville Dam Is Inspiring Scene.

By WILLIAM C. UTLEY

NOT only do some of the vast government dam projects provide subjects for controversy in political circles, irrigation for desert wastes and electric power for vast producing areas. They are assuming a new importance in the lives of our people, especially at this time of year. They are becoming major attractions for summer vacationers.

Mr. Average American, with two weeks out of the year for his vacation, likes to cram just as much into that fortnight as he possibly can. His mountains must be gigantic, his vistas colossal, his waterfalls terrific and his automobile trips long and rapid. He is usually somewhat impressed by the Grand Canyon.

Small wonder then, that sights such as Boulder dam, the Grand Coulee and the Bonneville dam projects interest him They are big, scenic and wonderful. And because they are government projects they have that patriotic appeal which is characteristically American.

The United States government hardly planned Boulder dam as a summer recreation project, and it is not yet as well equipped to entertain the thousands of tourists now visiting the dam as it will be in the near future. But in great throngs the vacationers come and after their souls have been satisfied with the enormity of it all they find they can have one whale of a time in, on and around Lake Mead, above the dam and the largest man-made body of water on earth.

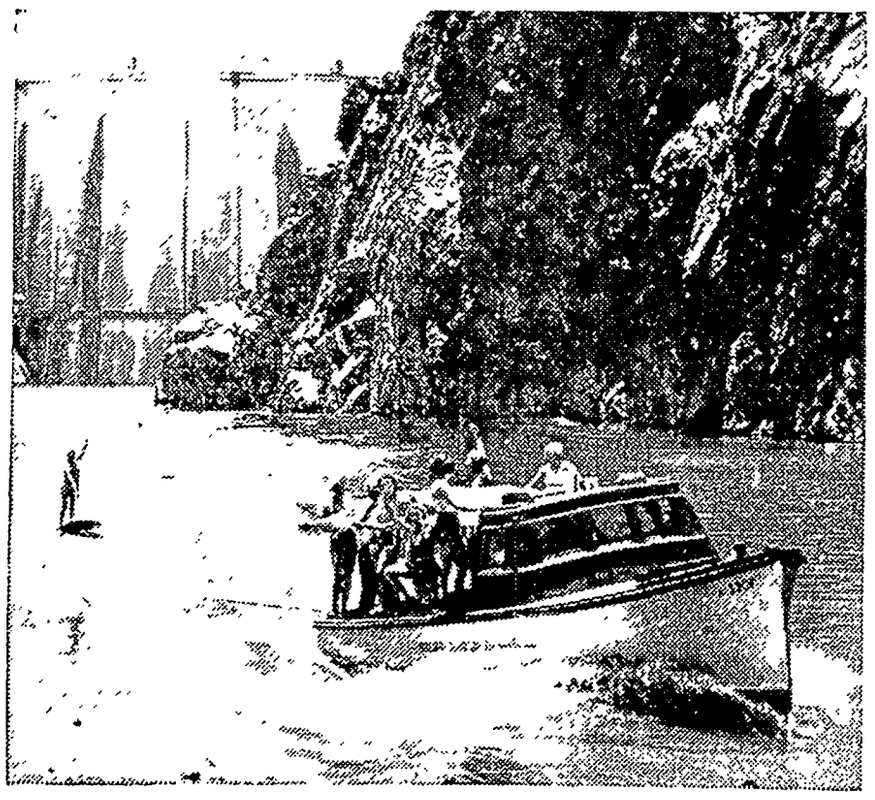
A picturesque scene against the morning sky of America's magnificent Northwest are these Bonneville dam workers.

Will Develop Appeal.

After all, swimming in the heart of a desert is a thrill that should appeal to the American temperament. The clear blue water in the shadow of the mountain peaks and the great dam is also a magnificent setting for boating, fishing and aquaplaning.

In an effort to encourage the movement already started the government has ordered the national parks service, together with the bureau of reclamation, to launch a program designed to make the Boulder dam region more attractive than ever First of all a number of public bath houses were built on the beach, which is artificial like the lake and a short distance from Boulder City, home of the workers on the project. Floating rafts have been provided, and life guards sit upon high seats to guard the safety of bathers, just as if this might be Coney Island.

Excursions over the surrounding area by air are popular, too, with the vacationers. There is a government-built airport at Boulder City from which several planes take off daily on these trips. Planes of the most modern type, equipped with two way wireless, wing the visitors over the Grand Canyon, Zion, Bryce and Death Valley national parks, the Black canyon, the Kaibab forest and other famous scenes.



Aquaplaning on Lake Mead, in the heart of the desert.

There are also power boats on Lake Mead which make scheduled excursion trips, stopping over at several points. It's quite a ride around Lake Mead, a 100-mile body of water.

Lecturers Explain Dam.

The interest of government projects as incidents in a vacation is apparent from the hundreds who choose to include a trip through the dam itself, under the able guidance of lecturers from the reclamation service. The long ride in an elevator down into the dam is a swift one; to many visitors it is also doubly thrilling for the fact that they have never before ridden in an elevator. The lecturer takes them through the catacombs under the dam, through the power plants so large and complicated they look like a moving picture set—as indeed do the switchboard control rooms and diversion tunnels.

Although there is not much in the way of night life out here—there is only one movie house in Boulder City—there are enough natural curiosities and marvels to make the visitor lose his taste for night life. Within 200 miles are, in addition to the beautiful canyons mentioned above, the Joshua Tree National forest, the Painted Desert, Petrified forests, the Mad Valley of Fire, Eldorado canyon, and many other sights, including many Indian settlements. Nature in remarkable mood exists up and down as well as across. You can descend to 360 feet below sea level in Death Valley and, if you are agile enough, you can get up 12,500 feet on San Francisco peak.

The government is stocking Lake Mead with bass, and although the fishing is not yet quite up to par there will be all you can take care of in another two years. Bridle paths are being laid out and within a short time there will also be plenty of dude-ranch facilities nearby. The building of tennis courts as well as desert gardens is included in the plans. There are good hotels near Boulder dam, and there is a government camping ground where the visitor may camp for nothing.

Are Earthquakes Possible?

Mead lake itself remains the biggest vacation attraction. It was created by the backing up of 41,518,125,000 tons of water from the dam. The question has been raised before the Seismological Society of America whether or not this great, unnatural body of water will cause earthquakes. The Colorado river in its lower course flows through a region where many violent earthquakes have occurred in the past, some of them comparatively recently. Scientists have wondered whether the vast weight of water which will be concentrated along the lake will put sufficient additional strain on the crystal rock layers to set off disturbances It has been suggested that seismograph stations be set up in the region to check the earth's slow movements there, since complete data are not yet available.

Projects along the Columbia river are also getting their share of the tourist trade this summer, for the Northwest has ever been a popular vacation spot. There the throngs are both surprised and pleased to see that the work on the giant Bonneville dam is being completed on schedule.

It will be finished before the year is out. It was in the summer of 1934 when President Roosevelt said, on the scene: "Within three years I hope that the Bonneville dam will be an actual fact, and that as a fact from then on it will militate very greatly to the benefit of the lives not only of the people of Oregon and Washington but to the whole course of life of the people of the United States."

Bonneville dam rises in some of the ruggedly beautiful country of the Northwest. The wild Columbia has cut a chasm two-thirds of a mile deep through the mountains. Bradford island causes the river to split into two rapid streams, roaring, whirling and throwing spray. From the island to the Oregon shore is the power station, and from the Washington shore to the island is the spillway. The power house and spillway are connected by an earthen dam which runs across the island and is 170 feet high. The entire chain, which is 3,850 feet long, will create a lake 65 miles long, upon which steamers will one day travel into the Cascade mountain region.

Cost Is $45,000,000.

Bonneville dam will have cost $45,000,000 by the time it is completed. With Grand Coulee dam it forms the first serious attempt to harness the Columbia, which river network is the second largest in the country. The river basin, which extends into the states of Idaho, Washington, Montana, Oregon, Nevada, Utah and Wyoming, is said to be five times as large as England.

It has never been possible before to navigate the Columbia more than a short distance inland, but Bonneville dam will attempt to change all that. In the dam is the world's highest navigation lock—a lift of 72 feet. On the Panama canal it requires three great locks to lift a ship only a little higher at Gatun lake. Bonneville itself is 42 miles east of Portland, but it is hoped that the locks will enable steamers to go 200 miles inland along the river.

The town of Bonneville has sprung up near the dam to house most of the workers on PWA project number 28. It is composed chiefly of tarpaper shacks such as the traveler might have seen in the earlier days of the West when the railroads were being built.

It is not likely that the living quarters of the construction workers needed to be built substantially enough to last a long time, for this is one federal project which is going ahead as it was planned. There have been no delays for political reasons or for lack of funds; only those caused by the river in some of its unsociable moods. Since the first surveyors came, things have moved right along. The excavating was done promptly, cribs and framework were installed, cranes and derricks started to work, and it was not long before Bonneville approached being a fact.

Where only a few rugged boulders once deterred the stream as it roared through a wilderness of cottonwoods and firs, today rise arched spillways and huge power intakes. The cost of the project was somewhat more than it was first estimated. This is because of an intricate system of locks and "ladders" for fish, for the salmon must be allowed to pass Bonneville to reach the headwaters of the river.

Indians Are Skeptics.

Here is one point upon which the government and nature may not be able to get together; perhaps if the President's magic voice could explain it all to the fish over the radio everything might be all right, but there are those who say the salmon will never use the ladders.

These unbelievers include most of the Cayuse Indians along the Columbia, whose ancestors were taking salmon out of the river long before the white man ever dreamed there was a new world beyond the western sun. "Bonneville means end of salmon," says their chief, George Red Hawk. And today the Columbia produces more salmon than any other river in the world; salmon fishing in its waters is a $10,000,000 industry.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG. WASHINGTON, D. C.

Washington.—Two actions of sections of the congress lately deserve more than ordinary attention. One of these was probably as courageous a position as any group of senators ever has taken. The other action—by majority of the house—was shot through with the utmost cowardice and selfishness.

Congress Makes News

Lately, a group of senators, nearly all Democrats, took their political lives in their hands and delivered to the senate a report from its judiciary committee advising defeat of President Roosevelt's proposal to add six new justices of his own choosing to the Supreme court of the United States.

In my time in Washington, I believe I can say without qualification, there never has been a committee action in the house or senate in which the President, as the leader of the dominant party, received such a castigation on a legislative proposal as was given Mr. Roosevelt by Democrats who constituted the majority of the senate judiciary committee. They did not mince words in any respect. Whatever may be the merit of Mr. Roosevelt's proposal to add six justices of his own choosing to the highest court, the majority report of the judiciary committee left no stone unturned in disclosing objections to the proposal as opponents of the court reorganization scheme see them.

Almost on the same day that senate Democrats were, in effect, breaking or revolting from the President's leadership, the Democratic majority in the house killed off a proposal for new taxes in the District of Columbia that would have resulted in taxing the salaries of representatives and senators and their office staffs. They were brazen about it. They were not going to vote an income tax upon themselves and they made no effort to conceal their reasons for refusing to accept the recommendations of a special tax subcommittee which was acting for the permanent committee in the house of the District of Columbia.

The District of Columbia committee, examining the budget for the seat of the federal government, was confronted with a deficit in the district finances and instructed its tax subcommittee to develop new sources of revenue in order that the District of Columbia might not get into debt. Among the taxes proposed was a tax on income of residents of the District of Columbia, which is synonymous with Washington, and it provided for taxing earnings here whether the person who earned the income was a resident of the capital city or not.

That was too much. The majority in the house of representatives just could not take it. They voiced their objections openly and, being superior in numbers to those who believed that income in the District of Columbia should be taxed, they forced the tax bill back to the District of Columbia committee for revision. Indeed, they went further. The line of criticism of an income tax that would touch the sacred salaries of congressmen and senators was such as to have the effect of forcing the committee to bring in a tax bill that would increase the tax on property in the federal area. Now, it is a fact that few members of the house and a very small number of senators have bought residences in Washington. They usually live in apartments or hotels or lease homes for the period that congress is in session. Consequently, a real estate tax will not concern most of the representatives and senators.

* * *

Court Plan Report

The indictment brought against the President's court plan by the senate judiciary committee was quite unusual in many respects.

In the first instance, it was approximately fifteen thousand words in length; being in that regard probably the longest and most comprehensive analysis that any congressional committee ever has made of a piece of legislation. Certainly, it is the most extensive examination to be included in a committee report in the last quarter of a century.

Every argument advanced by the administration in support of the plan was picked to pieces and held up to public gaze; every possible reason for expansion of the court by the addition of six new justices was scrutinized and denounced and, then, the committee put forth some of its own ideas.

"It applies force to the judiciary," the committee said in a sentence that constituted one paragraph and thereby was emphasized.

"The only argument for the increase which survives analysis," the report added, "is that congress should enlarge the court so as to make the policies of this administration effective."

The bill was found by the seven Democrats and three Republicans who constituted a majority of the senate judiciary committee, to be "a needless, futile and utterly dangerous abandonment of constitutional principle." It charged that the "American system" of independence of the courts would be violated and that if the bill were to be enacted into law, "political control" over the judiciary branch of the government would pass into the hands of the President.

With the presentation of this terrific attack on the bill to the senate, a second unusual circumstance developed. Those Democrats who were opposed to the President's proposal decided to go about the job of fighting the measure on the floor in a manner seldom seen in the congress. These opponents from the Democratic ranks got together and chose Senator Wheeler of Montana as leader of the Democratic opposition to the Democratic President's court revision program. They gave him full authority to act, including the selection of a steering committee, a committee on strategy, to aid him.

Thus, in the senate now we have three major leaders. Senator Wheeler will speak for the court opposition; Senator Robinson of Arkansas as the leader of the Democratic party in the senate will lead the fight for passage of the court bill; and Senator McNary of Oregon will head up the Republicans as usual. Since all of the Republicans and Independents excepting only Senator La Follette, Progressive, of Wisconsin, are opposed to the court revision plan, Senator McNary and Senator Wheeler are working hand in glove against the regular Democratic line-up headed by Senator Robinson.

It appears that the President is going to be badly defeated on this piece of legislation, but it is too early to be sure. Mr. Roosevelt is a powerful figure and he has political knowledge that must be described as remarkable. He has with him in the senate some exceedingly able political strategists. It is thus a battle of wits.

Mr. Roosevelt has said several times that he will accept no compromises. There is a very definite feeling at the Capitol, however, that the President will be glad to have a compromise if he can get one and save the bill from complete wreckage. On the other hand, Senator Wheeler and his strategy committee have announced in no uncertain terms that they will defeat the bill or any compromise that is offered. Time alone can answer the question of what will come out of the President's proposal. At this writing, the odds certainly are against the President on the proposition.

* * *

Hunt Tax Evaders

Speaking of taxes and the selfishness that was evident in the house action, as mentioned earlier, calls to mind the investigation by the joint house and senate committee that is now under way. This committee, made up of five representatives and five senators has begun a search to find out how taxpayers avoid taxes or reduce the amounts they would otherwise have to pay by various trick schemes. The committee has been given fifty thousand dollars with which to make the investigation and it is receiving able assistance from Under Secretary Roswell Magill and other Treasury experts on taxation.

Contrary to the outlook when Mr. Roosevelt released a vicious attack on tax dodgers and tax avoiders, this committee is getting down to real business and there is every reason to believe it will be able to recommend to congress changes in the law that will stop some of the schemes and tricks to which large taxpayers have resorted.

I have sat in on a number of the hearings thus far, including the opening session when Secretary Morgenthau made the opening statement and disclosed to the satisfaction of everyone that he was not conversant with the problem at hand. Like the President, Mr. Morgenthau attempted to place the tax problem confronting the government on moral grounds. His statement did not click with the committee at all. With two or three exceptions, the committee members recognized the problem as purely a question of law and Senator Pat Harrison, Democrat of Mississippi, vice chairman, said that there was no point in making the investigation "a Roman holiday." Therefore, the thing settled down very quickly to an earnest study of cases where men have resorted to various kinds of subterfuges of law, to reduce their tax liability.

In this connection, it seemed to me that too much credit cannot be given Under Secretary Magill who apparently is anxious to get to the bottom of the problem.

IMPROVED UNIFORM INTERNATIONAL SUNDAY SCHOOL Lesson

By REV HAROLD L. LUNDQUIST.
Dean of the Moody Bible Institute of Chicago.
© Western Newspaper Union.

Lesson for July 11

LESSON TEXT—Exodus 3:1-12.

GOLDEN TEXT—Come now therefore, and I will send thee.—Exodus 3:10.

PRIMARY TOPIC—How God Answered His People's Prayer.

JUNIOR TOPIC—A Leader in the Making.

INTERMEDIATE AND SENIOR TOPIC—How to Get Ready to Work for God.

YOUNG PEOPLE AND ADULT TOPIC—How God Provides Leaders Today.

God calls men, commissions and uses them to carry out his plans and purposes in the earth. What a great truth that is and how it glorifies the destiny of man to know that it is divinely appointed. As Joseph Parker beautifully points out, the experience of Moses in Midian was a direct dealing with God, whereas we who may not be able to "see the fountain" must "be content to drink at the stream," but should always remember that the stream flows from that same fountain.

"Every man should put to himself the questions—What is my destiny? What does God mean me to be and to do in the world? . . . It is a most pitiful thing that a man should read of Moses being divinely called . . . to a special work" and fail to realize "that God has a special work for every man to do." Let us have a care that we do not "so pervert and misinterpret circumstances as to press them into a justification of self-will," rather than recognize them as "destiny which is beckoning us to duty."

For our instruction and guidance we consider then the story of the call of this outstanding leader of Israel It presents him as a true servant of God—one who was

I. Personally Equipped.

While it is a blessed truth that God will use any man who surrenders himself to his control and guidance no matter how limited that man's ability and training may be, it is also true that, other things being equal, the man with the best equipment will be the most useful servant.

God gave Moses a unique preparation. He was first of all a Hebrew, born among the people that he was to lead He knew the luxury and all the cultural advantages of the Egyptian court (Acts 7:22), with the safeguard of training by his own mother as his nurse. He observed at first hand the oppression of his people and made a self-willed and impulsive effort to deal with the problem The result was that he had a "postgraduate" course of instruction and discipline in the wilderness where he spent forty years in the school of experience.

The leaders of God in our day need training. Some best receive it in schools, in Christian colleges, seminaries, and Bible schools true to the faith. Others prepare in the home, the church, and in the "university of hard knocks"—as someone has called the school of experience. Perhaps the best preparation is a balanced combination of the two, school and experience. But the important thing is to be prepared for God's call.

II. Spiritually Qualified.

Moses was a man who knew God. Had he been a worldly man he would have been but curious of the phenomenon of the burning bush. But note how alert and reverent he was and how immediately responsive to the instructions and the call of God.

All the training and preparation in the world is worse than useless in God's service apart from that spiritual qualification that comes from true regeneration and dedication to him. There is no more pathetic sight than a spiritually powerless church worker "going through the motions" of service for Christ. If we are in that condition we may be sure that we deceive no one but ourselves. Let us seek God in confession and in glad acceptance of his provision for both our redemption and our sanctification.

III. Divinely Called.

Moses was called (v. 4), commissioned (vv.6-10), and clad with divine authority (vv. 11-12) for his great task.

God calls his servants to different responsibilities and in different ways, but the important thing is that we should know that we are in his will and that we are answering his call.

No man or woman has any right to choose full-time Christian service simply as a desirable vocation, for it is a divine calling. Quite unscriptural was the attitude of the man who said that in a quiet woodland nook he had faced life's realities and had decided "to bet his life" on the preaching of the gospel.

On Giving of Alms

In giving of thy alms, inquire not so much into the person, as his necessity. God looks not so much upon the merits of him that requires, as into the manner of him that relieves; if the man deserve not, thou has given it to humanity.

Sense of Humor

A sense of humor enables us not so much to laugh at the people who provoke us, as to laugh at ourselves for being so easily provoked. —Robert Power.

AROUND the HOUSE

Items of Interest to the Housewife

Luncheon Dish.—Boil 2 pounds spinach, press out all moisture, and chop fine. Have ready ½ pound cooked macaroni and 2 hard-boiled eggs cut into slices. Well grease a pie dish, put in a layer of macaroni, sprinkle with grated cheese, and season with pepper and salt. Then put a layer of spinach with sliced eggs on top. Repeat the layers and pour in a little milk. Cover with a thick layer of breadcrumbs with pieces of butter on top. Bake for 10 minutes.

* * *

Washing White Gloves.—White gloves can be kept white by washing them after each wearing with a soft brush and a pure soap.

* * *

Removing Peach Stains.—Fresh peach stains can be removed from linen with a weak solution of chloride of lime.

* * *

Cheese Molds.—Pour 1½ cupfuls milk over 2 cupfuls soft breadcrumbs; add 3 well-beaten eggs, 1 heaped cupful grated cheese, 1 teaspoonful salt, pepper to taste, and 1 tablespoonful melted butter. Pour into buttered molds and bake from 20 to 30 minutes in a moderate oven.

* * *

Orange Peel Marmalade.—Take six orange rinds, or four orange, two grapefruit or orange and lemon rinds, cover with water and pinch of soda, cook till tender; drain. Take out white pulp with spoon. Put rinds through chopper, yielding two cups chopped rind, add water to cover, about two cups add sugar, about two cups; simmer slowly for three hours. Bottle in the usual way.

* * *

Apple and Rhubarb Jelly.—Cut apples into quarters. To every pound of apples add one cup of rhubarb juice. Simmer until the apples are soft. Strain through a jelly bag without pressure. To each pint of juice add one pound of sugar. Boil slowly, removing all scum until the juice will jell. Pour into tumblers and seal with paraffin.

* * *

Fire Prevention.—To avoid fires keep all cleaning cloths that have been treated with oil in a covered metal container.

* * *

Preserving Broom.—Soaking a broom in boiling salt water every two weeks will help preserve it.

* * *

Picking Raspberries. — Red raspberries will keep better if picked early in the morning.

* * *

Keeping Peeled Apples.—Peeled apples can be kept white until used by keeping them immersed in water to which a little salt has been added.

A Drop of Honey

"IF YOU would win a man to your cause," Lincoln said on one occasion, "first convince him that you are his true friend. Therein is a drop of honey which will catch his heart—and which, say what you will, is the greatest high road to his reason — and which, once gained, you will have little trouble in convincing him of the justness of your cause."

Lincoln prepared himself for every interview—he studied the prospect. "I spend one-third of my time figuring what I am going to say, and two-thirds of my time thinking what the other fellow is going to say."

Safeguarding Our Homes

THE story of advertising is one of service. Perhaps its most valuable service is safe-guarding our medicine cabinets. Advertising, increasing demand as well as competition, has been an important factor in the development of great laboratories. Today scientific resources safeguard the purity and effectiveness of our favorite home remedies . . . as well as the medicines prescribed by our physicians and compounded so painstakingly by our local druggists.

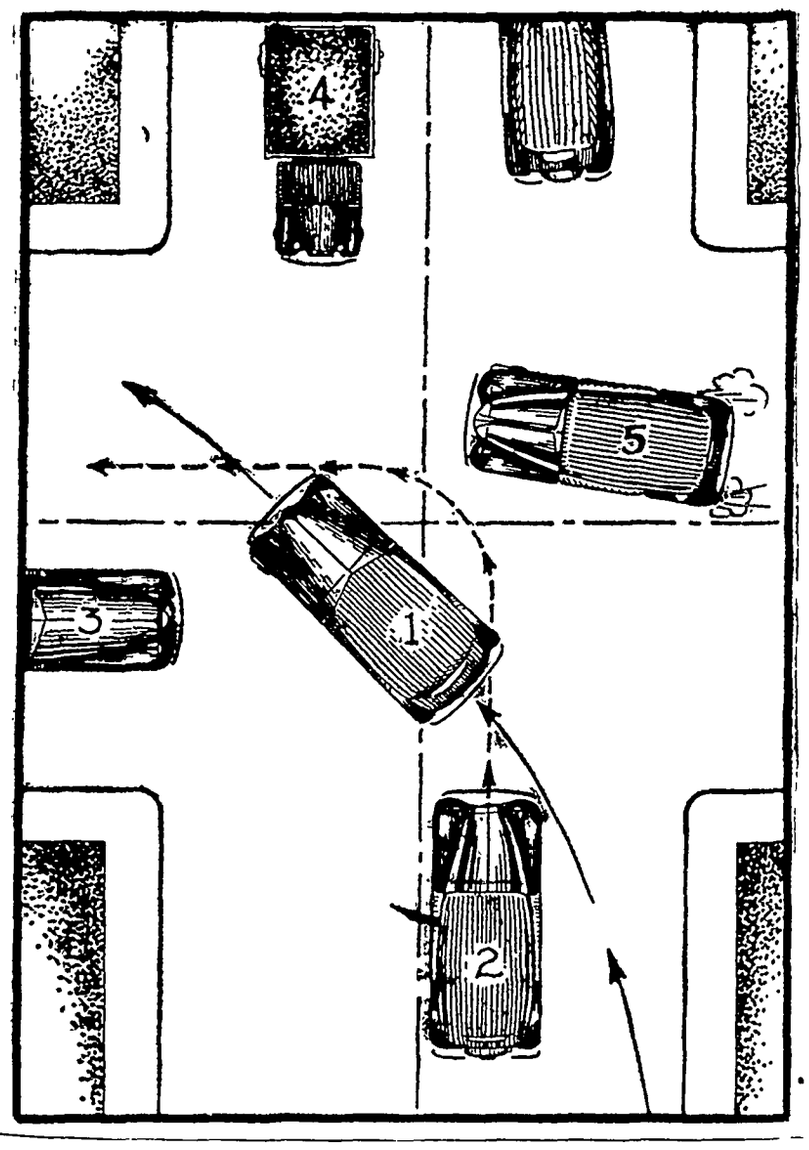
Use Caution When Turning



Use Caution When Turning

The driver of car No, 1, making a left hand turn from a right hand traffic lane presents a serious traffic hazard. While in some municipalities turning inside the intersection is permitted. it is advisable, unless otherwise directed, to make a left hand turn following the course of driver No 2. Placing his vehicle in the left hand traffic lane, using hand signals to warn traffic of his intention to change his course, he proceeds past the center of the intersection, yielding the right of way to car No 5 After car No 5 has safely passed, he will drive to the right hand traffic lane and proceed on his course. The driver of car No 1 would have no recourse under law should damages result from a collision Quite to the contrary, he would be held liable for all personal and property damage Regardless of the violations committed by car No 1, if car No 3 should collide with car No 1, both would be in the wrong, for car No 1 has the right of way over car No. 3, but car No 5 has the right of way over car No 1

Common sense is all that is necessary to avert an accident when faced by a similar traffic condition If you contemplate a left hand turn, pull into the left traffic lane, use hand signals and proceed cautiously, observing the right of way of other traffic on the street

This problem is not so difficult that any driver should be guilty of a similar violation

USE HAND SIGNALS WHEN TURNING

Copyright 1937 P. L Cummings, Des Moines, Iowa

QUESTIONS

1. Is car No 2 in the correct position to make a left hand turn?
2. Is car No 1 obeying traffic regulations?
3. Does car No 1 or car No 4 have the right of way?
4. What should the driver of car No 4 before turning left?
5. Which car has the right of way. No 1 or No 3?
6. Should the driver of car No 2 make a left hand turn?
7. Name four violations committed by driver of car No 1
8. If cars 1 and 5 collide which driver would be liable?
9. Why are hand signals used?
10. When should the horn be used for signalling?

ANSWERS

1. Car No 2 is obeying all traffic regulations
2. Car No 1 should not turn left from the right hand traffic lane.
3. Car No 1 must yield the right of way to Car no 4
4. Give left turn signal, yield right of way to cars 2 and 3
5. Car No 1 has right of way over car No 3
6. Car No 2 should not turn right from inside traffic lane
7. Making left hand turn from right hand lane failing to give hand signal cutting intersection violation of right of way.
8. Driver No 1 for violating right of way.
9. To warn traffic of changing direction or stopping.
10. When passing other vehicles or as a warning at blind intersections

1939 World's Fair Has New Ideas About Amusement Features

NEW YORK, (Special).—"Only seeing will be believing," says President Grover Whalen of the New York World's Fair 1939 Corporation, as he tries to envision what the Fair is planning, more than two years in advance, in the way of facilities for recreation, entertainment and amusement.

Every man, woman and child in the United States, he says, has an interest in the 1939 Fair and to some degree or other has a part in the building of that Fair. The exposition, therefore, will surpass all previous fairs, not only in the demonstration of the wonders of the world or present-day life and in the projection of the World of Tomorrow, but also in providing the utmost variety of entertainment and amusement for every man, woman and child.

The entire world will be tapped for every amusement possibility. The tiresome mediocrity of stunts and side shows—the stock-in-trade relics of the amusement world of yesterday—will give way to a new and modern standard of excellence. The plan of the New York World's Fair has anticipated the requirements for entertainment and is making them a part of the general scheme of the Fair, rather than allowing them to spring up as an appendage or an afterthought. Even the tiny children will have a playground reserved exclusively for their own use.

SWINE FLU TAKES HEAVY TOLL

—Prepared by American Foundation for Animal Health

This year has been a particularly bad one for Swine Influenza—and it behooves every hog-raiser to be on his guard against it.

Hog flu first shows itself in loss of appetite; the hogs run a high fever, and often become completely prostrated. Here is the farmer's first baffling problem—for those same danger signals are also symptoms of hog cholera.

If the hogs have been immunized against cholera—then the potential danger is reduced more than half. But if they have not been immunized, there is not only danger of the disease being cholera, but the added danger of the hogs contracting cholera, after being weakened by flu. So, again we see the advantage of cholera immunization, which should be one of the first tenets in any swine grower's creed.

In any case, the first thing to do when hogs show any of the above symptoms, is to call a veterinarian.

The next step is to impose rigid safety measures to prevent spread of the disease, as flu is extremely contagious. Do not visit your neighbor's hog lot, and don't allow him to visit yours. Keep dogs, other animals, and wagons out of your hog lot. Observe as strict a quarantine as you would in case of cholera. Do not allow the sick hogs to be exposed to drafts, and do not allow them to pile up.

While hogs usually recover from flu, the greatest danger is to the pig crop of sows which have been bred. Sows which have had flu frequently lose their pigs, or the pigs are born weak or dead. The result is disastrous to hog profits for the following season.

With hog flu ravaging many sections, all farmers should be on their guard against it—and at the first signs, should call a veterinarian to prevent unnecessary losses.

LEAD ARSENATE SRAY

The application of lead arsenate spray to fruits and vegetables that will be consumed in a short time is a dangerous practice, according to State Chemist, Harry L. Irwin.

Mr. Irwin pointed out that if the application is made shortly before the product is to be marketed that enough of he poison material remains to be dangerous for human consumption. Mr. Irwin advised that there are other insecticides that are effective and are not harmful to human beings.

The tolerance of lead permitted on food products is .018 grains per pound and the tolerance of arsenate permitted is .01 grains per pound Foods found to be carrying lead arsenate above this tolerance are taken off sale.

ON PASTURE HAVE WIDER TEST VARIATION

er fluctuation of the fat ile cows are on grass than ey are fed in the barn may buted to several different conditions, according to Dr. Cannon, head of the Dairy iry Department, Iowa State

cow is in good condition content of her milk will us- crease when she is put on which supplies a poorer f feed than she had prev- eceived. If the cow is thin turned on pasture which better feed than she had ly received, her milk will test lower, as she will ut- extra food in storing body er than converting it into

extra butterfat.

According to Dr. Cannon, one factor that may be responsible for reports of lower cream tests during the grass months is that more cows freshen in the spring, especially in Iowa with many beef herds being milked. An increased flow of milk, common when cows are fresh, results in a lower fat test. As the lactatation period advances the test goes up Also, when cows are turned on grass the flow of milk is often increased resulting in a lower butterfat test due to the greater volume of milk produced College records show greater fluctuation in the butterfat test when cows are first turned on grass than when they are stable fed

The test of milk, however, is not the sole determinant of how profitable a milk cow is Both test and quantity of milk produced must be considered

Large Crowd In Klemme When Stores Were Open Friday Night

To accomodate week end shoppers, the stores in Klemme were kept open on Friday night and there was a large crowd of people on the streets until a late hour.

The regular open-air movie show was held on that night and a big crowd took in the entertainment.

Movie Show Saturday Night

This week business swings back to normal and the open-air movies will be shown on Saturday night as usual and an especially good program has been scheduled. The weekly band concerts are given on Wednesday evening every week.

GOODELL U. B. CHURCH

Rev. W. E. Dye, S. T. D., Pastor

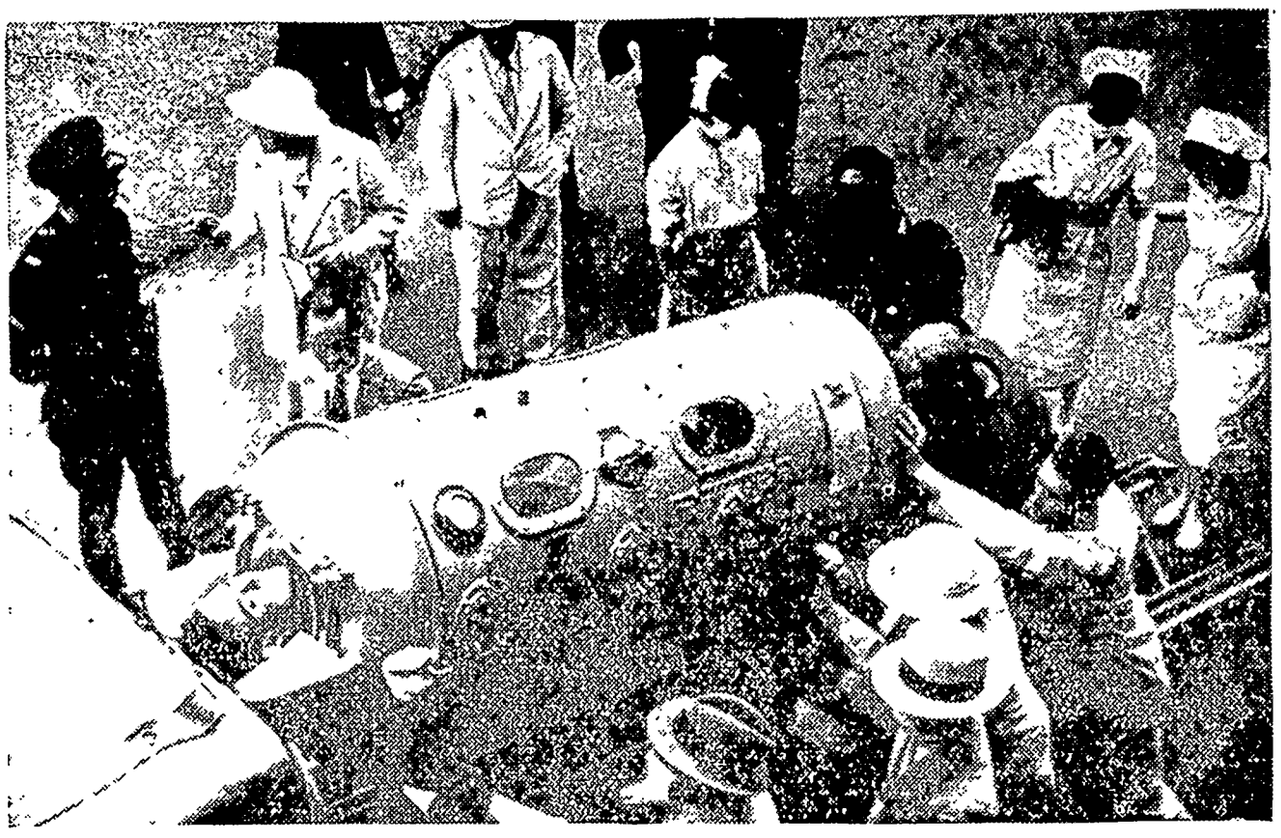
Patient Journeys From Orient in Iron Lung



Frederick B. Snite, Jr, of Chicago inside the "iron lung," or respirator in which he was brought from China. Stricken with infantile paralysis more than year ago while on a world cruise, young Snite owes his life to the iron lung. He has been brought to the United States for treatments which, it is hoped, may result in his eventual recovery.

Charles P. Taft Heads Strike Mediation Board

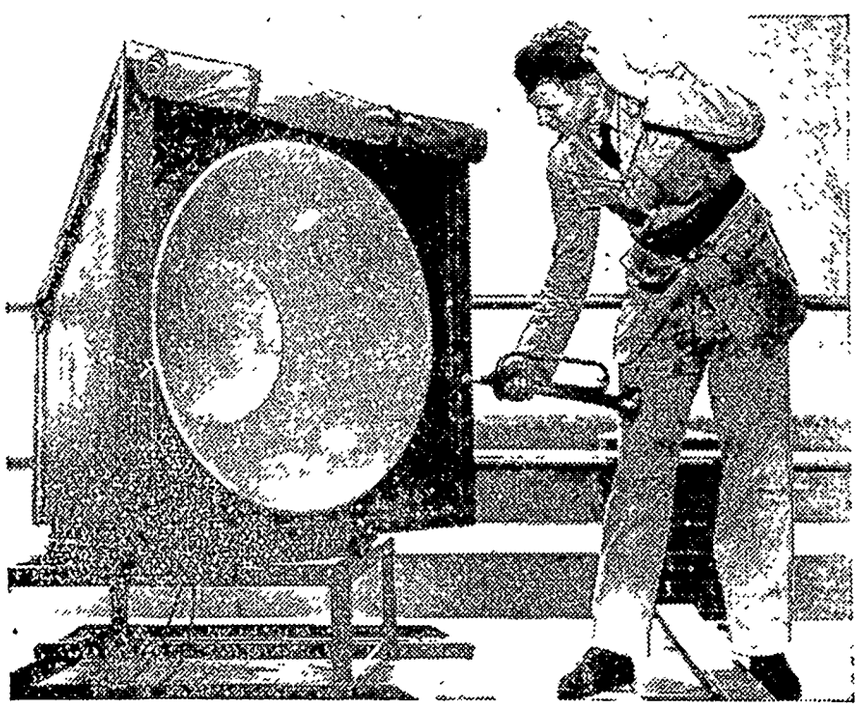
Charles P. Taft, son of the late chief justice of the Supreme court, who is one of the members of the three-man mediation board appointed by the U. S. Labor department at President Roosevelt's direction to

bring about peace in the steel industry. The other members are Lloyd K. Garrison, dean of the law school of the University of Wisconsin and Edward McGrady, assistant secretary of labor and the department's ace trouble shooter.

"Mosquito Control" Essay Wins $500

An essay on "The Importance of Mosquito Control and the Gorgas Memorial" brought a check of $500 to William L. Drake, Jr., of Milwaukee, Wis. The check was presented to young Drake in the White House. Photograph shows, left to right, Mrs. Henry L. Doherty, who donated the prize; William Drake, receiving the award from President Roosevelt; Admiral Carey T. Grayson and Senator F. Ryan Duffy of Wisconsin. The essay contest was the eighth annual in memory of Maj. Gen. William C. Gorgas.

Mechanical Reveille Supplants Bugler



Private Frank Kaufhold, of the Second air base at Mitchell field, N. Y., seems amazed as he hears Mitchell field's new mechanical bugle blow the familiar strains of "Reveille." His own bugle is now outmoded with the new contraption that has been adopted here. Although it takes some of the romance from army life, bugle calls, mechanical ones we mean, now have exceptional clarity and perfection.

BRITISH GOLF CHAMP

A close-up of Robert Sweeny, handsome Anglo-American, with the cup emblematic of the British amateur golf championship which he recently won in a 36-hole final match with fifty-year-old Lionel Munn at Sandwich, England. The twenty-five-year-old American-born Londoner won by three and two.

Quoddy Village Comes to Life Once More

A grading crew of boys, members of the National Youth administration, at work on the new baseball diamond which will be used this summer for camp games at Quoddy Village, Eastport, Maine, the model community of the suspended $36,000,000 federal Passamaquoddy bay tide-harnessing power project, which has been taken over by the N. Y. A. for the purpose of vocational training.

Keeping Up With Science

By Science Service

© Science Service.—WNU Service.

Geniuses Not Born Eccentric, Declares New York Scientist

Gifted Children Are Studied in Clinic

Langhorne, Pa.—If men of genius are eccentric or insane, it is not because all geniuses are born queer, but possibly because of lack of understanding in their education and family life, Dr. Harvey Zorbaugh, director of the Clinic for the Social Adjustment of the Gifted, New York university, told an audience at Woods schools.

Among a hundred gifted children whose development is being watched at the clinic, five are so extremely gifted as to be clearly in the class of potential genius In terms of IQ, these children all score at or above 180, a "normal" score is 100. One child registered 204 on this mental scale, the others were respectively 180, 190, 196, and 200. Such genius is rare, Dr. Zorbaugh said. Probably not more than 24 would be found in all New York's 1,086,416 public school children.

All Well Adjusted.

All are well adjusted, socially competent young persons, Dr. Zorbaugh told the Conference on Education and the Exceptional Child.

"In three generations of the five families of these children there is but one relative who may be suspected of a psychotic episode," he said. The mother of one child is eccentric although it has never been necessary to put her in a hospital.

At present these young prodigies are tall, healthy children ranging in age from five to fifteen—all of them normal mentally, physically and emotionally.

Their Futures Uncertain.

"We cannot predict the futures of these children," Dr. Zorbaugh said. "So far, they and their families have had careful guidance. The children have all had unusually fortunate educational experiences. If, as they grow older they become unstable, we believe it will be due to the clinic's inability to control the hazards of development to which such children are exposed.

"If society showed the interest in its children of genius that it shows in its idiots, we might speak more confidently. We spend millions of dollars yearly, for research and education, on our feebleminded.

"An equal amount invested in our gifted and talented children would yield an immeasurably rich return—in a deeper understanding of the nature of giftedness and talent, in the increased social productivity of the gifted elements of our human population."

Waste Products of Farm Used to Make Better Roads

Columbia, Mo.—A new method with which durable roads can be built by simply adding to the soil a cheap chemical mixture of resinifying materials such as furfural and its derivatives, has been developed by Dr. Hans Winterkorn of the Missouri College of Agriculture. The chemicals are obtained primarily from waste agricultural products—products grown in the average cropping system of a western farmer.

The process will make it possible to build satisfactory surfaces in many places where gravel crushed rock, and other aggregates are not readily available. The method also is expected to be used extensively in establishing the base for concrete and other types of highway surfacing.

Salmon's Homing Instinct Subject of Dispute

Stanford University, Calif.—Salmons' alleged homing instinct, or tendency to return at maturity to spawn in the waters where they were hatched, has become a point of debate among marine zoologists.

In Science, Dr. Willis H. Rich of Stanford university takes issue on the subject with Dr. A. G. Huntsman of the University of Toronto.

Dr. Huntsman has declared that salmon do not "go home," but Dr. Rich points to the existence of many distinct strains of Pacific coast salmon as evidence that they do. If salmon went up "just any old river" the distinctions between varieties would disappear through hybridization, he believes.

World of Future to Be Peopled by the Nations of East?

Increase in Japan Is Indication of This

By MARJORIE VAN DE WATER

PRESENT-DAY struggles of single European nations to stamp their own culture on the world seem peculiarly futile and pathetic when viewed in the light of certain figures now published for the first time in an American publication by Princeton university and the Population Association of America.

Will the world of future years be one peopled by the nations of the East?

This is the question that can be read between the lines of those marshaled rows of figures in the Population Index. Japan, although losing a grievous number of infants in extremely high infant mortality, is growing at a rate so high that it is not comparable with that of either the northern European nations or North America.

It's Girls That Count.

Although the girl child is not so important as her brother in some civilizations, she is the one who counts most in the calculations of the vital statistician. It is the number of daughters born to the women of proper age for motherhood that eventually determines (along with death rates) how many of their kind shall walk the earth.

So figures of total population increase or decrease do not interest statisticians so much as those more significant ones showing how many daughters may be expected to be born and grow to child-bearing age for each woman now living and at a reproductive age.

United States Falls Short.

In the United States, births of daughters are not numerous enough to insure replacement of one generation by the next. In Japan, the reproduction rate is high enough to double the population in each succeeding generation. France, in the depression year 1933, lacked 18 per cent of enough births to insure replacement. England lacked 27 per cent, Germany 30 per cent and Austria 33 per cent.

The hand that rocks the cradle appears to be working out a new destiny for the future of the world.

Yale Students Form Club for Research in Rocketry Field

New Haven, Conn.—Rocketry, long considered off the main path of the engineering sciences, is attracting the attention of student engineers at Yale. The recently organized Yale Rocketry club, consisting of engineering students and devoted to the study of fundamental rocket principles, plans to carry out actual experimentation and research in this field.

Experimentation in rocketry has long passed the phase of sending rockets for the purpose of gathering pertinent facts about the efficiency of the device. Proving stands built to hold the rocket motor securely to the ground, having delicate gauging mechanisms, furnish data on fuel flow, fuel tank and combustion chamber pressures, and jet reactions. This is the method the engineers of the Yale Rocket club plan to use.

The most pressing problems for rocket research are those concerning liquid fuels, used today almost to the exclusion of the old-fashioned explosive powder mixtures; and those dealing with constructional metals for the motor and the entire rocket. The Yale engineers point out that while liquid oxygen is now generally used in conjunction with either gasoline or alcohol, there are many drawbacks to this fuel mixture. They believe future development in the field of rocketry awaits the discovery of a more dependable source of power.

Astronautics, as this new field of science is called, is expected to yield information of an exploratory nature concerning the stratosphere. It is believed that astronautics will provide hitherto unknown facts for the meteorologist, astrophysicist, biologist, and aeronautical engineer.

Pink-Hearted Cabbage From Imported Stock

Washington.—A pink-hearted type of cabbage has been grown from stock imported from Turkestan, at the experiment station of the United States Department of Agriculture at Beltsville, Md., Dr. Roy Magruder reports in Science.

The heads are green outside. As the leaves are stripped off, the inner ones are first the usual cabbage-white or cream color. Then, varying from a half-inch to three inches in diameter, there is an inner heart around the terminal bud, of pale pink or magenta color.

Printed Organdie Ideal for Summer

By CHERIE NICHOLAS

THERE'S an exquisite femininity and a new elegance in this season's mode to be seen in the beguiling and flattering ruffled lingerie touches given to costumes, the whisper of taffeta underslips and the seductive charm of sheerest of sheer fabrics for daytime, afternoon and evening wear.

Of all the very lovely sheers on the summer fabric program there's none more lovely than the entrancing printed organdies. These dainty crisp cool-looking and cool-feeling gaily flowered Swiss organdies are the very embodiment of the new elegance and femininity that so distinguishes current fashion.

The fact that they are so enchanting, so lovely tells their story of allure only in part, for after all is said and done it is their utter practicality that offers the big appeal. With the permanent finish and fast color given to the new Swiss organdies you can depend upon them surviving endless tubbings, retaining their crisp vitality and handsome color tones the entire life of your frock.

The exciting variety of new finishings and new patternings given the organdies this season has greatly enhanced them in the eyes of designers who are launching a new vogue for tailored effects as well as the dressier-type costumes. The new matelasse organdie is especially attracting attention. These smart matelasse weaves come in most any coloring and patterning from multi-color florals to smaller geometric figures and fascinating dotted prints that tailor to perfection in attractive one and two-piece frocks such as are ideal for warm weather wear. With dark backgrounds they especially tune to street wear and to costumes for active moments the whole day through for their crinkled finish requires little or no pressing.

The distinctive daytime frock centering the fashions pictured, demonstrates the adaptability of organdie in the new cloque or matelasse finish for practical wear. The novelty patterning of this organdie is done in red, blue, green and white dots against a black background. Self-fabric applique in unique design on plain white organdie ornaments the short puffed sleeves and shoulder yoke, also banding the edge of a separate full-cut overskirt that has been cleverly contrived so it may be also worn as a cape if you feel an urge to wear it that way.

For comfort and joy supreme there's nothing more to be coveted than a beflowered print organdie done in exotic colorings. The summer fabric showings are playing up some of the most fascinating flower-printed organdies eyes ere beheld. That pretty-pretty frock to the right in the illustration is made of crisp and dainty floral printed permanent finish Swiss organdie Given a simple tailored styling it makes a very practical daytime dress as well as a very attractive one. The self-fabric saw-tooth edging at neckline and sleeves adds a voguish finish.

Glamorous is the word for the new organdie evening gowns. In youthful party frocks or in romantic trailing sophisticated styles, they run the gamut of color and fabric finish from dainty allover embroidery cutout patterns to pastels in brilliant floral patterns and striking flocked embroidery designs. For the beguiling evening frock shown to the left the designer uses crystal-clear organdie in white with a flocked floral motif in vivid red. It has a high pointed collar at the front and a sweeping double ruffle cascading so as to swirl about gracefully at the back in dancing.

© Western Newspaper Union.

DOTTED LAWN

By CHERIE NICHOLAS

fashion seems never to get tired ols. This season more than ever ed effects are playing a most portant role in the fabric realm. rime costumes tailored of sheer ed materials are featured in tones that are practical. Navy, burgundy, brown, copen, en, with tiny white dots are prov- big sellers. Clean cut, cool as reeze, is the suit of dotted lawn ere shown. Its linen collar and et flaps are scalloped. Being orized shrunk it can be suc- fully tubbed time and time n.

Full Skirts

irts that are kilted, pleated and red, with the fullness held in below the hipbone, are indi- d for the youthful, slim figure are very new.

LACE AND VEILINGS FOR EVENING HATS

By CHERIE NICHOLAS

A new collection of Suzanne Talbot millinery, just emerged from their Paris boxes and wrappings, presents the last word in delight to the eyes. To say the Talbot hats are feminine does not describe them quite adequately, for they are sheer bits of inspiration. She has taken finest horsehair and fashioned hair cloth of it that in some cases looks like patterned lace, and in others like sheerest straw. With this, in white, in black, in midnight navy, she has used Chantilly lace for veilings and trimmings instead of the accustomed mesh veilings.

One of the hats is a flat sailor made of the hair cloth in black, and vertically across the crown is placed an inch band of white insertion lace of fine linen thread. Then the same insertion falls from the edge of the brim, ever so delicately, to the eyes. Another model, a true basket type, is made of fine black hair woven in a lace pattern, with a full lace veil and a narrow velvet ribbon band coming under the chin and tied in a bow and streamers at one side. To complete the pretty picture, a pale blue ostrich feather curls up under the veil.

Higher Waists Being Shown for Day and Evening Wear

Vera Borea's summer collection shows higher waists for day and evening wear with short bodices that usually are draped. Shoulder width is maintained throughout but the sleeves are plain and straight in line.

There are many cotton prints and linens shown for wear at all times of the day with bright yellow as the outstanding color.

Bright colors are used for short little jackets over dark skirts—for example, pastel blue is now shown with dark red, and rose is shown with dark gray.

Cut-out applied designs are used for trimming for daytime and evening clothes.

Luggage Styles

New luggage styles prove that the old "suit case" is getting lighter every year.

FARM TOPICS

URGES FIRST AID FOR FARM MISHAPS

Specialist in Health Cites the Equipment Necessary.

By Miss Fannie Brooks, Extension Specialist in Health, University of Illinois. WNU Service.

With the peak of farm accidents soon to be here in the rush season and the busy summer months, this is a good time for farm folks to check up on first aid treatment.

Knowing what to do until a doctor can be reached will go far toward cutting down the toll of farm accidents.

Farm folks should check up on what to do when:

A barefooted child steps on a rusty nail, broken glass or other sharp object.

A child contacts poison ivy or poison oak.

Somebody becomes overcome by sunstroke or sunburn.

A child is burned by firecrackers, an injury which may result in tetanus unless taken care of promptly.

A child is bitten by a rabid dog.

A child has gone swimming too soon after eating and therefore is attacked by cramps or acute indigestion.

A child receives small cuts and scratches while playing about the farm.

A good first aid kit which can be managed in any home will contain a good book on first aid to the injured; a small drinking glass; two gauze bandages which are 2 inches by 10 yards; two gauze bandages, 1 inch by 10 yards; one all-cotton elastic bandage, 2 inches by standard; one package of absorbent cotton; one box of band-aid; one roll of adhesive plaster, 2 inches by 5 yards; one package sterilized gauze of 5 yards; one triangular bandage; six sterilized gauze pads; one tourniquet made of a handkerchief or wide muslin; safety pins; small scissors; tongue depressors; bar of soap, ammonia; camphor, iodine, and mercurochrome.

Proso Is Recommended as a Feed for Poultry

Plan for a patch of proso this year for the poultry. Proso is also known as hog millet, broom corn millet and Russian wheat. It is an enormous yielder and matures a crop in a very short time; our plantings in July were ready to harvest in less than sixty days, states a correspondent in Wallaces' Farmer. It grows more rapidly, stands a lot of hot, dry weather, and matures more quickly than other grains; reaches a height of three to four feet, stools and branches, making twelve to twenty heads instead of one, one head having as many as 1,185 grains by actual count. That is why it is an enormous yielder—up to sixty or seventy bushels per acre.

Proso makes extra fine poultry feed, fully the equal of wheat. It is also an excellent hog feed. It may be fed either as clean grain or in bundle form, as the kernels are readily scratched out of the heads.

Vaccination for Mastitis

We have not found vaccination for mastitis to be satisfactory. There seems to be no satisfactory treatment for this disease because numerous kinds of drugs, vaccines and other treatments have been relatively inefficient. The acute attack of mastitis probably is best treated with hot applications, or, if necessary, a suspensory bandage. Most essential, however, is the prevention of the disease. It is contagious, and infected animals are dangerous to the rest of the herd. Animals infected with mastitis should be segregated at one end of the barn and milked last. The hands of the milker should be carefully cleaned and disinfected following the milking of each animal. Platforms on which the animals stand should also be disinfected. —C. P. Fitch, chief, Division of Veterinary Medicine, University Farm, St. Paul.

Farm Notes

A farm of 97,000 acres is advertised for sale at Johannesburg, South Africa.

* * *

Veal calves should be at least four weeks old before they are slaughtered.

* * *

Depth for planting sweet corn varies with the soil and season, according to the College of Agriculture, University of Illinois.

* * *

Rye, oats, millet, buckwheat, and soy beans are common annual cover crops used in the orchard.

* * *

The color of egg shells depends on the breed of the hen. It does not indicate differences in the food content.

* * *

The United States now has 876 dairy herd - improvement associations. One of their main jobs is to find out exactly what each sire is able to do in building up the production of a dairy herd.

STAR DUST

Movie • Radio

By VIRGINIA VALE

PERHAPS the happiest, but certainly the most bewildered family in the country just now consists of Michael Kelly, his wife, and five children who live in that part of New York City known as the Bronx.

Their twelve-year-old Tommy has been selected to play Tom Sawyer in the Selznick-International film of the Mark Twain classic.

Such an opportunity for a youngster would be a dramatic thunderbolt in any family, but for the Kellys it was the first good break in years. Papa Kelly has been on the relief rolls for two years, his jobs as janitor in a school and life-guard at a beach having dwindled to nothing. Mama Kelly has been to the movies only three times in her 23 years of marriage.

Tommy and his father are in Hollywood now, and Michael gets a day's extra work every now and then while his son is being groomed for stardom.

—*—

When you see Claudette Colbert in "I Met Him in Paris" you will find it the gayest, most utterly delightful film in many months. Claudette Colbert, Melvyn Douglas, and Robert Young romp through the picture as if they were having the time of their lives. It is the story of a girl who has saved for five years for a trip to Paris, and when she gets there everything happens as it might have in a fantastic dream. A giddy novelist and a cynical playwright fall in love with her.

Claudette Colbert

—*—

For the first time since their marriage, Joel McCrea and Frances Dee will play opposite each other in the Paramount picture "Wells Fargo." Adolph Menjou and the Mrs. known to us as Verree Teasdale will be together in Sam Goldwyn's "Marco Polo" and the one extra clause they insisted on in their contract was that the dividing wall between two dressing rooms should be taken down so that they could be together.

—*—

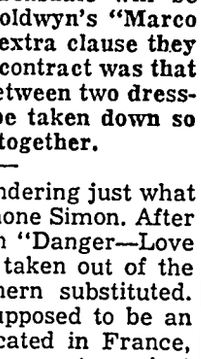
Everybody is wondering just what is to become of Simone Simon. After a few days' work in "Danger—Love at Work" she was taken out of the cast and Ann Sothern substituted. The heroine was supposed to be an American girl educated in France, and Simone's heavy accent was just too much to be convincing. Twentieth-Century-Fox officials still have faith in her, and say that when they find just the right story for her they will put her to work again.

—*—

The dinner party that marked the end of the recent Twentieth-Century-Fox convention put on a show that included about a million dollars' worth of talent. Irving Berlin sang "Remember," the Ritz Brothers made the rafters ring with hilarious shouts by their impromptu foolishment, but Eddie Cantor walked off with the honors of the evening when he arrived in blond curls and baby dress and did an imitation of Shirley Temple. Prettiest girls at the party were Loretta Young, who came with Merle Oberon's former fiance, David Niven, and Alice Faye, who came with her constant beau, Tony Martin. Incidentally, Tony will be back on the radio regularly again soon.

—*—

Mary Pickford is asking $700,000 for Pickfair, because when she sells the house she will include all the treasures that she and Douglas Fairbanks collected in their travels around the world. When she marries Buddy Rogers, she will live in a simple beach house and an old-fashioned ranch house, and wants no reminders of her former life around to haunt her. Whoever is purchaser will possess an estate at which notables of the world were entertained in the days when Mary and Doug were filmdom's most celebrated couple.



Mary Pickford

—*—

ODDS AND ENDS—Martha Raye gets furious when anyone refers to her as a rubber-faced comedienne, but Joan Crawford always refers to herself as Elephant Annie, because she never forgets anything . . . All the girls on the RKO lot are grateful to the costume designer, Eddie Stevenson, for making them look so elegant. By way of showing their gratitude Ann Sothern, Harriet Hilliard, Gertrude Michael and Ann Shirley got together and knitted, sewed, and bought him a knockout summer wardrobe . . . Mary Carlisle has added a pretty penny to her earnings by having Bing Crosby advise her on horse-race bets.

People of Egypt

The people of Egypt are of the same stock as the ancients who built the pyramids, and—despite the lapse of centuries—still look like them.

Cool, Smart, Comfortable

COOL is the word for Carrie when she wears one of these smart new frocks by Sew-Your-Own. No matter whether she's three or thirty, a June bride or a proud mama, Carrie will find what she needs for summer comfort here.

Left to Right.

The young frock with the interesting middle and sporty inverted pleat is one that's going in for extra credit at summer school. It has that advanced chic which readily distinguishes co-eds' clothes. If you're campus bound (or just bound for an ordinary vacation) be sure to have a couple of versions of this fashion first with you. Then you'll be set for that heavy summer schedule.

Lines for a Princess.

Second to none in the summer is this princess dress. As fit for golf as it is for dancing, you can see at a glance that this is the one dress you can't be even half-way happy without. Fresh in spirit, dainty in detail and becoming to all figures this simple-to-sew frock will introduce countless women to new chic this season. Come on, Milady, shake hands with Chic.

Tot's Tidbit.

Only when we're very young are we privileged to wear dresses as cute as this one. The most unaccustomed seamstress can make it with its half dozen pieces; the merest remnant will suffice for material. There is more than ordinary intrigue packed in the dimunitive skirt that shows a couple of darling dimpled knees so lusciously sun tanned. Use it as a cool, cool top with panties as the ideal hot weather attire, or slip it on as an apron—either way it will be a fine little companion for mother's pet this summer.

The Patterns.

Pattern 1258 is designed in sizes 12 to 20 (30 to 38 bust). Size 14 requires 3½ yards of 39 inch material plus 4½ yards for braid trimming as pictured.

Pattern 1323 is designed in sizes 14 to 20 (32 to 46 bust). Size 16 requires 5⅞ yards of 39 inch material for the short length. Beach length requires 7¼ yards of 39 inch material.

Pattern 1944 is designed for sizes 6 months, 1, 2, and 3 years. Size 1 year requires 1⅝ yards of 36 inch material. The pockets, cuffs and facings for collar in contrasting material require ¼ yard of 27 inch material.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

"I quote from the Record"—

The *only record* is the one you now hold in your hand —*this newspaper*

Congress is in session. Claims and counter-claims about proposed legislation are being made. What our national legislators say is soon forgotten. Forgotten, but recorded!

The "record" is down in black and white—you hold today's record in your hand—it is this newspaper. This is a record that cannot die—that cannot be erased. For your newspaper is a record of fact!

Here is recorded *exactly* what was said and done by presidents and kings, by senator leaders and congressmen. More important, the newspaper interprets what it all means to *you*.

For this newspaper is edited especially for its readers. News of remote places is adequately covered and interpreted. Local events are reported fully. Thus, a newspaper is "tailored" for the people it serves; you and your neighbors.

NOW is a good time to learn how "the record" is kept—for you.

Brothers And Sisters At Re-Union In Minnesota

RELATIVES GATHERED AT INTER LAKEN PARK

Family Re-Union Was Voted To Be Held Each Year

A picnic and family gathering of the Barz brothers and sisters and their families was held at Inter Laken Park near Fairmont, Minnesota, last Sunday, and was attended by forty-two people.

This was the first time in ten years that all the living brothers and sisters, who are children of August Barz, have gathered together Those present were:

Anna Lau, husband and children, Edna and Milton of Tracy, Minn; Mr. and Mrs. Will Barz of Garner; Herman Barz, Lena Schroeder, Henry Barz and family, Albert Barz and family, all of Klemme.

Bertha Baack, Stewart, Delbert and Harold of Tracy, Minn.; Mr. and Mrs. Emil Barz and Max of Waterloo

Ewald Lau, wife and Cora Lau Paulson and family of Redwood Falls, Minn; Albert Lau, and wife and Amanda Lau Blithe and husband of St. Paul.

Viola Baack, husband and baby son, Harvey Barz, wife and son Harley, Marvin Barz, wife and Darlene, and Martin Barz, wife and Maxine, of Klemme

Needless to say they all enjoyed the fine picnic dinner and even more, they enjoyed visiting with each other It was voted to make the picnic an annual affair.

Before departing for home all joined in singing "Blest Be The Tie That Binds"

GRIGGS FAMILY HELD RE-UNION AND PICNIC

The annual Griggs family picnic was held Sunday at the Clear Lake State Park Following the dinner a short business meeting and program were held A poem as a memoriam to Audrey Grubb was read by Maude Griggs Carpenter

The following members were in attendance

Mr and Mrs. J J Cook and Delores, Mr and Mrs. W. L. Sherwood and Iris and LaVohn, Mr and Mrs J T Griggs and Fernon and Kenneth, all of Klemme; Mr and Mrs A. C. Carpenter and Mr and Mrs. Gerald Burk, of Goodell; Mr. and Mrs Chester Biddon, of Boston, Mass., Mr and Mrs Walter Neuberger, of Rockford; Mr and Mrs. Frank Griggs, and Mrs. Garnet Gunn, of Iowa Falls; Mrs. Ray Kernan, Washington D. C; Lela Griggs, Des Moines; Mr and Mrs. Frank Fischel, Shell Rock; Betty, Duane and John Grubb, North English and Dr and Mrs Kenneth Brown, Springfield, Minn

Mrs. Ardith Martin and son, Jerry, of Shell Rock, and Miss Dalia Stromer, of Klemme, were guests.

THANKS, EVERYBODY!

The ladies of the Methodist church took in over $50 at their social Saturday evening and want to thank all those who donated and who worked on committees They want to thank Mr. Wellemeyer for the use of his lot; the Creamery for their cold storage; those who loaned freezers and special thanks to Fritzie Gobeli and Marvin Wade for turning the freezers. They thank the public for their fine patronage.

The Bureaucrats and Their Power

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

Official reports from Washington record a new peak in the number of peace-time Federal job-holders.

During the month of May, the records show, almost 5,000 new names were written on the public payroll This brought the total to 840 159—a throng exceeded only during the emergency of a World War

And, of course, the total of paychecks rose proportionately

All this is obviously tough on the public—which must pay the bills—but it's a great help to many of the appointed Bureaucrats.

Why?

Because it was the Bureaucrats—the appointed heads of the countless new boards and bureaus and commissions now overwhelming Washington who demanded this increased spending of the people's money—and who put their demands across.

Many leading Senators and Representatives have, in recent weeks, emphatically opposed continued extravagance The White House has promised economies But the Bureaucrats realize that without lavish spending their growth must cease And Bureaucracy seems determined to expand.

Growing armies of job-holders are, of course, only one element of the Bureaucrats' steady drain on the public purse New and costly and spreading activities into all possible fields create still other burdens for taxpayers to shoulder And these burdens will continue to multiply until Congress does the job it was elected to do

That job is to legislate for the American people who elected them, not for appointed Bureaucrats who seek to enhance their power through a succession of big checks drawn against the people's earnings

SMALL GRAIN IS BEING HARVESTED HERE THIS WEEK

Grain cutting is the order of the day up here in North Iowa this week A few farmers in the vicinity of Klemme began cutting grain the latter part of the week while others made a swath or two to start the annual job Monday

Small grains look very good this year and the quality should be good with a high yield per acre Iowa this year has the largest wheat crop for several years estimated to be worth 18 million dollars

MORE MOTOR VEHICLE LAWS

New Law Requires Stop For Railroad

Whenever any person driving a vehicle approaches a railroad grade crossing and a warning signal of any kind is given, or crossing gate is lowered, the driver must stop wtihin 50 feet but not less than ten feet from the nearest track of the railroad and not proceed until he can do so safely, says the new Iowa vehicle law which took effect July 4th

Vehicle Must Stop When Coming From Alleys

When emerging from an alley or private driveway, the driver of a vehicle within a business or residence district must stop, as specified in a revised section of the new vehicle laws. The stop must be made immediately before driving on to a sidewalk or into the sidewalk area extending across any alleyway or private driveway, as the Iowa State Safety Council points out

HELLO FOLKS!

A fine baby boy was born to Mr. and Mrs. Alvin Theimann on Wednesday, July 7th. They also have a little girl in their family.

CHIPS OFF THE OLD BLOCK

Four Boys Start On Trip That Will Take Them To West Coast

EDITOR'S SON TO LEAVE ON EXTENSIVE WESTERN TRIP

Ray Jorgenson Jr and his cousin, Bob Liebendorfer of Mason City expect to leave tomorrow morning (Thursday) on an extensive trip that will take them to the west coast

From Klemme the boys will drive to Pawnee City, Nebraska to spend a few days with Bob's grandmother The boys will make a few more stops in Nebraska and Kansas visiting relatives before going to Kansas City to begin the first part of the trip west

At Kansas City they will be joined by their cousins Sheldon Mendell of Lincoln Nebraska and David Chapman of Kansas City, and their grandfather, Titus Davis, also of Kansas City

Mr Davis and his four grandsons expect to leave Kansas City Monday morning for Denver Colorado where they will spend a week in company with their uncle Jack Davis, seeing the mountains and many parks in that vicinity

From Denver they head north for the Black Hills where they will be entertained for several days by the Editor's brother, John Jorgenson

Leaving the Black Hills their next stop will be at the Yellowstone Park and from there they drive to San Francisco After seeing the sights there they will head for Los Angeles, taking in the Yosemite Park and the Sequoia National Park

At Los Angeles they will visit their cousin, Don Davis and will take in the many sights around there and will plan an ocean trip The boys have also planned to drive down into Old Mexico for a few days.

On the return trip they will see the Grand Canyon National Park and Boulder Dam Their return trip will take them through Neveda, Arizona, New Mexico, Oklahoma and up through Kansas to Kansas City They expect to return about the first week in September

About the time you make both ends meet, somebody moves the other end

SERVICES HELD AT HOME AND AT GOLDFIELD FOR WILLIAM DUITSCHER

Died July Fourth; Left Wife And Two Children Besides Other Relatives And Friends

The funeral services of William Duitscher were held Tuesday, July sixth at his home east of Klemme and in the Baptist Church at 3 00 o'clock in Goldfield Rev Eaton of Eagle Grove had charge of the service and was assisted by Rev Carl Knutson Interment was made in the Goldfield Cemetery

Obituary

William Duitscher was born on the old home place north of Holmes September 18, 1891 Here he spent his young manhood with his parents, Ben and Josephine Duitscher, who have both preceded him to the Home over there where there's no parting

He was married to Mayme Matson on January 14, 1925 To this union two children were born A son, Arnold Berand, and a daughter, Janice Arlene He was a loving father and husband and made many friends in the neighborhood, being always ready to give a helping hand to those in need

He leaves to mourn his parting his dear wife and two children Also three brothers and five sisters His oldest brother, Pete, preceded him in death about two years ago The brothers surviving him are Art, Ben and Joe Duitscher, of Clarion The sisters are Blanche and Anna Matson, of Goldfield; Gertie Bronluwe, Clarion, Engle Jones Ottumwa and Ella Carlson, Mankato, Minnesota

A large number of other relatives and friends also will miss him greatly He passed away the morning of July 4th at 6:30 at his home near Meservey

Every medical care and loving kindness to him was of no avail

We will be still and say: "Lord, Thy will be done."

Card Of Thanks

We wish to express our gratitude to our neighbors and friends for the many acts of kindness shown during the illness of our husband and father and for the beautiful floral offerings.

Mrs Mayme Duitscher
Arnold and Janice

Cash Prizes Given Away After Show Each Week

CORN RECORDS RECALLED

Carl Notes Reasons Why Crop Is King Of Iowa Production

DES MOINES — With the promising 1937 crop now bursting in tassel, Leslie M Carl, federal agricultural statistician, leafed through his records and noted some reasons why corn is "king" of Iowa crops

The state's premeir crop has had an on-the-farm value of more than $200 000 000 in 18 years since 1912 his records showed The December 1st farm value of the crop first passed the $200,000,000 mark in 1913

Other years in which the crop has been valued at more than that figure were 1914, 1915, 1916 through 1020 1922 through 1926, 1935 and last year

The records also showed:

Corn brings in more income than all other crops combined in keeping with the farmers' livestock problem, most of the corn crop is husked or snapped for grain Usually more than 90 per cent of it is harvested in that manner The balance of the crop is out for silage or fodder or hogged down

From 1904 through 1936 the crop was valued at more than $100,000,000 each year except 1932 when the record breaking yield of 509,707.000 bushels was valued at $61,141,000 The average yield in 1932 was 43 bushels an acre and the on-the-farm price December 1st was 12 cents a bushel.

Annually about a third of the land on Iowa farms is planted to corn alone A relatively small percentage of the corn produced in Iowa is shipped out in it's original form Most of it is marketed in the form of hogs, beef, pork or lard.

METHODIST LADIES AID HAD SUCCESSFUL ICE CREAM SOCIAL

The Ladies Aid Society of the Methodist Church sponsored an ice cream and cake social which they held at the vacant lot east of the Wellemeyer building Saturday evening The ladies report they took in $57 from the sale of ice cream, cake and pie The ladies made 27 gallons of ice cream for the occasion and sold all of it

LITTLE BOY SUFFERS PECULIAR ACCIDENT

Denny, 17 month old son of Mr. and Mrs Levi Ridder, was the victim of a peculiar accident Saturday afternoon Denny was getting ready for his afternoon nap and evidently dropped his bottle on the floor, breaking it Then he tumbled out of his bed striking his head on the broken bottle A local doctor had to take five stiches to repair the damage done to Denny's head, but at this writing he appears to be making a good recovery from his experience

AUXILIARY ELECTS OFFICERS FOR THE COMING YEAR

The new officers for the local unit of the Legion Auxiliary are:

Pres., Mrs P. W Johnson; Vice Pres., Mrs D Schwichtenberg; Historian, Mrs Wm. Kirkwood; Chaplain, Mrs. Elmer Arnold; Serg At Arms, Mrs Paul Grange

The Executive Board is composed of Mrs Herman Paul, Mrs. Wallace Pavey and Miss Lydia Bock.

BAND CONCERTS ATTRACT LARGE CROWDS EACH WEDNESDAY NIGHT

Entertainment Is Sponsored By Klemme Business Firms

The open-air talking moving pictures on each Saturday night brings a large crowd to Klemme and the movies have proven to be a popular feature each week.

The first installment of an exciting serial was started last week and this proved a popular attraction to the regular run of pictures Following the picture show each Saturday night, cash prizes are given away at the open-air theatre.

Concerts On Wednesdays

The Klemme Band, under the direction of Martin Elstad, has made rapid progress and has provided up-to-date concerts on Wednesday evenings Those who like fine music will appreciate this special feature on Wednesday evenings

Exchange Concerts

This week the Goodell Band, directed by Miss Phillis Dougan, will provide the music in Klemme, while the Klemme Band will go to Goodell to put on a concert there It is also planned to have both bands play together here and at Goodell at a later date.

Business Men Back Of Entertainment

The business men of Klemme are providing enertainment on the two open nights as a means of expressing their appreciation of your patronage The really big show will be given September 13 and 14 when the Jay Gould Attractions will again come to Klemme.

Klemme Farmer Improving After Illness and Major Operation

Aaron Stromer, Liberty township farmer, who has been ill for several weeks in a Mason City hospital and who was the subject of a major operation, is making a good recovery and expects to be able to return to his home the latter part of the week,

Funniest jokes of Hollywood's No. 1 "Gagman," Boasberg, who made millions laugh and died telling a joke. Read this in the AMERICAN WEEKLY, the magazine distributed with NEXT SUNDAY'S CHICAGO HERALD AND EXAMINER.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building Washington, D. C.

Washington.—I believe it was President Grover Cleveland who made the very epigrammatic statement that "I will take care of my enemies; but please save me from my friends." The distinguished Democrat, Mr. Cleveland, recognized one of the gravest dangers that besets politicians and it was in this connection that he made the famous remark.

President on the Spot

Lately, I have been thinking that President Roosevelt is getting into the spot—if, indeed, he is not already behind the eight-ball—where he must have some protection from his friends. He faces a condition with which some observers fear he may not be able to deal as successfully as has been his record.

The thing that has put Mr. Roosevelt in a bad political spot is the outburst of Gov. George H. Earle of Pennsylvania. Governor Earle, it was, who burst forth recently with a declaration that Mr. Roosevelt must run for a third term. There are "no men in the Democratic party or any other party who reach knee-high stature mentally or morally to Franklin D. Roosevelt," according to Governor Earle's appraisal of the present Executive. Governor Earle's record in Pennsylvania is that of an avid New Dealer. He has followed the Roosevelt footsteps in every specification and he has maintained a constant gunfire of chatter in support of the President and his policies.

The activities of the Pennsylvania governor have been so constant that it led one observer to remark the other day that Governor Earle apparently wanted to be the first man on the Roosevelt bandwagon for 1940. This, of course, had reference to the priority given in political appointments after Mr. Roosevelt became President to those Democrats who had been supporters of Mr. Roosevelt before the Chicago convention that nominated him.

But instead of being flattered by the pronouncement by the agile Pennsylvania governor, I hear from authentic sources that the President was somewhat embarrassed. Certainly, a good many of the New Deal wheelhorses are embarrassed because they can see how the Earle declaration may be used to explode various things politically as Mr. Roosevelt goes through his current term.

However that picture may develop, the fact remains that no President ever has served a third term in the United States. It is a precedent established by George Washington and rigidly adhered to. Thus to have "my friend George" declare Mr. Roosevelt in the market for a third term at this particular time constitutes a bad political error. This is true because at the moment there are more cries of personal dictatorship being voiced in this country than has happened since congress gave the President all of the extraordinary powers that he holds.

* * *

There is, however, another side to the story concerning Governor Earle. There are many who do not believe Governor Earle is stupid, politically. These persons hold the conviction that the Pennsylvania governor knows exactly what he is doing in promoting Mr. Roosevelt for a third term at this time. Their reasoning is to the effect that it will be impossible to renominate and reelect President Roosevelt for a third time, however much the President may want the job again. This same group contends that it would be fatal to the liberal movement for Mr. Roosevelt to take any steps in this direction although there are a goodly number of people who are convinced that he wants to break this precedent as he has broken many others.

Playing Politics

In consequence, according to this line of reasoning, Governor Earle is playing his own game of politics. Hoping that the lightning may strike Governor Earle of Pennsylvania, Governor Earle is promoting Franklin Roosevelt for the job that Governor Earle wants.

It is plain to see that, by urging renomination and re-election of President Roosevelt, Governor Earle avoids the barbs and bludgeons that would be certain to come his way if he were to admit that he is a candidate thus far in advance of 1940. Someone suggested that the governor wanted Mr. Roosevelt to be the objective of the brickbats until that happy day when the President would step aside and label Governor Earle as the crown prince of the New Deal.

* * *

However, in talking about 1940, there are basketsful of men who would be most willing to dedicate their lives for four or eight years in the White House that they could perform the great service of carrying on the principles laid down by Franklin Roosevelt. It will be a great sacrifice, of course, for most of them to leave their present jobs and run for the presidency. But a good many of them already have let it be known that they are prepared to make this terrific sacrifice in order to serve their country.

Many Are Willing

I do not attempt to enumerate all of them. In any discussion of current politics, however, one cannot overlook such men as Henry Wallace, now secretary of agriculture, or Governor Murphy of Michigan or Paul McNutt, now high commissioner for the United States to the Philippine commonwealth. One must not forget the ambitions of Governor Davey of Ohio, or Senator Barkley of Kentucky—all good New Dealers and true. Then, I think, one ought not omit reference to Jesse Jones, chairman of the gigantic Federal Reconstruction Finance corporation, who would leave his vast business interests, if necessary, to serve in the White House.

Nor would I be fair to all of the budding candidates if I omitted reference to John L. Lewis who has been claiming such yeoman service in behalf of the working men through the Committee for Industrial Organization which is violently antagonistic to the American Federation of Labor. Mr. Lewis, of course, will deny that he ever intends to desert labor even for the presidency, but there are a good many people who think that Mr. Lewis has some little thought concealed in his heart—something of a wish or a hope that he, too, might find himself in the direct path of the political lightning from the Democratic national convention in 1940.

I do not know now, nor do I think anyone else knows, what the relative strength is among these various gentlemen who are exhibiting signs of a willingness to serve the nation as the Democratic candidate.

* * *

Most of those who do me the honor of reading these columns undoubtedly have had varying opinions as to why President Roosevelt held the famous love feast on the island in Chesapeake bay at the end of June. From conversations with Democratic friends in the house of representatives, I am quite convinced that not all of those who were invited to the Jefferson Island club for the meeting with the President were happy over the results. Of course, as everyone knows, the three-day session which the President had with Democrat senators and representatives was intended to placate all of the little ills and disagreements that have arisen. These congressmen with whom I have discussed the affair were not so sure that the President accomplished his purpose.

Famous Love Feast

But I am quite convinced that the real purpose Mr. Roosevelt had in holding a love feast lies much deeper. I believe that he foresees the very difficulties that I mentioned earlier, namely, the dangers of a full list of candidates for the nomination in 1940. Mr. Roosevelt is too good a politician not to move early as leader of his party to protect against that sort of thing. By dropping words in these free conferences and by making suggestions concerning the general political situation, the President was enabled to approach the problem that he foresees without disclosing too much of his hand. Only time will tell how he has succeeded.

In the meantime, one may properly call attention to the situation that has developed at the capitol, particularly in the senate. Heretofore, I have mentioned several times that strained relations existed between the President and certain leaders in congress. That condition has not improved, to say the least. Indeed, I think it is very much worse.

Probably Vice President Garner and Senator Robinson of Arkansas, and Senator Harrison of Mississippi each will deny that which I am about to say but knowledge of it is so general around the capitol in Washington that a denial will not change my conviction.

Unless I have been reading political signs wrongly for 20 years, I am convinced that the strained relationship between the capitol and the White House now embraces Vice President Garner and Senators Robinson and Harrison. The vice president has done remarkable service in behalf of the New Deal but I never have believed that he was whole-heartedly in favor of all Roosevelt policies. Senator Robinson has served as majority leader and as such has carried the hod for the President on the floor of the senate day after day, fighting for legislation which the President wanted and generally serving as Mr. Roosevelt's right hand at the capitol. My own belief is that Senator Robinson would have changed many of the administration policies if he could have done so without endangering the President's leadership of the party. Much the same can be written about Senator Harrison who has served as the chairman of the senate finance committee, a powerful unit in carrying out New Deal policies.

Ma!
I got my name in the paper!

Only Newspapers bring the news of vital interest to you

Headlines may scream of death and disaster without causing you to raise an eyebrow. But if your son gets his name in the paper — that's real news!

It isn't by accident that this paper prints so many stories which vitally interest you and your neighbors. News of remote places is stated briefly and interpreted. Local news is covered fully, because all good editors know that the news which interests the readers most is news about themselves.

Now is a good time to learn more about this newspaper which is made especially for you. Just for fun ask yourself this question: How could we get along without newspapers?

Here's What to Wear on Summer Day

By CHERIE NICHOLAS

AS TO what to wear on a summer day, simple flattering little gay print frocks, the more unsophisticated the smarter, are literally "running away with the show." To emphasize the summery look comes into the style picture hats that are very wide of brim. These hats are of straw, or felt, or that which is very, very new, they may be of stitched fabric, pique, linen or layer upon layer of stiffened silk chiffon.

In the illustration we are showing to the right a most wearable shirtwaist-type spectator sports dress in a silk crepe with a neat Paisley patterning on a blue ground. The panel front in the skirt has pleats on either side. The conservative styling of this dress together with the quality texture of the silk gives "class" in the eyes of those who recognize the better fashions. The fabric being a sterling pure silk dye can be depended upon as a standby when in critical moments the "what-to-wear" problem presents itself. The wide-brimmed hat of burnt straw adds the final touch of distinction. Another token of chic is the fact that this hat is crownless, and hats in fashion's realm are going crownless at an astonishing rate.

Speaking of smart millinery, there is a tendency, whether hats are large or small, to wear them in an off-the-face manner that reveals a smooth brow framed with smartly coiffed hair. The hat pictured in the oval inset is a Jean King creation in glistening white toya, a cool papier-mache straw that is just the thing for midsummer wear. A velvet band in soft blue finishes its graceful line in an artful bow at the nape of the neck. With your most summery frocks a hat of this type will carry a convincing message of chic and charm.

Designers have entered into the spirit of cottons wholeheartedly this season. It is truly a revelation to see what wonders they are doing with both sturdy and dainty sheer weaves, tuning their fashioning to formal as well as informal wear. Printed cottons especially were never more beautiful. A special feature is being made of printed cotton voiles, some of which are simply entrancing both as to their patterning and their exquisite sheerness. These voiles are so inexpensive too, women who do their own sewing can have the prettiest sort of frocks at trifling cost.

The attractive summer girls standing to the left and center in the illustration are wearing charming cotton dresses as fresh and sweet as an old-fashioned garden. The cottons that fashion them won't shrink because they have already been scientifically shrunk. The dress to the left has wee little pleatings on the skirt and is a pretty style to copy if you are making your own.

The dress centered offsets its gay print with a dainty lace-and-embroidered lingerie collar. There never was a time in fashion history when accessories counted for as much as they do this season. Not only is the most feminine looking neckwear a necessary luxury but in more ways than can here be enumerated the emphasis is placed on the value of choosing smart tuned-to-the-costume accessories. An intriguing use of bright cotton prints is made in the clever halters which are selling at the neckwear counters so briskly. These halter vestees with their long tie-sashes are making a gesture in economy that enables the woman with a most limited budget to look well dressed at all times.

VIVID FLORALS

By CHERIE NICHOLAS

Simple daytime frocks neatly tailored of sturdy wash fabrics patterned with vibrant florals are the call of the hour. One should include several frocks of the type pictured in the summer wardrobe, especially since they are so easily made, and alluring materials guaranteed not to shrink are so easily available. This well-tailored frock is strewn all over with exotic flowers. It is a dress that will tub any number of times and never shrink a mite.

SHORT DANCE DRESS IS NEV'EST FASHION

Why not wear the new short dance dresses before anyone else does? Schiaparelli introduced them, Paris immediately began wearing them, and New York is looking them over with great interest. They may be the beginning of the end for long evening gowns, as some stylists say, but the end is a long way off.

These short frocks for long evenings are very spirited and gay and young. Their swirling hemlines are more than five yards around. College girls will take them back to school this fall. The length may be anything that suits you, from six to twelve inches from the dance floor.

Tyrolean Influence Is Spreading to Accessories

Gay colors cross the border of the Tyrol—that little mountainous district in western Austria—to fashion circles in all parts of the world. From the shaving brush feather in madame's sport hat to the embroidery on the hem of her skirt, the Tyrol influences her wardrobe.

The latest and most novel Tyrolean accessory—prong initials for the handbag—were just brought out for Palm Beach wear. They are made up in many colors which madame mixes with gay abandon. Tangerine yellow, followed by red and hunter green is a garish combination inspired by the peasant girls' costumes.

The largest of the new Tyrolean initials is reminiscent of the bold lettering on children's blocks. Cut out in metal, the initial is covered over with shiny patent leather, or, a calf grain. Strung across the flap of a white pastel bag, these initials speak a dashing personality.

'Way Back When

By JEANNE

FAMOUS SONG WRITER KEPT A BOARDING HOUSE

I WONDER how many many women who are just simple little housewives today would be famous, if they had the time to take from demands of their homes and families.

Carrie Jacobs Bond made her success because circumstances forced her to change from a housewife to a business woman. She was born in Janesville, Wisconsin, in 1863. She liked music and studied piano from childhood until she married at the age of eighteen. When she was twenty-five, she remarried Dr. Frank L. Bond, who took a sympathetic interest in her music and encouraged her to compose. She wrote one song, "Is My Dolly Dead?", at that time and it was accepted; but the work was merely a hobby with her and she did not produce more. She devoted her time and efforts to being a good housewife and mother for the Doctor and her little boy. Then, Dr. Bond was killed in an accident and she was left an invalid without

money, and an eight-year-old son.

Carrie Jacobs Bond did not lose heart. She rented a large house in Chicago and took in roomers. She made some money as a dressmaker and painting china. They were so poor that her son had to go to work soon thereafter as a delivery boy. Ambitiously, she devoted all her spare time to composing songs. Through financial support from a woman singer she started a small music publishing house, writing the words and music, and painting the cover designs of the songs she printed. She even promoted the songs herself, and little by little she won success. Today the songs she wrote are remembered and sung throughout the world, "A Perfect Day," "I Love You Truly," "His Lullaby," "My Son," "Do You Remember?" and others.

* * *

SENATOR PITTMAN RUSHED TO ALASKA

SO OFTEN gold buried far away in some inaccessible part of the world looks easier to get than fortunes awaiting us right at home. Senator Key Pittman of Nevada started his career on a wild goose chase for gold, but came back to make his success in the occupation for which his schooling fitted him.

Key Pittman, who was born in 1872, attended law college in Tennessee. His career at that time looked as though it might consist of practicing law, obtaining an appointment as district attorney, and forging ahead in politics with the United States senate as a goal. But young Pittman could not see it that way, and the reason was the Alaskan gold rush in 1896. He rushed up to the Klondike! And what happened? Key Pittman landed at Dawson just ahead of the freeze almost penniless. In Nome it is said that he worked at one end of a bucksaw

to make a living. Then, the people made him district attorney. Shortly thereafter, he returned to the United States, settling in Tonopah, Nev., where he laid the foundation of his fortune in the Tonopah Telephone company.

In 1913, Key Pittman, in his first political contest, was elected to the United States senate, where he has given a good account of himself for 24 years. His greatest interest is to better the position of silver, inspired of course by the great production of this metal in Nevada.

Stories of wealth to be won in foreign fields sound so much more alluring simply because the fields represent the unknown and seem to offer more adventure. Probably while we are pining to be in one place, the fellow who is there wishes he were in ours.

Experienced Special Pilots Guide Ships Through the Suez Canal.

Popular Idea That British Control Canal Doesn't Agree With Facts

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

THE Suez canal, thought by many laymen to be British controlled, is the property of and is operated by the Compagnie Universelle du Canal Maritime de Suez, registered as an Egyptian company under Egyptian law, with its main administrative offices in Paris. The president is always French, as are also 21 of its 32 directors and its entire secretariat and higher personnel. The general workers are a cosmopolitan group.

The canal company does nothing that it can get others to do equally well. When hand labor gave way to machine operation, various entrepreneurs were given the work of excavation and the majority of the digging was done by contractors. Part of the west jetty, made up of cement blocks worth $65 apiece, was built by contract.

The company had to construct a fresh-water canal and filtering stations in order to carry on its basic work. But it leaves the delivery of the water to others. The personnel has just three things to do: to keep the canal open, to keep the ships passing through, and to keep the records.

The maintenance of the canal and its improvements is in the hands of the works department, whose officers are first class graduates from the Ecole Polytechnique and the Ecole Centrale in Paris.

Dentistry for Dredges.

One never knows how much equipment is required in the upkeep of a canal until he acompanies a member of the works department through the shops and around the small harbor where the broken-toothed dredges come back to have their dentistry done. It looks as though every disabled or incorrigible piece of wood or metal in that part of the world were dumped about.

Compared with the works department, the traffic department has a nice clean job. One sees no clutter of papers, no bulky correspondence. The principal officers are recruited from the French navy.

There is, in addition to the watchfulness of captain and pilot, an eye on every ship that goes through the canal from the time she is sighted in one sea until she is turned loose to shift for herself in the other.

The British post office refused to recognize the canal for two years. "Too slow," they said. Yet nothing but an airplane has equalled the speed actually attained between Port Said and Port Tewfik on the canal itself. The traffic department has some little Thornycroft boats which can make the trip in a trifle over two hours and a half.

The speed for steamers on the canal is 6.21 miles an hour, but pilots exceed the limit when side winds prevent the ship from obeying her rudder at a lower speed. The canal is now 104½ miles long, jetties having added considerably to its length in recent years.

Guard Against Blasts.

During the transit of the canal two pilots are used, each making one-half the journey. They serve only in an advisory capacity, though many a captain lets the pilot handle the ship as though it were his own.

Officers of the company unhesitatingly sacrifice a single vessel to the common good. A shipload of explosives was sunk near the Port Said waterworks and a cargo of benzine in the Commercial Basin. But ships carrying dangerous cargoes are being removed farther and farther from the main anchorages and as careful a quarantine is kept against spontaneous combustion as against cholera.

Of the towns on the canal, only one existed before De Lesseps began his work. Suez, then a miserable Arab village, is now a miserable Arab town. A few apartment houses are rising on squares of salt-encrusted land which are filled in to bring them up to the level of the street. The Sweet Water canal brightens things up and flowers, fruits, and vegetables line its banks.

Clouds and the softer light that comes with them give to nondescript Suez a beauty such as many a greener, lovelier spot would envy. The upper curve of the Red Sea becomes purest emerald and beside it the tawdry town seems carved from silver and onyx. In the background, their imposing flanks mottled by shadows into a chocolate and coffee marbling, lie the barren hills of Africa.

In the middle distance gray oil tanks seem almost phosphorescent in spite of the brightness of the whole scene, and tall chimneys of the Port Ibrahim refineries rise like full-leaded exclamation points.

Suez Lady Finds Love.

Suez has little to do with the canal. It lies up a creek in which the dhows from the Arabian coast are stranded at low tide and is connected with Port Tewfik by a causeway.

Port Tewfik, like Port Said, is a by-product of the canal. When there was need for land on which to build, the dredges dumped it there.

Along the canal front runs the Avenue Helene, a shady bund with a comradely cafe or two. Nursmaids occupy shaded benches and one healthy little miss of three or four, who had fallen quite in love with Lieutenant Waghorn, stood gazing at his monument for minutes together.

Port Tewfik, gateway to the teeming East, is provincial. On the canal and hence a busy place, it is not a port at all. Ships wait in the Gulf of Suez until the pilot takes them in hand. Ships coming down the canal don't stop at Port Tewfik. They only drop the pilot and signal "full speed ahead."

Port Ibrahim is principally a haven for tankers which come there to spew up the viscous crude oil or pump forth a silver stream of refined petroleum.

To the east of Suez there was formerly a large camping ground for Mecca-bound caravans made up of swarthy Egyptians, slender Syrians, serious-faced Turks, and Moslems from Turkistan clad in wadded gowns made of bright-colored cloth like upholstery cretonnes, with their women hiding behind horsehair veils.

Presents Desolate Scene.

Now this vast expanse is deserted. A single stalking camel or a Bedouin on horseback would make it a desolate picture. Lacking the living element, it is only empty.

The first station north of Suez is Shallufa. Near the small wharf are some brightly painted buoys. At the foot of the signal mast are the canvas balls, cylinders, and cones used to signal to passing ships. Back of the homes and office is a water tank served by a windmill and provided with a filter. A few trees give sparse shade. That is all.

Along the northern half of the canal the railway runs just behind these canal stations and the station master can keep in touch with the world on land as well as the world of ships. But Shallufa is a lonely spot. The visitor is greeted like a prodigal son.

Some ships have a strict mail schedule to keep. Others are unkempt tramps whose engines need no slowing down to keep them within the proper speed. Winds sweep across the desert with tremendous force, although the banks of the canal, behind which a steamer looks like a procession of masts, protect all but the largest ships. Dredges, with barges alongside, are always shifting their position.

No One Shown Favors.

The station master knows no favorites. It may cause the captain of a great cruise ship some chaffing at table if he has to tie up and let a smudgy tramp steam slowly by. But he takes his orders from those who know the canal and would lose their jobs if they didn't. As the tide ebbs and flows between the Red Sea and the equalizing tanks of the Bitter lakes, the ship facing the current, be it ragged tramp or merchant prince, ties up.

At Shallufa from the upper deck of any decently large steamer one can trace the course of the ancient canal. Making the moderate depression more conspicuous are haircloth tents of the Beduoins, who plant grain and vegetables in its concavity. The station master of Shallufa uses a section of the ancient canal as a private garden.

When, in 1887, it was decided to use the canal day and night there arose the question of whether the canal or the ships should be lighted. The latter was decided upon. A fine experience is to lie flat on the bow above the headlight while its silver beams advance into the mystery of Asia on the one side and Africa on the other. Then another Polyphemus eye far down the canal turns its lidless stare upon one and comes silently on.

STAR DUST

Movie • Radio

By VIRGINIA VALE

THE loyal motion picture fans of the country do not want any substitute for the late Jean Harlow. Letters, telegrams and phone calls of protest poured into the Metro-Goldwyn-Mayer studio when it was announced soon after her death that her unfinished picture "Saratoga" would be refilmed with a newcomer named Rita Johnson in her role.

In no uncertain terms the public demanded that Jean's last picture either be released in its unfinished state or kept from view. Decision on the matter is being postponed, but when the public takes such a whole-hearted stand on any question, you can be sure that the studio will not run the risk of offending them. "Saratoga" will probably never be seen.

—★—

Loretta Young's household is just about the happiest, busiest establishment in all Hollywood just now. She has adopted two little girls, Jane aged three, and Judy not quite two, and is busily conferring with architects about adding a wing to her house. Just to add to the air of Old Home Week, her sister, Sally Blane, and Sally's husband Norman Foster have come with their youngster to stay at Loretta's house while they re-build theirs.

Loretta Young

—★—

All the time that Irene Hervey was under contract to M-G-M, the executives just couldn't see her when a good role in a big picture came up for casting. She married Allan Jones, her contract expired, and it looked as if she meant to retire from the screen. She was just waiting for the right part, though. Along came the enterprising Grand National company with a role for her in "The Girl Said No," audiences raved about her at the preview, and what company rushed to get her services then, do you suppose? None other than her old studio.

—★—

Lily Pons is very busy these days with her radio program and an extensive concert tour, to say nothing of her frenzied trips up to her home in Connecticut to see how the garden is doing, but she keeps in touch with the R-K-O studio every day to get reports on the plans for her next picture.

—★—

It is all of a year now since Jack Dempsey and his restaurant were shown in a motion picture, typifying the very center of New York sporting and night life, so M-G-M is going to remedy that omission right away. He and his headquarters will appear in "Big City" which stars Spencer Tracey and Luise Rainer. Jack won't go to Hollywood, though; his scenes will be made in a studio near New York.

—★—

The best picture of the week, and a frothy light extravaganza for a warm evening it is too, is "Woman Chases Man." Miriam Hopkins is the star and dear old Charles Winniger plays a giddy role delightfully. The picture is farce that verges on slapstick most of the time, and Joel McCrea plays the thankless role of the one fairly sensible human in the piece. It isn't, frankly, nearly so good a picture as Claudette Colbert's grand comedy "I Met Him in Paris"—but until that superb bit of entertainment comes your way, "Woman Chases Man" will keep you amused.

Miriam Hopkins

—★—

ODDS AND ENDS—Grace Moore postponed starting her next picture for two weeks so that her leading man, Melvyn Douglas, could go to the Salzburg Festival, where his wife is going to sing . . . Ann Sothern's sister, Bonnie Lake, has sold a song that she composed to Buddy Ebsen . . . That loud studio laugh you hear intermittently through Walter Winchell's Sunday night broadcast is W. C. Fields, his favorite visitor. Walter draws an audience that is an all-star cast . . . Hazel Glenn who sings nursery songs on the Dr. Dafoe broadcast has a fan letter that she wouldn't exchange for a diamond bracelet. The good doctor wrote her that the quints had listened to one of their broadcasts and expressed delight over the lady who sang . . . The make-up experts are bullying Stokowski now. After all his many years as an orchestra conductor, waving his tousled mane, he has been ordered to grease his hair because otherwise it doesn't look dignified . . . Deanna Durbin tried to console him by telling him it made him look like a juvenile . . . Since Carole Lombard is not available, Fred Astaire is now trying to get Loretta Young to play opposite him in his next picture.

CHILDREN WILL WADE

Many children living near lakes and streams seek relief from the [illegible] heat by wading It is fun for the youngsters and a good clean sport It should be encouraged but not until we have instructed children how and where to wade

Fear of wading in strange waters could be discouraged If children [illegible] acquainted with dangerous [illegible] especially in strange [illegible] where [illegible] who are not Some are especially dangerous Many high waters of the spring have steep bottoms have changed greatly There are deep holes, steep-offs shifting sand bars and hidden snags One foremost thought to save the children is never to wade downstream The force of the flowing water [illegible] dangerous factor To step against the current is often a difficult thing to do In order to make the step-off [illegible] gradual and the water [illegible] the current in his favor [illegible] back up in time to save himself

This caution goes for adults as [illegible] many a fisherman prefer to [illegible] on using the flyrod All [illegible] suitable stream in Iowa [illegible] this purpose [illegible] wading fisherman [illegible] the stream [illegible] to himself Lots there will be more fishermen and children wading Let each and everyone using the streams and lakes for wading purposes offer guidance to others, especially children, in hope that the number of drownings in 1937 might be reduced to a minimum

ITEMS OF INTEREST FROM ELL TOWNSHIP

Mr and Mrs. Verner Priebe and Mrs Louise Rosendahl visited at the Werner Schlawin home Sunday evening

Mr and Mrs Awalt Jahnke and son were Monday evening visitors at the Henry Theimann home.

Mr and Mrs Carl Swanson are the parents of an 8¼ pound baby boy born Saturday Mrs Harm Menke is assisting with the work

Mr and Mrs A E Alford of Blairsburg, Mr and Mrs Herman Stromer and daughter, Nellie, and Mr and Mrs Verner Stromer visited Aaron Stromer at the Mercy Hospital at Mason City Sunday afternoon They report Mr Stromer as feeling fine and that he expects to return home the latter part of this week

Mr and Mrs Lewis Neuberger and son, Lester, Donald Neuberger and sons visited at the Clarence Lemke home Sunday evening

Mr and Mrs Martin Barz and daughter visited at the parental Herman Barz home Monday evening

4-H Girls Invite You To Lawn Party

The 4-H girls of Avery township are having a lawn party at the home of Mrs August Trampel, Friday evening, July 16th at 8 00 o'clock

After a musical program lunch will be sold The Public is invited

COOK VEGETABLES SIMPLY

Simple cooking is recommended by nutritionists at Iowa State College for summer vegetables.

Vegetables fresh from the garden, well-cooked, need no disguise of fancy recipes of sauces. The homemaker will spend as little time as possible in a warm kitchen

Vegetables picked when they are of the proper size will have good flavor and texture. Beans and peas that have grown to large cannot be cooked soft and tender by any method Young beans, carrots, beets, peas and turnips make delicious dishes adorned with nothing else than butter or a bit of cream or milk

Overcooking ruins many a good fresh vegetable Vegetables are not meant to be cooked soft and mushy but should retain some of their original crispness Green vegetables are cooked uncovered If haste in preparation is important, the cover may be left on providing that is lifted occasionally to allow escape of the volatile acids that change the bright green color to drab

PIGS GAIN FASTER BUT AT NO LESS COST WITH SOAKED OATS

Soaking oats to feed hogs will induce them to eat more grain and result in faster gains, but except for speeding up gains there will be no saving due to soaking, according to C C. Culbertson, in charge of feeding experiments at Iowa State College.

Many letters are coming to Mr Culbertson asking whether or not it would be profitable to soak oats for the pigs He advises soaking if one has sufficient time to do it But the practice simply induces the pigs to eat more and gain faster as a result of eating more

If pigs are merely being carried along on oats with no thought of pushing them, soaking oats then would have no advantage

GOOSE BANDED IN IOWA KILLED IN ONTARIO

During the spring of 1934 an illegal shot cripled a Canada goose on the Missouri River near Sioux City The bird was nursed back to health by a Conservation Officer and it was banded and released in June of that year on the small artificial lake on the airport area at Des Moines. It remained at the lake for several days and then disappeared

A report from the Department of Resources at Ottawa relates the finding of the Iowa band on a goose shot at Hannah Bay Ontario, during the fall of 1936 The report was received only recently when the Canadian official requested information about the history of the bird

SEA THREE MILES DEEP

From their camp on the ice floe near the North Pole, the four Russian scientists plumbed the depth of the sea below them Their measurements showed the Arctic waters to be 14,075 feet deep. Just what the Russians hope to gain by laying claim to this waste of ice and nearly 3 miles of water under it is hard to understand

1st Man· "Didja hear about my mother-in-law? She gave a sick guy a pint of her blood for a transfusion."

2nd Man· "How generous of her! And did the patient recover?"

1st Man "Naw— he froze to death!"

It's smart to be careful—death takes no holday.

NEWS FROM GOODELL AND VICINITY

Mr and Mrs. Matt Smith and daughter, Ruth spent Sunday evening at the J J. Cook home.

The Farm Bureau ladies held a demonstration meeting Wednesday afternoon at the home of Mrs Jule Cook Quite a number of ladies were present and all enjoyed the lesson.

Mrs. O. Evenson and children went to Fertile Wednesday where she attended a luncheon at the home of her sister, Mrs. Haugen.

Mrs C. A Arnold of Klemme was a business caller here Wednesday.

Mr and Mrs. Thomas Quigley are the parents of a fine baby boy born to them on Thursday morning.

Billie Brooks of Bird Island, Minnesota is visiting relatives and old friends here and at Belmond

Mrs Cashman and Mrs. Hofer entertained the Rosary Society ladies at the former's home About thirty ladies attended Refreshments of ice cream and cake were served

Stanley Ahlstrom of San Diego, California is spending his furlough of two weeks with home folks

Grind Rye For Hogs

Many Iowa farmers this year want to feed rye to hogs, but some of them have never had experience in it's use and they are putting the problem up to animal husbandry men at Iowa State College.

Rye is not especially palatable to hogs, but it can be fed, according to C. C. Culbertson, in charge of feeding experiments. He says it should be ground to medium fineness and that it can best be used mixed with other grains.

Furniture Gave Sheraton Alibi for His Failures

No more colorful figure walked the streets of London during the late Eighteenth century than Thomas Sheraton He was a bitter, disillusioned man — often complaining that he had not had "the advantages of a collegiate education," therefore providing himself with an alibi for his failures. He was early an itinerant preacher and a vitriolic pamphleteer, scolding his contemporaries for their vices or lack of virtues, states a writer in the Washington Post.

The designing and building of furniture was the most fruitful activity a gentleman could undertake during the last quarter of the Eighteenth century and Sheraton quickly turned his hand to it. He never maintained a shop but set himself up as a teacher of art and craftsmanship, writing the "Cabinet Maker's and Upholsterer's Drawing Book." In his writing he cannot conceal his bitterness toward his successful contemporaries, particularly Robert Adam, the king's favorite, and he reveals himself as a man who thought his genius was being wasted even among a brilliant society.

Thomas Sheraton featured mahogany in his writings and extolled its beauty and durability in no uncertain terms. He provided many valuable hints on the use of this wood in cabinet making and advised on its cutting, finishing and decorating.

Sheraton was the last of the great Georgian masters and this work performed a sort of good will ambassadorship between England and America after the bitter Revolutionary war. George Washington's home, after he became President, was furnished almost exclusively in furniture designed after the Sheraton school.

Foxhounds Were Known in America as Early as 1650

It is a known fact that American foxhounds have shown much variation in different localities, but in recent years there has been a steady trend toward developing a more standard type, relates an authority in the Chicago Tribune.

The basic strains of our American hounds go back many centuries. According to some authorities, the first mention that we have of hound importations to America appears in a diary belonging to a member of De Soto's party.

This same authority is responsible for the following interesting bit of information· In 1650 there arrived in America (east coast) a colonist who brought a big pack of hounds with him. These dogs were the foundation of several strains of American hounds. Then we must consider the important part played by Thomas Walker of Virginia in contributing to the development of the American foxhound. And George Washington helped in the development of this sporting breed. He imported a number of hounds from Europe, and we read that their voices sounded "like the bells of Moscow!" We have heard some musical hounds, but none that fitted that description. Later importations were responsible for the foundation of the Henry-Birdsong and Trigg and other strains.

Louisiana Parishes

Louisiana is the only state not divided into counties, though the District of Columbia should also be mentioned, it having tracts and police precincts but no counties. Louisiana is divided into 64 parishes which correspond to counties in other states. When that territory was purchased from France, Governor Claiborne and his legislative council divided it into 12 cantons or counties, but the lines between these were so indefinite and the size so varying and disproportionate that in 1807 it was found necessary to redivide the territory into 19 parts. These were called parishes, as the old Spanish ecclesiastical districts were used as the basis of division. The name was retained for further districts subsequently formed by subdivision of some of these.

Platinum Third Heaviest

Platinum is the third heaviest element and generally sells for five times as much as gold. It is absolutely rustless, an excellent conductor of electricity, and is not attacked by simple acids. This makes it valuable for crucibles and other vessels used in laboratories. Expensive jewelry is made from platinum. Up to the middle of the Nineteenth century, before its value was realized, platinum was actually used to adulterate the silver in Russian coins. But all these coins long ago were called in and the platinum extracted. It was also used in the Ural mountains to make stovepipes, pots and pans.—Washington Post.

Academy Built by Lottery

A century ago in Ohio schemes of chance were accepted by the people to the extent that even education was financed by lotteries. For example, a petition circulated in St. Clairsville in the second decade to provide for the establishment of an academy by a public lottery was signed by the community's leading citizens, including doctors, lawyers, magistrates and even clergymen. The petition requested the general assembly to authorize a public lottery "to raise the sum of $7,000."

Yarmouth Port Founded by 80 Cape Cod Pioneers

The old customs port of Yarmouth, Nova Scotia, was founded by a group of eighty hardy pioneers from Cape Cod, Massachusetts, in 1761.

The tract of country surrounding Yarmouth was originally known as Cap Fourchu—the name bestowed by Champlain in 1604, meaning "forked" or "cloven" cape. In 1759, after the capture of Quebec by Wolfe, a number of New Englanders migrated north, and a grant of land on the western tip of Nova Scotia was made to prospective settlers from Yarmouth, Massachusetts, who named the new site after their own town Building operations got under way in June, 1761, with the arrival of the actual colonists from Sandwich, Cape Cod.

The first families to arrive, the Landers, the Perrys and the Ellises, came in a fishing shallop, laden with their household effects Other families soon followed. The first winter was very severe, and, to add to the discomfiture of the pioneers the ship commissioned to bring their winter supplies failed to arrive, and the little settlement subsisted on fish and gifts of venison from the friendly Micmacs.

In the spring eleven of the seventeen first families returned to New England. However, others, mostly fishermen, took their places, and the settlement prospered. In three years the first ship was launched, and so began the industry that was to make Yarmouth-built ships famous on the seven seas and Yarmouth sea captains known the world over Her great clipper ships brought prosperity, and the little fishing village grew into a busy port,

Early Plows Fell Short of Type That Came Later

The early plow fell far short of the dictionary definition—"An implement to cut, lift, invert, and partly pulverize the soil." Even as late as 1550 plows failed to cut and turn a clean furrow. "They rooted, but would not invert, the soil."

In the South the shovel plow was used almost universally until some years after the Civil war. Records in the Bureau of Agricultural Engineering show they were "made of wrought iron in the shape of * * * an Irish shovel, with a loop on the backside for the stock to enter. They generally are made by the blacksmith on the plantation where they are used They are drawn through the ground with one horse or a mule * * * throwing the dirt both ways It is pretty much like dragging a cat by the tail"

The "Old Colony" plow used in the United States about 1820, reports the 1899 Department of Agriculture Yearbook, left furrows standing up "like the ribs of a lean horse in March. A lazy plowman might sit on the beam and count every bout (circuit) of his day's work."

Route of the Pony Express

The Pony Express has been called the most spectacular episode in the carrying of the mail since Genghis Kahn established a courier system from Hungary to the China Sea to keep in touch with the outposts of his far-flung empire. While the American route was nothing like the length of its earlier counterpart, the putting it in service was nevertheless a stupendous undertaking It extended from St Joseph on the Missouri River to Placerville, California a distance but little short of 2,000 miles through a country which was practically uninhabited, except for roving bands of hostile Indians and which included the prairies of Kansas and Nebraska, the mountains of Wyoming and Utah, the desert of Nevada and, as an added obstacle, on the western end the Sierra Nevada of California along the route taken by the first settlers in the Oregon country, the Mormons and afterward many of the gold seekers in California.

"According to Hoyle"

The Hoyle referred to in the phrase "according to Hoyle" was Edmond Hoyle, a writer on games, who was born in England in 1672. Little is known about his life Tradition says he was educated for the bar. At any rate, he went to London where he spent much of his time writing on games and giving lessons in card playing, especially whist He published a book in which he systematized the laws and rules of whist, a game on which he was considered an authority as late as the middle of the Nineteenth century. His name became proverbial as an authority on games. Playing a game "according to Hoyle," came to mean playing it fair and according to the recognized rules. Hoyle died in London in 1769.

Undersecretary of State

The undersecretary of state is the principal assistant of the secretary of state in the discharge of his various functions, aiding in the formulation and execution of the foreign policies of the government, in the reception of representatives of foreign governments, etc. In matters which do not require the personal attention of the secretary of state he acts for him and in his absence becomes acting secretary of state. He is also charged with the general direction of the work of the Department of State and of the foreign service.

DID YOU KNOW IT

Do you know that today corn is used in the manufacture of explosives and cosmetics, in the laundry industry, in the textile industry, in the confectionery business, in the manufacture of colors, in the adhesive, asbestos, and oil cloth industries, in paper manufacturing, in the manufacture of moving picture films, and in cast iron and steel foundry work? Do you know that the eraser at the top of your lead pencil and art gums are made from corn? It is found in pharmaceuticals and cosmetics; it is used in the manufacture of patent leather, is is used in the brewery business, in the ice cream business, in the alcohol and liquor business A great deal of it is used in the manufacture of rayon and various chemicals, such as sodium lactate and calcium lactate It is used in the processing of vinegar, in the manufacture of yeast Then there are other foods for human consumption, such as corn flakes, corn oil, corn sugar, and of course we all know that corn starch comes from corn After a great many of these chemicals are taken out, there remains corn meal and corn gluten feed for livestock

Soviet Russia Tries to Explain Why Eight Generals Were Shot

But, as in Case of Most Red Intrigues, Explanations Border on Fantastic.

By WILLIAM C. UTLEY

RUSSIA—land of intrigue, struggle and upheaval—is today no freer from the plots and counter-plots on the grand scale which have characterized it over many decades than it has been in the past. And conspiracies today are dealt with by the Communist government with as much dispatch as they were in the days of the Czars, or more. Explanations today are, as they were in the past, largely a matter of conjecture, and most of them are magnificently fantastic.

When, in the most recent "purge" of Red traitors, seven generals and a marshal who was very nearly the executive head of the whole Russian army, were summarily tried, lined up against a wall and shot, a typical, wild explanation of the act filled the early accounts. It was reported, rumored or "secretly known to the Kremlin" that the eight had been leaders of a mass plot, involving hundreds of thousands of Russians, to turn over a generous helping of western Russia to "an enemy power," Nazi Germany. Of course, when the perspective of even a few days' time permitted a clearer view of the situation, the "explanation" was wholly rejected.

Ordinarily little or no official government explanation would be attempted, but the prestige of the Russian army received such a body blow by these latest executions that a semi-authoritative one was concocted. You can take it or leave it, for it is almost as fantastic as the first one.

Masses Must Support Plots.

It involves not alone this one act, but the entire series of some 250 military trials and executions which have taken place in Russia over a period of less than three years, climaxed by the deaths of Marshal Mikhail Tukhachevsky and his seven generals in Moscow on June 12. It is ascribed to the discovery by the Kremlin of a single huge conspiracy against the state.

To anyone who has followed modern Russian history at all it is apparent at once that no serious conspiracy to overthrow the existing regime could be successful without mass support. But how to gain the sympathy of any great mass of citizens, without spreading the great secret so widely that its existence must be obvious, was a poser indeed.

The one unit of people with whom such a plan could hope to be accomplished was the Red army This highly trained, massive organization had been well-drilled in discipline and would obey the dictates of a few key men among its leaders without question. The theory of the conspirators, then, was to win over a few army men in the key positions of command, who could be relied upon to control the movements of the army. And this, according to the explanation, is what the civil conspirators were successful in doing.

Soviet authorities discovered the plot among the civil conspirators, and it was a simple matter to learn then that it had been extended to a handful of important army officers. Accordingly, a strict espionage system was set up to gather evidence in army quarters. The executions followed quickly. It is believed by some close observers that the Soviet government was tipped off to the plot by the French secret service, interested because of the alliance between the two communist nations, but this has never been admitted officially.

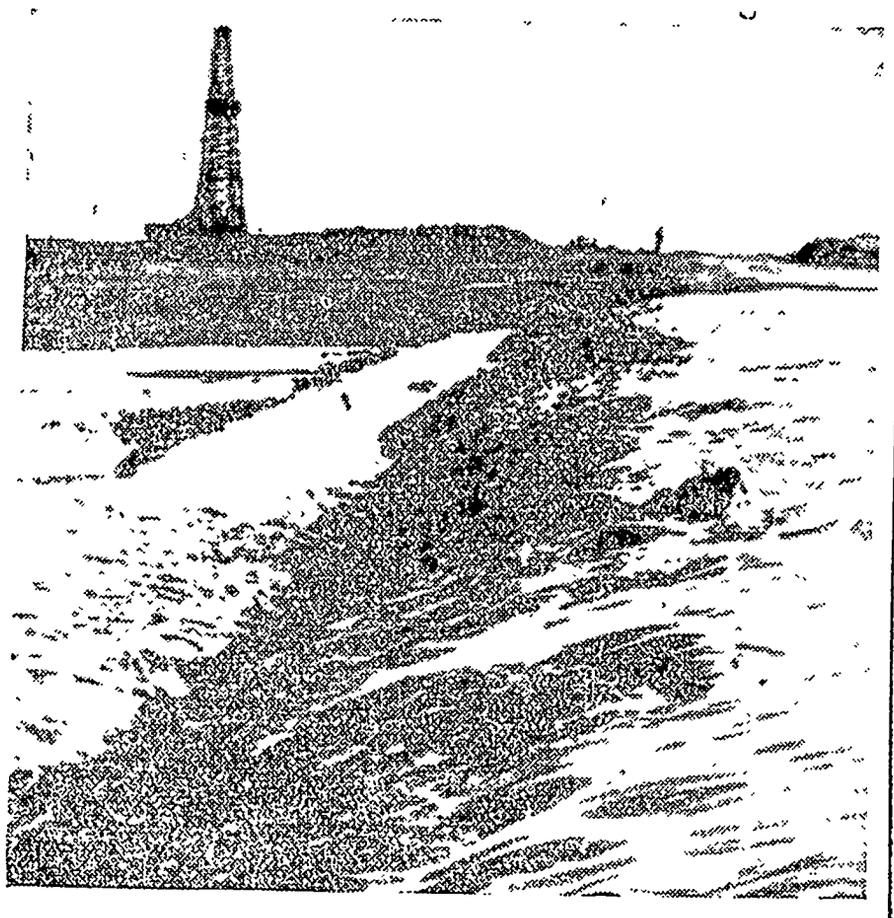
No Evidence of Agreement.

The plot did not, as first believed, include the turning over of White Russia to an enemy power, but the traitors did attempt to reach an agreement with Germany and Japan. The generals were well aware that if their plot developed into an important revolution, these two hostile nations would find the period of Russia's internal strife an opportunity for successful attack. So the conspirators sought the promise of Germany and Japan that they would not interfere during the revolution. In return for this co-operation, valuable territory in the Ukraine would be ceded to Germany after the successful completion of the coup, and Japan would be rewarded with generous oil, mineral and fishing concessions in the Far East.

There is no actual evidence that definite agreements were ever consummated between the plotters and the enemy powers. Indeed, Hitler has emphatically refused to consider the suggestion of a military alliance between the Reich and Russia, despite the fact that his high military command has assured him that such an alliance would be the most powerful in the world.

The question that now poses itself before the world outside the Soviet is: Can the semi-authoritative explanation of the "purge" be true—or is it merely a concoction brewed to fit a long series of incidents in a sordid rule of terrorism under the iron hand of a vicious dictatorship?

There is no denying the fact that the conspiring generals must have been rather stupid to risk their enviable positions of power in the existing regime, and their careers of brilliant promise for the future, in a plot which certainly must not fail to be discovered amid the universal system of state control and state spying which is Russia today.



The Soviet Union has vast oil resources. This well, which broke loose in a torrent when tapped, produces 15 to 20 thousand tons daily.

Russia Worries Over Prestige.

The puzzle also arises: If one dictator can dispose of eight of the most prominent men of the army in one fell swoop, why would it not be as easy for eight generals to do away with one dictator?

Russia is definitely worried over the effect of her internal military disharmony upon the outside world. Diplomatic divisions of the western European powers lost no time in taking advantage of it. Germany and Italy, particularly, acted quickly. Their dream has always been of a four-power alliance with France and Great Britain. But France, controlled by a communistic party government, in sympathy with the Russians and out of sympathy with the Fascists, has been the stumbling block. Now Germany is trying to convince France that she had better forsake any alliance with Russia because it would be too unreliable. The recent resignation of the Popular Front government in France may work to the advantage of the Fascists, also.

There is no doubt that the French must be a little uneasy over this new weakness of the nation they had counted upon as their most important ally. The Red army can hardly look so powerful today as it did a few weeks ago. And the French can hardly help remembering how powerful that same army looked before the World war and how pitiful it looked once the war got under way.

Russia's importance among the powers of the world has always been limited by her difficulty in preserving her own unity. Stretching out 5,500 miles across Europe and Asia and from the Arctic ocean to the southern mountain ranges, the Soviet Union comprises the largest connected realm of any nation on earth. It is sub-tropical, it is Arctic, it is desert and it is verdant farm land.

Marshal Mikhail Tukhachevsky, most important of the eight Red army officers who were executed for treason June 12.

Ninety per cent of all the area of the union is included in the largest of the eleven constituent republics, the Russian Federative Socialist Republic, which also includes more than two-thirds of the population. The other ten are: Ukrainia, White Russia, Azerbaijan, Georgia, Armenia, Turkmenistan, Uzbekistan, Tadjikistan, Kazakhstan and Kirghizia. All except White Russia, Armenia, Turkmenistan and Kirghizia contain smaller republics within themselves.

Rich in Natural Resources.

The 175,000,000 people are as varied as the physiography. They fall into some 180 different groups and speak 150 different languages and dialects; the government makes no attempt at establishing a national language.

There are more Russians than persons of any other nationality, the Russians composing about half the population. The other principal groups, in order of their number, are: Ukrainians, White Russians, Kazaks, Uzbeks, Tatars, Georgians, Turks, Armenians, Jews, Germans, Mordva, Shuvash, Tajiks, Poles, Turkmens, Kirghiz, Bashkirs and Votyaks.

These are some of the reasons Russia's tremendous natural resources have been little more than dipped into. She is almost completely self-sufficient, with a vast wealth of coal, iron, oil, gold and other minerals, as well as rich farm lands and wide stretches of fine virgin timber.

Josef Stalin's personal dictatorship is all-powerful. He is secretary-general of the political bureau of the central executive committee of the communist party of the Union of Socialistic Soviet Republics, which is quite a mouthful any way you chew it. The party bosses the state (for law has decreed that it is the only party which shall be recognized), the central executive committee bosses the party, the political bureau bosses the committee, and Stalin bosses the bureau.

By virtue of the constitution adopted in December there is a parliament—or soviet—composed of a soviet of the union and a soviet of the nationalities, and called the Supreme Soviet. Together the two bodies exert all legislative and administrative authority, through a cabinet appointed by the Supreme Soviet and known as the council of people's commissars. But through the political structure outlined in the foregoing paragraph it may be seen that what they do is dictated by Josef Stalin.

Production Speeded Up.

Russia is now in the last year of its second Five-Year Plan for agricultural and industrial development by the state, under which the state controls the entire economic life of the nation. The first of these plans was started by Stalin in 1928; private trade was suppressed, landowners liquidated, and agriculture collectivized.

Production under the second Five-Year Plan was speeded up greatly, for both economic and military reasons.

A few facts serve to illustrate the effectiveness of the programs. Electric power production in the Soviet Union was 5,007,000,000 kilowatt hours in the year before the first Five-year Plan; last year it was 32,600,000,000 kilowatt hours. In steel production the Soviet Union rose to a position second only to Germany among European producers last year. In 1927 it manufactured a total of 680 automobiles; last year, 138,000. The total grain harvest was 92,010,000 metric tons in 1935, although it fell off to less than 77,000,000 metric tons last year, because of widespread drouths. The 1936 cotton crop set a new record.

Latest reports are that there will be a third Five-Year Plan started which will go into effect January 1.

Miniature Airplanes Now Fly Freely in New Test Tunnel

Scientists Test Catapult for Launching Transports

By WATSON DAVIS
Director, Science Service.

Langley Field, Va.—Miniature airplanes take off and maneuver for the sake of science in the world's first "free-flight" wind tunnel just demonstrated for the first time by the National Advisory Committee for Aeronautics at its laboratories here.

Instead of the small counterpart of a full-sized airplane being held conventionally in an experimental blast of air, the artificial breeze is increased until the model takes off by itself and flies freely. Then ailerons and rudder are controlled by magnetic fields acting on small electro-magnets in the model's wings. The scientist in charge maneuvers the test model plane just as a pilot handles a real one.

"We expect that this new method of studying airplane stability and control will give us much information directly that we have hitherto obtained theoretically or by empirical estimation," said Dr. George W. Lewis, N. A. C. A. director of research.

"Bumps" or gusts of wind are measured and studied by two new devices devised by N. A. C. A. experts.

Instrument Fits Pocket.

One of these is a bump recorder small enough to fit into the pocket. About 160 of these instruments are placed in airplanes and seaplanes of different types during actual flight. One of them has been carried by the China Clipper on round trips between San Francisco and Manila. From the curve traced by the instrument, engineers are able to reconstruct every roughness of the voyage and tell what stresses the craft withstood.

Gusts are made to order in a new tunnel and model airplanes are catapulted into them. As fast as an arrow is shot from a bow, the tiny plane is accelerated to 50 miles per hour in a few feet of travel. Hit by the gust, its action is recorded by a motion picture camera.

Reduces Take-Off Distance.

Just by reducing the size of rivets in an airplane wing by one thirty-second of an inch, it is possible to reduce the power necessary by 100 horsepower. This is one result of the experiments on the friction drag on the wings of large modern airplanes. In operating high-performance modern aircraft, the importance of smooth surface in a wing is so great that the N. A. C. A. experts suggest it may be found economical to have service crews wipe off accumulated dirt and dust on wing surfaces at every stop.

Large air transports leaving our airports in the future may be catapulted in order to assist their take-off and reduce the long run now necessary, if a suggestion of the N. A. C. A. is adopted. A catapult with half the acceleration of gravity would reduce the take-off distance from 1,000 feet to 1,150 feet.

No Housing Shortage in Days of Cave Men

New Haven, Conn.—There was no housing shortage in the United States in prehistoric times when men were cave men, and went cave hunting instead of house hunting. Many a fine cave was vacant century after century.

In Europe practically all caves and shelters have yielded evidence of occupancy by ancient man, says Dr. George Grant MacCurdy of Yale university, director of the American School of Prehistoric Research. Caves in the United States, including some of the biggest and most beautiful caverns in the world, are, from the viewpoint of importance in study of the cave man, not comparable with Old world caves.

Dr. MacCurdy believes there is evidence indicating that man may have come to America some 40,000 years ago,, but that it would have been far easier for man to have reached this country ten or fifteen thousand years ago.

The oldest known prehistoric inhabitants of this country, called Folsom and Yuma men after their characteristic weapons of stone, were older than the Basket Makers of the southwest, who in turn were older than the Pueblo Indians in that part of the country.

Start Early, Girls, to Find Real Mate, Expert Admonishes

Widen Circle of Friends, Improve Your Personality

New York.—Go out of your way to make friends, improve your personality, get out of a rut, and give real time and thought to finding a husband. These admonitions were given along with much other practical advice on how to win a mate, directed particularly to college girls and other intelligent women by Dr. Paul Popenoe, general director of the Institute of Family Relations, Los Angeles, Calif.

Two difficulties hamper the girl who would like to marry, but cannot find a suitable partner, Dr. Popenoe says. The first has to do with her marriageability; the second with lack of opportunities for meeting eligible young men.

Here are the elements that go to make up marriageability, as outlined by Dr. Popenoe from his broad experience in the study of married couples at the Institute of Family Relations:

1. The girl must be sexually normal. If she is mannish or engrossed with persons of her own sex, she may be cured provided this is a psychological condition. The happiest marriages are between womanly women and manly men.

Mustn't Be Suspicious.

2. She must be emotionally grown-up. The infantile girl is likely to have a fear of sex that, unconsciously perhaps, prevents her from desiring or attaining a happy marriage.

3. She must not be suspicious or stand-offish by disposition.

4. She must not make the mistake of relying on her diploma to charm desirable potential husbands. When 250 happy, educated married couples were asked what they found most admirable in their respective mates, most of the women stressed intellectual companionability. But the husbands were pleased with something quite different—it was the wife's ability to do her job and be equal to her responsibilities.

A girl to be attractive as a wife must appeal to the man's emotion, she must be able to enhance his ego, and she must have domestic competence. If she lacks these assets, she can not offset the deficiency by putting forward a quality that he does not particularly want—capacity to satisfy him intellectually.

Be Seductive, Alluring.

For the woman who possesses these points of marriageability, the importance of the correct technique for winning a mate was stressed by Dr. Popenoe who has many practical hints to offer in this connection.

Don't be misled by thinking that you must take the initiative in courtship or proposal, he warns educated women. The role of the female as seductive and alluring rather than aggressive goes back in evolution not only far beyond the human, but far beyond the mammalian stage.

"The woman who is not clever enough to maneuver a man into a position where he will propose, is probably not clever enough to hold a man after she gets one," he said.

Streamlined Mines Suggested to Lower Ventilation Losses

Cincinnati.—Streamlined mines, using the discoveries of air flow which have produced the modern, sleek airplane, were suggested here at the annual coal mining convention by Prof. H. Landsberg of the Pennsylvania State college.

Ventilation losses when mine air has to turn an acute angled corner are equivalent to 485 feet of straight, concrete-lined tunnel, he disclosed. A right angle bend in a shaft creates losses equal to 250 feet of the standard reference concrete-lined tunnel. A rounded bend, by contrast, produces losses equal only to about 25 feet of straight, lined tunnel.

While admitting that few mines can achieve the ideal of a smooth concrete lining, Professor Landsberg showed that it was possible to place the timbering so that much loss could be prevented.

Even mine cars achieve some streamlining, Professor Landsberg indicated, although they move relatively slowly in relation to the ground. Actually of course their velocity relative to the ventilating air stream when heading into it is the important point.

Studies showed, disclosed the professor, that when a mine car blocks 20 per cent of a tunnel area a train of 20 such cars causes losses equal to 525 feet of surface in the standard smooth reference tunnel.

"It is true," said Dr. Landsberg in summary, "that one rounded corner in a mine will not reduce the operating costs of a ventilating system appreciably, but the sum total of bends, splits and overcasts along an air course of several miles will show the savings effected by a streamlined ventilation system."

IMPROVED UNIFORM INTERNATIONAL

SUNDAY SCHOOL Lesson

By REV HAROLD L. LUNDQUIST.
Dean of the Moody Bible Institute of Chicago.
© Western Newspaper Union.

Lesson for July 18

LESSON TEXT—Exodus 3:13-16; 4:10-16; 5:1.

GOLDEN TEXT—The Lord will give strength unto his people.—Psalm 29:11.

PRIMARY TOPIC—When Moses Was Afraid.

JUNIOR TOPIC—Moses Made Ambassador.

INTERMEDIATE AND SENIOR TOPIC—God Stands by His Workers.

YOUNG PEOPLE AND ADULT TOPIC—Strong in the Strength of God.

Never in a hurry! Who? God. He needed a human leader to bring his chosen people up out of the bondage of Egypt and he spent 80 years getting him ready—40 years learning all the wisdom of Egypt, and 40 years learning the lessons of God, patience and humility, on the back side of the desert.

Infinite and omnipotent is God, and he may move with faster-than-lightning speed. But usually we find him working out his blessed purposes, normally, quietly, but always "on time."

Our lesson brings before us the meeting with God which preceded the appearance of Moses as the head of the nation of Israel in its mighty conflict with Pharaoh. We find him first proceeding with commendable care but then going on in unfortunate humility which amounted almost to unbelief and which resulted in the substitution of his brother Aaron as his spokesman, but eventually we do see him going about his difficult task with resolution and courage.

I. Justifiable Caution (Exod. 3:13-16).

Neither God nor man dare entrust a high and difficult commission to a foolish man who brusquely "rushes in where angels fear to tread." The fact that one feels fully and unhesitatingly qualified to take over such a responsibility is almost a certain indication that he is not the man to assume it.

The ambassador must have credentials God's representative has them. When "they shall say"—what an important and difficult situation that creates. The one who speaks for God must expect not only the scornful bitterness of God's enemies, but also the unbelieving questions of those he seeks to serve.

"What shall I say?" asks Moses, and God answers that he may say that "I AM" had sent him. This name of God reveals him as the eternal, independent, self-sufficient, self-existent, immutable, personal being Consider, Christian brethren, whose we are and whom we serve. Here indeed is "inspiration in excess of duty," real equipment for Christian life and service.

But Moses seems to be unable to see beyond his own human infirmity even in the light of such a glorious revelation, supplemented as it was by miraculous powers, and we find him showing an

II. Unjustified Humility (Exod. 4:10-12)

When God calls a man he knows his limitations—why then should one plead them as an excuse for not serving? The excuse of Moses that he was not a fluent speaker has been the stand-by of unwilling workers all through the ages. When asked to lead a prayer meeting, teach a Sunday School class, conduct a young people's meeting, thousands have lamely thus excused themselves and missed a blessing.

The perfect answer of God in v.11 merits attention. God made your mouth and mine. He gives us the power of speech. He asks not the eloquence of polished rhetorical periods, or the flights of man's imagination. He wants but the incomparable eloquence of his own words on our lips. Dr. Richard Ellsworth Day in "Bush Aglow" rightly points out that this was the secret of the power of D. L. Moody.

III. Unnecessary Substitution (Exod. 4:13-16).

Loving and patient is our God, but there is a boundary line to that patience. Moses went too far in his humility and reflected on the ability of God, who promptly substituted Aaron as the spokesman.

Gracious was He in thus providing a helper for Moses. But one wonders what Moses missed of blessing and power because of his slowness of heart.

IV. "And Afterward" (Exod. 5:1).

Commissioned, bearing credentials from the infinite and eternal "I AM," and with a strong and eloquent brother by his side, Moses stands before Pharaoh to say in God's name, "Let my people go."

Preparation and the holy privilege of fellowship with God are to make us ready for service. While it is folly to go unprepared, it is double folly to prepare and then fail to go when God commands.

Morning and Evening Prayer

It is well to let prayer be the first employment in the morning and the last in the evening.—M. Luther.

As He Sees Us

As we come to know ourselves through and through, we come to see ourselves more as God sees us.

The Counters of Wise Men

Words are the counters of wise men, and the money of fools.—Hobbes.

Smart and Comfortable

YOU can stay on the cool side this summer and still bask in the sunshine of flattery if you'll look to Sew-Your-Own for your inspiration. Witness today's trio of smart fashions: do they not fairly take you by the hand?

For Sheer Comfort

The model portraying the cool poise of a well groomed cosmopolitan, above center, can be yours, Milady, with very little tadoo: Choose a beauteous dark ground sheer for this stylish frock. You'll enjoy making it up. Remember it's modern to sew—medieval to swelter.

This cleverly designed slip is, in a way, like the lovely flower born to blush unseen for it knows its place and keeps it. Because of superb styling, this slip offers new chic to the meticulous woman. It has a wide shadow proof panel, and smooth fashionable lines that make for a well turned out appearance.

Sweet 'n' Tart.

As wholesome and becoming as her suntan, is this exciting new dress for Miss Junior Deb or her kid sis. It is young enough to please its youthful client, and pretty enough to satisfy the most fastidious mother. Noteworthy is the button-all-the-way front. This means easy laundering.

The Patterns.

Pattern 1946 comes in sizes 14 to 20 (32 to 44 bust). Size 16 requires 3¼ yards of 39 inch material plus 1 yard of ribbon for shoulder straps.

Pattern 1325 is designed for sizes 36 to 52. Size 38 requires 4⅜ yards of 39 inch material plus ⅞ yard trimming as pictured.

Pattern 1301 is designed for sizes 6, 8, 10, 12, and 14 years. Size 8 years requires 2⅓ yards of 35 or 39 inch material plus 5 yards of trimming to finish as pictured.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

Soviet Russia Tries to Explain Why Eight Generals Were Shot

But, as in Case of Most Red Intrigues, Explanations Border on Fantastic.

By WILLIAM C. UTLEY

RUSSIA—land of intrigue, struggle and upheaval—is today no freer from the plots and counter-plots on the grand scale which have characterized it over many decades than it has been in the past. And conspiracies today are dealt with by the Communist government with as much dispatch as they were in the days of the Czars, or more. Explanations today are, as they were in the past, largely a matter of conjecture, and most of them are magnificently fantastic.

When, in the most recent "purge" of Red traitors, seven generals and a marshal who was very nearly the executive head of the whole Russian army, were summarily tried, lined up against a wall and shot, a typical, wild explanation of the act filled the early accounts. It was reported, rumored or "secretly known to the Kremlin" that the eight had been leaders of a mass plot, involving hundreds of thousands of Russians, to turn over a generous helping of western Russia to "an enemy power," Nazi Germany. Of course, when the perspective of even a few days' time permitted a clearer view of the situation, the "explanation" was wholly rejected.

Ordinarily little or no official government explanation would be attempted, but the prestige of the Russian army received such a body blow by these latest executions that a semi-authoritative one was concocted. You can take it or leave it, for it is almost as fantastic as the first one.

Masses Must Support Plots.

It involves not alone this one act, but the entire series of some 250 military trials and executions which have taken place in Russia over a period of less than three years, climaxed by the deaths of Marshal Mikhail Tukhachevsky and his seven generals in Moscow on June 12. It is ascribed to the discovery by the Kremlin of a single huge conspiracy against the state.

To anyone who has followed modern Russian history at all it is apparent at once that no serious conspiracy to overthrow the existing regime could be successful without mass support But how to gain the sympathy of any great mass of citizens, without spreading the great secret so widely that its existence must be obvious, was a poser indeed.

The one unit of people with whom such a plan could hope to be accomplished was the Red army. This highly trained, massive organization had been well-drilled in discipline and would obey the dictates of a few key men among its leaders without question. The theory of the conspirators, then, was to win over a few army men in the key positions of command, who could be relied upon to control the movements of the army. And this, according to the explanation, is what the civil conspirators were successful in doing.

Soviet authorities discovered the plot among the civil conspirators, and it was a simple matter to learn then that it had been extended to a handful of important army officers. Accordingly, a strict espionage system was set up to gather evidence in army quarters. The executions followed quickly. It is believed by some close observers that the Soviet government was tipped off to the plot by the French secret service, interested because of the alliance between the two communist nations, but this has never been admitted officially.

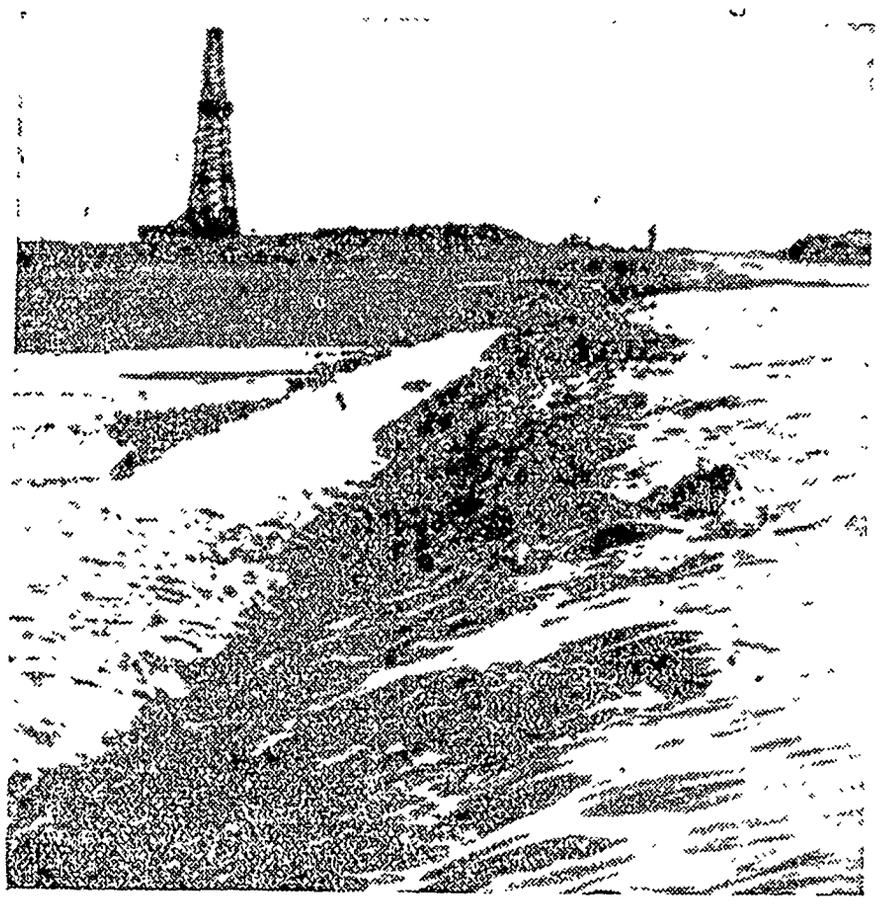
No Evidence of Agreement.

The plot did not, as first believed, include the turning over of White Russia to an enemy power, but the traitors did attempt to reach an agreement with Germany and Japan. The generals were well aware that if their plot developed into an important revolution, these two hostile nations would find the period of Russia's internal strife an opportunity for successful attack. So the conspirators sought the promise of Germany and Japan that they would not interfere during the revolution. In return for this co-operation, valuable territory in the Ukraine would be ceded to Germany after the successful completion of the coup, and Japan would be rewarded with generous oil, mineral and fishing concessions in the Far East.

There is no actual evidence that definite agreements were ever consummated between the plotters and the enemy powers. Indeed, Hitler has emphatically refused to consider the suggestion of a military alliance between the Reich and Russia, despite the fact that his high military command has assured him that such an alliance would be the most powerful in the world.

The question that now poses itself before the world outside the Soviet is: Can the semi-authoritative explanation of the "purge" be true—or is it merely a concoction brewed to fit a long series of incidents in a sordid rule of terrorism under the iron hand of a vicious dictatorship?

There is no denying the fact that the conspiring generals must have been rather stupid to risk their enviable positions of power in the existing regime, and their careers of brilliant promise for the future, in a plot which certainly must not fail to be discovered amid the universal system of state control and state spying which is Russia today.



The Soviet Union has vast oil resources. This well, which broke loose in a torrent when tapped, produces 15 to 20 thousand tons daily.

Russia Worries Over Prestige.

The puzzle also arises: If one dictator can dispose of eight of the most prominent men of the army in one fell swoop, why would it not be as easy for eight generals to do away with one dictator?

Russia is definitely worried over the effect of her internal military disharmony upon the outside world. Diplomatic divisions of the western European powers lost no time in taking advantage of it. Germany and Italy, particularly, acted quickly. Their dream has always been of a four-power alliance with France and Great Britain. But France, controlled by a communistic party government, in sympathy with the Russians and out of sympathy with the Fascists, has been the stumbling block. Now Germany is trying to convince France that she had better forsake any alliance with Russia because it would be too unreliable. The recent resignation of the Popular Front government in France may work to the advantage of the Fascists, also.

There is no doubt that the French must be a little uneasy over this new weakness of the nation they had counted upon as their most important ally. The Red army can hardly look so powerful today as it did a few weeks ago. And the French can hardly help remembering how powerful that same army looked before the World war and how pitiful it looked once the war got under way.

Russia's importance among the powers of the world has always been limited by her difficulty in preserving her own unity. Stretching out 5,500 miles across Europe and Asia and from the Arctic ocean to the southern mountain ranges, the Soviet Union comprises the largest connected realm of any nation on earth. It is sub-tropical, it is Arctic, it is desert and it is verdant farm land.

Marshal Mikhail Tukhachevsky, most important of the eight Red army officers who were executed for treason June 12.

Ninety per cent of all the area of the union is included in the largest of the eleven constituent republics, the Russian Federative Socialist Republic, which also includes more than two-thirds of the population. The other ten are: Ukrainia, White Russia, Azerbaijan, Georgia, Armenia, Turkmenistan, Uzbekistan, Tadjikistan, Kazakhstan and Kirghizia. All except White Russia, Armenia, Turkmenistan and Kirghizia contain smaller republics within themselves.

Rich in Natural Resources.

The 175,000,000 people are as varied as the physiography. They fall into some 180 different groups and speak 150 different languages and dialects; the government makes no attempt at establishing a national language.

There are more Russians than persons of any other nationality, the Russians composing about half the population. The other principal groups, in order of their number, are: Ukrainians, White Russians, Kazaks, Uzbeks, Tatars, Georgians, Turks, Armenians, Jews, Germans, Mordva, Shuvash, Tajiks, Poles, Turkmens, Kirghiz, Bashkirs and Votyaks.

These are some of the reasons Russia's tremendous natural resources have been little more than dipped into. She is almost completely self-sufficient, with a vast wealth of coal, iron, oil, gold and other minerals, as well as rich farm lands and wide stretches of fine virgin timber.

Josef Stalin's personal dictatorship is all-powerful. He is secretary-general of the political bureau of the central executive committee of the communist party of the Union of Socialistic Soviet Republics, which is quite a mouthful any way you chew it. The party bosses the state (for law has decreed that it is the only party which shall be recognized), the central executive committee bosses the party, the political bureau bosses the committee, and Stalin bosses the bureau.

By virtue of the constitution adopted in December there is a parliament—or soviet—composed of a soviet of the union and a soviet of the nationalities, and called the Supreme Soviet. Together the two bodies exert all legislative and administrative authority, through a cabinet appointed by the Supreme Soviet and known as the council of people's commissars. But through the political structure outlined in the foregoing paragraph it may be seen that what they do is dictated by Josef Stalin.

Production Speeded Up.

Russia is now in the last year of its second Five-Year Plan for agricultural and industrial development by the state, under which the state controls the entire economic life of the nation. The first of these plans was started by Stalin in 1928; private trade was suppressed, landowners liquidated and agriculture collectivized.

Production under the second Five-Year Plan was speeded up greatly, for both economic and military reasons.

A few facts serve to illustrate the effectiveness of the programs. Electric power production in the Soviet Union was 5,007,000,000 kilowatt hours in the year before the first Five-year Plan; last year it was 32,600,000,000 kilowatt hours. In steel production the Soviet Union rose to a position second only to Germany among European producers last year. In 1927 it manufactured a total of 680 automobiles; last year, 138,000. The total grain harvest was 92,010,000 metric tons in 1935, although it fell off to less than 77,000,000 metric tons last year, because of widespread drouths. The 1936 cotton crop set a new record.

Latest reports are that there will be a third Five-Year Plan started which will go into effect January 1.

Miniature Airplanes Now Fly Freely in New Test Tunnel

Scientists Test Catapult for Launching Transports

By WATSON DAVIS
Director, Science Service.

Langley Field, Va.—Miniature airplanes take off and maneuver for the sake of science in the world's first "free-flight" wind tunnel just demonstrated for the first time by the National Advisory Committee for Aeronautics at its laboratories here.

Instead of the small counterpart of a full-sized airplane being held conventionally in an experimental blast of air, the artificial breeze is increased until the model takes off by itself and flies freely. Then ailerons and rudder are controlled by magnetic fields acting on small electro-magnets in the model's wings. The scientist in charge maneuvers the test model plane just as a pilot handles a real one.

"We expect that this new method of studying airplane stability and control will give us much information directly that we have hitherto obtained theoretically or by empirical estimation," said Dr. George W. Lewis, N. A. C. A. director of research.

"Bumps" or gusts of wind are measured and studied by two new devices devised by N. A. C. A. experts.

Instrument Fits Pocket.

One of these is a bump recorder small enough to fit into the pocket. About 160 of these instruments are placed in airplanes and seaplanes of different types during actual flight. One of them has been carried by the China Clipper on round trips between San Francisco and Manila. From the curve traced by the instrument, engineers are able to reconstruct every roughness of the voyage and tell what stresses the craft withstood.

Gusts are made to order in a new tunnel and model airplanes are catapulted into them. As fast as an arrow is shot from a bow, the tiny plane is accelerated to 50 miles per hour in a few feet of travel. Hit by the gust, its action is recorded by a motion picture camera.

Reduces Take-Off Distance.

Just by reducing the size of rivets in an airplane wing by one thirty-second of an inch, it is possible to reduce the power necessary by 100 horsepower. This is one result of the experiments on the friction drag on the wings of large modern airplanes. In operating high-performance modern aircraft, the importance of smooth surface in a wing is so great that the N. A. C. A. experts suggest it may be found economical to have service crews wipe off accumulated dirt and dust on wing surfaces at every stop.

Large air transports leaving our airports in the future may be catapulted in order to assist their take-off and reduce the long run now necessary, if a suggestion of the N. A. C. A. is adopted. A catapult with half the acceleration of gravity would reduce the take-off distance from 1,000 feet to 1,150 feet.

No Housing Shortage in Days of Cave Men

New Haven, Conn.—There was no housing shortage in the United States in prehistoric times when men were cave men, and went cave hunting instead of house hunting. Many a fine cave was vacant century after century.

In Europe practically all caves and shelters have yielded evidence of occupancy by ancient man, says Dr. George Grant MacCurdy of Yale university, director of the American School of Prehistoric Research. Caves in the United States, including some of the biggest and most beautiful caverns in the world, are, from the viewpoint of importance in study of the cave man, not comparable with Old world caves.

Dr. MacCurdy believes there is evidence indicating that man may have come to America some 40,000 years ago,, but that it would have been far easier for man to have reached this country ten or fifteen thousand years ago.

The oldest known prehistoric inhabitants of this country, called Folsom and Yuma men after their characteristic weapons of stone, were older than the Basket Makers of the southwest, who in turn were older than the Pueblo Indians in that part of the country.

Start Early, Girls, to Find Real Mate, Expert Admonishes

Widen Circle of Friends, Improve Your Personality

New York.—Go out of your way to make friends, improve your personality, get out of a rut, and give real time and thought to finding a husband. These admonitions were given along with much other practical advice on how to win a mate, directed particularly to college girls and other intelligent women by Dr. Paul Popenoe, general director of the Institute of Family Relations, Los Angeles, Calif.

Two difficulties hamper the girl who would like to marry, but cannot find a suitable partner, Dr. Popenoe says. The first has to do with her marriageability; the second with lack of opportunities for meeting eligible young men.

Here are the elements that go to make up marriageability, as outlined by Dr. Popenoe from his broad experience in the study of married couples at the Institute of Family Relations:

1. The girl must be sexually normal. If she is mannish or engrossed with persons of her own sex, she may be cured provided this is a psychological condition. The happiest marriages are between womanly women and manly men.

Mustn't Be Suspicious.

2. She must be emotionally grown-up. The infantile girl is likely to have a fear of sex that, unconsciously perhaps, prevents her from desiring or attaining a happy marriage.

3. She must not be suspicious or stand-offish by disposition.

4. She must not make the mistake of relying on her diploma to charm desirable potential husbands. When 250 happy, educated married couples were asked what they found most admirable in their respective mates, most of the women stressed intellectual companionability. But the husbands were pleased with something quite different—it was the wife's ability to do her job and be equal to her responsibilities.

A girl to be attractive as a wife must appeal to the man's emotion, she must be able to enhance his ego, and she must have domestic competence. If she lacks these assets, she can not offset the deficiency by putting forward a quality that he does not particularly want—capacity to satisfy him intellectually.

Be Seductive, Alluring.

For the woman who possesses these points of marriageability, the importance of the correct technique for winning a mate was stressed by Dr. Popenoe who has many practical hints to offer in this connection.

Don't be misled by thinking that you must take the initiative in courtship or proposal, he warns educated women. The role of the female as seductive and alluring rather than aggressive goes back in evolution not only far beyond the human, but far beyond the mammalian stage.

"The woman who is not clever enough to maneuver a man into a position where he will propose, is probably not clever enough to hold a man after she gets one," he said.

Streamlined Mines Suggested to Lower Ventilation Losses

Cincinnati.—Streamlined mines, using the discoveries of air flow which have produced the modern, sleek airplane, were suggested here at the annual coal mining convention by Prof. H. Landsberg of the Pennsylvania State college.

Ventilation losses when mine air has to turn an acute angled corner are equivalent to 485 feet of straight, concrete-lined tunnel, he disclosed. A right angle bend in a shaft creates losses equal to 250 feet of the standard reference concrete-lined tunnel. A rounded bend, by contrast, produces losses equal only to about 25 feet of straight, lined tunnel.

While admitting that few mines can achieve the ideal of a smooth concrete lining, Professor Landsberg showed that it was possible to place the timbering so that much loss could be prevented.

Even mine cars achieve some streamlining, Professor Landsberg indicated, although they move relatively slowly in relation to the ground. Actually of course their velocity relative to the ventilating air stream when heading into it is the important point.

Studies showed, disclosed the professor, that when a mine car blocks 20 per cent of a tunnel area a train of 20 such cars causes losses equal to 525 feet of surface in the standard smooth reference tunnel.

"It is true," said Dr. Landsberg in summary, "that one rounded corner in a mine will not reduce the operating costs of a ventilating system appreciably, but the sum total of bends, splits and overcasts along an air course of several miles will show the savings effected by a streamlined ventilation system."

IMPROVED UNIFORM INTERNATIONAL

SUNDAY SCHOOL Lesson

By REV HAROLD L. LUNDQUIST, Dean of the Moody Bible Institute of Chicago.

© Western Newspaper Union.

Lesson for July 18

LESSON TEXT—Exodus 3:13-16; 4:10-16; 5:1.

GOLDEN TEXT—The Lord will give strength unto his people.—Psalm 29:11.

PRIMARY TOPIC—When Moses Was Afraid.

JUNIOR TOPIC—Moses Made Ambassador.

INTERMEDIATE AND SENIOR TOPIC—God Stands by His Workers.

YOUNG PEOPLE AND ADULT TOPIC—Strong in the Strength of God.

Never in a hurry! Who? God. He needed a human leader to bring his chosen people up out of the bondage of Egypt and he spent 80 years getting him ready—40 years learning all the wisdom of Egypt, and 40 years learning the lessons of God, patience and humility, on the back side of the desert.

Infinite and omnipotent is God, and he may move with faster-than-lightning speed. But usually we find him working out his blessed purposes, normally, quietly, but always "on time."

Our lesson brings before us the meeting with God which preceded the appearance of Moses as the head of the nation of Israel in its mighty conflict with Pharaoh. We find him first proceeding with commendable care but then going on in unfortunate humility which amounted almost to unbelief and which resulted in the substitution of his brother Aaron as his spokesman, but eventually we do see him going about his difficult task with resolution and courage.

I. Justifiable Caution (Exod. 3:13-16).

Neither God nor man dare entrust a high and difficult commission to a foolish man who brusquely "rushes in where angels fear to tread." The fact that one feels fully and unhesitatingly qualified to take over such a responsibility is almost a certain indication that he is not the man to assume it.

The ambassador must have credentials. God's representative has them. When "they shall say"—what an important and difficult situation that creates. The one who speaks for God must expect not only the scornful bitterness of God's enemies, but also the unbelieving questions of those he seeks to serve.

"What shall I say?" asks Moses, and God answers that he may say that "I AM" had sent him. This name of God reveals him as the eternal, independent, self-sufficient, self-existent, immutable, personal being. Consider, Christian brethren, whose we are and whom we serve. Here indeed is "inspiration in excess of duty," real equipment for Christian life and service.

But Moses seems to be unable to see beyond his own human infirmity even in the light of such a glorious revelation, supplemented as it was by miraculous powers, and we find him showing an

II. Unjustified Humility (Exod. 4:10-12)

When God calls a man he knows his limitations—why then should one plead them as an excuse for not serving? The excuse of Moses that he was not a fluent speaker has been the stand-by of unwilling workers all through the ages. When asked to lead a prayer meeting, teach a Sunday School class, conduct a young people's meeting, thousands have lamely thus excused themselves and missed a blessing.

The perfect answer of God in v.11 merits attention. God made your mouth and mine. He gives us the power of speech. He asks not the eloquence of polished rhetorical periods, or the flights of man's imagination. He wants but the incomparable eloquence of his own words on our lips. Dr. Richard Ellsworth Day in "Bush Aglow" rightly points out that this was the secret of the power of D. L. Moody.

III. Unnecessary Substitution (Exod. 4:13-16).

Loving and patient is our God, but there is a boundary line to that patience. Moses went too far in his humility and reflected on the ability of God, who promptly substituted Aaron as the spokesman.

Gracious was He in thus providing a helper for Moses. But one wonders what Moses missed of blessing and power because of his slowness of heart.

IV. "And Afterward" (Exod. 5:1).

Commissioned, bearing credentials from the infinite and eternal "I AM," and with a strong and eloquent brother by his side, Moses stands before Pharaoh to say in God's name, "Let my people go."

Preparation and the holy privilege of fellowship with God are to make us ready for service. While it is folly to go unprepared, it is double folly to prepare and then fail to go when God commands.

Morning and Evening Prayer

It is well to let prayer be the first employment in the morning and the last in the evening.—M. Luther.

As He Sees Us

As we come to know ourselves through and through, we come to see ourselves more as God sees us.

The Counters of Wise Men

Words are the counters of wise men, and the money of fools.—Hobbes.

Smart and Comfortable

YOU can stay on the cool side this summer and still bask in the sunshine of flattery if you'll look to Sew-Your-Own for your inspiration. Witness today's trio of smart fashions: do they not fairly take you by the hand?

For Sheer Comfort

The model portraying the cool poise of a well groomed cosmopolitan, above center, can be yours, Milady, with very little tadoo: Choose a beauteous dark ground sheer for this stylish frock. You'll enjoy making it up. Remember it's modern to sew—medieval to swelter.

This cleverly designed slip is, in a way, like the lovely flower born to blush unseen for it knows its place and keeps it. Because of superb styling, this slip offers new chic to the meticulous woman. It has a wide shadow proof panel, and smooth fashionable lines that make for a well turned out appearance.

Sweet 'n' Tart.

As wholesome and becoming as her suntan, is this exciting new dress for Miss Junior Deb or her kid sis. It is young enough to please its youthful client, and pretty enough to satisfy the most fastidious mother. Noteworthy is the button-all-the-way front. This means easy laundering.

The Patterns.

Pattern 1946 comes in sizes 14 to 20 (32 to 44 bust). Size 16 requires 3¼ yards of 39 inch material plus 1 yard of ribbon for shoulder straps.

Pattern 1325 is designed for sizes 36 to 52. Size 38 requires 4⅜ yards of 39 inch material plus ⅞ yard trimming as pictured.

Pattern 1301 is designed for sizes 6, 8, 10, 12, and 14 years. Size 8 years requires 2⅛ yards of 35 or 39 inch material plus 5 yards of trimming to finish as pictured.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

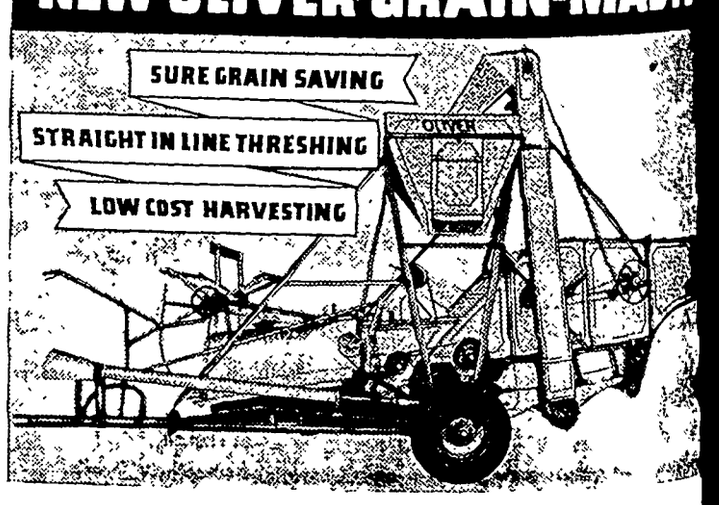
OLDEST BANK IN HANCOCK COUNTY

First National Bank

Established 1892



See our Oliver Grain-Master right away. Get the greatest possible return from your crop this year by being ready to harvest and thresh it quickly, safely, cheaply. A new Oliver Grain-Master with its ground-following, 6-foot, clip-cutting header and straight-in-line threshing will do the job for you. It will save more grain and clean it so that it grades high at the elevator.

The Grain-Master can also be equipped to harvest soybeans, clover, lespedeza, flax, beans and other grain and seed crops with equal efficiency.

But hurry... Oliver Grain-Masters are going like hot cakes down the hired-man's throat on a frosty morning. There may not be enough for everybody who wants one of these better harvesting units this year. See us at once. Don't risk the disappointment of having to use some other type of harvesting outfit. We'll be glad to show you this remarkable improvement in small combines.

obert Maitland Funeral Held At Ventura Church

RT MAITLAND, 80, DIED MONDAY, JULY 19TH

ces Were Held This Wednesday Afternoon At U. B. Church In Ventura

(Courtesy A. Wellemeyer)

bert Maitland, age 80 years, nths and 8 days, passed away e home of his daughter, Mrs Hyde about two and one miles southeast of Ventura, day, July 19th at 3 30 p. m. eceased had been in ill health the past year or more but for greater portion of that time he able to be up and about the ises. Death came as a relief to venerable old gentleman and as the wearing out of a mechm which had for so long a sustained him.

Obituary

obert Maitland was born Oct. 1856 at Colbourne, Ontario, ada, one of a large family born is parents James Maitland and ah (nee) Renwick

is parents were natives of tland and at the age of 12 years moved with them to the state llinois where he began workout as a farm hand. He was a ner for more than 50 years.

n Nov 29, 1893, at the age of he was united in marriage to eline Elizabeth Fox at Sycare, Illinois. This union was ssed wth two children, Rose Robert, both of whom were n at Rockford, Illinois. Then r ten years their happy home s saddened by the death of his e. This was in 1903 while they d east of Goodell.

Shortly after this Mr. Maitland his children, Rose, 8 and Rot, 5, moved to a farm east of mme where he farmed for e twenty years. Through good rs and bad years this faithful, er, hard-working little man k good care of his farm and his sehold and succeeded in raischildren into manhood and manhood He was respected and ll thought of by all who knew n.

For the last several years, since children were married, he has de his home with his daughter

He leaves of his immediate mily one dauphter, Rose, Mrs. hn Hyde, of Ventura, one son, mes Robert, of Fort Dodge, Ia; grand children, one sister, rah, of Sycamore, Illinois, five others, Henry, George and Wal-, of Sycamore, Illinois; Herbert, Aitken, Minnesota, and Tom, of ashua, Iowa.

Funeral services were held in e U B Church at Ventura. Rev. Hougham in charge, this Wedesday afternoon, July 21st and terment made in the Avery ownship Cemetery east of Goodell beside his wife who preceded im in death 34 years ago.

UNERAL SERVICES HELD FOR SISTER OF KLEMME WOMAN FRIDAY

Funeral services were held Friday afternoon at St. John's Lutheran Church at Woden for Mrs. J. Buns, 47, who died at a Rochester, Minnesota hospital last week Tuesday.

Mrs. Buns was a sister of Mrs. Emma Medaus of Klemme.

Eggs in summer should be cooled quickly and kept cool for best quality.

Still Deep in the Red

By RAYMOND PITCAIRN

National Chairman Sentinels of the Republic

For more than six months Congress has sat in virtually continuous session

What work has it completed?

With one exception, little that the average citizen can recall And that exception is by no means novel It is merely a continuance of the free-handed spending of the people's money, which for the seventh consecutive year has kept our national finances deep, deep in the red

At the close of the fiscal year, on June 30, for example, the national deficit—which means the excess of expenditure over income—was approximately $2,800,000,000.

And the public debt—which means postponed taxes—exceeded $36,000,000,000.

There have, of course, been promises at Washington of efforts to eliminate extravagance, and with it such staggering cost-sheets.

But, somehow, the evidence of financial restraint has been lacking. Appropriation bills have remained lavish, "nuisance taxes" have been extended, "must" legislation for economy has been absent.

All this public spending—as every house-wife knows—brings inevitably in its train higher costs of living Rising food prices constitute today an emphatic reminder of that fact

On Congress rests the responsibility for spending the people's money. But that responsibility should not be one-sided.

Congress should accept the responsibility for saving some of the people's money for them as well.

And on the evidence of such responsibility members of Congress may expect to be judged when next they appeal to their employers—the men and women who foot the bills—for a vote of confidence at the polls.

Funeral Held For Goodell Resident

FUNERAL HELD SUNDAY FOR JAMES BUSICK OF GOODELL

Funeral services were held Sunday afternoon from a Belmond funeral home for James Busick, 79 of Goodell Services were in charge of Dr W E. Dye, pastor of the Goodell U B Church. Interment was m the Avery Township Cemetery east of Goodell.

Obituary

James Busick was born on September 17, 1857 at Peru, Indiana and moved to the Goodell community when a small boy

He was united in marriage on September 7, 1885 to Miss Nancy M Church and to this union were born four sons and one daughter They are John N, Orick E. of Belmond, Clifton H of Salem, Oregon, Dale G of Belmond, and Mrs. Clara Schmalle of Goodell His wife and son John preceded him in death.

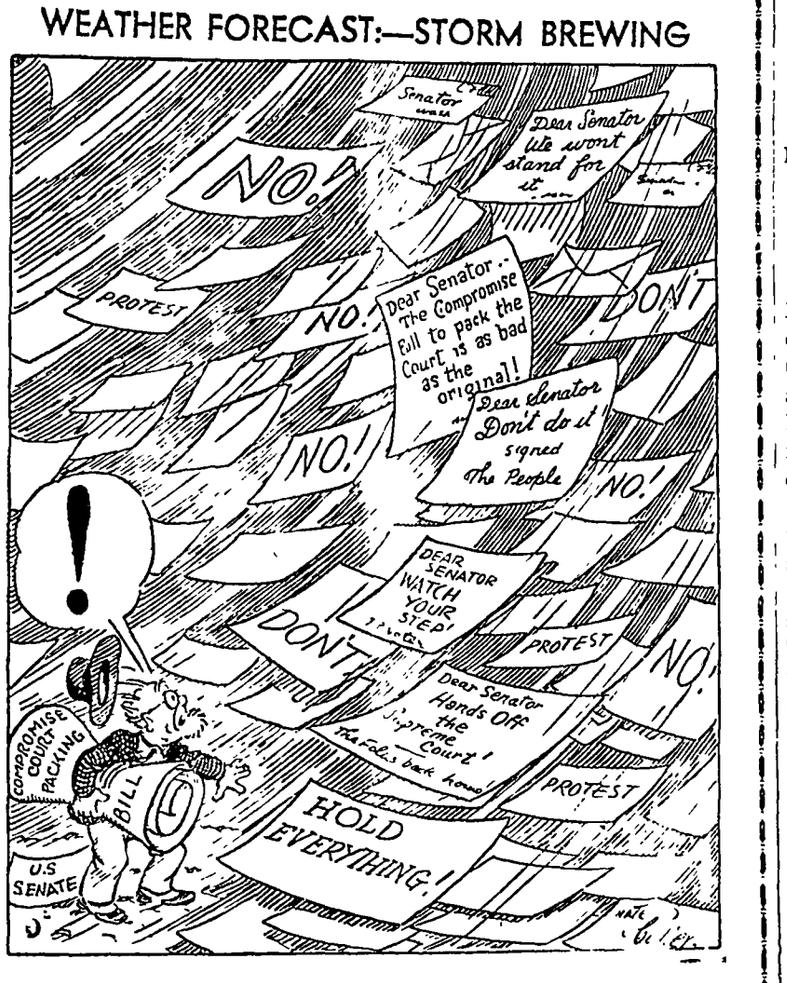
Funeral services were held Thursday afternoon at Spencer for Warner Smith, age 41, who died last week Tuesday at the Veterans Hospital at Des Moines

Mr Smith was a brother to Mrs. P. W. Johnson.



Goodell-Klemme Band Concert Being Planned For Near Future

GOODELL AND KLEMME BANDS EXCHANGED CONCERTS LAST WEEK

Bands Will Give A Joint Concert At Both Towns At A Later Date

Last week Wednesday the Goodell Band, under the direction of Miss Phyllis Dougan, gave a band concert and program in Klemme Because of a threatening rain the band played in Jacobs new brick building Besides the band music Miss Dougan presented several specialty numbers, including tap dancing by some little girls

The concert given by the Goodell band was greatly enjoyed and a large crowd gathered to hear our neighbors from the south

Return Engagement

On Thursday night, Martin Elstad director of the Klemme Band returned the compliment by having the Klemme Band give a concert at Goodell There was a large crowd out at Goodell to hear the Klemme Band play.

At a latter date it is planned to unite the two bands and then give a concert at Klemme and another at Goodell

HEALTH PROJECT TO BE DISCUSSED

Two meetings to discuss the county Nursing Service for Hancock County have been planned for August 3rd at the Farm Bureau office in Garner. Every township Health Chairman or a substitute is especially urged to be present at the afternoon meeting at 2:30 sharp A representative from the State Department of Health will be present to explain the program in detail. A committee will be selected to meet with representatives of various county organizations in the evening at 8 o'clock The County Nursing Service is made possible through funds available from the State Department of Health, from Federal and local appropriations The purpose o the program is to improve health conditions in our communities. It is hoped enough interest will be shown to establish this servce in Hancock County

Ladies Aid Picnic

The Ladies Aid of the Garner, Ell Township and Klemme Reformed Churches will hold a picnic in the Klemme Park next Wednesday afternoon, July 28th All ladies of the congregations are invited.

Eaton Will Speak At Dry Meeting

DRY RALLY WILL BE HELD AT GARNER

"The Unkown Visitor" a dynamic dramatic Monologue, presenting a novel message of total abstinence and prohibition. will be presented by the Rev L. T Eator, under the auspices of the National Voice, national temperance tabloid, at a dry rally in Garner 7.00 p m. Monday, July 26 in the Court Room of the Court House.

Rev Eaton's unique presentation is a gripping dramatization of present-day liquor conditions, the story of a man who sank to the lowest depths of alcoholism and then fought back to a triumphant victory over the race's age old curse.

Presentation of "The Unkown Visitor" is open and free to the public.

The Katter Trio will furnish the music.

MISS IDA AX IS BRIDE OF MR. LESLIE DE MERRITT

Miss Ida Ax, daughter of Mr and Mrs Will Ax, Klemme, and Mr. Leslie De Merritt, Thornton, were married Wednesday, July 14 at the home of the Bride's parents by Rev T E Hoon, pastor of the Methodist Church at Garner Only the immediate relatives of the contracting parties were present at the wedding ceremony.

Mr. and Mrs De Merritt left on a honeymoon trip through Minnesota and upon their return will reside at the Ax home for the time being.

Mr. De Merritt is in the portable milling business and has Klemme as his headquarters.

Oats Yield Is Well Above Average In This County

EDITOR'S SON AND PARTY LENGTHEN TRIP TO WEST COAST VIA SEATTLE

A letter from the Editor's son, Ray Jr, who in company with his cousins Bob Liebendorfer, Mason City, David Chapman, Kansas City and Sheldon Mendell, Lincoln, Nebraska, and Titus Davis, grandfather of all the boys, and who are on a trip to the west coast, says that they have decided to cut the trip to the Black Hills via Denver and instead of the former plan will now drive from the Yellowstone Park to Seattle, Washington This trip further north and west will add over a housand miles to their journey

They will probably drive to Seattle via Portland Oregon and will take the wonderful Columbia River drive, rated as the most scenic drive in the United States

At Seattle Grandpa Davis and his four grandsons have been invited to spend as much time as they wish at a cabin on Puget Sound They will then leave Seattle for San Francisco and take the drive along the coast

Their destination will be Los Angeles, Calif where they will visit their cousin Donn Davis and his parents Mr Davis is a son of Grandpa Davis

The boys and their grandfather are spending this week at Denver, Colorado with their uncle, Jack Davis and his wife While at Denver they will make trips through the various parks and places of interest in that region.

HANCOCK COUNTY REA RECEIVES ALLOTMENT

The Rural Electrification Administration approved last week a partial allotment of $122.000 for the Hancock County Rural Electric Cooperative, to serve 366 customers in Hancock County. When this project is brought to its full size, $366,000 will be needed to build 335 miles of line to serve 1,079 customers Wholesale power will be applied by a generating plant built with REA funds in Franklyn County

A meeting was called Monday evening, July 19th. by M C James, temporary chairman, to discuss matters before the temporary board The group voted to accept as cooperators the following. E. G. Gaskill, Crwith, J A. Huisinga, Woden, M C James. Goodell; C J. Wille, Klemme, I V. Rasmus, Garner; Victor Loebig, Wesley; Earl Ruka, Goodell, Wm. E Haes, Garner, and Omar J Maland, Kanawha

Model T's Still Kicking

Model T's and mules are about in the same class when it comes to kicking which George Lau found out to his sorrow when attempting to crank Old Henry Wednesday morning George gave the crank a good healthy swing or two, Henry kicked like a mule and George came out second best with a fractured arm

Suprised On Birthday

Mrs Wes Schuldt had a birthday last Wednesday and to help her the better to observe the event several of her relatatives and neighbors planned a surprise party on her and when they came to call on her in the afternoon they brought well filled baskets of good things to eat. Mrs Sam Harvey and daughter, Enid, of Mason City, were out-of-town guests.

SMALL GRAIN HARVEST IN FULL SWING HERE THIS WEEK

Crop Is One Of The Best In North Iowa For Several Years

Cutting and shocking oats has been the principle job of North Iowa farmers this past week At this writing most of the small grain has been shocked There are but a few fields of late oats which are still standing

Oats Is Heavy

The oats appears heavy this year and the stand is better than average When the harvest season is on the farmers begin to estimate the number of bushels per acre that the grain will make There will be a lot of oats in Hancock County that will make 50 and 60 bushels to the acre this year The stalks are long and there should be plenty of good straw this year

Corn Looks Good

It is too early in the season, farmers say, to make any estimate on the corn crop. However, at this time the corn looks like it will be a bumper crop.

Won High Grades At Drake

Gladys Zabilka was honored recently when she was given a grade average of "B" for work taken during the spring semester at Drake university, Des Moines.

Miss Zabilka is a junior n the college of fne arts.

Bible Class Held Camp Fire Meet

YOUNG PEOPLES BIBLE CLASS HAD CAMPFIRE MEETING TUESDAY NIGHT

The Young Peoples Bible Class of the Klemme Reformed Church met Tuesday evening at Meadow Park, at the Emil Lau farm. The young folks gathered around a campfire and enjoyed a program with Mitchell Bock as leader A member of each Confirmation Class from 1926 to 1937 gave a short history of the class.

The following took part in the program·

Edmund Josten, Mabel Schuldt, Raymond Barz, Mitchell Bock, Ethel Barz, Esther Knoke, Paul Theimann, Milvern Barz, Avis Barz, Elsie Christians, Dale Schlei, Ruben Grosshuesch.

Raymond Barz led in singing Rev. Grosshuesch gave a short talk at the end of the program Fifty-seven members were present Every class since 1926 was represented by at least one member

Accident Last Day Of School Cause Of Little Girl's Pain

The last day of school, Eunice, daughter of Mr and Mrs C A Larsen was playing with other children on the teeter-toter when she fell off the plank from several feet up in thr air At the time Eunice was only shaken up a bit and felt slight pain in her foot The past week she suffered more or less pain and discomfort and so had the injury X-Rayed and the picture revealed that a small bone was possibly splintered and so Eunice now has her foot in cast which she will have to wear for the next few weeks in order that a bone in her heel will heal back to normal position.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG. WASHINGTON D. C.

Washington.—It appears that another session of congress will go by without the congress and the administration doing anything serious in the way of cutting down government expenses. There is nothing that can be done now toward carrying out the expressions made by President Roosevelt in his message last January when he told congress that he wanted to cut federal expenses and take important steps toward balancing the federal budget. The reason that federal spending is due to go on for another year at the extraordinary rate of the last four or five years is because a majority in congress, under the lash of the White House, refused to require states and local governments to bear a percentage of the relief costs. In other words, federal spending will go on because congress and the President have lacked the courage to start taking the federal government out of the relief work and gradually restore it to the care of those folks in the various communities who know where relief is needed.

Spending Will Go On

There had been a very determined movement in congress to compel the states to share in the gigantic relief burden. It took on various forms and had various sponsors. But the end and aim of all of them was to divide the cost in equitable fashion.

The proposal that had the best chance of getting through was one offered by Senator Robinson of Arkansas, the Democratic leader in the senate. He offered an amendment to the relief bill which would have required the states to contribute one-fourth of the amount expended in each state, with the federal Treasury supplying the remainder. When that amount was offered, it was something in the nature of a compromise between proposals that the states should bear 40 per cent and that they should bear none of the cost. With the White House operating through the President's lobbyist, Charles West, and Senator Barkley of Kentucky, the administration was able to force defeat of the Robinson amendment.

Now, Senator Barkley is assistant Democratic leader of the senate and so we had the spectacle of one of Mr. Roosevelt's spokesmen being on one side and a second one on the other side. The one who was spurred on by the President was victorious.

I am not sure that the Robinson proposal would have resulted in an appreciable reduction in the federal outlay for relief. Of course, it would have cut the total somewhat but not by the full one-fourth that appeared on its face. It was valuable as a piece of legislation, however, because it would have required the states again to assume some of the burden which only a few years ago they carried in its entirety. It was a principle for which Senator Robinson fought and it was a principle upon which he was defeated because Harry Hopkins, relief administrator, objected and still objects to returning any part of the relief obligation to the local authorities.

I suspect that Senator Robinson's activities on the relief proposition will not help his relations with the White House but I think it ought to be said that Senator Robinson demonstrated again his capacity as a statesman. He demonstrated as well that he recognizes the dangers confronting the United States Treasury which at the end of the current fiscal year—June 30—had an outstanding debt in excess of $36,000,000,000.

From among some of the senators I gained the impression that there is considerable worry about the government's spending and they wanted to see the Robinson amendment prevail because they recognized it as a move that would eventually bring federal government spending within control. Also, senators of that school of thought maintained that if states were called upon to bear some of the burden of relief, it would bring home forcefully the fact that all of this spending must sometime be made up out of taxes. People do not like to pay taxes and they cannot be blamed for their attitude. Unless they realize, however, that borrowed money is being spent and they and their children and children's children are to be taxed to pay off the loans, they will not be in favor of reducing national, state or local expenses.

City Mayors Are Active

The debate in the senate on the proposition to send some of the relief burden back to the states showed rather plainly that most of the senators are disgusted with talk that hunger and distress will haunt the land if states are required again to take over some of this charity work. The impression I gained from this debate was that a powerful lobby of mayors from some of the larger cities was turning on all of the steam it could muster. Mayor LaGuardia of New York was the boldest of these as he has been bold constantly in forcing the federal government to pay the relief rolls in New York city and save his own New York city budget.

Another phase of the debate should be noticed. It was the reluctance of congress to reassume its right to direct and control the spending of federal funds. The above-mentioned Mr. Hopkins wants to be free and unfettered in his spending and those policies were the ones he recommended to Mr. Roosevelt. Consequently, with administration pressure on many senators, the Hopkins idea prevailed and so for another year congress must sit back and watch the Hopkins organization spend money virtually any way it desires.

I think there ought to be a lesson in this whole situation upon which the country can look back rather regretfully. The experience gained by making lump sum appropriations certainly shows how a bad habit can be contracted and how difficult it is to cure that habit. Seldom in history until this depression would congress ever vote lump sum appropriations for executive departments to spend as they will. Having contracted the habit, however, it is going to be difficult hereafter to deny any President lump sum appropriations, provided only that he has a substantial majority in the house and senate.

No doubt many persons will wonder why this sort of thing constitutes an important issue. The answer is simple. Governments are wasteful and the federal government, being larger than state or local governments, is just that much more wasteful and unable to handle money carefully. If states and local communities have to bear expenses of this sort out of their own treasuries, they see to it that only those entitled to relief obtain it. Unhappily, the national relief system is caring for thousands upon thousands of men who could get jobs and who could support their families but who will not do so as long as money is given them from Washington.

Since the national debt is at the highest point in the history of our nation, there is a growing conviction at the Capitol that a halt must be called sometime. The present trouble is that there are not yet enough courageous representatives and senators to force a stoppage in such spending.

* * *

Baker Takes Labor Job

While the steel strike blazed forth with battle after battle, blood was shed and property was damaged, little attention was paid to a development here in the nation's capital—in the government itself.

While all of the sensational things were happening on the steel front, one Jacob Baker was resigning his job as assistant relief administrator and was accepting the job of chief of a new labor unit to be associated with John L. Lewis and his Committee for Industrial Organization. Mr. Baker's unit is to be made up of government workers themselves, a labor union in the government of the United States.

For some years, there have been minor labor units among government employees. They were affiliated with the American Federation of Labor. Generally speaking, they were impotent and did little more than create a dozen jobs for the officials of the organization.

Now, however, the government workers are to have a "militant, fighting labor union which will get things done for them." Such at least is the press agent word that has been spread under Mr. Baker's direction.

Mr. Baker is familiar with the problems of government service. Undoubtedly he recognizes that he cannot use the same methods in organizing government workers that are used in private industry. If, for example, he would attempt a strike, I think probably it would be the end of labor organizations in the government of the "militant, fighting" type.

The advance notices concerning Mr. Baker's plans seem to indicate that he is seeking members below the grades of official rank. In other words, if the Baker plans are carried out, the new union will be made up of the so-called rank and file. This would seem to be an advantageous arrangement because it eliminates some of the dangers that always develop where bureaucrats and division heads assume too much authority.

There is a danger also in confining the organization to the rank and file because among the less experienced labor leaders there is always a tendency "to flare up." That is to say, lacking experience they may say things or do things which are regrettable or which they have cause to regret later on. The violence that has shown its ugly head in the steel strike proves this point. So Mr. Baker has his job cut out for him in this direction.

This is more of a victory for ley than it is for radio exec All their money did not inter and Mrs. Temple, who try Shirley's working hours down minimum. But Shirley hear on the studio lot about this and that one going on the ra she began to wonder wh couldn't do it. She begge begged. Finally Mrs. Temple had to let her do it.

—★—

When Carole Lombard that her new contract with mount include a clause giving her permission to make one picture a year for any other company she chose, all the little companies scurried around looking for stories that might interest her. One picture with a star like Lombard, they figured, would put them in the big theaters, and in the big money. And now Carole gone and broken their hearts. has signed a contract with Sel to make one picture a year for for five years.

Carole Lombard

—★—

R-K-O has a grand surprise ready for Irene Dunne. They found a dizzy, hilarious char for her to play in a perfectly comedy—the kind she loves. the role of a rich, giddy girl wants to be a detective and goes around detecting whether one wants her to or not. "The Miss Minton" is the name, here's hoping it is half as good everyone expects it to be.

—★—

There are a lot of people on M-G-M lot who think that Greta Garbo is just about the grandest person alive and one of them is Charles Boyer. When their current picture, "Countess Walewska" was about half finished, he went to the director a little worried. He discovered that his part was much longer than hers. Breezily the director told him not to give it another thought. Miss Garbo knew all about that before the picture was started and insisted that no changes be made. "The picture must be good," she said. "Not all Garbo."

—★—

Weary of waiting around the Warner Brothers studio watching song and dance stars overworked while there was rarely a part for her, Josephine Hutchinson asked for a release from her contract and got it. Immediately Metro-Goldwyn-Mayer signed her for one of the most thrilling roles of the year. She will play the lead in "He Who Gets Slapped," with Spencer Tracy and Robert Taylor in the cast.

—★—

Meanwhile, the same studio that is making Miss Hutchinson so happy, is making Joan Crawford unhappy. She suspects that the story-finding department forgets her for months at a stretch and just picks out any old story that is left over as a vehicle for her. Rumor has it that she would like to break away and go to work for Sam Goldwyn, May-be she will. And you know what grand pictures he makes.

—★—

After all, the Bennett sisters, Joan and Constance, won't play the picture star and the double in the popular novel, "Stand In." Joan Blondell has been borrowed from Warner Brothers and will play both parts. Constance was not keen about playing the vicious, calculating star and Joan is intent on going to the Summer Stock theater at Dennis on Cape Cod to do some stage acting. Incidentally, Joan is said to be the best rumba dancer in all Hollywood. Wouldn't you love it if she would dance in a film? If enough fans wrote and asked her to, she probably would. Stars love to get letters that offer suggestions.

Joan Blondell

—★—

ODDS AND ENDS—After all, Fred Allen won't make a picture this summer. He did not like the story the studio cooked up for him. It would have to be good to top his last few radio programs of the season. Everyone is wondering if Walter O'Keefe can keep the pace Allen set . . . Dance directors and scene designers who think up those colossal numbers for musical pictures are a little annoyed because Jeanette MacDonald outdid them in staging her own wedding . . . Eddie Cantor demands that Virgil Miller be hired as cameraman on his pictures. Miller has five handsome sons and Eddie still has a lot of unmarried daughters around the house.

n 1781, it took General Washing- n four days to ferry only 4,000 en across the Hudson when he oved his army south from New rk to Virginia. Now, over the eorge Washington bridge at New rk, a whole army corps—or 97,- 0 men, 23,105 animals, and more an 11,000 gun carriages, trucks, d other vehicles—could be put ross in eight hours!

Chinese classics relate that a cer- in king once crossed a river by alking over a bridge formed by e backs of a long line of big, ac- mmodating turtles!

Turkish and Chinese Bridges.

In west China and Tibet, to this ay, men "coast" across rivers on ghtropes, sitting in a seat slung nder the rope and sliding along it. o make the underslung seat slide ster the rope is often greased with utter. Dr. Joseph Rock, exploring r the National Geographic society, eports his own use of yak butter n such bridges. "I always tried to nd a bridge made of new rope," ays Dr. Rock, "for the rope soon ears out."

In his "Voyage to South America," written many decades ago, Don Antonio de Ulloa describes various Inca bridges he found there. One of them, the tarabita, is much like the greasy buttered bridge of Tibet. "The tarabita is only a single rope made of bejuco," says Ulloa, "or thongs of ox hide . . . This rope is fastened on each bank to strong posts. On one side is a kind of wheel, or winch, to straighten or slacken the tarabita to the degree required. From the tarabita hangs a leathern hammock capable of holding a man."

Using another rope, the passenger pulls himself back and forth. Ulloa saw mules moved the same way.

At Baghdad years ago, when the Turks were still waging their long war against desert tribes, their artillery used to lumber noisily across the Tigris on a bridge of boats, on its way to bombard some Arab mud town that had not paid its taxes. From a safe distance, when Turkish guns opened fire on the mud-walled villages, observers could see dust and timbers fly high into the air. Sometimes the Turks came back across the bridge of boats driving long lines of camels confiscated from delinquent nomads. One quiet, very hot Sunday morning, the Bedouins, shooting and shouting, rushed suddenly over the bridge, and stole their camels back again.

At Mosul on the Tigris, hard by old Nineveh and in the shadow of Jonah's tomb, is another such bridge of boats. Millions of Shiah pilgrims have crossed these swaying structures, carrying their dried and salted dead relatives and friends to sacred burial grounds around the desert holy cities of An Najaf and Karbala.

Bridge Into the Sea.

In Arabic Al Kantarah means "The Bridge." That old Roman bridge, the Alcantara, over the Tagus in Spain, stands today as proud and stout as when its huge arches were built, some 1,800 years ago.

Look at the mass, the heavy weight of these ancient bridges! They were built in, and for, one particular place. Today man cuts his steel bridges to order, ships them 5,000 miles, 10,000 miles, and erects them, by standardized practice, wherever they may be needed. The pieces are all shaped, numbered, and packed in a ship's hold like the pieces of a child's construction toy in a Christmas box; blueprints are the "directions" for setting up!

Rocketing from rain clouds on an air trip around Brazil, passengers come suddenly upon an enormous suspension bridge that seems to run out into the Atlantic ocean. It does. It connects the mainland state of Santa Catharina with its capital, Florianopolis, which stands on an off-shore island. The American Bridge company erected this structure, shipping all the parts ready-made.

No other field in American overseas trade demands more ingenuity than does the bridge man's calling. Orders come in for new bridges which may be wanted in any land from Alaska to Ecuador. No facts may be at hand about floods, river traffic, health and food conditions, or the nature of the river bed and banks, whether rock, clay, sand, or mud, at the spot where the new bridge is to be built.

Since no tools, equipment, or building supplies of any kind may be available there, the American builder must take everything with him.

A Twist of Tongues.

Problems of language, food, and climate must be met. One American engineer arrived in Peru on his first visit to Latin America to build a bridge. Anxious to gain a Spanish vocabulary of bridge words, he chose a personal helper from among the workers and practiced diligently. Imagine his chagrin when he finally discovered that his bridge vocabulary could be used only in India, for he had picked a Hindu as a teacher! On another job food shipments were so delayed that one American foreman was found subsisting on popcorn fried with bananas.

SOMEONE'S PICKING YOUR POCKET!

It's the Hidden Tax Collector—He Respects Not Even the Real Necessities of Life, and How He Wallops Your Budget!

By WILLIAM C. UTLEY

DO YOU make $150 a month? If you do, you'll be interested—and perhaps a little surprised—to learn that the tax collector picks your pocket to the tune of one-eighth of your income. He sneaks enough from the family wallet in two years to buy a new car.

Yes, he picks your pocket. For this "take"—which amounts to 12.7 cents out of every dollar—represents indirect, or "hidden," taxes. They're not like your income tax or personal property tax or a state retail sales tax, for you rarely know when you have to "shell out" for them. They're concealed in the price of the goods and services you buy, even the bare necessities of life such as bread and shoes. "Death and taxes are inevitable"—and all too often invisible.

These are only a few of many illuminating revelations to come out of a survey just completed by the Family Economics bureau of the Northwestern National Life Insurance company, of Minneapolis. The study was started in November, 1935. Records of 206 concerns—public utilities, insurance companies, manufacturers, jobbers and retailers—were investigated "in an effort to measure as accurately as possible the proportion of prices paid by the consumer for which taxes—federal, state and local—are responsible."

All levies which would not normally be included in the cost of goods and services sold were omitted in the calculations which followed from the original producer to the retailer. The principal taxes entering into the picture then were: Farm and urban realty taxes, personal property and general property taxes of business concerns, excise taxes, licenses, fees and franchises, moneys and credits taxes, gasoline and oil taxes on motor truck deliveries, import duties and the tax element in freight costs involved in the various steps of distribution.

Taxes Are Passed On.

To understand the figures it is necessary to understand how some of these indirect taxes work. "In the case of a retailer who owns the building which houses his store," says the report, "real estate taxes are shown on his books as an item of overhead, and their participation in the 'makeup' which he must add to his cost prices can be measured with considerable certainty.

"However, if he rents his store building, the taxes on the building are necessarily contained in the rental paid, and are just as surely a portion of his overhead expense, even though concealed in the entry 'rent.'

"In the wholesale price which the retailer pays for his merchandise is necessarily contained an overhead element consisting of the real estate taxes on the building occupied by the wholesaler, and just as necessarily, taxes on the factory which produced the goods contribute a portion of the price charged the jobber by the manufacturer.

"This study," the report continued, "has undertaken to include in the figures finally attained the principal elements affecting ultimate prices charged, whether actually listed as 'taxes' on the books of the business, or contained as a portion of some other entry."

Social security taxes were not considered, "because they are in a sense deposits for future withdrawal." Gasoline taxes were computed, because gasoline and oil are subject to local taxes in all 48 states and the District of Columbia, in addition to the federal levy.

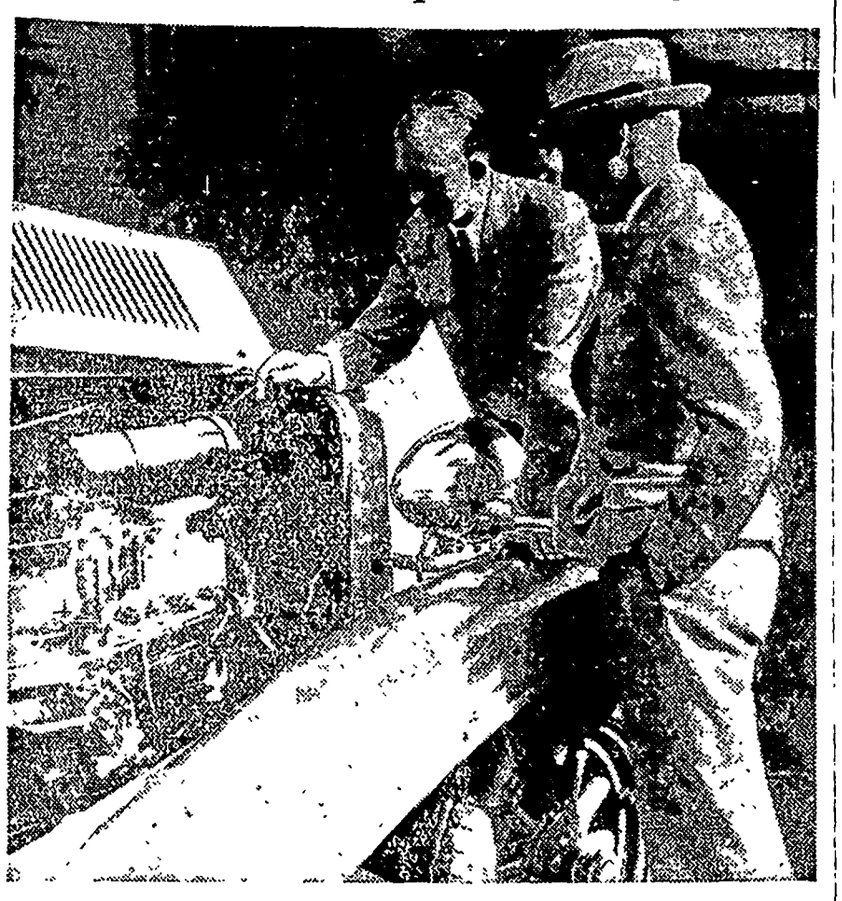
Tax-Grabber Is Killjoy.

The researchers estimated that the average worker's family with an income of $150 a month spends $43.50 for food; of this 7.1 per cent, or $3.09, goes to the hidden tax collector. Of the $30 spent for shelter, hidden taxes take more than a quarter, $7.59. They account for 8 per cent of the $16 clothing bill, or $1.28. Fuel and light cost $11, but 9.5 per cent of this, or $1.05, represents indirect taxes.

The tax-grabber really cuts into the family's enjoyment of life. The cost of an average used car, including license, and gas and oil sales tax, is $14.50 a month; hidden taxes get 20.1 per cent—$2.91. And the $3.00 the $150-a-month family can set aside for recreation includes 30 cents for the tax-grabber, who seldom shows his face.

Insurance bears a lighter tax load. Of the $5.00 spent monthly for that protection, only 2.6 per cent, or 13 cents, falls into the hidden tax barrel. Sundries and miscellaneous items—toothpaste, jewelry, tobacco, etc.—which cost $27 a month are burdened with taxes amounting to 10.2 per cent, or $2.75.

The hidden taxes which eat away at an $80 monthly income are slightly less in proportion, since it is assumed that such an income does not ordinarily permit the ownership or operation of an automobile.



What the salesman doesn't always tell you: The cost of a used car and its operation include hidden taxes amounting to 20.1 per cent. If it were a new car, the figure would be 21.4 per cent.

Here's the way the tax collector fares with that one:

	Cost Per Month	% of Taxes Found in Cost	Amount of Tax in Dollars
Food	$27.00	7.1	$1.92
Shelter	18.00	25.3	4.55
Clothing	9.00	8.0	.72
Fuel and Light	6.00	9.5	.57
Transportation (Streetcar)	4.00	11.0	.44
Recreation	2.00	10.0	.20
Insurance	2.00	2.6	.05
Sundries & Miscellaneous	12.00	10.2	1.22
Total	$80.00	Av. 12.0	$9.67
Annually	$960.00	12.0	$116.04

Taxes on $200 Income.

There is a slight difference in the proportion of hidden taxes to the spending of a family with an income of $200 a month. This is again accounted for by the automobile, as shown:

	Cost Per Month	% of Taxes Found in Cost	Tax in Dollars
Food	$48.00	7.1	$3.41
Shelter	38.00	25.3	9.61
Clothing	22.00	8.0	1.76
Fuel and Light	14.00	9.5	1.33
Transportation (Auto bought new)	20.00	21.4*	4.28
Recreation	6.00	10.0	.60
Savings	5.00	**	**
Insurance	12.00	2.6	.31
Sundries & Miscellaneous	35.00	10.2	3.57
Total	$200.00	Av. 12.4	24.87
Annually	$2,400.00	12.4	$298.44

*Also includes license, and gas and oil sales taxes.

**Tax ratio to total time and demand deposits in banks studied was .2 per cent. However, the effect of this tax would obviously not be to increase the savings depositor's outlay, but could only affect him by reducing the interest yield on his savings. The moneys and credits taxes levied by many states are paid directly by depositors, with wide variation in rates and in minimum exemptions.

"After arriving at general tax ratios for the various lines of goods and products represented by the concerns studied," says the report, "further studies were made of individual products in certain lines—in the case of food products, bread, pork, beef, sugar etc. The results of these studies gave an additional series of checks though, necessarily, individual items varied rather widely in some cases from the tax proportions arrived at for the general group of goods."

You'll never recognize 'em, madame, but hidden taxes will account for 8 per cent of what you pay for that dress!

The loaf of bread for which you pay a dime bears in its cost .64 of a cent in hidden taxes, the study disclosed. Beef prices contain indirect taxes amounting to 8.14 per cent; pork prices, 8.04 per cent. A five-pound bag of sugar costs a nickel more than it would if there were no indirect taxes concealed in it.

Rent Boosted by Taxes.

If the man of the house buys a suit of clothes for $25, a portion of that amounting to $2.62 helps clothe the tax collector. If the lady spends $5.00 for a pair of shoes, she will never be happy to learn that she could have bought them for $4.58, were it not for the inevitable taxes.

The great proportion of indirect taxes to residential rental costs was investigated with the aid of real estate companies in 48 cities; records on representative local properties were taken at random from their files.

A total of 7,964 single and multiple family dwelling units were covered by the final averages. These revealed that taxes represented 28 per cent of the current rental rate of the one-family dwellings studied; 19.2 per cent of the rental rates of the duplexes and 13.6 per cent of the rental rates of the apartments.

"The notably lower ratio of taxes to apartment dwellings is due," says the report, "first to the fact that a portion of the apartment rental dollar represents fuel, water, rent, janitor service, etc.; second floor space is more intensively occupied in apartment buildings, and third, apartment rental rates have in general recovered somewhat faster than house rental rates. In many communities, however, tax rates are mounting approximately as fast as rental rates are recovering."

Average Motorist Taxed $48.

The automobile today has passed the stage where it may be classified as altogether a luxury. But it's a free luxury for the tax-grabber; in fact it's soft picking for him. Motorists paid an average of $48 apiece in taxes, direct and indirect, contributing a total of $1,349,000,000 or 10½ per cent of the nation's entire tax revenues during the fiscal year ended June 30, 1937, according to the study.

In a detailed advance estimate, the report sets total federal, state and local tax collections at $12,872,000,000 for the fiscal year just ended. General property taxes contribute $4,718,000,000, and income taxes—federal, state, and local—$2,629,000,000 according to the study, with the owners of twenty-eight million motor vehicles ranking a strong third as a source of revenue.

Gasoline and oil taxes, totaling $884,000,000, make up the bulk of motorists' current tax contribution. Combined federal and state taxes on gasoline average slightly over five cents per gallon, for the country as a whole.

The purchaser of a new low-priced car pays $101 in taxes, direct and indirect, during his first year of ownership, according to the study.

He pays approximately $64 in taxes as a part of the original purchase price, the study shows. This figure includes $3.30 estimated tax content in the freight costs, $14.41 in excise taxes, and numerous direct and indirect taxes which accumulate in material and production costs to an estimated amount of $46.10.

Computations Conservative.

If the motorist operates his car 7,200 miles a season, his gasoline and oil sales taxes will total approximately $23; with an average cost for his new car license of $14.50, a motorist thus contributes some $101.50 in taxes during his first year of ownership.

If, however, the $64 of taxes contained in the original purchase price is averaged down to an annual depreciation basis of $10.42, assuming resale or trade-in at the end of the third year for $350, the motorist's average tax cost becomes $48.14 annually for the three years, the study shows. This figure is computed on the very conservative operating basis of 7,200 miles per season, the report points out.

The owner of a used car in its fourth to seventh year of service contributes an average of $35 annually in taxes, the study shows, if he operates his car a modest 6,000 miles per season.

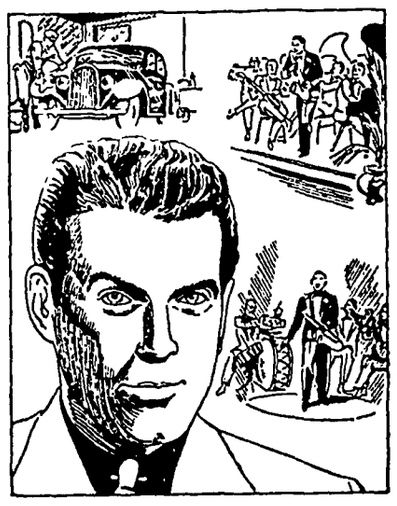
'Way Back When

By JEANNE

FRED MACMURRAY WASHED CARS FOR A LIVING

NECESSITY is the mother of invention, they say; and if that is so I think someone should emphasize that "Courage is the father of opportunity." So many times, when things look blackest, it seems that only by drawing on reserve strength can we keep going. Suddenly we find ourselves face to face with opportunity. Everything looked hopeless before. We were really almost ready to give up. And, then looking back, we wonder how things could have seemed as bad as they were.

Fred MacMurray was born in Kankakee, Ill., in 1908, and spent his boyhood in Beaver Dam, Wis. He lived a normal small town life for an American youngster. In 1925, when he was seventeen, he was awarded the annual American Legion medal for the student showing the most well-rounded development in scholastic subjects and sports. His mother worked in offices to support them both, and Fred attended Carroll college in



Waukesha, Wis., earning his way by playing the saxophone. A broken hip forced his mother to quit work, and Fred left college to try to blow a living out of his saxophone. They moved to Hollywood, Calif., for her health and the boy was glad to get a job washing cars in a garage, to pay her hospital bills. Before he could collect his pay, the garage went bankrupt, and Fred MacMurray faced a discouraging period without a job. He tried to obtain work in the picture studios as a saxophone player, but had no luck. Things looked very black, indeed.

Then, he was signed up with a band called the California Collegians, which worked its way to New York city and was hired for the play "Three's a Crowd." Fred had a small bit which led to a slightly better part in "Roberta." A talent scout for Paramount saw him, brought him back to Hollywood, and he was given a contract which led to his success in pictures.

POET LAUREATE OF ENGLAND WAS A PORTER IN A SALOON

WHAT romantic occupation could you possibly predict for a boy so adventurous that no one could control him, so reckless that the aunt who took care of him after his father and mother died indentured him to a merchant ship at the age of fourteen to curb him? That was John Masefield's start in life and today he holds the highest honors England can give any poet.

Born in Ledburn, Herefordshire, England, in 1874, he sailed the seas for three years. Leaving the ship in port at New York city, he took any odd job he could get. He worked in a bakery and in a livery stable. He was porter in Luke O'Connor's saloon at the Columbian hotel near Jefferson Market jail. Then he moved to Yonkers, at the north end of New York city, where

he worked in a carpet factory, rising to the magnificent position of "mistake finder" at $8.50 per week.

It was at this time, in his early twenties, that Masefield started to write poetry and in 1897 he left for London. His first volume of verses, "Salt Water Ballads," was published in 1902 opening with "A Consecration," in which he announces himself as the champion of "the dust and scum of the earth." Books of verse and novels followed, one upon the other, and John Masefield became established as one of England's greatest poets.

So, remember John Masefield before you pass judgment on that neighbor's boy who is such a holy terror or that young scamp who works in the saloon across the railroad tracks.

A $500,000 memorial was recently dedicated to Stephen A Foster on the campus of the University of Pittsburg, Pennsylvania. Foster was the composer of "My Old Kentucky Home," "The Old Folks At Home," and many other immortal southern melodies. Foster died in a charity ward in Bellevue hospital in New York on January 13, 1864 Though his 200 songs were all of the south he never lived in the south and only visited it on two occasions. His life was most unhappy and he died at the age of thirty-eight a victim of strong drink

YEAST PROTEINS ARE GOOD BUT EXPENSIVE FOR SWINE

Yeast proteins are good, but they are expensive

This is the reply which C C Culbertson, in charge of animal feeding experiments at Iowa State College makes to the many who ask him regarding the value of yeast feeds which are recommended to them for feeding to pigs as supplements to oats.

When pigs are on good pasture, some such protein supplement as tankage at the rate of about 0 2 pound per pig daily, will prove an excellent supplement for oats and will give quite as good results as some of the yeast protein feeds at much less cost.

CHEVROLET PRODUCES 13TH MILLIONTH CAR

Another milestone in industry was reached Wednesday, when the 13-millionth Chevrolet rolled off the assembly line in the Flint plant of the Chevrolet Division, General Motors Corporation.

In spite of interupted production Chevrolet's 14th millionth car was produced in a period of just two days more than 11 months, the second shortest million-unit period in the company's history Officials stated that the demand for the 1937 models has exceeded anything heretofore known, and that, but for the frequent interuptions of output since January 1, production and workers' wages would have shattered all previous records, and the present milestone would have been reached from 60 to 90 days earlier

Production of No 13 million was marked by no ceremonies at the factory, but M. E Coyle, general manager of the division, issued a brief statement from his Detroit office officially announcing the event, which was also the occasion for an informal luncheon, attended by Mr Coyle, Mr Holler and other executives of the company.

When the present management, headed by Mr Coyle, took over the reins in October, 1933, the company had built 9,000,000 cars and trucks The 10-millionth was produced Nov 20, 1934, the 11 millionth Dec 4 1935, and the 12-millionth August 5, 1936 Records show that it took 12 years for the company to build its first million units while the remaining 12 million have been produced in a period of only 14 years. Mr Coyle has been a member of the organization throughout the production of all but 120,000 of the 13,000,000 units built to date

NECRO IS MOST SERIOUS SWINE DISEASE IN IOWA

Worse Than Cholera In Some Respects Because There Is No Dependable Vaccine For It

Because of the number of inquiries which he has received, Dr K W Stouder, Iowa State College extension veterinarian, believes that necro, otherwise known as infectious interitis, has been the most serious swine disease during the first 6 month of the year

"In many ways," Dr Stouder points out. "necro can be considered a worse plague than cholera. There is no equally dependable specific vaccine for it. The only effective control method is prevention through rigid sanitation and careful feeding."

Dr Stouder declared that there "is no positive way of determining how many hogs have died of necro or would be better off dead," but that his correspondence indicates necro is giving the farmers more trouble than any other disease.

Prolonged periods of wet weather this spring provided ideal conditions for the spread of the disease, Dr. Stouder recalls. The necro germ like other bacteria, thrives in darkness and dampness, and can live in moist soil for years.

When a pig swallows these organisms, they promptly attack the wall of the intestine, causing inflamation, eventual sloughing off of the lining membrane, and bleeding. Hogs that do not die from the disease rarely make sufficient gains to pay for the cost of marketing them Insead they remain as "carriers" which reinfect the soil and spread the disease to healthy animals.

Dr. Stouder's advice to farmers who have necro is:

(1) Get rid of every hog on the farm before starting next year's breeding operations.

(2) Clean up all hog house pens with lye and water.

(3) Secure breeding stock from healthy herds

(4) Keep them on clean, uninfected ground in disinfected pens.

(5) Feed non-irritating feeds in clean, dry quarters (Too much dry hulled oats, or highly alkaline dish water sometimes cause enough irritation to help give the germs a foothold.)

(6) Feed the pigs in a disinfected pen or clean pasture until the litter is four weeks old. If kept free of disease until that age they stand a much better chance of keeping healthy

Whenever an outbreak of necro is suspected, it is wise to call a veterinarian at once, Dr Stouder says, because prompt control measures are essential.

KLEMME LOCAL NEWS

Mr and Mrs. Paul Mueller and Herbert took Mr. and Mrs. Chis Riebe of Garner on a trip to eastern Iowa a week ago Sunday. The party went to McGregor and then down the River Drive to Dubuque, which is one of the prettiest drives in Iowa Forty-seven years ago the Riebes lived at Dubuque.

Mr and Mrs. W. Henry Galbreth are spending this week at the Methodist Camp at Clear Lake where they are chaperoning a group of young people from Mason City who arrived at the Camp Sunday to spend the week Mr. and Mrs Galbreth are at the cottage known as the "Mason City Cottage" They will superintend swimming, games and recreational activities of various kinds.

Mr and Mrs. Walt Thada and their daughter, Mrs Edward Thompson and husband of Whittemore, returned Friday evening from a pleasure trip through Northern Minnesota and Canada They drove along the scenic north shore of Lake Superior from Duluth to Port Arthur, Canada, and then west to Kenora, Canada, back through the Lake of the Woods country into Minnesota and then back home They enjoyed their trip very much

Mr and Mrs Glen Bridges and daughter, Cecil Bridges, Miss Lucille Stille and Roger Ridder returned Saturday from their trip to Louisiana where they visited the Paul Stille family at De Ridder Mrs Herman Bridges, who accompanied them on the trip, remained at De Ridder for an extended visit. The party drove as far south as the Gulf of Mexico, which is a distance of 1,350 miles from Klemme They enjoyed the trip and saw many things of interest in the far south.

CAN BEANS UNDER PRESSURE

Green beans are known as "good keeper" in the vegetable canning world, but even the bean may spoil if the homemaker makes up her recipe as she cans

Following definite directions suitable to the vegetable being canned is recommended by Miss Ruth Cessna, extension nutritionist at Iowa State College

Choose snap beans for canning when they are still green and tender, Miss Cessna advises After a thorough washing, cut the beans in pieces and add enough boiling water to cover Let them simmer in an open kettle for about 5 minutes, or until the beans are wilted and will bend without breaking They are then packed hot into containers, covered with hot water and a teaspoon of salt added to each quart.

A pressure cooker should be used, if possible, processing the containers immediately at 10 lbs pressure Pint glass jars require 30 minutes processing and quart jars 35 minutes Number 2 plain tin cans require 25 minutes and No. 3 cans 30 minutes The jars may be processed in a hot water bath.

Gus O Krueg and wife are spending a month or more visiting thier daughter Dorothy, at Dayton Ohio

Mr and Mrs Gerald Burk visited at the home of the grandparents in Belmond Sunday evening

Italian Village Mourns for Ousted Compatriots

The populace of the small village of Condino, Italy, celebrates a quaint and pious religious ceremony that has been dear to their hearts for more than 300 years.

The procession on a chosen Sunday each year leaves the village and slowly climbs the slopes of Mount Melino, reaching a tiny chapel where they drop lilies and pray, relates a Trento, Italy, United Press correspondent

In 1630 40 workmen of this village emigrated to Venice. A plague had spread and the workmen were refused entrance They immediatly returned to Condino but were not permitted to enter the village for fear they might have caught the disease. So they built their homes on top of Mount Melino.

Their relatives living in Condino carried food and water to them half way up the mountain side. The 40 hermits lived in isolation for nearly three months, when suddenly one of them fell sick with the plague. Swiftly all died, praying God to pardon their selfish compatriots who, stricken with grief, buried them on the mountain top.

A shepherd one cold winter morning brought the miraculous news to Condino that lilies had grown out of the snow on the workmen's graves and henceforth pilgrimages were organized every summer to venerate and cover with lillies the tombs.

Hospitals of India Used Heat 2 Thousand Yrs. Ago

The earliest development of hospitals on the plan on which they have long existed, took place about 1,000 B. C. among the Aryans in the northwestern part of India whose culture centered around the city of Benares. Its greatest impetus came about the time Buddha was born, in that city, in the Sixth century B. C., and continued to its highest development about the Third century B. C., according to a writer in the New York Herald-Tribune. Its progressive expansion throughout the surrounding areas continued until the Sixth century A. D., when the Scythian hordes from the north over-ran the country and were unable to absorb and carry on its culture. A great deal of the knowledge of the early doctors and surgeons has been preserved in Sanscrit.

These early Sanscrit records make it plain that the early Aryan doctors knew of the spread of disease by contagion and took measures to guard against it. In the maternity hospitals of India more than 2,000 years ago clean sheets that had been treated by steam were provided for the patients every day, indicating that they knew of the power of heat to prevent disease.

"Christian Soldiers" by Small Village Minister

"Onward Christian Soldiers" was written by Dr. Sabine Baring-Gould, minister of the small village church at Lew-Trenchard, England, says a writer in the Boston Herald. On Whitsunday in 1865 the boys and girls of his parish Bible school were preparing to attend a festival on the following day in a nearby village.

"They must have a stirring song to sing as they march tomorrow," the pastor decided. He spent most of the day searching for a satisfactory marching song and, when he found none to suit him, he sat up most of the night writing one of his own.

As those little English children, convention bound, sang "Onward, Christian Soldiers" for the first time the next day, Dr. Baring-Gould little dreamed that he had written a song destined to live with the great hymns of the ages: "It was written in great haste, and I am afraid some of the rhymes are faulty. Certainly nothing has surprised me more than its popularity."

One Sunday in May, 1910, when the sixth international Sunday school convention was meeting in Washington, D. C., it was arranged that "Onward, Christian Soldiers be sung simultaneously in Bible schools the world around. The hymn was translated into more than 100 tongues and dialects for the occasion. Today it is as popular as ever in churches and Sunday schools and at young people's religious gatherings.

The hymn tune with which modern Christians are most familiar was composed in 1871 by Sir Arthur Seymour Sullivan, the great English organist, who is known also as the composer of "The Lost Chord."

Wm. Penn Also Known as First Conservationist

William Penn, founder of Pennsylvania, was also known as the country's first conservationist.

In a letter, written in 1687 to Penn's proprietary governor, contained strict instructions against destruction and felling of trees. Penn even went so far as to instruct his commissioner to "inform upon those and indict them for same to the utmost rigour."

"That you take special care that where the timber of mine is not cut down it be carefully preserved . . Hearing that a windmill is to be set up in the town of Philadelphia, which is my royalty, and thereby consuming a great quantity of wood . . . I hereby order you to prevent erection of said mill until further orders . . ."

Another example of Penn's careful conservation of wood appeared in his original Charter of Rights, issued in 1681, which reads: "in clearing the ground, care should be taken to leave one acre of trees for every five acres cleared, especially preserve the oaks and mulberries for shipping."

And as a result of an early beginning, Pennsylvania has conserved a large portion of the state in wooded land and forests.

Early New England Life

In the home life of the first settlers in New England, the men and women who came here in the Mayflower and subsequent ships, there was one focal point about which all the daily life and activities centered. That was the big open fireplace in the living room, which was literally that and, in many cases during the years immediately following 1620, the only room in the house This fireplace, writes Arthur H. Hayward in "American Collector," was the sole source of warmth and a matter of vital importance during the long and bitterly cold months of those New England winters. In or about it all the food necessary to sustain life and health was prepared Often it was the sole source of light. Of necessity construction of this part of the house fell to the most skillful workers.

Eyes of the Housefly

The greater portion of the hemispherical head of the fly is occupied by a pair of large compound eyes. Each of these is composed of about 4,000 faceted individual eyes which together apparently produce a single somewhat blurred image, and not thousands of separate images. On the top of the head in the space between the eyes are three simple eyes arranged in a triangle. The width of this space on the top of the head between the eyes serves as a means of distinguishing the male from the female. In the male the eyes are separated by about one-fifth the breadth of the head, but in the female, this space is wider, being about one-third the breadth of the head.

Mirage at Sea

There is record of an entire shipful of people seeing a mirage and suffering from a mass-hallucination. A French frigate, in the last century, on a sunny afternoon, officers and sailors, all clearly saw a raft covered with men towed by boats which were showing signals of distress The frigate lowered a boat to go to the rescue of the men clearly seen stretching out their hands and clearly heard, yet, when they actually touched the raft, they found it nothing but a few branches of trees covered with leaves, swept out from the nearby coast!

Chic Swim Suits and Deck Fashions

By CHERIE NICHOLAS

FICKLE fashion? Maybe so, but decidedly practical and dependable when occasion demands. Be assured when it comes to proper clothes for outdoor activities modern fashion is displaying an efficiency that is equal to every demand for practicality and wearability plus all that can be desired in the way of smart style. It is really amazing and most gratifying to see how skilfully the esthetic and the utilitarian combine in present day apparel.

Speaking of fashion from the practical viewpoint, have you noted the clever use being made of denim in the sportswear realm, just plain ordinary denim such as is used for workmen's overalls? Designers are making the swankiest tailored jacket suits of it. Goodlooking? Yes, indeed, and as to withstanding strenous wear and tear, we leave that for you to figure out for yourself. Slacks and shorts of denim too, are on the sportswear style program.

And there's bed ticking, the simple "homey" blue and white stripe sort, or giddier stripes if you prefer. It's fun to see what fashion is doing with this sturdy material, making separate skirts of it, jackets, beach robes and simple one-piece frocks and like denim there's "no wear out to it."

On board ship and at all smart resorts many women are wearing shorts and tailored shirts (see illustrated to left) made of serviceable chambray, the kind workmen have always depended upon to give good wear. This reliable fabric now enters the high-style sportswear picture, and being completely shrunk aforehand, workmen's chambray becomes the perfect fabric for strenuous play clothes for fashionable women.

Aye, aye sir, the sailor's life is the life for any girl who owns such a timely costume as the venturous young woman is wearing, making the hazardous climb among the ship's rigging as pictured in the group. This suit is beautifully tailored out of sanforized-shrunk cotton. Yes, this swanky slacks and shirt outfit is genuinely amphibian—takes to water like a duck and when it comes to setting a fashion pace on dry land it is all that it should be.

If you want to show up colorfully in fashion's swim and beach parade by all means choose a flamboyant print. Designers land print this season for the entire outfit, swim suit, matching beach coat, accessories 'n everything, even to the very sandals one wears. Printed silk crepe that washes to perfection makes the one-piece bathing suit with halter top shown to center-left in the picture. The matching long beach coat has a shirred yoke and full push-up sleeves.

To fashionables who go in for aquatic sports here is a message to delight the imagination. It's concerning the wide use of costume jewelry being made this season by those who go forth to brave the surf. Things that walk or swim or fly is the theme for the pins and clips to adorn bathing suits and such. The idea is to wear pinned here and there on your swim suit frogs, turtles, or decorative fish hand-carved from rich white catalin. See the cunning little lady to the right in the picture. Her clever play-suit is of Congo cloth with gray, white and red striped halter and gray shorts trimmed with same striping. A hand-carved frog of handsome white catalin blinks at you from the edge of her amusing coconut husk hat, another frog is pinned to her halter bodice while a third pins casually to one side near her waistline. Clever idea these beach jewelry novelties, and the fad is being taken up with enthusiasm.

© Western Newspaper Union.

GAY SILK PRINT

By CHERIE NICHOLAS

As the season progresses the fascination of silk prints leads on and on to acquire another and another and "just one more." The latest message is for brilliant flowers in gorgeous purples and vibrant blues and exotic magenta reds and bright greens and other ravishing colors printed on white backgrounds. Typical of this midsummer spirit in prints is the handsome model shown. It is a white silk crepe patterned in medium size florals. A grand dress to wear to afternoon occasions. The neck is high with a tiny collar that flaunts a spaghetti tie in purple. The large hat is most interesting and significant since it bespeaks a type of millinery that is new and outstanding. The long gloves are according to the latest style dictates.

NEW SUMMER SUITS FAVOR EMBROIDERY

Heim has gone in for embroidered details on spring and summer suits.

One black tailored suit in black wool has a straight little skirt and a tailored and fitted jacket that fastens high at the neck with a cut-out and embroidered design of a bird in a cage. The round cage is banded by gold embroidery which matches the gold braid that trims the neckline. Inside the round cage is a natural linen foundation upon which is embroidered a little silk bird.

A more summery suit is grege (between gray and beige) shantung. The skirt is made with front pleats that are stitched down to the knees and then pressed into place. The jacket fastens high at the neck but is cut away in a center V to make small revers and to reveal a blouse of black linen embroidered all over in a conventional design of colored birds.

Skirts Shorter and Fuller in Late Paris Collection

Shorter, fuller skirts are shown in the new Chanel collection and waistlines are slightly dropped to give a more youthful silhouette.

Series of small pockets trim the tailored clothes, and there are many touches of bright red throughout the entire collection.

Tulles, laces and sheer organdies are shown in white and in pastel shades for summery evening gowns that are fashioned with full, bouffant skirts to stress the youthful and girlish trend

Nassau Hats for Beach

Those picturesque colorful hats worn by dusky market women of Nassau and Havana have influenced beach hat fashions. Made of reeds, they are gay as summer and flattering as moonlight.

Keeping Up With Science

Great Heat Hurts Corn More Than Lack of Moisture

Meteorologist Explains How Drouth Cuts Crop

Detroit.—Excessive heat in drouth years is a more potent cause of corn crop failure than lack of water, Senior Meteorologist Charles D. Reed of the United States weather bureau station at Des Moines, Iowa, told the third Dearborn conference of agriculture, industry and science session here.

In support of his thesis, Mr. Reed cited recent drouth history in his own state:

"In 1934, summer precipitation averaged 2.08 inches greater than in 1933 in Iowa, yet there was a bumper crop in 1933 and nearly a corn failure in the southern counties in 1934, because of the excessive and prolonged heat, with an average of 19.7 days with temperatures 100 degrees or higher, the greatest of record up to that time. This cut the 1934 corn yield to 21.6 bushels as compared with 14 in 1894.

Lost 235 Million Bushels.

"Then came the calamitous summer of 1936. The heat of July and August averaged 81.3 degrees, surpassing by 3.2 degrees the record hot July and August, 1901, with an average of 25.6 days 100 degrees or higher.

"During the last half of July, 1936, the Iowa corn crop was reduced 235,000,000 bushels to an average yield per acre of about 17 bushels. . . In small areas the destruction was even more complete than in 1894. Whole townships in the south part of Plymouth and the central part of Woodbury counties, report only two or three wagon loads of corn.

"We used to say, 'It can't happen in Iowa,' but like the Californians, we must reluctantly admit that we had some unusual weather."

Deprecates "Cycle" Theory.

Discussing the much - debated question of weather cycles, Mr. Reed found some difficulties, but also offered sweltering humanity promise of some relief:

"Considerable has been said about precipitation cycles but since precipitation is a resultant of many complex factors of which temperature is the major one, the search for precipitation cycles is not likely to be very fruitful. There is, however, a rough rhythm to the temperature graph for the state of Iowa which can, with a little imagination, be divided into cycles or periods after eliminating volcanic and other influences.

"There is little doubt that we have just passed a historic peak in the temperature cycle that must be followed by a summer in 1937 much cooler than recent summers and probably averaging near or slightly below the long time summer average. And the cycles that have gone before lead one to believe that there will be a tendency for the next 2 or 3 summers to grow cooler."

Early Eocene Pig, Found in Badlands

Buffalo, N. Y. — Discovery of the fossilized brain of a primitive pig-like animal, the Oreodon, which existed in the western United States during early eocene times, some 40 million years ago, has just been reported by Irving G. Reimann, curator of geology at the Buffalo Museum of Science.

Mr. Reimann discovered the brain while collecting remains of these extinct peccaries at a famous locality near Scenic, S. D., in the Badlands. He found the place well picked over when he arrived, with fragments of bones littering the ground. As he was turning away with disappointment, he noticed the skull of an Oreodon, badly weathered. As he picked it up, the top of the cranium came off, revealing an excellent cast of the brain. The various areas and convolutions could be recognized.

Concrete Lumber Used in Fireproof Construction

Washington.—Concrete lumber is now being used for fireproof construction, reports Oliver Bowles of the United States bureau of mines here.

One inch thick boards are coated with firmly-bonded concrete. It is used for ceilings, floors, roofs and partitions.

Science, Like Law, Has Own "Bureau of Missing Persons"

Hunt Is On Now for Long Lost Parents of Actinium

Rochester, N. Y.—The police may have their missing persons bureaus who hunt for the Charley Rosses and Judge Craters of the world but science too has similar mysteries and none so famous as the "missing" parents of the element actinium.

In a report to the American Physical society, Prof. T. R. Wilkins and Dr. W. M. Rayton of the University of Rochester present new evidence which helps make clearer the origins of the missing long-lived parents of the actinium series of radio-elements.

How Lost Are Traced.

Scientific happenings which make it possible to throw light on the atomic "missing persons" problem are that sometimes the change from one element to another is accompanied by a loss of weight and sometimes merely by a loss of electrical charge without the weight loss.

The loss of weight occurs when the nucleus of a helium atom, known as an alpha particle, is liberated in the radioactive disintegration. Then, the parent atom drops down two whole numbers in the numerical scale which rates chemical element from hydrogen at one, to uranium at 92.

When electricity is given off by the emission of an electron the atomic number of the element jumps back up the scale by one unit. Thus Uranium I (92) gives off an alpha particle and becomes Uranium X_1 (90). But Uranium X_1 gives off an electron and becomes Uranium X_2, with atomic number 91.

Radium Best Known.

Thus in stepwise fashion, but sometimes up and sometimes down the scale of atomic numbers, go the disintegrations of the heavy radioactive elements, of which the best known is, perhaps, radium with atomic number 88. Common, gray and soft lead are the final offspring of all these spontaneous changes and there are four different kinds of lead; radium lead, thorium lead, actinium lead and just lead. The radium, thorium and actinium here mean that it is lead which had each of these specific origins. Plain lead merely means that scientists cannot specifically fix its origin.

The ability of the radioactive atoms to lose or take on weight at various stages means that there will frequently be two or more varieties all having the same chemical properties but slightly different masses even though they may have the same atomic number rating. Thus Uranium X_1 and its three isotopes (as they are known) all have atomic weight of 234. One has an atomic number of 90, another is number 92 and two are number 91.

While chemical methods are not sufficiently exact to permit distinguishing between all these varieties, other methods, and in particular, the range with which alpha particles are emitted, serve as experimental checks.

Drs. Wilkins and Rayton have studied the alpha particle ranges as their method in seeking actinium's "lost parent." The investigation also throws much needed light on the way alpha particles are emitted from the nucleus of atoms; a problem which has bearing on the much-studied and important field of the constitution of the inner cores of atoms.

Details of the methods used will interest scientists but need not necessarily be presented for the layman. Suffice it to say that a previously-unfound isotope of uranium has been indicated, at least tentatively, which might well serve as the parent for the now-orphaned series of actinium radio-elements.

Uncle Sam Breeds His Own Huskies for Alaskan Use

McKinley Park, Alaska.—Advent of the airplane in Alaska, and resultant air-mail contracts, have resulted in the past few years in a diminution of the supply of huskies available to pull dog teams. The result is that park authorities in Mount McKinley National park are raising their own dogs, reports Superintendent Harry J. Liek.

Previous to the use of air-mail, mail delivery was mainly by dog-team throughout the territory, so that the breeding of huskies was a thriving business. Now that the dog-team delivery has been discontinued in most sections, huskies are scarce and difficult to purchase.

The dogteam still remains the winter mode of transportation in Mount McKinley park, however, hence the decision to breed huskies in the park for government needs.

Lesson for July 25

LESSON TEXT—Exodus 12:21-28.
GOLDEN TEXT—The Lord thy God hath chosen thee to be a special people unto himself.—Deuteronomy 7:6.
PRIMARY TOPIC—Ready for the Journey
JUNIOR TOPIC—Ready to Start Home.
INTERMEDIATE AND SENIOR TOPIC—How God Prepares a People.
YOUNG PEOPLE AND ADULT TOPIC—Equipped for a New Era.

"Let my people go"—such was the word of the Lord to Pharaoh through Moses and Aaron. "Who is the Lord, that I should obey his voice to let Israel go? I know not the Lord, neither will I let Israel go" — thus hardened Pharaoh his heart. The issue was so drawn for one of the great struggles of history. On one side was a bold and mighty monarch with all the resources of the empire of Egypt, and on the other an unorganized multitude of slaves. No, wait, on the other side was Almighty God! The outcome was never in doubt and through the unspeakable horror of the plagues we come to consider the last of the ten, the death of the first-born, with which is joined the establishment of the Passover.

The Passover is of sufficient importance to justify careful study simply as the perpetual feast of Jews, but to the Christian it is also a most blessed and instructive type of Christ who is, according to Paul, "our passover" (I Cor. 5:7). Let no one who studies or teaches this lesson fail to point to "the Lamb of God which taketh away the sin of the world" (John 1:29).

I. A Lamb Slain (v. 21).

The sacrifice appears, a gentle, submissive lamb, a male without blemish, which is separated for the giving of its life that the first-born in Israel might be saved.

Notice that God's instructions were explicit, and were to be obeyed if there was to be redemption. There are those in our day who would substitute any and every other method of salvation for God's revealed plan. They talk about character development, the redemption of the social order, peace and politics, and forget the Lamb of God.

II. A Blood Salvation (vv. 22, 23).

The act of faith in marking the lintel and the doorposts with the blood, brought salvation to the families of Israel. Had they waited until they could reason out the philosophy of their promised redemption, or had they shrunk from the blood as their covering, their first-born would have been slain. It was when the destroying angel saw the blood that he passed over them.

Many there are in our time who speak disparagingly of the blood of Jesus Christ, but it is still the only way of redemption. "Without shedding of blood there is no remission."

It ill befits an age that is so blase and sophisticated as ours to attempt to cover its dislike for God's way of redemption by suddenly becoming too cultured and sensitive to hear of the blood of the Lamb of God shed on Calvary's tree for our cleansing from sin.

III. A Perpetual Memorial (vv. 24-28).

God wants his people to remember. We, like Israel, are to remember the bondage from which we were delivered. Down through the ages the Jews have kept the Passover. Our Hebrew neighbors do it today. Let us honor them for their obedience to God's command and at the same time seek to point them to the One who is the true Passover, Jesus Christ.

IV. Christ Our Passover (I Cor. 5:7).

Let us add to the assigned lesson text this New Testament passage which speaks of our Lord Jesus Christ as "our passover . . . sacrificed for us."

The bondage in Egypt was terrible in its afflictions and sorrows, but far more serious is the bondage in which men find themselves under sin and the rule of Satan. Surely there is need of divine redemption, and there is none to bring it to us but the Lamb of God. He was the One who without spot or blemish (I Pet. 1:19) was able to offer himself in our behalf that in him we might find "redemption through his blood" (Eph. 1:7, Col. 1:14).

"Is the blood upon the house of my life? Is the blood upon the doorpost of my dwelling place? Have I put up against the divine judgment some hand of self-protection? Verily, it will be swallowed up in the great visitation. In that time nothing will stand but the blood which God himself has chosen as a token and a memorial. 'The blood of Jesus Christ, his Son, cleanseth us from all sin'" (Joseph Parker).

Labor and Patience

Truth is to be costly to you—of labor and patience; and you are never to sell it, but to guard and to give.—Ruskin.

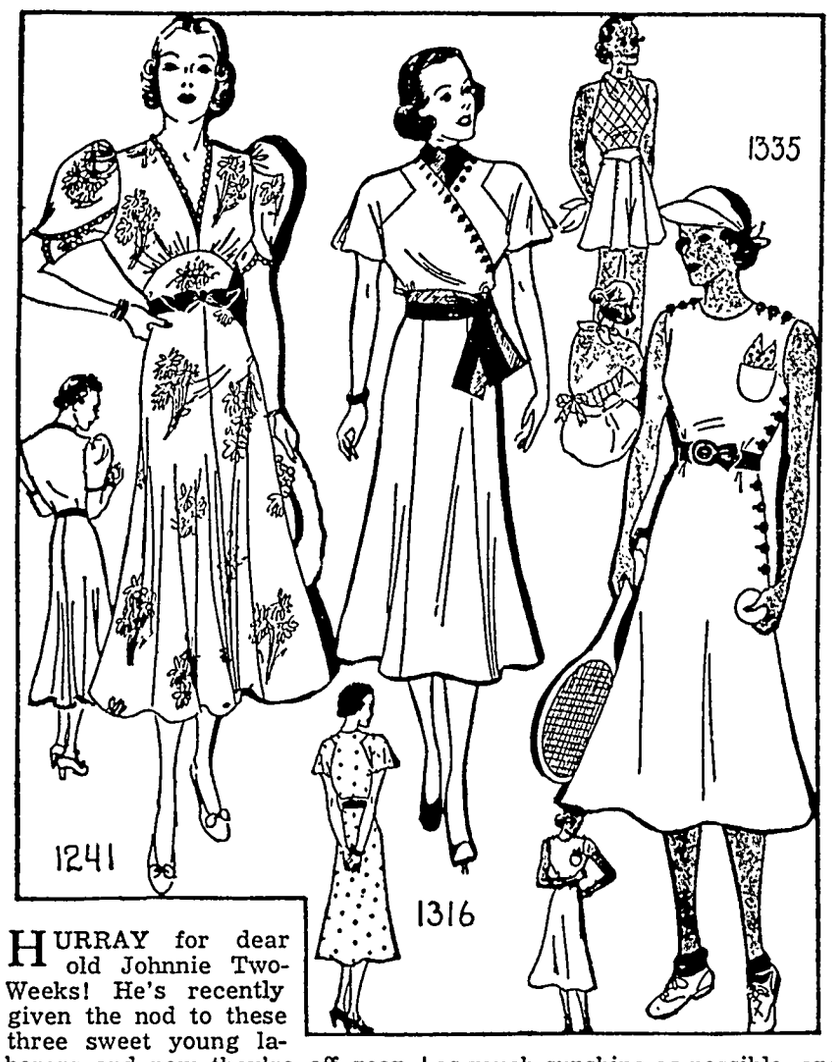
Judging Another's Sorrow

One can never be the judge of another's grief. That which is a sorrow to one, to another is joy.

Follow Our Convictions

Never swerve in your conduct from your honest convictions.—Horace Bushnell.

Fashions at Vacationland



HURRAY for dear old Johnnie Two-Weeks! He's recently given the nod to these three sweet young laborers and now they're off reaping the rewards. Yes, they're vacationing — and how! But, of course, Sew-Your-Own had them dressed right up to the hilt.

Chic in Chiffon.

Miss M, picturesque blonde, above, left, knows what glamour is and how to have it. That's why she chose this softly feminine frock with its swirling skirt and delicately slim waist. You should see her of an evening in the outdoor terrace. She's a picture in black gossamer chiffon trimmed with white satin. And to think, she made it all herself!

Cunning in Cotton.

Miss B, above, center, and center of attraction at the Surf club, has everything under perfect control as she strolls along the boardwalk. With not a care in her pretty head, and lots of streamlining in her natty little sports dress, she walks with confidence and pride. She has a clever way of achieving variety by switching scarfs and belts. In fact, she's so clever she made this little number, button holes and all, in one day without a hitch.

Cool for Sports.

Miss Y, the sports enthusiast at the right, says that her three piece ensemble is so very, very and practical she wears it almost to the exclusion of her other frocks. Her idea is to soak up as much sunshine as possible, and that's pretty easy to do when she wears the halter and shorts sans dress. Take a tip from Miss Y. Make your version of this ensemble in duplicate for all summer wear. Have one in seersucker, the other in acetate.

The Patterns.

Pattern 1241 is for sizes 14 to 20 (32 to 44 bust). Size 16 requires 4⅝ yards of 39 inch material plus 1½ yards of ribbon, and 3 yards of trimming.

Pattern 1316 is designed for sizes 12 to 20 (30 to 38 bust). Size 14 requires 4 yards of 39 inch material.

Pattern 1335 is designed for sizes 12 to 20 (30 to 38 bust). Size 14 requires 4¾ yards of 39 inch material for the dress and shorts, and 1 yard for the topper. The dress alone requires 3⅜ yards.

Send your order to The Sewing Circle Pattern Dept., Room 1020. 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each

WE WANT TO MEET THIS MAN

We want to meet tire merchants in open territory who are interested in a direct-from-factory tire proposition that has answered all the problems of more than 5000 successful independent merchants in protected territories. If you are located in open territory, we shall be happy to send you full particulars, including details of special introductory offer. Corduroy has served and satisfied independent merchants for more than 17 years.

We want to meet car owners who do a lot of investigating before they invest in new tires . . . who are keenly conscious of the life-and-death importance of equipping with the SAFEST tires their money can buy. If you answer this description, we'd like to call your attention to CORDUROY tires . . . the tires that are so carefully and durably built that they are backed by a written Performance Contract, guaranteeing them for a definite period of months against blowouts and other road hazards. CORDUROYS are sold only by independent tire merchants. Ask about Corduroy's special low prices.

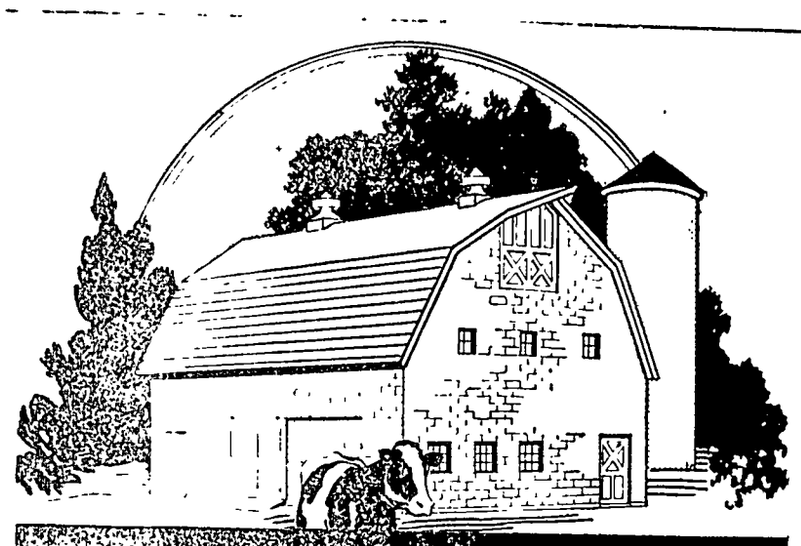
WHY? THE PEOPLES CHOICE



FOR FIRESAFETY, PERMANENCE AND ECONOMY BUILD YOUR BARN OF

CONCRETE MASONRY

If you want your new barn to last a lifetime with little or no repairs, build it of concrete masonry! This type of barn resists fire, weather, decay and termites—is sanitary and vermin-proof—dry and comfortable—attractive in appearance. It will pay you dividends in healthier stock and bigger milk and cream checks.

Concrete masonry gives you big value for your investment. The large-sized blocks are easy to lay; save labor and mortar. You'll find concrete masonry ideal for dozens of farm uses. We'll gladly supply free booklets showing you how to build. You can do the work yourself, or hire a good mason contractor.

Paste coupon on postcard and mail for literature on subjects checked.

reshing Gets Under Way In Hancock County

ERS SAY AVER-
GE WILL HIT FIFTY
BUSHELS PER ACRE

Weigh Out Heavy, Some 37 Pounds To The Bushel

reshing is in full swing in Iowa this week, with a few rs getting a jump on the by starting the latter part t week In every neighbor- threshing is the order of the

Oats Is Good Quality

ts seem to be a good quality year and grain men have test- mples that came in early. A er of tests have been made run from 34 to 37 pounds to ushel and the color of grain od.

quiring here and there the r is invariably informed that "oats is gong around fifty els to the acre." And that is oats in any language.

Combine Used Successfully

ute an attraction for many week was the combine work- in Harry Gibbs field south and of Klemme Many are the com- ts the writer has heard re- ing this method of harvesting n, but sifting out the pros and , it seems to be the opnion of y that the combine is the ing thing The machine did work at the Gibbs farm and ed to work out successfully

riving through the country will see fields here and there scattered sections where com- s have been used. No doubt e will be seen in operation t year, and the year after.

D CROSS GIVES SWIMMING PRECAUTION

o avoid stomach cramps, nev- swim until at least two hours r meals. Swimming immedi- y after a meal is responsible cramps, which are the cause many a bather becoming help- in the water. From victims of h attacks who have been res- d, it is known that they are able to use their arms and legs; d, fully concious of their pre- ament, are unable to help mselves.

Muscle cramps sometimes affect immers. but, aside from fright, not commonly affect them so iously as to make them help- s If the cramp is in the calf of e leg. submerge and sieze the mped muscle with thumbs and gers of both hands. Pinch mus- with both hands quickly, as ough trying to force thumb and ger of one hand to meet those the other This usually relieves amp at once and it rarely re- rns

Go ashore as quickly as pos- ble and massage muscle well.

For toe cramp, pressure on a rve which lies in the arch of e foot on the inside edge about third of the way from heel to e, will relieve the cramp. Find e spot, so that if you ever need do so you can locate it. Sub- erge and press the place with our thumbs, sliding them to- ard the great toe.

If you are subject to cramps, a- oid long swims and stay close to ore

---

According to the story in Gen- sis, the first thing that Eve found ut after she had eaten the apple as that she was unclothed. Wo- noticed things like that in those ays more than they do now.

Re-Employment vs. Political Jobs

By RAYMOND PITCAIRN
National Chairman Sentinels of the Republic

From various sources at Washington and elsewhere, Ameriea is hearing re- ports of increased private employment

This is a refreshing contrast to the recurrent reports of more and more political jobs which we have grown so accustomed to hearing

It means much more to the progress, the well-being and the general happi- ness of the nation. Why?

Because constructive employment, whether in business, in agriculture, in manufacturing, or in any other field, means not only increased production, but—through the earned income of the workers—ability to consume the results of American enterprise. This, in turn, means more jobs, more income for those who hold them, and higher standards of living.

Political job-holding, on the other hand, means only a drain on the worker's earnings, bringing neither him nor his family an adequate return for the cut it takes out of his pay- envelope. It creates neither goods nor real opportunity.

Although encouraging, the employ- ment gain reflected by official figures is not as great nor as swift as the American people could wish. But it is apparent, and many students of the current scene believe it will continue.

Let's hope they are right. Let's hope that nothing is done to divert this progress of re-employment from its natural and promised course. Let's hope that it is permitted to develop into the strong movement which represents normal employment and normal pro- duction and normal consumption in America.

Throughout their history, the Amer- ican people have constituted a nation of productive workers, whether in the field, the office or the shop. Their domi- nant desire is to resume constructive activities.

In that way, they realize, lie both progress and recovery.

RAY JORGENSON, JR. AND PARTY ON WAY TO SEATTLE THIS WEEK

Editor and Mrs Jorgenson re- ceived a letter Monday from their son, Ray, Jr, which was mailed from Denver and in which he stated that they would leave Den- ver for the Yellowstone Park on Saturday.

The party includes Titus Davis, grandfather and his four grand- sons. Ray Jr, Bob Liebendorfer, Sheldon Mendell and David Chap- man Mr Davis and his grandsons will spend a few days at the Yel- lowstone Park and will then drive to Seattle, Washington, where they will spend some time at a cabin on Puget Sound and will also take in all that part of Wash- ington While at Seattle they will drive up into Canada

Their destination will be Los Angeles, where they will visit with Mr. Davis' son, D. N Davis. wife and son, Donn, for a couple of weeks while taking in the sights in that part of California A drive to Old Mexico is planned before starting back for home in Septem- ber.

Overcoat Weather In July

North Iowa experienced some very cool nights over the week end, when the thermometer dropped to a low of 61 degrees Saturday morning, and then broke that record by dropping to a low of 50 degrees early Sunday morn- ing.

With the exception of only a few days, the summer has been ideal in North Iowa this year. Quite a contrast to the long peri- of heat experienced a year ago. So far this year the thermometers have failed to register a 100 degree official high in North Iowa.

State Fair Plans Big Rodeo

Des Moines, Ia., Special:—Four afternoons and three nights of rodeo events, with more than 100 nationally-famous contestants com- peting, will headline the Iowa State Fair and Exposition here this month The rodeo will be the feature of the night program on Aug. 27, 28 and 29, and the afternoon program Aug 30, 31, Sept. 1 and 2. Over $2,500 in cash prizes will be paid for bulldogging, bronc riding, calf roping, wild cow milking, steer wrestling, and similar events. A new feature will be an exhibition bull fight, presenting a famous Spanish toreador.

Governor Backs Uy His Boast With Iowa Tall Corn Samples

16½ FOOT CORN SHATTERS ALL IOWA RECORDS

And Illinois Boasts Of a 12-Footer!

All previous records for tall corn went tumbling Monday when a new "skyscraper of the corn- field" measuring 16 feet 6 inches was discovered in the field of Isaac Ogden near Batavia, Iowa

Ogden's field held the previous 1937 record of 15 feet, 2 inches

Discovery of the 16½-footer Monday pleased Governor Kras- chel who has issued a challenge to his neighboring governors, and anyone else who wants to com- pete, to provide corn taller than Iowa's

Meanwhile Gov Henry Horner of Illinois entered the controversy with a medium-sized stalk, 12 feet, and Gov Phil La Follette of Wi- consin accepted Kraschel's chal- lenge to produce a Wisconsin stalk within two feet of Iowa's tallest

It was Governor La Follette's state that started all the argu- ment by boasting of a 9-foot ex- hibit

In his reply to Krashel's chal- lenge, Governor La Follette con- fessed some doubt that Wisconsin could beat Iowa on height alone and tried to shift the argument to the subject of quality. So Kras- chel immediately took him up on that too

La Follette's telegram to Kras- chel said.

"Will arrive at state capitol building in Des Moines next Sat- urday, July 31, at high noon to meet your challenge Maybe you can beat us a trifle on the height of corn but certainly not on qual- ity. Even though Iowa is a natural for corn production you will have to look far and wide over your state to match the Wisconsin corn I will show you.

"On the other hand I challenge you show me some specimens of Iowa dairy products that can ev- en come close to Wisconsin's fa- mous dairy products.

"Bake a good loaf of Iowa corn- bread and I will bring along some- thing for a sandwich that will make you stand up and take no- tice."

Kraschel lost no time in tele- graphing this answer:

"The original challenge covers tall corn only, but when you sug- gest that it also cover quality I am delighted as it gives Iowa two strikes on Wisconsin to start with

"Leave your baloney sandwiches in Wisconsin for we are a hospit- able people and would not look kindly on our guests bringing their lunch

"You refer to the incomparable lakes of your state. You surely know Iowa's Lake Okoboji has been designated as one of the three most beautiful lakes in the world, the other two being in Europe

"I shall be waiting for you at the statehouse at high noon July 31. Bring a good appetite."

Governor Horner, the latest governor to challenge Iowa's title as the "tall corn state," apparently hadn't heard about Iowa's corn this year when he started brag- ging about his stalk.

12 Feet!—My! My!

It's 12 feet and I'd like to know if taller corn can be found in Iowa or any other state," said Governor Horner.

He'd like to know! Well, let Governor Kraschel tell him.

"I am distressed to learn that my native state of Illinois, where once I plowed corn of normal size, now is growing a dwarf var- iety," said Governor Kraschel.

"It would be very unfair for Governor Horner to enter this corn contest with a stunted speci- men that does not exceed 12 feet."

—Des Moines Register

NEW LAW REQUIRES DIMMING OF LIGHTS

When a driver approaches an oncoming vehicle within 500 feet he is required to lower his head- light beams so that the glaring rays are not projected in the eyes of he oncoming driver, under the new Iowa Motor Vehicle Code, ef- fective July 4, the Iowa State Safety Council points out. In no case may the intensity of the beam be aimed higher than the center of he lamp from which it comes, with a maximum height of 42 in- ches above the level on which the vehicle stands at a distance of 75 feet ahead.

Gould's Million Dollar Spectacle Booked Again

MANY NEW ATTRACTIONS ADDED TO GOULD'S SHOW

Is Noted As A Clean Show That Everyone Can Enjoy

Jay Gould's Million Dollar Spectacle, which includes a com- pany of 125 people, who travel in 25 busses, trucks and trailers, which includes a complete show; midway, circus acts and revue, has been sheduled to appear at Klemme for two days, including Monday and Tuesday, September 13th and 14th.

There are many outstanding features of this well known at- traction, which has traveled for many years, starting from a small organization, and being built to one of the finest attractions offer- ed in the nation

Million Dollar Gems

The stage setting for the per- formance, is of the most modern type, Mr. Gould having gone to considerable expense to put before the people of this community, something exceptional and out- standing. The cast of the Revue includes specialties, novelties, the latest popular numbers, a modern dance band under the personal direction of Prof Mercer. A stage attraction that is clean and clever. A sound system, which will insure everyone present, a chance to hear the entire program, will be on the platform

Rides And Shows

The rides and shows on the grounds are the best. They include Large Eli 12-car ferris wheel, mer- ry-go-round, loop-the-loop, loop- the-plane, kiddy rides, midget cars, live shetland pony, the World's Fair Midgets which were featured at the Chicago World s Fair, an animal show, a freak show, a miniature model mechani- cal farm, the Abraham Lincoln historical show and Matt Goodies colored revue.

Circus Acts

During the afternoon of each day, the program will be a circus made up of acts including "Baby Mine" an elephant, owned by the school children of Iowa, which weighed 1665 pounds when pur- chased in 1929, but now tips the scales at 3,500 pounds; and a pony show, which includes Elwood Emery, the trainer, which act is direct from the Des Moines State Fair.

Bernice Kelley's Circus Revue, presenting a shetland pony drill, Bernie and Joe which is an aeal act. the high diving dog, and the tight wire artist. an intelligent pony, a novelty fooball dance number, riding dogs and monkeys, a football pony, and La Tell sisters in a dancing act Nationally known clowns will be on the grounds and stage during the af- ternoon.

Music Thoughout

One of the features of this spectacle is the music. The or- ganization has a calliphone, which plays throughout the circus acts of the afternoon. This is like the main music attraction featured at all large circuses. During the re- vue in the evening, the Jay Gould Million Dollar Spectacle Band will furnish the music, under the di- rection of Prof. Charles Mercer. This musical organization plays afternoon, evening, and for a dance following the evening epr- formance

Balloon Ascension

One of the main attractions is the Balloon Ascension, which will take place, wind and weather per- mitting, with Prof. D. Luther Den- nis, going up, and jumping out, being lowered to the ground in his parachute

A Guarantee

Mr. Gould guarantees the people who attend this attraction to be entertained by outstanding talent of the cleanest type He is trying to bring to the people of this com- munity a show and performance that no one can take exception to Clean in every way, no gambling devices or no racket of any kind, as he is endeavoring to bring a show that every man, woman and child can see and enjoy

LAW REQUIRES LIGHT ON ALL VEHICLES

All vehicles including animal drawn vehicles not otherwise spe- cifically required to be equipped with lamps, when traveling on highways of the state, exhibit at least one lighted lamp or lantern with a white light visible for 500 feet to the front, and a red lamp or lantern visible for 500 ft. to the rear, the new law effective July 4 states.

Confessions of a bandit chief who crowned himself king. A true story as exciting as any Arabian Knight's tale. In the AMERICAN WEEKLY, the magazine distribut- ed with next SUNDAY'S CHICA- GO HERALD AND EXAMINER.

Vacationing In Black Hills And Yellowstone Park

Mr. and Mrs. C. G. Waterman and daughter Marian, and Mrs. Mary Waterman left early Sunday morning on a vacation trip to the West. They will stop a couple of days at the Black Hills and will then drive to the Yellowstone Park to spend. a few days there They expect to be gone a little ov- er a week.

METHODIST EPISCOPAL CHURCH

William Zabilka, Pastor

There will be no services next Sunday at either the Klemme or Liberty Methodist Churches.

The regular services at both Churches will be August 8th.

No M. E. Church Next Sunday

Owing to the fact that so many people are taking vacations these days, the Methodists will take a vacation Sunday, August 1st. Rev. and Mrs. Zabilka and family will visit with relatives at Oskaloosa.

STRIKES DON'T BOTHER THE SOUTH

Not As Much As the North and East, at Any Rate—Dixie Begins to Enjoy Results of Campaign to Attract Industries.

By WILLIAM C. UTLEY

SPECTACULAR strikes of recent months in the North and East, with their accompanying publicity, have largely obscured from the public consciousness the industrial awakening that is taking place in the South. Yet southern industrial leaders feel that labor troubles outside Dixie will soon be reflected in increased southern migrations as industry spreads out to avoid the difficulties rooted in over-concentration.

Fortunately for the South, which in the last 18 months has pressed a determined campaign to attract new manufacturing plants, its comparatively quiet labor conditions have stood out in serene contrast to the hectic scenes which have filled the northern stage.

Department of Labor reports show that the number of workers involved in strikes steadily increased in both the North and South during the last six months of 1936, the latest period for which official records are available. But the totals are heavily against the North, which suffered 894 strikes, involving 372,495 workers, as compared with 105 strikes, involving 29,134 workers in Dixie. The North had its greatest number of strikes in August and September, with 187 in each month, but 163 strikes in October involved the most workers—95,172. The South had 24 strikes in August, keeping 4,563 from employment, but 11,596 were kept out by 16 strikes in October.

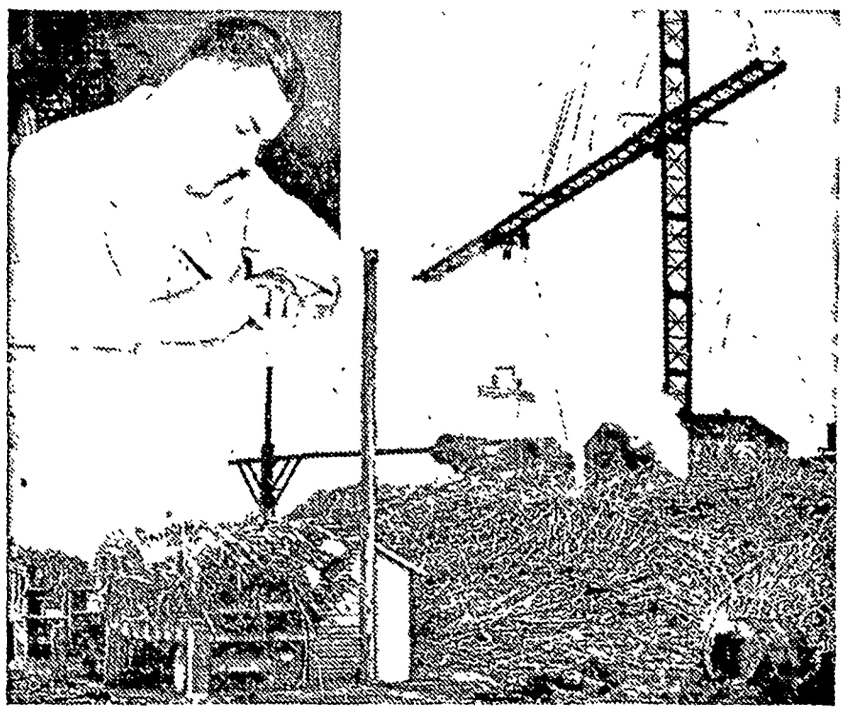
Contented workers, these! They are enjoying themselves in a recreation hall built by a large paper manufacturer with plants in several southern cities.

South Is Non-Union.

During the six-month period 40 to 60 per cent of all new strikes occurred in four states—New York, Pennsylvania, Ohio and California—with Illinois and Michigan accounting for a sizeable portion of the remainder. During the same six months only two important strikes took place in the South—one in the Chevrolet and Fisher bodies plants at Atlanta, and one in the plant of the Celanese Corporation of America at Cumberland, Md. Both were settled amicably.

Scarcity of strikes of either "sit-down" or "walkout" variety in the South is easily explained. The South is relatively non-union. With industry less concentrated than in eastern or middle western regions, it is less susceptible to strike epidemics. Some industrialists deem it probable that public opinion will have outlawed the "sit-down" before the South can be effectively unionized; if "sit-downs" should appear, state and local governments should profit by the experience of their eastern and middle western neighbors in handling them.

Wages and employment in the South have increased more rapidly than in other sections, while hours have not increased as much, and this undoubtedly has some bearing on the absence of strikes. The wage differential between the South and other sections was approximately 33.5 per cent in 1933; by December, 1936, it had narrowed down to 21.9 per cent. Since the southern worker, according to economists, can maintain the same standard of living as his northern counterpart at 20 per cent less cost, the South may now claim virtual parity as far as real wages are concerned.



Louisiana is offering manufacturers a new field of industry with recent chemical discoveries of the possibilities of converting sugar cane tops into industrial alcohol. Inset: Gov. Richard W. Leche signing contract to give a container manufacturer ten years tax exemption on addition to plant, to cost $400,000.

Dixie Woos Industry.

It is not hard to see why industry is attracted by the opportunity the South affords for decentralization. For instance, Detroit and Akron could be paralyzed in their production of automobiles and rubber if a single plant gets into difficulties with a vertical union; it would then be within the power of union leaders to call out workers in all plants in a "sympathy" strike. Sympathy strikes, while still possible under decentralized industry, would be much more difficult to carry out and might end in a workers' revolt.

Southern states are now making it easier than ever before for industries to migrate to points within their borders. The first year of Dixie's industrial promotion drive—1936—brought $322,000,000 in new plants and equipment, the greatest one-year development in history. Leading the pack were paper companies with investments totaling $60,000,000 in new plants; petroleum refining, with $50,000,000 in new distributing plants and pipelines, and iron and steel manufacturers with a $53,000,000 expansion program. During the first quarter of 1937 the pace was maintained, with $92,964,000 in industrial and engineering construction contracts awarded.

Prominent among the reasons for this sudden metamorphosis of a civilization that seemed destined to remain permanently agricultural, has been the extension of hydro-electric power to the most remote regions, resulting in an abundance of cheap energy in places which had been without it owing to lack of coal for generating or lack of distribution lines from hydro-electric plants. In addition, the South provided a ready market, lower construction and maintenance costs, and plentiful raw materials. Of it, Arthur D. Little, the noted industrial engineer, said, "Nowhere is there likely to be a greater extension of industrial activity."

Now the South has "gone out after the business." States have conducted active publicity and "selling" campaigns, making generous offers. These included exemption from taxation for new industries and outright subsidies in the form of free factory sites, free buildings and state-trained labor.

Leche Revives Louisiana.

Louisiana was one of those which took the lead, capitalizing on underdeveloped natural resources and on new, man-made ones. It stressed the fact that "nowhere in the world is there a greater opportunity for the development of a chemical industry than Louisiana, where salt, sulphur and gas occur in close proximity." It advertised and "sold" its 4,700 miles of inland waterways, its 14,000-mile highway system, its 10 trunk-line railroads, its large percentage of native American white population. It aggressively promoted its mineral and timber wealths and its great basic crops of rice, cotton and sugar, supplemented by sweet potatoes, strawberries, soybeans and truck vegetables. Its port of New Orleans was touted as the second largest in the United States, with unrivaled facilities.

Political interference with industry in the recent past, coupled with heavy industrial taxes, had prevented much industrial growth in the last decade. But when the new governor, Richard W. Leche, was elected he outlined a plan to revive the state industrially.

The plan, which was adopted, repealed the objectionable license tax on manufacturing establishments; effected a more equitable tax on oil refining; encouraged establishment of a livestock industry by removing the tax on cattle, sheep and hogs; created a board of commerce and industry to court industry; appropriated $100,000 for promotion, and proposed a constitutional amendment giving the governor permission to grant tax exemptions for ten years to new plants and additions to existing plants.

Effects were not long in coming to notice. Building permits soared; so did department store sales, electric power consumption, manufacturing sales, post office receipts, wholesale grocery sales and other indices. Problems of state finance and legislative problems kept Governor Leche from starting his industrial program with the full gusto he would have liked, but his own personal efforts brought into the state 15 new industries ranging in value from $100,000 to $3,000,000, employing 3,000 in their construction and giving permanent employment to nearly 8,000.

Mississippi Follows Lead.

Florida is wooing industry with a tax exemption law and is granting municipalities permission to erect buildings for manufacturers. Cities are vying with each other to attract new factories, although insisting that they must be engaged in light manufacturing, such as garments, small housewares, etc.—no plant which emits objectionable fumes need apply.

Agricultural Mississippi, eager to replace the lumber mills that have left "ghost towns" along the railroads, has adopted a plan to "balance agriculture with industry," which was sponsored by Gov. Hugh White. In addition to tax exemption for five years, it offers free factories and free factory sites which, if the manufacturer maintains a specified payroll for a stated period of years, become his property in most cases. The factories are built by the municipalities in which they are situated, the cities issuing bonds to cover the cost.

Other states are proceeding along the same lines. Alabama offers ten years of freedom from taxes Maryland's countries may grant permanent tax exemption on manufacturing machinery. Arkansas, with a population 70 per cent rural, has thrown its working cap in the industrial ring with a large fund to advertise the state's natural resources and manufacturing advantages. North Carolina has just appropriated $250,000 to herald its attraction as a field for industrial expansion. Texas is now considering an appropriation of $1,000,000 a year for the next five years to advertise the state's resources.

Southern Markets Grow.

To date efforts have been concentrated upon attracting industries which could process the raw materials of the various regions. Louisiana, with its thousands of acres of rolling pine land, now leads the South in the securing of paper and pulp factories—largely a new southern activity. The textile industry has moved almost en masse to the Carolinas; the South now produces 52 per cent of the nation's textiles, while New England, for more than a century the seat of this industry, now produces only 38 per cent.

As industrial payrolls provide a constant stream of wealth for southern workers, the markets below the Mason and Dixon line are constantly gaining in importance.

Advised opinion of many industrialists and economists is that the North and East, as well as the South, will benefit from the greater prosperity of Dixie, with each section of the country supplying the products it can best produce.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building — Washington, D. C.

Washington. — This article shall be devoted not to politics nor to affairs of the government of the nation exclusively but to the future—the future leaders. It shall be, to that extent, a discussion of fundamentals about which I think there can be no controversy.

Future Leaders

First, let us take a quick survey. In the Capitol building of our own nation there is raging a bitter debate between two schools of political thought. The question is whether there shall be a law passed that will give to the President of the United States the power to appoint additional justices to the bench of the Supreme court when and if present sitting members reach the age of seventy-five and refuse to retire from active work.

In Spain, a bitter political warfare moves on apace. It is over the question whether Communism of the Russian sort or Fascism of the Italian brand should be the dominant influence in the government of that nation.

In the Far East, along the Russian border, troops of the Japanese emperor and of the Russian dictator, Stalin, glared at each other. Their controversy also involves political bases. That controversy also is complicated by economic conditions. It is a powder keg.

Back in Europe, we find a dictator, Hitler by name, persecuting citizens of Germany almost without end. A political question there is involved and it is complicated deeply by religion and race. Hitler and his minions seek to destroy, first, the Catholic church and, second, the Jews.

Somewhat set off by the great Alps, although woven intricately into the whole picture, is another distorted and disturbing condition. In Italy, Mussolini, having most of his people under his steel boot, is now preparing for new crusades. He has ordered all steel producing units in Italy to increase their production to the maximum so that war material will be available Mussolini wants more territory; he wants to expand the influence of Fascism and he wants to build a gigantic world power in a military way with Rome as the center and with him as the head.

* * *

Through many years residents of Washington and visitors to the capital of the nation have gloried in a greensward that borders the Potomac river within the District of Columbia. It is a justly famous park, made more beautiful by such stately structures as the monument to George Washington and the great citadel of beauty erected to the memory of Abraham Lincoln. And, to add to this beauty is the vista across the river where stands in grandeur the beautiful home that was the residence of Robert E. Lee—maintaining throughout the years the respect that a nation has for a great military leader. It reposes, or seems to repose, in peace and quiet as do the thousands of men who rest in the hillsides of Arlington National cemetery.

Building for Future

In this peaceful setting for ten days, more than twenty-six thousand boys—the leaders of the future—were congregated in a National Jamboree of the Boy Scouts of America. Tents were everywhere. Uncounted boys in the khaki shorts, which is their uniform, flitted about the city or held various maneuvers or staged dramas of the ages in a great arena. Among them was a sprinkling, and the number was not more than a sprinkling compared to the boys, of the scoutmasters and mature men who constitute the leadership of this great army of youth.

I hope I may be forgiven for interjecting here an expression of my personal feelings. It has been my lot to work hard from the time I put off swaddling clothes. The work I have done and the experiences I have met had a tendency to make me callous, somewhat cynical. But I must confess that on half a dozen occasions as I wandered through this tented city, I gave thought to my own boyhood and to two boys for whom I am responsible, I felt a swelling of pride, a satisfaction of heart, that I live in a nation which has given me the right to liberty and progress.

Moreover, there came to me the thoughts of the future of my own two boys and the millions of others just like them— future leaders of a nation that holds forth such possibilities as are best evidenced by the encampment of those twenty-six thousand then within the range of my vision.

* * *

Then, no tribute to these future leaders of our nation and to the nation which bred them can or will be complete without mention of Dr. James E. West, Chief Scout Executive. Dr. West was an orphan boy. Worse, he was a cripple. And to add to these handicaps, there was a period in his early life when the keenest medical minds said he could not live and if he did live would be a hopeless invalid.

Tribute to West

But Dr. West was made out of the same mold from which came the founders of our nation and from whom, as founders, the traditions and the methods known now as the American way have grown.

It was Dr. West who devoted, indeed, dedicated his life to the organization and development of the Boy Scouts of America. It is now an organization of more than two million boys and there are some six million who can be called alumni because they have grown too old to remain in the ranks of active Boy Scouts.

I mentioned earlier that this was an army of peace, an army devoted to the maintenance of American traditions. No better proof of this need be given, if any were needed, than the notorious fact that representatives from the three totalitarian states—Italy, Germany and Russia—are missing from the encampment. In two of those states the Boy Scout movement has been superseded by a dictator's decree which forces regimentation and militarizing of the youth. They are being trained for war. Happily most countries still pin their faith to the virtues summarized in the Scout law—the boys promise not to die but to live, not to cringe but to blossom, by holding themselves ever trustworthy, loyal, helpful, friendly, courteous, obedient, cheerful, thrifty, clean, and last but not least to maintain a reverence for God.

So, I think I can be pardoned for the feeling I have that in this encampment lie the seeds of a continued free America, waiting the time to take root and bloom into manhood. It is from these and from these alone that we can hope to maintain in our beloved nation a political system which warrants neither Communism nor Fascism; which desires liberty and peace and which challenges the cockeyed theories that government must care for the people rather than the people care for their government.

It seemed to me, therefore, to be something of a sour note that the National Youth administration which set up a hideous looking, box-like structure near the center of the capital city from which literature could be distributed to the Boy Scouts. This structure looked for all the world like a soft drink stand at a cheap carnival and I, personally, resented the action of National Youth administration officials who ordered its construction. I felt this way because the National Youth administration is predicated upon the very theory that I have just condemned—a theory that government must serve as a father for everybody and that it must lay down rules to which all must subscribe. It is the nearest thing to the regimentation that is going on in nations under dictators that exists in our government today.

* * *

Cabled dispatches from Russia indicate again that the dictator, Stalin, is determined to rid the Soviet of anyone and everyone who may be opposed to him. The official announcements of the so-called Soviet government tell of the "liquidation" of numerous individuals who have objected to Stalin's tactics or who are seeking to revise the Soviet system. "Liquidation" in Russia means that those individuals were executed by a firing squad. A dead man can cause no harm to the aspirations of a dictator.

Heavy Hand of Stalin

The Stalin administration arranges for the "liquidation" of its opponents by coercion of confessions and this is followed up by what the Soviet calls a trial in a court of justice. The courts of justice are owned and controlled by Stalin; they decide as they are told to decide and there is no such thing as an impartial court in Russia because the government owns the courts and names the judges who are to do the government's bidding.

Private advices from abroad seem to show that there is a very serious uprising underneath the surface in Russia. Thousands of Russians have grown tired of having one man determine whether they shall live or die and they yearn again for a system of courts which will determine their guilt or innocence in accordance with honest evidence presented and not in accordance with the way the governing clique wants justice administered.

As the Russian judiciary is constructed under the mailed fist of Stalin, courts are a farce. Without such a court structure, however, a dictator could not perpetuate his own power. He must have control of the courts in order to carry out under the guise of law all of the whims and fancies and hatreds that he possesses. A nation of free people does not long remain free after its courts become subjected to the direction and control of one man. Judges who can administer justice without fear or favor are the first perquisite to liberty.

SINGER WAS A BISCUIT PA

USUALLY we are inclined to too much credit to chan luck in analyzing the succes prominent people forgettu without th talent to take adva of an unexpected opportunity could not have risen. Helen gan's sudden rise to fame is ex ample.

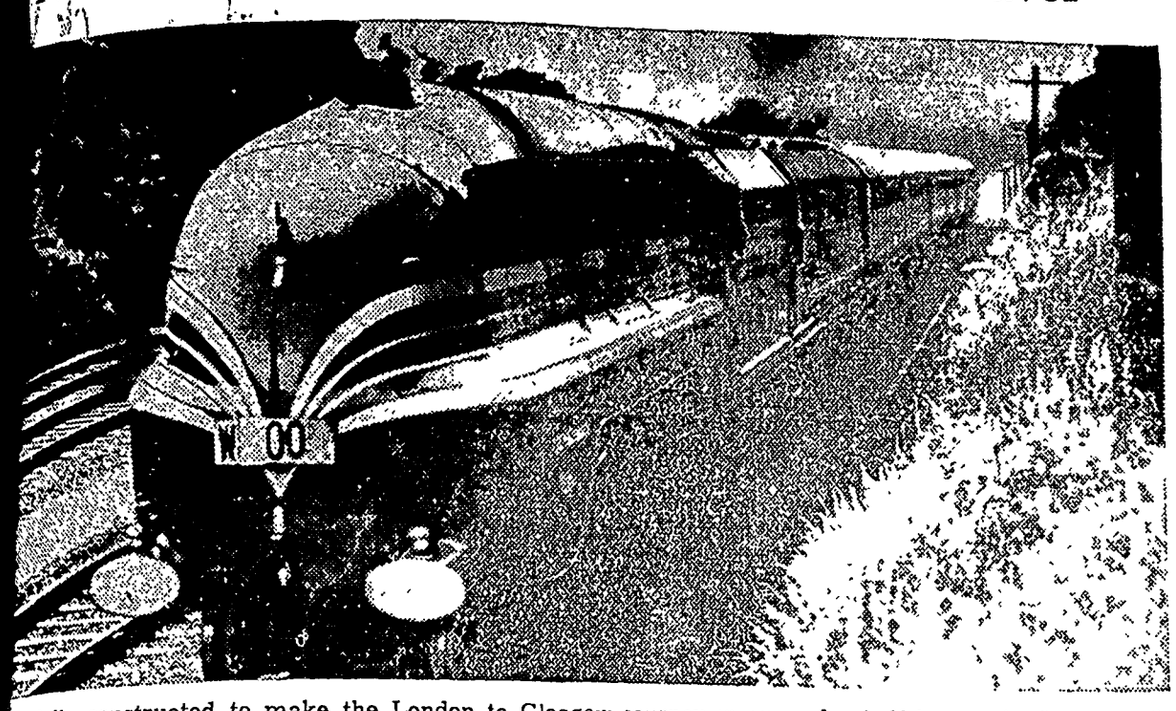
Born in Danville, Illinois, her ther died when she was very yo leaving Helen Morgan and mother practically penniless. W she was five years old, paint th by another child partially bl her, and she had to spend a year in a dark room. She sang herself to pass the long dark h and later she sang in a church c in Chicago. There, she worked a manicurist, a waitress, a co tometer operator, and a model. was a ribbon clerk at Marsh Field's department store and a cuit packer for the National Bis

company. None of her jobs las long, for her eyes were always the stage. She sang occasionally cabarets and finally got a through Ziegfeld in the chorus "Sally." Dissatisfied, she quit, Billy Rose hired her to sing in Backstage club.

That was Helen Morgan's lucky chance. The Backstage club was so small that she was forced to on the piano! Most of us would co sider it a disadvantage, and p haps she did, too. But the pub was interested; she became a sen sation, and speedily rose to fam Musical comedies and motion pi tures starred her, and soon she w singing in a night club named h her, at a salary of $1,500 per week. Today she is known the world over.

Perhaps, if Helen Morgan had had to sit on the piano in the Back stage club, she would never have risen to stardom. Perhaps, she would have sung comparatively u known for a couple of years, and gone back to manicuring or biscuit packing. But, remember, she had something worth delivering when she sat on the piano.

New Streamliner Speeds British Train Travel



Specially constructed to make the London to Glasgow journey in six and a half hours, the London Midland and Scottish railway's new streamlined train, the Coronation, has set a new speed record for British rail. The high-speed express is shown getting into its stride near Watford, England, on a recent test run.

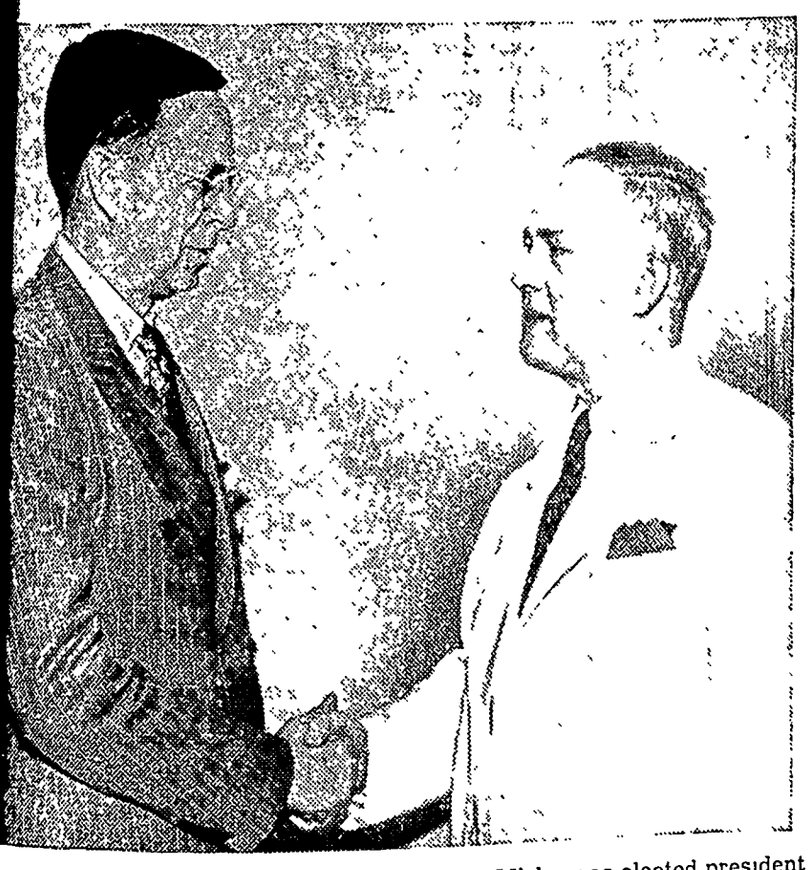
FALSELY IMPRISONED

Ernest Mattice, thirty-three-year-old candy salesman of Denver who was freed after serving six months of two sentences of life imprisonment for the kidnaping and assault of Mrs. Margaret Cykosz, twenty-two-year-old waitress. Gov. Teller Emmons of Colorado signed the pardon after Frank Neill, twenty-six years old, and Arthur Parker, twenty-one years old, confessed to the assault charge. They denied the charge of kidnaping.

"Puppy Love" Uncovers Old Art

Forgotten pictures, gathering dust for years in an old attic, brought the hope of new life to Mrs. Alida Clark, seventy-nine years old, of Maywood, Ill., a suburb of Chicago. She swapped one of the pictures with Arthur Lloyd, Jr., of Oak Park, an antique dealer, for a cocker spaniel, shown in the picture here. When the dealer cleaned it up he was told by an art authority that it was the work of an old French master, Jean Baptiste Greuze.

Dr. Ward Elected Head of Osteopaths



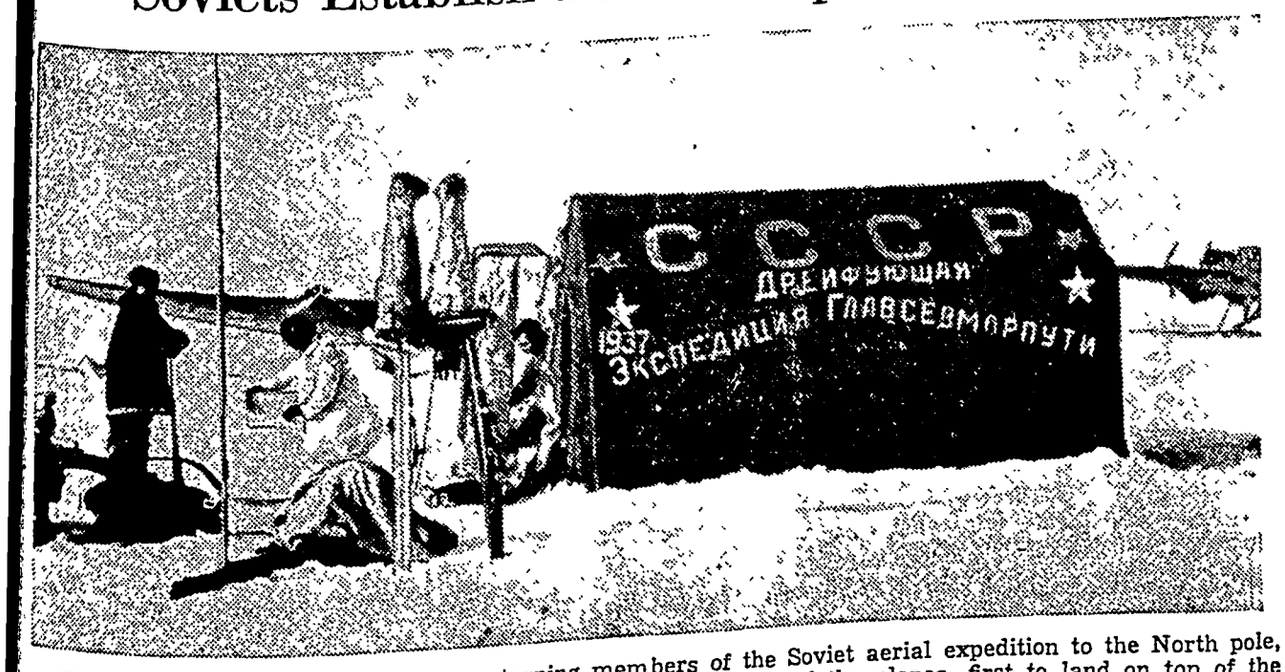
Dr. Edward A. Ward (right), of Saginaw, Mich., was elected president of the American Osteopathic association representing 10,000 physicians, surgeons and specialists at the association's annual convention in Chicago recently. With him is Dr. Arthur E. Allen (left), of Minneapolis, Minn., who was chosen president-elect, to take office at the 1938 convention, which will be held about mid-year. The office of president-elect is a new one.

Screen Star's Tiny Son Plans Athletic Career

Emblazoned on the front of his sweat shirt are the letters of the future alma mater of two and one-half year old Norman Scott Barnes, son of Joan Blondell, screen

star, by her former husband. When Norman reaches college age, the University of California, Los Angeles, will be his choice.

Soviets Establish Post on Top of the World



This photograph, brought back by returning members of the Soviet aerial expedition to the North pole, shows the camp established at the pole by the expedition. Parts of the planes, first to land on top of the world, may be seen in background. Four members of the expedition will remain at the pole for a year, studying conditions and atmospheric phenomena. It is planned to establish a base there for a regular Soviet air service between Moscow and the United States.

STAR DUST

Movie • Radio

★★★By VIRGINIA VALE★★★

FANS had to wait two long years for the Marx Brothers' new picture, "A Day at the Races," but it was well worth waiting for. It is almost too funny, the laughs coming in such quick succession that you are still shouting over one comic scene when the next hits you.

This picture tops their previous masterpieces of hilarity by several lengths. Groucho is, as usual, the wise guy but when he goes to the race track he is a gullible customer for Chico's sales talk on tips on the races. Chico performs one of those piano solos that makes enough tough little boys want to become piano virtuosos so they can copy his tricks.

And Harpo is even greater than usual. He talks—in pantomime only—at great length, and it is a toss-up whether his pantomime or Chico's efforts to translate it into words is funnier.

—★—

Planned for fall is a household hints program starring Zasu Pitts, if she can ever stop making pictures long enough to appear on an air program regularly. Putting this program together is a job for a magician, for while Zasu is always a comedienne to her public, at home she is just the world's greatest housekeeper and cook. Nobody could write funny lines about Zasu's cooking if they had ever sampled it, and her new kitchen which she designed herself is a model of ingenuity, beauty, and efficiency. As you may have read, Zasu has been working on a cook book for the last year or two.

Zasu Pitts

—★—

Lily Pons' last broadcast of the season before leaving for Hollywood to make "The Girl in the Cage" for RKO was a big night for her. She was elected the best-dressed star of the radio studios, an honor formerly divided between Helen Jepson and Gladys Swarthout. Most singers take such honors in their stride, but not the volcanic and appreciative Lily.

—★—

Motion picture producers have just about given up hope of interesting their public in Shakespeare, but broadcasting companies have decided the bard's stirring lines are just what the public wants. John Barrymore's NBC program has proved a tremendous success since the first Monday night a few weeks ago when he presented a foreshortened version of "Hamlet." For its competing hour, Columbia has signed up an impressive array of talent.

—★—

Everybody would like to have an employer like Walter Wanger. He thinks that every workman ought to have three months a year in which to get away from his job. His hired help are supposed to relax and seek new impressions but Joan Bennett, Sylvia Sidney, and Henry Fonda are all going on the stage during their vacations, Madeleine Carroll is going yachting off the coast of Great Britain, Charles Boyer and Pat Patterson are going to France to make a picture.

—★—

Any time Henry Fonda and Gary Cooper want to stop acting and open a traveling art exhibit, they have plenty of lucrative offers. Both are candid camera fans, and when they have a few minutes leisure between scenes they stroll around whatever studio they are working in and snap pictures of players off guard. They have some fine snaps of stars snoozing in chairs, of directors watching scenes with obvious disgust, of romantic co-stars glaring at each other between scenes. But they won't sell them!

Gary Cooper

—★—

ODDS AND ENDS—Shirley Temple is learning to yodel for her next picture, "Heidi" . . . Dick Powell and Franchot Tone are just two of the many players who long to make Westerns . . . Carole Lombard has tampered with the color of her hair to the extent of making it a deep, golden blond. The new color shows up better in Technicolor . . . John Gambling, who for twelve years has roused the radio audience at six forty-five and bullied them into doing morning exercises, sits in an easy chair while he bellows at his audience and never takes any exercise . . . Connie Boswell has her first big screen role in Columbia's "It's All Yours." J. C. Nugent, stage veteran, is also in it, which leads to a lot of friendly arguments, since the picture is being directed by his son, Elliot, who learned his stagecraft acting in his father's companies . . . Deanna Durbin's director has rigged up an old-fashioned auto horn to call her from the schoolroom to the motion-picture set when lights and cameras are all ready to go.

For Discriminating People

NOW is the time for all smart women to come to the aid of their wardrobes. Sew-Your-Own wants to lend a hand, Milady: hence today's trio of mid-summer pace makers.

At The Left.

A trim little reminder that careful grooming is an asset anywhere, anytime, is this frock. It features simplicity. Its forte is comfort. Make one version in cotton for all purpose wear, another of sports silk for dressy occasions. You'll praise the cool cut of its short sleeves and softly rolled collar. Yes, Milady, you'll enjoy making it.

In The Center.

Here you have a light and breezy ensemble that's the perfect attire for Society. It has cosmopolitan dash, refinement, and engaging charm. Once more you'll be the subject of complimentary tea table talk with your delightfully slender silhouette. Make it of sheer chiffon or more durable acetate. You'll have a hit in either.

At The Right.

The little lady who likes unusual touches in her frocks will go for this new dress and pantie set. It has the chic of mommy's dresses plus a little-girl daintiness that is more than fetching. Wrap around styling makes it easy for even the tiniest girl to get into and it's quite a time saver on ironing day. A splendid idea is to cut this pattern twice and be assured of little sister's all summer chic.

The Patterns.

Pattern 1237 is designed for sizes 34 to 46. Size 36 requires 4⅔ yards of 35 inch material plus ⅝ yard contrasting for collar.

Pattern 1333 is designed for sizes 36 to 52. Size 38 requires 7⅛ yards of 39 inch material. The dress alone requires 4¾ yards. To line the jacket requires 2¼ yards of 39 inch material.

Pattern 1322 is designed for sizes 4, 6, 8, 10, and 12 years. Size 6 requires 3⅛ yards of 35 inch material plus 5½ yards of ribbon for trimming as pictured.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

Ask Me Another

A General Quiz

1. How much does it cost the United States to turn out each piece of paper money?
2. What are the dimensions of Big Ben on the House of Parliament, London?
3. What is the average pay of state governors?
4. How do the Chinese indicate the use to which a building is put?
5. Are any of our states debt-free?
6. Who transcribed the Declaration of Independence?

Answers

1. Each piece of paper money made by the bureau of engraving and printing costs Uncle Sam around six mills, and for the same amount he can turn out 100 postage stamps.
2. The dials are 22½ feet in diameter; hour figures, 2 feet; minute spaces, 1 foot square; pendulum, 13 feet; weight, 700 pounds.
3. Gubernatorial pay in the various states ranges from $3,000 in South Dakota to $25,000 in New York. The average is about $7,500.
4. In China the use to which a building is put is not indicated by its design but by the color of the tiles used for the roof, etc. Green indicates an official place, yellow a commercial place and brown a place where people live.
5. Nebraska, Florida, Ohio and Wisconsin have no debt. Nebraska has a balance of over $21,000,000 in her treasury.
6. The actual work of transcription was done by Timothy Matlack.

Foreign Words and Phrases

Qui timide rogat, docet negare. (L.) He who asks timidly, teaches denial.

Mihi cura futuri. (L.) My anxiety is for the future.

Hora e sempre. (It.) It is always time.

Vox, et praeterea nihil. (L.) A voice, and nothing more; that is, sound without sense.

Les affaires font les hommes. (F.) Business makes men.

J'ignore l'art de flatter. (F.) I am unacquainted with the art of flattery.

Humble de coeur. (F.) Lowly in heart.

Tuum est. (L.) It is your own.

Arto rilievo. (It.) High relief; sculpture in which figures stand out from plain surface.

Affaire d'amour. (F.) A love affair.

Favorite Recipe of the Week

Freezer Ice Cream.

1 quart milk
1 package ice cream powder (vanilla, strawberry, lemon, maple, or chocolate* flavor)

Add milk very gradually to ice cream powder, stirring until dissolved. Pour into freezer can; place in freezer and pack mixture of cracked ice and salt around can (use 8 parts ice to 1 part salt). Turn slowly for 3 minutes, then rapidly and continuously until frozen. Makes 1½ quarts ice cream.

Any of the following may be substituted for milk in this recipe: 1 quart rich milk or light cream, 1 cup cream and 3 cups milk, or 2 cups evaporated milk and 2 cups milk or water.

*With chocolate ice cream powder, add ¾ cup sugar.

HELP KIDNEYS
To Get Rid of Acid and Poisonous Waste

Your kidneys help to keep you well by constantly filtering waste matter from the blood. If your kidneys get functionally disordered and fail to remove excess impurities, there may be poisoning of the whole system and body-wide distress.

Burning, scanty or too frequent urination may be a warning of some kidney or bladder disturbance.

You may suffer nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—feel weak, nervous, all played out.

In such cases it is better to rely on a medicine that has won country-wide acclaim than on something less favorably known. Use *Doan's Pills*. A multitude of grateful people recommend *Doan's. Ask your neighbor!*

ELECTRIC
REFRIGERATION

GIVES ABSOLUTE FOOD PROTECTION

THERE IS DANGER TO FOOD AND HEALTH ABOVE 50°

U. S. Government Bulletins warn that food must be kept between 35 and 50° to prevent spoilage and growth of harmful bacteria. There are only 14 days in the 365 when the outside temperature is within this range. Refrigeration is a year round necessity.

Buy food protecton when you buy a refrigerator. Electrical Refrigeration guarantees this—plus quietness, economical operation and long life.

Superior Electric Service at Suprisingly Low Rates

LESS VALUE IN RUSTED GRAIN BUT PERFECTLY SAFE TO FEED

"Is it safe to feed grain that has been badly affected with black stem rust?"

This rather unusual question has been asked of authorities at Iowa State College. R. H. Porter, plant pathologist says he has never heard of any harmful effect from feeding any kind of grain that has been rusted.

The principal effect of rust, he points out, is to reduce the amount of food which the leaves can manufacture and send to the heads for making grain If the leaves and stalks are rusted, less food is manufactured and transported and, as a result, the poorly fed kernel shrivels.

The feeding value of badly rusted grain is less per measured bushel because the grain is lighter For example, some wheat this year that was badly rusted is weighing only 50 to 52 pounds to the measured bushel instead of 60

Rust lives on the leaves and stems—not the kernels—so there is no possible way that livestock could be injured by eating the grain from rusted plants.

THUNDER AND LIGHTNING ARE NOT CAUSE OF MILK SOURING

Don't blame thunder and lightning for souring your milk and cream.

They're really inocent, says A W Rudnick, Iowa State College extension dairyman.

The real culprits are members of the bacterial Steptococcus lactis family whose growth in milk and cream is accelerated by atmospheric conditions which precede and produce thunderstorms.

Milk and cream frequently sour more quickly during sultry weather because of the warm atmosphere, pre-storm calms which halt windmill cooling systems and lack of bacteria-destroying sunshine

All of these conditions accelerate the growh of souring bacteria, says Mr Rudnik.

When separators are only rinsed and not washed at night residual bacteria multiply at an amazing rate, especially during sultry weather. The next morning these bacteria inoculate the fresh milk and cream, greatly speeding up the souring process.

When utensils are clean and sterilized and when the milk and cream are properly cooled and kept cold, thunderstorms do not bring about souring

Robert Ripley of "Believe It or Not" fame is said to receive more mail than Presdient Roosevelt, James Farley or Shirley Temple His outgoing mail totals 1500 letters each day. So many ideas have been received for his feature that if he dismissed his staff of helpers he would have enough ideas to supply his column for eleven years. It requires fifteen expert secretaries to answer his mail which amounts to between three and four million letters a year. Ripley is said to have never been caught in an error in his feature.

Great Britain has divided the Holy Lands into three parts, has given one to the Jews, one to the Arabs and kept one for herself We will make a little bet that the part she kept is worth the most money.

PEDESTRIANS SHOULD EXERCISE CARE TO AVOID ACCIDENTS

The next time you are riding in an automobile, just note the action of pedestrians. Is it any wonder that almost fifty per cent of the automobile fatalities are caused by pedestrians Of course the pedestrian has some rights and he should exercise those rights. There is no right under high heaven that allows the pedestrian to cross in the middle of the block, to come from behind parked cars, or to jay-walk at corners. He takes his life in his own hands and is subject to the mercy of the automobile driver who does not see him and cannot control the pedestrian's actions. When we come to the realization that we must walk right and in the proper place, then we will have an opportunity to make a big cut into the automobile fatalities of the nation.

Walk in the manner and in the place where you are supposed to walk.

SAFETY COUNCIL WORK PROVES TO BE EFFECTIVE

"Traffic fatality statistics for the first five months of 1937 are definite proof that a material decrease can be effeced by county co-operation under the plan of the Iowa State Safety Council," P. H. Sproul, Executive Secretary, said. Compared with the same period last year, the 31 counties in which county safety council units were organized during 1936 show a reduction of 16 fatalities. The state as a whole for the first five months had an increase of 11 fatalities from traffic accidents.

The record for the county safety conucils organized last year is really more favorable than it appears, for in two organized counties where an active program has not been recorded, fatalities have increased by 10. The remaining 29 counties have in fact succeeded in reducing their traffic fatalities a total of 26.

Eght of the 31 counties still have a clean fatality record. Cerro Gordo and Kossuth who had 14 and 11 respectively in 1936 are two of them. Others are Van Buren, Greene, Hancock, Monroe, Sac and Winnebago.

IF YOU CANNOT SWIM

The most important thing you can do if you cannot swim is to learn how In the meantime and while you are learning, remember a few simple rules First, take a companion with you who knows how to swim He is the best friend you can have around. Avoid waters with which you are not acquainted Swimming pools with their expert supervision were constructed and are operated for the purpose of furnshing the public a safe place to swim as were bathing beaches with safety lines, proper equipment and life guards. Use these facilities, they are placed there for your safety. There are enough properly supervised beaches and pools in the State of Iowa to accomodate all those wishing to swim at one time .

Avoid an attempted long swim immediately upon entering the water That sudden rush of cold water on your body is often too much of a shock to your system to permit it to function properly. Enter the water gradually and if you are very warm avoid a sudden dive into cold water. If you can swim, watch those who cannot and warn them of the dangers of water Teach them to swim and what to do in case of emergency.

FAVOR REDUCTION IN IOWA GASOLINE TAX

DES MOINES — State Treasurer Leo Wegman urged elimination of the tax refund on gasoline used for agricultural purposes, substituting instead a reduction of the state gasoline tax from 3 to 2 cents The change could be made only by the state legislatures, he said.

PUT OUT YOUR CAMPFIRE

Campers were warned by Conservation Officials to extinguish all campfires along streams and lakes. Several serious fires were averted recently by quick action of persons finding abandoned campfires which had spread through undergrowth.

The average political federal office holder works so hard to get his job that when he is appointed he is all tired out and unable to do much.

BICYLE LAMPS REQUIRED

Bicycles must be equipped with a white lamp which must burn at the same time that lights are required on motor vehicles. Such lamps must be visible at 300 feet. A red lamp or reflector visible for 300 feet is required on the back, the law effective july 4 states, according to the Iowa Stafe Safety Council.

Mr and Mrs. E. W. Bradwell and son, Robert, visited at the Jennings Anderson home Sunday afternoon

Mr and Mrs Arnold Tesdal of Morris, Ill., came Saturday and visited until Monday at the Ernest Helps and Ted Dutheridge homes

RETURN FROM STRAWBERRIES IS NEARLY $1,000 AN ACRE

It's the berries!

That's what George D. Esdohr, Coon Rapids farmer, credited with having the outstanding strawberry patch in Iowa, thinks of his fruit business.

This year he sold $875.50 from a three-quarter acre plot comprised mainly of Dunlaps and a few Everbearings. He sold 4,312 quarts of berries, and had plenty of fresh fruit for the family and has 100 quarts of berries canned for winter.

According to C. V. Holsinger, extension horticulturist, Edsohr's strawberry plot "is a good example of the $1,000 per acre type." Figuring Edsohr's home consumption (including canned berries) at nearly $25, he grossed $900 from his plot. He would have grossed more than $1,100 from a full acre.

President Fillmore installed the first bathtub in the White House 85 years ago.

KLEMME LOCAL NEWS

Miss Jacqueline Kudje entertained the 4-H Club Girls at her home last Friday afternoon The young ladies are studying the making of jellies and that afternoon, they made black currant jelly. Delicious refreshments were served later in the afternoon.

Pastoral Gleanings: The Class that helps.

Those who pray.

Those who attend regularly.

Those who make a prayer list.

Those who bring their friends to church.

Those who say a word to encourage the preacher.

Those who live unworldly lives.

Those who worship by giving

Those who do not have estrangements

Those who talk the meetings up.

Those who write letters to friend for Christ

Those who bring others in their cars

Those who telephone to others to come

Those who join the Witness Group.

Those who use their influence to wm others for Christ

Next week, "The Class That Hinders."

We are glad to have you worship with us.

"The Iowa Legionaire said a mouthful when it advised: "Dislike the president as you will, but defend the presidency; condemn one or more congressmen as you like, but champion congress; disaprove of one or more justices and of any decision of the supreme court as you want, but uphold the court—for to fail to draw these lines is to shatter faith in the American system of government, and is therefore un-American."

A new finish proposed for automobiles is said to consnist of coating the body with aluminum which has been impregnated with color The new finish which would do away with paint would be practically indestructible and non-fading

RABBIT SEASON OPEN SOON

Cottontail and jackrabbits may be lawfully taken on August 1 according to the new game laws The daily bag limit is fixed at ten fo reach person and the possession limit at 20. The season will close on March 1, 1938.

The life of a dollar bill, once 20 months, now averages only six months.

Scenes and Persons in the Current News

1—With a Russo-Jap dispute over the Amur river, crack battalions of the Red army have been held in readiness for possible trouble. 2—Senators Robert M. LaFollette, Jr., left, and Elbert Thomas of the senate civil liberties committee are shown studying photographs of the Memorial day riot at the Republic steel plant in South Chicago in which ten pickets were shot down. 3—President Roosevelt in a recent radio salute to Canada exchanged greetings with Governor-General Lord Tweedsmuir.

Windsor's Parson on Lecture Tour

Rev. and Mrs. Robert Anderson Jardine, who sprang into the international spotlight when he defied the Church of England's highest dignitaries to perform the wedding ceremony for the Duke of Windsor and the former Wallis Warfield, shown as he arrived in New York recently for a lecture tour of the United States, to aid charities.

"KNUCKLERS" KING

William Kloss, thirteen, of Greater Canton, Ohio, grins broadly after being crowned national marble champ after playing off a tie for the title with Andrew Tanana, thirteen, of Throop, Pa. The Canton boy held the best average in the tournament, winning 49 of 57 games.

EDUCATOR RETIRES

Dr. William Low Bryan, who recently retired as president of Indiana university. Dr. Bryan, who spent 53 years on the faculty of the university, was its president for 35 years, holding the record for the longest service among presidents of state universities. The seventy-seven-year-old educator is a firm believer in the average student—the one who is neither too brilliant nor too dull.

Scientist Puts Old Sol to Work

Dr. Charles Greeley Abbott, secretary of the Smithsonian institution and director of the American Astrophysical observatory at Washington, D. C., is shown setting up his solar boiler at the Great Lakes exposition at Cleveland. The device, hailed as science's first successful effort to translate solar energy into usable power, would yield a total of 70,000 horsepower on cloudless days, according to Dr. Abbott.

Clipper Ship Blazes Atlantic Air Trail

Broadside view of the giant four-motored Pan-American clipper ship in which Capt. Harold E. Gray and his crew of seven completed in 12 hours and 29 minutes the west to east survey flight of the projected British-American trans-Atlantic passenger and mail route, landing at Foynes, Ireland. At practically the same moment, the British Imperial Airways flying boat landed at Botwood, Newfoundland, on the east to west leg of the trip, proving the feasibility of trans-Atlantic commercial airways.

Lesson for August 1

LESSON TEXT—Exodus 13:17-22; 14:10-15.

GOLDEN TEXT—And the Lord shall guide thee continually.—Isaiah 58:11.

PRIMARY TOPIC—A Shining Cloud.

JUNIOR TOPIC—Forward March!

INTERMEDIATE AND SENIOR TOPIC—How God Leads Today

YOUNG PEOPLE AND ADULT TOPIC—A Nation Following God's Leadership.

The destinies of the nations are in the hands of God. Mighty are the warriors, learned are the advisors, clever are the diplomats, and when they have exercised all their human ingenuity and have only brought themselves and their nations to "Wits' End Corner," God must lay hold and bring order out of chaos. Happy is that people where rulers recognize God and seek his guidance

Israel through the human instrumentality of Moses was ruled by God He had prepared for them a leader and had prepared the people to follow that leader. Now he brings them forth out of their bondage.

I. "God Led Them" (Exod. 13:17-22).

It is significant that he did not lead them by the easy way to Canaan, by the short route through Philistia but rather led them south into the wilderness.

How often it seems to us that we could improve on God's ways. Suffering, sorrow, affliction, we would shun and would go the quick easy road, where all is bright and happy. But God's way is the best way, even though it leads through the wilderness.

His purpose for Israel was that they might not be disheartened by the warlike Philistines (v. 17). Thus it was really his loving-kindness that sent them the long way. See Prov. 14:12, and Prov. 10 29

Another and equally important purpose of God was that the undisciplined multitude might in the trials and responsibilities of their journey through the wilderness be prepared to enter the promised land.

The miraculous pillar of cloud and fire was God's constant assurance of his presence with them.

Hardly had Israel withdrawn, and the wail over the death of the firstborn in Egypt ceased when Pharaoh regretted that he had permitted his slaves to escape, and set out in pursuit. He represents the world, the flesh, and the Devil in their relentless efforts to hold back those who would follow the Lord. Making a decision for Christ, and experiencing his redemptive power does not mean that the enemy has given up. Temptations, doubts, trials, will come. When you come up out of Egypt do not be surprised if Pharaoh pursues you.

The situation could not have been more difficult. Hemmed in by the flower of Egypt's army, with the Red sea before them—a group of men not trained in warfare—with women and children to care for, and God forgotten in their disbelief and discouragement.

Moses, who was their great leader in the hour of triumph, tastes the bitterness of their hatred and unbelief in the hour of trial. A leader of men for God must know that God has called him and have faith in his almighty power, for in the time of crises he will find those whom he leads ready to condemn him. What is the solution?

III. "Stand Still" (vv. 13,14).

Sublime in his confidence in God, Moses bids the people to cease their petty complaining, to abandon their plans for saving themselves. "Stand still, and see the salvation of the Lord" (v. 13).

Perhaps these lines will be read by some Christian who is fretting and fussing, bearing all the burdens of the universe on his shoulders. Be still, my friend. God is able to care for you, and for all the burdens which you are needlessly trying to bear. Trusting God will result in real spiritual progress.

IV. "Go Forward" (v. 15).

Humanly it was impossible, but "with God all things are possible" (Mark 10:27). When every circumstance says "Stop," when the counsel of men is against attempting anything, when human leadership seems to be lacking—just at that hour God may say, "go forward."

If every true Christian who reads these words will respond to the Lord's command, "Go forward," hundreds of locked church doors will be opened, new Sunday schools will gather children to hear God's Word, men and women will be won for Christ. Let us "go forward." The God who brought Israel dryshod through the Red sea is just the same today!

Enjoyments and Troubles

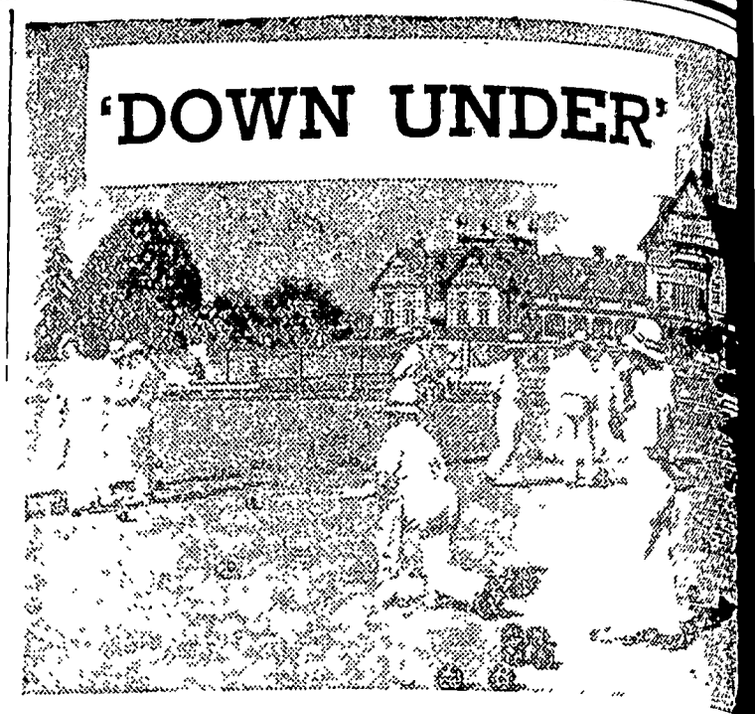
I make the most of my enjoyments. As for my troubles, I pack them in as little compass as I can for myself and never let them annoy others.—Southey.

Faith

Given a man of faith, and the heavenly powers behind him, and you have untold possibilities.

Right Kind of Growth

All growth that is not toward God, is growing to decay.



Bowling on the Green Is One of the Favorite Sports in New Z

New Zealand Is Country of Scenic Wonders and Many Odd Parad

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

ON DECEMBER 16, 1642, Abel Tasman stood on the deck of the Heemskirk in the South Pacific and gazed out toward an unknown "great, high, bold land." At the hands of an unimaginative cartographer the new wavy lines added to the map became New Zealand, after the Netherlands Province of Zeeland, to which it bears not the least resemblance. The inappropriateness of its name, however, is not the only paradox of this British dominion of the Far South.

Captain James Cook, who first explored the islands a century and a quarter later, took possession of them for his country only to have his claims rejected. Britain still later hoisted the Union Jack over the land to prevent French immigrants from settling in the place they cherished. The country's capital bears the name Wellington, but the Iron Duke stood firm against the annexation.

Many New Zealanders who have never been away from the island's shores, and whose parents likewise were born in the Dominion, still speak of England as "home."

Here in an area approximately the size of Colorado are grouped the snow-mantled peaks of Switzerland, geysers of a Yellowstone, volcanic cones of Java and Japan, and the lakes of Italy; the mineral springs of Czechoslovakia, fiords of Norway, seacoasts of Maine and California, and waterfalls higher than Yosemite.

Largest and Smallest Pines.

Glaciers slip down sharp mountainsides from vast snow fields into subtropical bush. A short ride through a pass in the southern Alps will take one from impenetrable evergreen forests into barren tussock-covered lands.

New Zealand is the home of the massive kauri pines, some of which measure 22 feet in diameter and have reached hoary ages that rank them next to the sequoias. It also is the home of the smallest known representative of the pine-tree family. Giant fuchsias grow to the height of 40 feet; a white buttercup has blooms four inches in diameter; flax is produced from a lily; man has imported all of the mammals, and many of the native birds cannot fly.

The Maoris were the first-known colonists of these southern islands. Guided only by the stars and a knowledge of the winds and ocean currents, they boldly piloted their slender double canoes from their homeland of "Hawaiki" (probably Tahiti and the Cook islands) to the shores of New Zealand in the Fourteenth century. Legend credits them with having followed the sailing directions of the famous Polynesian navigator, Kupe, who is said to have preceded them by 400 years.

To the new land they gave the lilting, vowel - studded name, Aotea-roa, which is variously translated as "The Long White Cloud," "The Land of Long Daylight," and "The Long, Bright Land."

Here they lived, increased, warred against each other, and cultivated their taro and the more important kumara, or sweet potato, which they brought with them. Then came whalers, missionaries, and traders; and colonists arrived with gunpowder, conflicting social standards, and the desire to carve out new homes.

Principal City Thrives.

Protracted Maori wars, contested land claims, the discovery of gold, land booms, and a heavy depression—New Zealand passed through them all before she settled down to economic equilibrium.

With its 221,300 people Auckland today has more than twice the British population of the whole country in the early 60's of the last century. As a ship nears the end of its 6,000-mile journey from the west coast of the United States, or the 1,200-mile span from Australia, it skirts the islands that stud the cobalt waters of Hauraki gulf, enters Waitemata harbor, and finally ties up at the very foot of the thriving city.

The early colonists chose well when they staked out this harbor-side settlement that once served the country as capital and now is the largest city in New Zealand.

Long ago Nature's force man's industry, reigned in ity. Within a radius of there are more than 60 volcanic cones. Stand on of Mount Eden, one of preserved of the craters rises like an observation the center of the city, and the once-fiery throats bri forming symmetrical cones landscape.

From this same vantage is apparent how narrow island escaped being divide The isthmus upon which sprawls, between the W harbor, looking out toward fic, and the Manukau harb ing westward to the Tas is only eight miles wid estuaries and other inde narrow it in places to a sca Veritably, water seems encircle the red- and gree maze of the city's busines and suburban residences.

Abounds in Flowers.

Business hovers close to street, which leads up t wharves, and in its adjace row, twisting thoroughfare the people responsible for t growth have failed some town planning so far as tha are concerned, they have no exonerated themselves in p broad park spaces.

The parks seem almost n less. To them the flush of tropics gives perpetual bl and color. Flowers luxuriate year round Even the race has an avenue of palms a tensive beds of blooms that do justice to a botanical ga

One cannot move about A long without the new War M museum claiming attenti stands out boldly, a massiv Grecian building, above th greensward on the heights Domain. Here are housed t from many lands, but mos esting of all is the compre collection of Maori objects play—the homes, elaborately storehouses, war canoes, w plements, and handicrafts powerful native race.

Rolling southward in from Auckland on the r concrete and asphalt, you p into smiling open country, ered with fields. Men are and herds of sleek cattle ex graze on a hundred rolling

Agriculture was the task the New Zealand colonists rected their efforts, but in t ing years they have come more and more on pastoral prise. An experimental sh frozen meat sent to England pointed the way out of a p depression that had follow collapse of a land boom.

Historic Battle Scenes.

Today New Zealand bu other dairy products have world-wide distribution. Of than 4,300,000 cattle past the land, nearly half are stock. More than 28,600,00 also range North and South making New Zealand the seventh largest sheep c country and the fifth largest production.

Near the little town of was the old frontier betwee and colonist. The whole re historic ground, for here t the Maori warriors tested t mettle of the British troops made pioneering a perilous

Today, instead of a battle the district is a peaceful, flavored countryside. Upon now stands the St. Stephen Boys' college, where Maori are being trained for useful suits.

Just beyond Hamilton, the provincial town in Auckland ince, you may run into p that are smoldering and eat the black soil in many plac continued dry, hot summer causes an outbreak of these destructive fires.

A few miles to the west main road that leads to T are the fascinating Waitomo

Interest in the caves hing tiny worm—an unusual car glowworm—scientifically, th tophela luminosa.

ion Is in Mood for All-White

By CHERIE NICHOLAS

R all when it comes to look- your sweetest and prettiest anything in the way of a arty frock more flattering ring feminine charms than ? Really now, is there? ntly fashion feels the same ut it for with all the excit- glamorous, the esthetic, the he eye-appealing delectable nd tints on the color card son, comes all-white on the nd the contest is on, written the style program and in lines—white versus color! hic and the charm and the late nicety with which the e costume dresses you up he daytime hours is exceed- by the magic and the ble loveliness of the dine- ce and the formal party hat designers are creating white silk sheers this sum- h as mousseline de soies, andies, finest dainty silk d soft "drapy" filmy chif- t sway and flutter and dance rains of rapturous music.

here are the stiff silks that h favorites and which re- uch queenly styling to do stice. Their vogue in all outstanding with particular s on gleaming white satin his summer is more than ding sway in ballroom and al night functions. A most ng white silk satin gown is centered in the illustration. ely princess lines are de- y in keeping with the exqui- of the fabric itself. The ind shoulder line adds in- describable charm and the square-inclined neckline and the majestic sweep of the skirt so expertly styled so as to slenderize at the same time that it achieves a full hemline, are all details that glorify. The sophisticated simplicity of this gown and the elegance of the all-silk satin is its big appeal.

An interesting feature about present party dresses is that their silhouettes go to such extremes. Some are sheathlike to the knees with flaring hemlines and slenderized fitted waistlines, while others are that bouffant it requires yards and yards of material to make them. For the airy-fairy types that are so entrancing and so beloved this season by the younger set, vaporous filmy chiffons and billowy tulles and nets are the logical answer.

Beautifully draped in classic lines is the dress pictured to the left. It required yards and yards of white silk chiffon for its fashioning. The girdled straps of narrow ribbon reflect Greek influence.

To the right a most exquisite silk chiffon evening ensemble is shown. The girlish simplicity of this dainty gown and cape commends this costume to the young debutante. This lovely creation naively informs you that not all the honors are going to all-white for in this instance the chiffon is in the new exquisite desert dawn tint, which is a delicate pink shade that is too lovely for words. The gown has a halter neck which is most becoming to the wearer. The cape is grace itself. By the way, you really should have a cape of chiffon or of net or of some type of silk sheer to wear with lingerie dresses, for the transparent cape is one of fashion's pet vanities this summer.

Ex-Mental Patient Warns Dissipation Leads to Collapse

Shun Bad Temper, Drink and Love-Nests, He Says

By MARJORIE VAN DE WATER
Science Service Staff Writer.

New York.—Bad temper, greed, and overweening ambition are blamed for the bringing on of mental disease, by Henry Collins Brown, historian-founder of the Museum of the City of New York, himself a patient for about three years in a state hospital for mental patients and now recovered.

Mr. Brown's own breakdown occurred when, at the age of sixty-five, he was removed from the museum in which were tied up all his hopes and dreams and he was replaced by a younger man. He did not "lose his mind," did not become confused in his thoughts, but he entered a long period of depression during which he ceaselessly paced the floor without rest or even a sense of fatigue.

Love Nests, Liquor Blamed.

"Early in my sojourn I became profoundly impressed with the large number of cases that were what I classed as preventable," Mr. Brown said in summing up these impressions in "A Mind Mislaid," published by Dutton. "That is to say, they were the result of causes that could be avoided. They were the direct and natural consequences of the risks deliberately chosen by the patients themselves. And, of course, when things went wrong, as they invariably did, one or two persons smashed up as a consequence.

"Philandering and excessive drinking furnished the largest contingent of these casualties," Mr. Brown declared.

"Love nests rear nothing but 'cuckoos.' That is a piece of 'bughouse' philosophy worth remembering."

Particularly, Mr. Brown warns against the dangers, mental as well as physical, of intense anger.

Self-Control Not Easy.

"We have all known men who allow themselves to get in a towering rage over some very trivial matter," said Mr. Brown. "Perhaps if that man knew that he might snap one of the numerous delicate tissues of the brain, causing him to spend his old age in an insane asylum, he might very readily learn to control himself.

"Now self-control is not an easy matter. Today I can control myself, but who wants to go through what I did to learn a lesson that can be acquired without all that hideous torment and suffering?

"I often think a few weeks spent in an insane asylum would be the greatest panacea for bad temper that could be devised."

No Trace of Air Found on the Planet Mercury

Cambridge, Mass.—The planet Mercury has no trace of atmosphere, observations of the recent transit of Mercury (the planet passing across the disk of the sun) made at Harvard's astronomical station at Bloemfontein, South Africa, indicate. There was no luminous arc around the planet, indicating no air.

Best astronomical evidence was that Mercury, like the moon, was completely without air, any that it may have had having escaped into space long, long ago. But the evidence for the lack on Mercury was less detailed than for the moon.

Aside from the lack of sufficient atmosphere, Mecury is too burning hot to support life.

Powdered Bone Used as Remedy for Pyorrhea

New York.—Boiled powdered bone was suggested as a remedy in pyorrhea and diseased jaw bones at a faculty clinic at Columbia university school of dental and oral surgery here.

Powdered bone was successful in treating pyorrhea and jaw bone damage in dogs, Dr. Frank E. Beube reported.

The bone used was obtained from the long bones of sheep and cows. This boiled powdered bone was packed into the holes surgically produced in the jaw bone to resemble the holes produced by disease or injury. Within a few weeks new bone, natural cement layer, and other dental tissues had grown in to replace those lost. In the case of pyorrhea, a "quite loose" tooth was firm in its socket after the powdered bone treatment had healed the diseased condition.

Enforce Simple Rules of Road to Cut Traffic Toll

Drivers in Mishaps Must Appear for Hearings

By ROBERT D. POTTER
Science Service Writer.

Washington.—As the League of Nations has long since found out, you can set up all sorts of rules and regulations but their success depends on the kind of enforcement which goes along with them. Something of the same kind of situation exists in regard to the intricate and varied traffic laws and regulations which are invisibly but firmly wound around every driver of a motor vehicle on the roads of America today.

The current and encouraging trend among thinking traffic experts today is toward simplification rather than an augmentation of the traffic rules. Four simple, basic "rules of the road" are suggested by Dr. H. C. Dickinson, chief of the heat and power division of the national bureau of standards in Washington and chairman of the important highway research board of the National Research council.

Condensed in summary these rules are:

1. Stick to your own lane of traffic with but two thoughts in mind. Watch the car ahead and warn the car behind when you do anything which changes your movement in your own traffic lane.

Wait for Other's Signal.

2. Realize that you have no right to cross or turn into another traffic lane. You do so at your own risk and must not do so without proper signal.

3. Change from your own traffic lane only after having given a specific signal or by a clear indication by the motion of your car. BUT, do not complete the movement until you have received a signal from the other driver that he will yield hs right of way.

4. At no time exceed such speeds that your car cannot be stopped in its own traffic lane before interfering with other traffic in this lane, or with traffic which may reasonably be expected to enter your lane even without a right to do so.

Dr. Dickinson, however, is not merely content to set up such simple basic rules. He knows that on the proper enforcement rests their effectiveness.

Get Both Parties in Court.

Any traffic accident, says Dr. Dickinson, means that one of the four basic rules has been violated. It is probable that both parties have been guilty in this respect and the fact of the accident itself should be prima-facie evidence of such violation. A consideration of each accident in this fashion would put it up to the fellow who had not violated the rules of safety to show that he had not.

Consequently, states Dr. Dickinson, both parties should be required to appear at a hearing on the accident in question. If one of the parties is innocent he should be able to prove it in court.

In order to get both parties to an accident into court, it should be obligatory, contends Dr. Dickinson, that both parties report any collision in which there is personal injury or damage to cars other than to fenders or bumpers. Failure of either party in the accident to report it, should be considered as "leaving the scene of the accident." A system of small rewards might be installed to encourage anyone to report traffic accidents.

Oldest Land Plant Is Discovered in Sweden

Cambridge, Mass.—The world's oldest land plant, estimated to be about 500,000,000 years old or almost twice as old as previously discovered specimens, has been detected from its fossil remains by a Harvard scientist.

The primitive shoot, found in black oil shale from Sweden, is believed to have lived during the Cambrian era, a fact that substantially doubles the known age of higher plant forms on earth.

Warn Children Against Playing With "Dry Ice"

Chicago.—Don't let children get hold of "dry ice," warn Drs. Max L. Som and A. Harry Neffson of New York city.

One of the popular neighborhood diversions is to beg or buy some carbon dioxide snow and to put a small piece of it in the mouth. Then the child will blow off "steam."

These two physicians report the case of a seven-year-old boy who swallowed a piece of "dry ice," in the Journal of the American Medical Association. The boy is all right today, but it took a great deal of medical treatment and surgery before the damage was repaired.

AROUND the HOUSE

Items of Interest to the Housewife

Browning Biscuits.—Biscuits can be given rich brown tops by brushing the tops with a pastry brush dipped in milk before placing them in the oven.

* * *

When Drawers Stick.—Black lead or black lead pencil rubbed on the edges of a drawer which has become swollen from heat will enable it to be opened and shut quite easily.

* * *

Turnips Au Gratin.—For this tasty dish half-cook turnips in boiling salted water, then cut into fairly thin slices and drain well. Arrange in layers in a buttered fireproof dish, and cover each layer of turnip with grated cheese, a seasoning of pepper, and some little dabs of butter. The last layers should consist of breadcrumbs sprinkled with grated cheese and dotted with butter. Bake in a moderate oven until well browned.

* * *

Storing Brown Sugar.—Brown sugar will not become lumpy if stored in an airtight jar.

* * *

Cooking Cabbage. — Cabbage should be cooked only until tender when tested with a fork. Too much cooking results in changed color and an indigestible product.

* * *

Disagreeable Odor.—The smell of new paint has a very bad effect on some people. To minimize it, fill a pail of water and sprinkle in it some hay and one or two onions, freshly sliced. Stand this in a room newly painted, and much of the smell will be neutralized.

* * *

Heating the Oven.—Open the oven door for a minute soon after the gas has been lit and you will find that the oven will get hot much quicker. By doing so you let out the moisture that always collects when the oven is not in use.

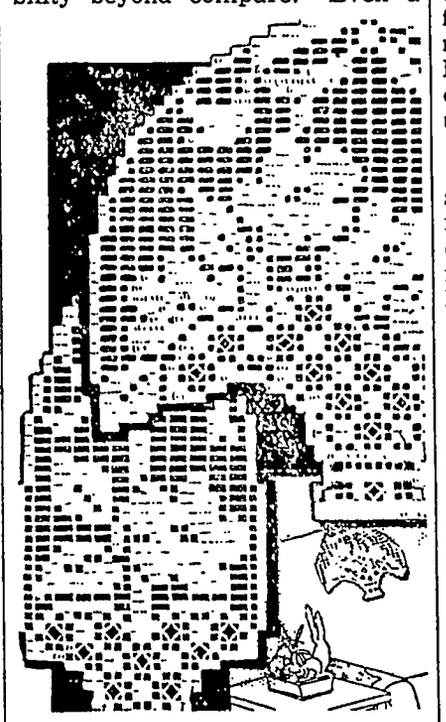
* * *

To Clean the Piano.—Use the suction cleaner to remove dust from the inside of the piano, and clean the keys with a soft cloth moistened with methylated spirit. Polish with a chamois leather.

WNU Service.

Baskets of Lace For Chair Set

Isn't it exciting to think that with your own crochet hook you can fashion a chair or buffet set as lovely and practical as this basket design? A bit of string helps do the trick, giving it durability beyond compare. Even a



beginner can do this simple filet crochet, the design set off in open stitch. Pattern 1437 contains charts and directions for making the set shown; material requirements, an illustration of all stitches used.

Send 15 cents in stamps or coins (coins preferred) for this pattern to The Sewing Circle Needlecraft Dept., 82 Eighth Ave., New York, N. Y.

U. S. Postal Camels

In 1854, to make transportation of mails across the Western deserts of this country a "certainty," the Post Office department purchased a number of camels in Egypt and Asia Minor for $30,000. The stony surfaces on the deserts of Arizona and California injured the soft pads on the feet of the camels. An unsuccessful attempt was made to provide the camels with specially devised leather boots. The idea was finally abandoned.

Mable and Paul Schuldt have purchased a 1935 Ford V-8 which they are enjoying.

Mr and Mrs. Jim Thomas and son of Eldora were visiting with Klemme friends Thursday.

Dr and Mrs. W F. Missman visited at Mason City last Thursday afternoon

Mrs. Ed. Jacobs and Mrs Will Kirkwood will be hostesses at the Reformed Aid Society this week.

Mr and Mrs Earl Stott are located at Algona now, where M Stott is driving a truck.

Mr and Mrs Art Kudje and family are enjoying the use of a new Buick sedan which they traded for Friday.

Mr and Mrs. Paul Mueller and Herbert and Mr. and Mrs. Walt Lemke attended a butermakers picnic at Dows Sunday.

Mrs. Tom Blank of Hayfield came last Monday and stayed at the Tom Blank home until Thursday evening.

Charlie Gruetzmacher, of Minneapolis, came Sunday for a visit with the Frank Gruetzmacher family.

We are glad to report that Grandma Schroeder is much better and was able to come down stairs Monday at the Lena Schoeder home.

Rev. and Mrs. Mueller left for their home at Winthrop, Minnesota, Friday, after visiting for a few days with their son, Pahl Mueller and family.

Mr. and Mrs. C. F. Keraus have had their house repainted. This is the place occupied by Mr. and Mrs. Kingery and Dr. and Mrs. Raney.

Mr. and Mrs. Dick Baumann of Titonka, were Klemme visitors Monday afternoon. Mr. Baumann is in the garage business at Titonka.

Mr. and Mrs. Emil Patet were at Charles City Sunday where they visited a cousin who had just returned home from a Chicago hospital.

Miss Ada Mutch of Grundy Center, and her nephew, Tom Gray of Rockford, Illinois, came Thursday evening ond visited until Saturday afternoon at the Dr. A. H. Dulmes home.

Mrs. Curly Lucas and son, Jimmie, returned to their home at La Crosse, Wisconsin, after visiting for some time at the home of her praents, Mr. and Mrs Henry Keeper.

Mr. and Mrs. Dorance Day and son, Gary, of Mason City, and Mr. and Mrs. Bert Mathews, of near Clear Lake, were guests at the home of Mr. and Mrs John Day, Sunday.

Mr. and Mrs. Ed. Thompson left Klemme Saturday evening, as Mr. Thompson's vacation was over and he was to be back on the job again Monday morning, working for the Des Moines Register.

Mr. and Mrs. C G. Waterman, ann Marian and Mrs. Mary Water man and Dr. and Mrs. A H. Dulmes were dinner guests Saturday evening at the R. A. Jorgenson home.

Mr. and Mrs Lee Anderson, of Floyd, came last week for a visit with Mrs. Anderson's parents, Mr. and Mrs. Wm. Stille. Mr. Anderson is recuperating from a recent operation

Mrs Herman Paul took care of Mrs. Wm. Smith at the Day home during Mrs. Smith's illness. The Times is glad to report tha Mrs. Smith is recovering from her illness.

Rev. Zabilka had a long distance call Monday evening to deliver a missionary address at Hilton Junction next Sunday. Rev. Zabilka served as pastor at Hilton Junction before going to India as a missionary in 1920.

Clair Kilgore left last Thursday for Moline, Illinois, where he visited over the week end with his uncle and aunt, Mr. and Mrs. A. V. Ackerman. From there he went on to Chicago where he will be for about a week.

Mr and Mrs. J N Day had planned to leave last week Friday for a visit over the week end with relatives in South Dakota, but postponed their trip on account of the illness of Mrs. Wm. Smith, mother of Mrs. Day.

Mr. and Mrs. Leslie DeMerritt, who recently returned from their honeymoon trip to Braynor, Mo, will locate in the house just west of the City Hall this week. Mr. DeMerritt will continue with his feed grinding business.

The Times is in receipt of a letter from Mrs. Lyle Burr (nee Stella Bock) in which she says that her husband was in an auto accident recently and received a dislocated shoulder and torn ligaments and is now confined to his home.

Mr. and Mrs. W. Henry Galbreth have returned to Klemme after spending a week at the Methodist Camp at Clear Lake where they chaperoned a large group of young people who were attending the Epworth League institute.

Dr. and Mrs. A. H. Dulmes and Dr And Mrs. E. G. Schaeffer left early Sunday morning on a vacation trip to the West. They will take in the rodeo and round-up at Cheyenne for a day and will then drive to Salt Lake City, Utah. From there they will go to Yellowstone Park for a few days, expecting to arrive back in Klemme about August 5th.

The Misses Marie Blank and Gracka Quandt, of Klemme, and Worthy Usher and family of Rowan, returned Friday evening from a weeks visit in the Black Hills of South Dakota. They report a most enjoyable trip through the hills, but did not enjoy the drive through South Dakota as the grasshoppers were so thick that the windows of the cars had to be closed to keep them out. They returned home via Nebraska.

Mr. and Mrs W. F. Pavey and Wayne and Juanita and Miss Florence Woodhouse, of Mason City, drove to Medical Lodge Cabin between Cedar Falls and Waterloo Sunday, where they attended the family reunion of the Ridenour's Relatives gathered from Iowa, Illinois, Wisconsin, Ohio and Kansas and thoroughly enjoyed the day visiting

More New Houses For Klemme

Our "Walter Wicnhell" tells us that there will be four more new houses built in Klemme before the snow flies! It's too early yet to give out the names.

KEEP WINDSHIELDS CLEAR, CODE SAYS

Drivers may not have any sign, poster or other nontransparent material upon the front windshield of a motor vehicle, other than a certificate or other paper required to be displayed by law, under a new provision of the Iowa Motor vehicle code The Iowa State Safety Council also points out that every motor vehicle must be equipped with a device for cleaning rain, snow or other momisture from the windshield, and this device must be so constructed as to be controlled by the driver of the vehicle.

Save First Means Safety First

Some people have the idea that to save is to put away what remains from their weekly or monthly incomes, after the spending is finished.

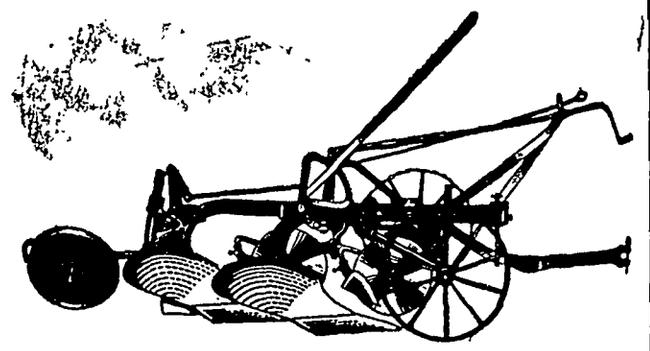
A much surer way is to put a little in your savings account the very first thing—before you spend a penny. Compound interest helps build up your funds, and you will be pleasantly surprised to see how quickly you can accquire a substantial amount for the emergencies which inevitably arise.

OLDEST BANK IN HANCOCK COUNTY

First National Bank

Established 1892

SEE THIS FAMOUS TRASH-SINKING PLOW



It's the popular Oliver *No. 109* Gang Plow—designed for tractors in the light power class. Ability to completely bury surface trash has made many friends for it.

If you want fast, clean plowing and thorough soil pulverization—here's the gang for you. It has an *Adjustable Frame* which can be easily widened or narrowed to cut 11, 12, 13 or 14 inches. A *Flexible Hitch* is another feature of the No. 109—adjustable vertically or horizontally to follow the contour of the ground. The famous Oliver *Depth Adjusting Screw* allows instant control of plowing depth without leaving the tractor seat.

Land and front furrow wheels, with 3-inch tires are regular equipment—or 5-inch tires can be furnished if you have loose, sandy soil. A rear furrow wheel, spring-locked to facilitate backing the plow, holds it constantly to its work and helps assure clean plowing. See the No. 109 soon. It's a mighty fine plow!

Legion Auxiliary Will Meet

The local unit of the American Legion Auxiliary will meet on Thursday evening, August 12th at the home of Mrs. E. J. Arnold southeast of Klemme.

It is expected that the death toll of automobile accidents will reach 50,000 this year.

State Fair Picks Iowa Bridal Beauty

Des Moines, Ia., Special—Over 20(of Iowa's most gorgeous girls, wearing historic wedding gowns of early Iowa will compete in a statewide "bridal beauty" contest at the Iowa State Fair here, starting Aug. 27. Offering $500 in cash prizes, the contest will feature a series of preliminary elimination contests each day of the State Fair, with the finals to be held Thursday, Sept. 2 Above are two of the contestants — Pearline Anderson, "Miss Iowa Falls" (right), and Theone Freed, "Miss Grundy Center" (left). This will be one of the several dozen new attractions featuring the dally entertainment programs at this year's state exposition here.

Do You Remember Threshing Away Back In The Dim Past?

HARVEST NOW AND THEN
(Fairmont Sentinel)

Yesterday Ben drove us out to the Stade farm and we watched a Nolte boy harvesting a barley crop with a combine.

The hail storm of July 3 had battered this field so that it looked like a total loss. None the less the combine was picking up the tangled mess and delivering a fair quality of beautifully threshed barley into the hopper The young man said he was getting about fifteen bushels to the acre

Just fifty years ago we went to work at our first regular job Right here we'll boast a little. We have never since been out of a job

That first job was helping with the cutting, stacking and threshing the grain on John Jack's farm in Riverton township down in Iowa It started early in July, lasted until some time in October. Being small and puny, the wages were fifty cents a day, except when it rained Then we did odd jobs for meals. The really good men on this job got top wages— a dollar a day.

The grain was cut with a harvester. Self binders were still a novelty. The harvester was drawn by five horses, three on the tongue, two in the lead A boy rode one of the lead horses, the driver handled the other three Two men stood on the platform and bound the grain by hand.

Two of us did the shocking That made a crew of six to get the grain cut.

Those days everyone stacked their grain and let it go through the sweat. Here again six of us worked, two men to each bundle rack, the boss to build the stacks. No one had then thought of building racks with sides on them so one man stayed on the wagon and loaded the bundles the other pitched.

Threshing called for a much larger crew. There was one man to swing the whip on the six teams hitched to the horse power sweeps. There were two feeders who changed off as that was considered the hardest as well as the most expert work around the machine The feeder off shift tended separator. Two boys cut bands. Two, sometimes three men stacked straw. One man measured the grain as it ran from the machine in half bushel measures Another held sacks the half bushels were emptied into Two men with teams and wagons loaded the filled sacks and hauled them to the granary, where another man helped carry and empty the sacks into the bins That made a threshing crew of twelve or thirteen men. From the first cutting in July until the last threshing in October or November the harvest utilized a lot of man and horse power.

Yesterday on the Stade farm just one man was doing the job, all at one operation. He rode the caterpillar tractor, guided round and round the field at about five miles per hour. The combined harvester and thresher worked automatically The hopper on the machine holds fifteen bushels or more When full this was emptied into wagons stationed at the end of the field. When the loaded wagons were hauled to the granary a dump and hoist, gasoline operated, put the grain into the bins without any man labor.

One man doing in a short time what once took a big crew many weeks.

Mechanization of industry?

Unemployment?

There you have them. As a factor in utilizing surplus labor the farm is out

Progress Being Made On New Buildings In Klemme

INTERIOR FINISH BEING INSTALLED IN THE NEW JACOBS HARDWARE STORE

Work is progressing rapidly at the new double front hardware store being built for E. F. Jacobs.

Last week the plate glass windows were installed by an expert glass cutter and fitter from Des Moines.

Contractor John Suckow has kept several finishing men at work in the building installing the Insulite ceiling and walls This style of finish is very attractive and well designed.

The electrical work has all been roughed in and wires strung through the steel conduit tubes

The work is shaping up nicely and already shows that the final results will be one of the most up to date store buildings in North Iowa.

DRIVERS' LICENSES STILL FAR BEHIND

Lew Wallace, state motor vehicle superintendent, says it will be about Sept. 1 before all drivers who filed their applications before July 5th will receive their licenses.

Wallace said 355,000 licenses have been issued so far of the 650,000 applications which have been audited and checked. Applications mailed to the department between June 26 and July 5 have not yet been checked and audited. Including the latter untabulated total, the department has approximately 900,000 applications on hand, the superintendent added.

Mr Wallace said the department is sending out between 15,000 and 16,000 licenses a day.

CAREFUL DRIVING

Everybody that drives an automobile feels that he or she is a very careful driver. But let me ask you, "Are you a thoughtful driver?" There is a difference between careful and thoughtful.

Most of us operate an automobile mechanically. We drive along crowded thoroughfares, over country roads at considerable speed, thinking of the day's work or some specific problem and pay very little attention to the job at hand—driving. The thoughtful driver dismisses all his cares and worries and concenrates on the job of driving an automobile. To be a thoughtful driver is to constantly have in mind the possibilities of accidents, watching intersections, traffic lights, pedestrians, and the many other numerous problems that confront the driving public.

If you are a thoughtful driver you are automatically a careful driver.

Herman Shows 'Em How!

It must have been on a bet that Herman Paul, congenial manager of the Hancock County Co-Op. Oil Station, was induced to show his skill as a straw stacker at Sam Larsen's farm just south of Klemme last Friday.

Anyway Herman was in the straw pile most of the day by the forelorn and bedraggled look he had when he sneaked into town late in the afternoon. Our readers will never believe this but Clay Kilgore heard about the unusual and so sneaked up on Herman with a camera and caught him in the act. It's hard to tell Herman from the straw, as it kept him busy digging himself out.

And we have seen better straw piles than the one Herman built! But anyway, one town fellow had sand enough to show 'em how!

LARSEN'S COLD STORAGE PLANT WILL SOON BEGIN TO OPERATE

With the arrival of machinery and pipes for the refrigerating coils, work has progressed rapidly the past week at Larsen's cold storage and locker plant under construction.

The refrigerating machinery is installed in the basement of the building and will provide the necessary refrigeration for the three special rooms in the plant. In the process of refrigeration the products to be stored are first put into the chilling room where they are thoroughly chilled. Next the products are prepared and wrapped and put into the freezing room, which will be kept at a temperature of about 20 degrees below zero The next step is putting the products in the locker compartments in a room kept below the freezing mark

All of the refrigeration pipes are welded together and an expert welder came Monday to do this part of the work. Other men have been on the job installing the machinery and coils.

LAW STATES SCOPE EFFECT OF REGULATIONS

It is a misdemeanor, punishable by a fine of not exceeding $100 or imprisonment of not exceeding 30 days, for any person to drive or for the owner to permit to be driven, any vehicle which is in an unsafe condition upon a highway, according to the new Iowa motor vehicle code effective July 4. This provision further states that the driver of a vehicle which does not contain parts or is not at all times equipped with such lamps and other equipment in proper condition and adjustment as is legally specified, or which is equipped in any manner in violation of the laws, is also committing a misdemeanor.

No motor vehicle or combination of vehicles which cannot proceed up a three per cent grade on dry concrete pmavement, at a minimum of 20 miles an hour, may be operated after January 1, 1938, upon the highways of this state, the Iowa State Safety Council says.

Farm Bureau Ladies Met

The Farm Bureau Ladies of Ell Township met Tuesday, July 27th at the home of Mrs. Charles Goll to prepare for Achievement Day.

Some of the ladies reported how they had made use of Lesson I, "Unusual Vegetable Cookery." The following had planted vegetables listed as unusual and were learning how to use them:

Mrs. Chas Goll, Chives, Endive, and Egg Plant; Mrs. Weaver, Okra, Chinese Cabbage, and Egg Plant; Mrs. Clark Lacore, Brocolli; Mrs. Oscar Greimann, Salsify and Coreless Carrots; Mrs. Verner Stromer, Brocolli; Mrs. Ray Ford, Cauliflower.

The Homemakers have completed the fourth year of Nutrition. Next year they will study the third year of Home Furnishings.

Taken To Hospital

George Thieman was taken to a Mason City hospital Sunday for examination and treatment. Mr. Thiemann was injured several weeks ago when he fell from the roof of a corn crib he was helping shingle, and at which time he suffered a fractured leg. The past week he had not been feeling well and a trip to the hospital was advised.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG. WASHINGTON, D. C.

Washington.—Many times in these columns I have had occasion to write in praise of Senator Joe Robinson of Arkansas, the Democratic leader in the senate. His magnificent qualities, his capacity as a statesman and the regard with which he was held by Republicans and Democrats alike were such that further praise from this pen would be of little value. Suffice it to say that in Joe Robinson's death the nation is the loser because "he fought the good fight."

Great Leader Passes On

But Senator Robinson's sudden death a few days ago has precipitated a political condition of gravest importance. Although none of us who knew him nor those with whom he was associated in an official capacity could have foreseen his sudden death, I think it is proper to say that the passing of Joe Robinson may have more far-reaching influence upon his country's history than all of his long and distinguished career in public life. That is to say, fate possibly has turned in this instance to the role it sometimes plays—the role of master strategist.

The question may be asked: Why does the death of one man become so important?

The answer is simple. Joe Robinson was the field marshal for the Roosevelt administration. Particularly, he was the field marshal in the greatest legislative battle to reach the floors of congress since the days of slavery, and this coincided with the daring adventure of an epochal administration.

President Roosevelt leaned upon Senator Robinson to put through the senate a bill that would permit the Chief Executive to appoint additional justices of his own choosing to membership in the Supreme court of the United States. He leaned upon the Arkansas senator for many other things as well, but it seems to be the consensus of opinion that Mr. Roosevelt's administration may well stand or fall by the success or failure of his program to reorganize the judiciary of the United States. It seems further that if the President fails to obtain congressional approval for this plan which would give the President domination over the court system of the country, he will have lost control of the legislative branch of the government for the remainder of his term. Few Presidents have been able to carry on successfully without the co-operation of the legislative branch.

It is too early, of course, to say whether the death of Senator Robinson means defeat for the court packing program. Nevertheless, most of the astute political observers in Washington—indeed, many of the President's own party in the senate—believe that the passing of the Democratic leader was a fatal blow to the President's power in congress. This results from the fact that Joe Robinson was able to mold together many groups and cliques and hold them by the sheer power of his lovable personality in a cohesive, workable unit.

The country never will know how well and faithfully Joe Robinson fought for the President and his policies. I have said in these columns heretofore and I repeat that I do not believe Senator Robinson favored all of the New Deal policies, in his heart. He was progressive but he had sound ideas; he stood by the President and the New Deal with courage and capacity, but on many occasions, I have reason to believe, he fought for those principles because he believed he should either fight as a member of his party or retire. Further, he knew that if he would retire he would not have the opportunity nor the influence to persuade the radical wing of the New Dealers to propose reasonable policies. In other words, the late Democratic leader was attempting to be a leader in fact as well as in name and many are the indications where he was able to pull the theorists and the radical New Dealers back from the brink of political destruction.

* * *

In view of the facts I have reported and the observations I have made above, it becomes perfectly plain that the President is in a position where he can lose the present court battle with ease. In fact, there are many observers who believe the court legislation will have to be abandoned and that congress will be quickly overwhelmed by that annual desire of representatives and senators to conclude their work and adjourn.

Court Bill Doomed

Let us review the situation as regards the court legislation. The President got off to a very bad start when the original bill to add six new justices to the Supreme court was presented. The original reasons he gave for demanding the new power he sought were shattered within a few days after the draft of the bill reached the Capitol. He was forced to abandon them. Mr. Roosevelt then came forward with a second set of reasons, namely, that the Supreme court as at present constituted could not and would not hold some of his social legislation constitutional. That set of reasons was knocked into a cocked hat when the Supreme court upheld the Washington state minimum wage law, the Wagner labor relations act and the social security taxes. Then came the resignation of Justice Van Devanter. Justice Van Devanter was one of the men whom Mr. Roosevelt had in mind as unwilling and unlikely to see social legislation through the same glasses as Mr. Roosevelt saw the situation in the country.

The Van Devanter resignation gave the President an opportunity to appoint a new member to the court. It also gave the senate an opportunity to burst forth with expressions of its own ideas concerning the type of man who should succeed Justice Van Devanter and the senators were not backward in promoting the name of the Democratic leader, Senator Robinson. But Mr. Roosevelt thus far has failed to fill the vacancy, and this failure has been interpreted by the opposition among the President's own party as an unwillingness to select anyone but a radical for the highest court. In any event, those opposed to the court bill contend that the President's delay constitutes only another reason why he should accept "the inevitable defeat" of the court revision program.

When it became apparent that the original bill for six new justices could not be passed because the Democratic-dominated senate judiciary committee reported the bill with a scathing denunciation, the late Senator Robinson astutely offered a substitute bill in the nature of a compromise. This substitute bore the authorship of Senators Logan of Kentucky and Hatch of New Mexico. Even the substitute which provided for one additional judge a year until the Supreme court numbered eleven members has received the same bitter criticism that characterized the first measure. Many members of the senate say they will fight it as long as they would have fought the original because it will give the Chief Executive control of the Supreme court just as the earlier one would have done.

* * *

President Roosevelt vetoed a little known and little discussed bill the other day. It was known as "H. R. 4408, An Act to Provide for the Renewal of Star-Route Contracts at Four Year Intervals." The title, of course, will mean little to most of those who read these lines. But, this was a bill intended to do justice to those underprivileged classes about which Mr. Roosevelt has often spoken in his fireside chats over the radio. The men who would have benefited by this piece of legislation were the star route carriers of the mails—the service that dates back to the stagecoach days of America and the service from which originated the Postal department's famous phrase, "the mails must go through." The star route is the only means by which a good many thousand persons are able to receive mails on anything like a modern basis because this service reaches the out-of-the-way inland towns where railroads are not yet and possibly never will be in operation.

Star Route Bill Vetoed

I watched this legislation go through the house without dissenting vote; I saw Senator McKellar, Democrat, of Tennessee, attack the bill in vicious language and then I saw the senate pass it by a vote of nearly two to one.

In addition, I know that the representatives of these little known carriers (little known except to those whom they directly serve) had tried for a number of years to obtain a basis of pay that will let them live. They finally were able to convince Postmaster General Farley that unless they were paid more money the number that would go broke in carrying out their contracts would be amazingly large. I have not the slightest doubt that this group ought to be paid more money for the work they do because their present basis of compensation is shamefully low—so low that if they were members of a labor union, they would all go on strike.

No change has been made in the basis of compensation or in the method of contracting for this service since it was organized in 1845, except in minor ways. Three quarters of a century or more is a long, long time. The President's action in vetoing this legislation, therefore, is very difficult to understand. His action is made the more inconsistent, many persons believe, because the additional cost to the government would be insufficient to maintain the smallest unit of the hundred New Deal agencies which the President has created.

Russian Flyers Feted After Record Breaking Hop

Jubilant after their record-breaking non-stop flight of 6,262 miles from Moscow to a cow pasture near San Jacinto, Calif., three Soviet fliers were feted and congratulated on their remarkable feat. Photograph shows, left to right, Pilot Michael Gromov, Co-Pilot Andrei Yumachev and Navigator Sergei Lanlin. The fliers, who were in the air 62 hours and 17 minutes, exceeded the record of the Soviet trans-polar expedition of three weeks previous by nearly 1,000 miles.

BRITISH GOLF ACE

Henry Cotton, who was acclaimed as the new British Open champion at Carnoustie, Scotland, recently, after defeating leading amateurs and professionals from all parts of the world.

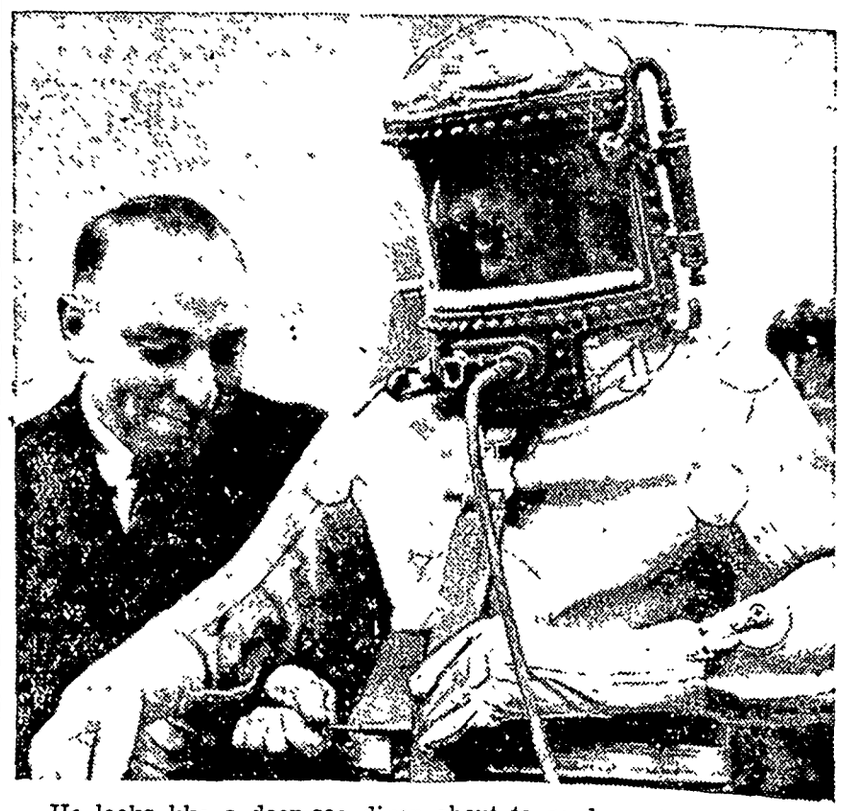
Prince Charles, nephew of King Gustaf of Sweden, with his bride, the former Countess Elsa von Rosen, pictured soon after their recent wedding in Stockholm. By marrying a commoner, Prince Charles lost his title and prerogatives as a member of the royal family.

Families Pick New Homes as Town Starts Moving

Mayor Fred Howell of Shawneetown, Ill., right, helps Clifford Durham and his family select their new home on the model of the new town. Fourteen hundred citizens are going to move to a new site three miles to the west and 400 feet above sea level. The re-location project, expected to take two years, was undertaken as a result of last winter's floods that completely inundated the community.

Air, Not Water, Is His Province



He looks like a deep-sea diver about to go down, but instead, he's an aviator about to go up. This is Flight Lieut. M. J. Adam of the British royal flying corps, being fitted with a special high altitude pressure suit before his recent attempt at a high altitude record. Lieut. Adam reached a height of 53,937 feet, setting a new high altitude record.

AIRPLANE BICYCLE

The addition of a propeller which controls the speed of his streamlined "aerocycle" makes it possible for Dominick Devincenzi of Chicago to drive his bicycle at the rate of 45 miles per hour.

'Way Back W

By JEANNE

WALT DISNEY WAS A CARRIER

WHAT are the secret a of those who serve ticularly those whose occ are mechanical or lonesom to allow their minds to d into the realms of fantasy?

Walt Disney is an examp in Chicago in 1901, his first as a mail carrier there, at of sixteen. As a little boy to draw, and he liked to d mals; but the famous cr Mickey Mouse had to make delivering mail He had no to express his creative ge til after the World war, obtained a job as a com artist in Kansas City In his he experimented with a newsreels called "Local H ings," which he sold to Ka

moving picture theaters. E lowed these with a series of tales for local clubs and c gatherings.

This modest success pro him to try Hollywood, whe started in an unpretentious building far from the big st There he created "Oswald Rabbit," but after making 26 jects, he and his backer separ The backer owned the right "Oswald, the Rabbit" which is being shown in the theaters. Disney was left without his promising character. Out of adversity was born "Mi Mouse" and the "Silly Sym nies."

Today, Walt Disney employ staff of artists to draw his cha ters but he is, himself, the voic Mickey Mouse

* * *

PICTURE MAGNATE WAS PEDDLER

IT'S fun for the young man was born to be president of rich father's company: a month the shop, a month clerking, then general manager. But co er the discouragement and he aches of the boy too poor for adequate education, too poor nourishing food or decent cloth too poor to meet people with ence. That such boys, possess only courage, ambition and bra can still rise in America is t country's strongest defense aga fascism and communism.

William Fox was born 1879 Tulchva, Hungary, son of a sc shopkeeper who extracted teeth a side-line. The family moved America when William was six months old, and settled in an Ea Side tenement district of New Y city. His first job was at the age nine, when his father, who was of work, made stove blacking their small tenement and Willia peddled it from door to door in

neighborhood. Later he sold candy lozenges at the Third Street dock and at Central park on Sundays. At the age of fourteen, he was forced by poverty to quit school. He obtained a job in a clothing firm and rose to be foreman in charge of lining cutting, at the magnificent salary of $8 per week. To augment his earnings, he bought umbrellas and peddled them in front of theaters on rainy nights. With $1,600 savings accumulated through many privations, he started a cloth examining and shrinking business when he was twenty-one, and at the end of the second year invested his profits in a nickelodeon or five-cent motion picture house. Twenty-five years later he headed the great $200,000,000 corporation which bore his name, including a picture producing company, distributing agencies, and thousands of theaters throughout the United States.

Who knows for what high position that peddler who calls at your door may be preparing. William Fox rose from the same start.

...er Wools in Summer Wardrobe

By CHERIE NICHOLAS

...ERE'S no doubt about it, the ...ell-dressed woman of today ...ws the value of clothes that will ...places and do things with the ...e ease and aplomb as their ...amlined wearer. The up-and-...t wardrobe must contain frocks ...costumes that will adapt them-...es with taste and comfort to ... number of changing scenes and ...peratures.

...o matter what the season, there ...omething about sheer wool that ...s the trick. Tailored or dress-...ker in style, a sheer wool cos-...e carries with it a classic at-...sphere which keeps it never too ...ssy for town or country, travel-... or local activities. There is ...r that something about the ...art new light woolen ensembles, ...sses and coats that bespeak that ...ual look of good taste that is ...stocratically at home at tea or ...d party or any more or less so-...l event of the day.

Wool knits, light as a feather and ...riously soft to the touch, make ...arming and supremely correct ...orts frocks. Whether you are an ...ile golfer or simply a deck ...nger your wool knit costume will ...ve you a joyful feeling of freedom ... take your fun as you find it. ...th pastel and darker shades are ...o smart for sports and clever de-...gns vary from one-piece classic ...yles to two-piece and jacket cos-...mes that may be ensembled ...th a variety of blouses and acces-...ries. Zephyr knits, soft wool jer-...ys and fine featherweight angoras ...e cool and comfortable, and lacy ...eaves in lightweight wool are ...usually interesting.

Fancy shadow weaves, fascinating bright prints and embroidery motifs are cleverly emphasized by simple styling. Sheer monotones and self-plaided weaves vie with hard-twisted worsteds for first place in the tailored scene.

The adaptability of sheer wool knits is well illustrated in the slim short-sleeved frock shown to the left in the picture. The material for this dress is a featherweight angora knit in pearl gray with distinctive two-toned bands in brown and maize inserted in bolero effect in the blouse and edging the sleeves and skirt hem. The smart shirtwaist closing below a rounded collarless neck is finished with a row of composition buttons in maize. A deep inverted pleat in the skirt front gives plenty of action freedom.

As pictured to the right, close knit wool jersey in chic navy blue makes stunning and versatile frock for sports or spectator wear. Cut on flattering princess lines with a full-length front buttoned closing, it is cool and practical. Sleeves are full and short and neckline is high. Men's tie silk in gay red, navy and white tri-color patterning is interesting trimming. Note how attractively it is employed to outline two large plastron pockets and the round yoke treatment below a trim tailored neck.

A stunning color combination distinguishes the beautifully tailored dress and redingote ensemble of sheer wool centered in the group. Tucked treatment in bold chevron patterning accents the high-throated neckline. The dusty rose dress is topped by a full length redingote in a light olive green. Double flap hip pockets and scissor-sharp lapels are nice details.

IT'S HAND KNIT

By CHERIE NICHOLAS

Just imagine the joy, not to forget the comfort in wearing, any little girl will find in owning such a cute peasant hand knit dress as this. When all other frocks in little missy's wardrobe fail, being too this or that for a practical day, there just isn't anything to equal a dress knit of knit-cro-sheen, as is the model pictured. Looks not too dressy but is dressy enough, washes perfectly and is pretty in dark colors or in the charming pastels as you may choose. Doesn't take long at all to knit the cunning model pictured and the yarn costs very little. Note that it has no belt, the dress falling in a graceful princess line from the shoulders, which makes it very stylish.

SHIRTMAKER FROCKS IN COTTON, LINENS

Summer means shirtmaker frocks, and this year's crop of shirtmakers is smarter and more distinguished than ever.

Cotton, linen and silk are used to fashion useful frocks that are good for most occasions in the summer scene, especially out-of-town. New and diversified necklines bring novelty to some of the models.

Smart is a shirtmaker frock with a collarless neckline marked by tucking. The tucks continue all the way down the button-up-the-front closing.

The classic frock in striped silk is always good, as is the model in pure silk that tubs beautifully. A grand model is in dotted silk and has a fly front with enclosed zipper.

Decorative Zippers Now Used in Variety of Ways

New jeweled zippers are now being shown in use on women's wear, for fastening sweaters, bathing suits, gloves, hand bags and many other purposes. The new zippers are bound on colored tape and spaced at frequent intervals with various colored catalin ornaments resembling novelty buttons. When the zipper is closed the catalin ornaments take the place of buttons. When opened the ornaments assemble at the base of the zipper with the effect of being in a continuous piece.

Variety in Hats

Little pillbox hats that attain new summer heights indicate that the width of a chapeau is no more certain than the depth of its crown.

No Monotones

Three and four bright colors are combined for tailored cotton suits, as well as summer evening gowns.

STAR DUST

Movie • Radio

★★★By VIRGINIA VALE★★★

EVELYN DAW is going to play the lead in her very first picture, and as if that were not enough to make her Hollywood's Cinderella of the week, she tops it by being a girl who can keep a secret.

For six months she has known that she was going to be given a big screen opportunity and she hasn't told a soul. Even so, when she learned that her big chance was to be nothing less than prima donna opposite James Cagney in Grand National's "Something to Sing About" she nearly swooned.

Victor Schertzinger, well-known composer and the motion-picture director who gave Janet Gaynor her first chance and Grace Moore her second, is responsible for Evelyn's opportunity.

—★—

Carole Lombard still has a sleek town car, a limousine and a roadster or two, but she isn't using them much these days. Every afternoon when she finishes work at the studio, up drives a station wagon all filled with fishing paraphernalia and driven by Clark Gable and off go the two most irrepressible merrymakers of Hollywood. She claims she likes the station wagon better than the limousine and she'd rather go fishing than attend a fashionable party. Clark agrees with her.

Carole Lombard

—★—

Two newcomers to Hollywood are setting Hollywood fashions and everyone is wondering just how far these new trends will go. Sigrid Gurie, the exquisite young Norwegian actress whom United Artists imported to play opposite Gary Cooper in "The Adventures of Marco Polo" goes in for simplicity. Louise Hovick, most famous of strip-tease artists in her burlesque days when she was known as Gypsy Rose Lee, goes in for conservatism. She won't pose for pictures in bathing suits, shorts, or even negligees.

—★—

Nick Foran's brother Jimmy graduated from Princeton medical school just a few weeks ago and walked right into a contract to act in pictures for Universal. Buddy de Sylva, who is producing a musical extravaganza called "Merry Go Round," saw Jimmy doing some impersonations of Washington politicians and was so amused he persuaded him to postpone his career in medicine for a while. Jimmy will certainly be welcome on the Universal lot.

—★—

Grown-ups in Hollywood may plead for a chance to watch Robert Taylor or Joan Crawford or Luise Rainer at work, but children unanimously beg to be allowed to visit the Grand National lot. There is a reason, or rather a lot of them. Grand National is rapidly acquiring a zoo made up of the most talented animals in Hollywood.

—★—

All over the country picture fans are enthusiastic over Claudette Colbert's grand comedy, "I Met Him in Paris," but in Hollywood it looks as if the run will never end, because the same people come back to see it again and again. Almost any night you can find in the audience Barbara Stanwyck and Robert Taylor, Marlene Dietrich, her husband, and Douglas Fairbanks, Jr.

—★—

Opal Craven, known to radio listeners from coast to coast as "the Lullaby Lady" of the Contented Hour, has been appearing professionally in the entertainment world since she was seven. With Frank Black and the Continentals she shares top billing on this concert program that has run without interruption for more than five and a half years. In private life Opal Craven is the wife of a prominent Chicago insurance man. She began singing lullabies in real earnest about a year ago when her husky son was born.

Opal Craven

—★—

ODDS AND ENDS—Joan Crawford's idea of grand fun is to go down to a radio station when her husband or one of her friends is broadcasting and join the mob of offstage noises . . . M-G-M has found a way to finish Jean Harlow's last picture "Saratoga," using only long shots of a double. The preview audience approved mightily . . . Paul Robeson lifts his magnificent voice in song in "King Solomon's Mines," making this giddy thriller a picture not to be missed under any circumstances . . . And don't miss any of Edgar Bergen's shorts with his priceless dummy, Charlie McCarthy. Incidentally, his Sunday night radio program with W. C. Fields almost makes up for Jack Benny's absence from the airwaves. doesn't it?

Ask Me Another?

A Quiz With Answers Offering Information on Various Subjects

1. Has the population of the United States increased or decreased in the last ten years and how much?
2. What is the world's longest airline?
3. How many people have lived since the beginning of recorded history?
4. For what countries did the United States coin money last year?
5. What was the beginning of the motion picture industry in Hollywood?
6. Do the cold waters of the temperate and frigid zones contain more plant and animal life than do the warm waters of the tropics?

Answers

1. A census of population was taken in this country in 1930 and the next will be taken in 1940. Any other figures that may be given are simply estimates. The United States had a population of 122,775,046 in 1930; the estimated population on July 1, 1935, was 127,521,000, showing an increase of nearly five millions in five years.

2. The world's longest air line is that between Amsterdam, Holland, and the Dutch East Indies, 9,000 miles away. There are two departures weekly at each end of it.

3. The eugenics department of the Carnegie institution estimates that 30,000,000,000 people have lived since the beginning of recorded history, some 6,000 or 7,000 years ago.

4. For Cuba, Honduras, Mexico, Nicaragua, Venezuela, Costa Rica, Colombia and San Salvador. This coinage totaled 72,180,449 pieces.

5. In 1907 Selig opened the first California studio in Los Angeles. The first picture was the "Count of Monte Cristo" in 1,000 feet. Soon after that time other motion picture studios in New York opened California studios.

6. More plant and animal life per square mile is found in the cold waters of the temperate and frigid zones than in the ocean waters of the tropics.

A Refreshing Drink

IN THE summertime, cool drinks are so grateful to parched young throats. Here is a cold cereal drink you can mix in a jiffy. It is very refreshing and nourishing to boot.

Quick Cooler.
2 level teaspoons Instant Postum
1 cup cold milk

Combine ingredients in beverage shaker or in glass jar with tight top. Shake thoroughly until all cereal is dissolved. Sweeten to taste and serve. Serves one.—Adv.

"Quotations"

—▽—

Memorials of the future will commemorate the servants of society rather than the conquerors of men. —*Rev. Dr. Ralph W. Sockman.*

The American is impatient of delay. He does not believe the proverb that warns: Time always has its revenge.—*Andre Siegfried.*

I believe democracies will survive in the world if they know how to evolve, govern and agree with each other.—*Georges Bonnet.*

American students of today feel very little moral sense of obligation to live up to their capacities, and that in great measure is owing to the dropping standards of secondary schools.—*Dr. John L. Tildsley.*

Uncle Phil Says:

Praiseworthy Spirit

What we call public spirit is a moral quality, a particular and highly specialized form of unselfishness.

A "rugged individualist" is one who hurts your feelings and doesn't care if he does.

It was Dean Inge who said there was such a thing as fatty degeneration of the conscience.

A man allows himself to become "slouchy" because he feels he has something more important to think about than beauty.

A foolish man pursues a course that he knows will make him drunk and then is disappointed in the result.

Move or Be Mastered

Most people master their environment, if they ever do, by moving away from it. Perhaps, in their case, that's the best way.

A man of few words may convince you of his wisdom; but for companionship he is a flop.

In order to be applauded for what we do we must not too much applaud ourselves.

"Humanitarian" is a modern word coined to express a modern idea.

It is usually somebody else's work that is the grindstone to which one's nose is applied.

Only One Blue

True blue is not the kind that means a melancholy depression of spirits. That blue rests on false premises.

It is more blessed to give than to receive; but one likes to have this fact acknowledged by the beneficiary.

With all its drawbacks, life is still a splendid adventure.

Better to be afraid of the dark than to be afraid of the light.

Why MORE FARM TRACTORS ARE EQUIPPED WITH FIRESTONE TRACTOR TIRES THAN ALL OTHER MAKES OF TIRES COMBINED

Farmers KNOW Ground Grip Tires

PROVIDE GREATER TRACTION
INCREASED DRAWBAR PULL
SAVE MORE TIME AND MONEY

NOW THE Amazing New

Firestone GROUND GRIP TIRE

THAT PROVIDES STILL GREATER TRACTION AND SAVINGS

FIRESTONE has done it again! All you have to do is to examine the amazing new Firestone Ground Grip Tractor Tire and you will quickly understand why it provides still greater traction, greater drawbar pull, and makes greater savings in time and fuel. The basic Firestone patented Ground Grip tread design has been retained, but the extra heavy bars of rubber are spaced wider and built higher. The tire cleans itself still better, providing much greater traction.

Farmers everywhere are welcoming this new tire, for tests show that tractors equipped with it consume up to 50% less fuel, as compared with tractors equipped with steel lugged wheels. With this amazing new tire you get up to 30% more available drawbar pull on dry sod — up to 40% more on stubble — and up to 50% more on wet plowed ground, than with any other tire made.

Only Firestone can build all this extra traction into a tractor tire because only Firestone has the patented extra construction features of Gum-Dipped cords which are stronger to resist the strain of heavy pulling, and two extra layers of Gum-Dipped cords under the tread which bind the tread and cord body into one inseparable unit. The tread is made of specially compounded rubber which resists the action of sun, rain, and snow. See this amazing new tire at your Firestone Implement Dealer, Tire Dealer or Auto Supply & Service Store today. You will want a set on your tractor so you can make the savings that only Firestone Ground Grip Tractor Tires provide.

Listen to the Voice of Firestone, Monday evenings over Nationwide N. B. C. Red Network

If you have not received a copy of the new Firestone Farm Tire Catalog, please send your name and address to The Firestone Tire & Rubber Company, Akron, Ohio, or Los Angeles, California, and a copy will be mailed to you promptly.

1937 GREAT YEAR FOR INSECTS, SAYS DRAKE

Intensive Control Campaign Mainly Responsible For Saving Of Farmers' Crops

'Bugs! Bugs! Bugs!"

It's been a great year for insects in Iowa, reports Dr C J Drake, Iowa State College entomologist So much so that in many parts of the state only intensive control campaigns such as the drive against grasshoppers--enable the farmers to cheerfully report. "No serious damage"

Unusually kind to propagating pests during the current growing season, nature has liberated hordes of insects, ranging from man-eating mosquitoes to army worms, and has provided plenty of their favorite foods to "work on"

Chinch bugs, "frozen out" by the rigorous winter, have failed to make a comeback this year. In only one county, Marion, have they become a sufficient threat to warrant laying of creosote barriers

Ten thousand tons of grasshopper bait -the largest amount in the state's history- -have been distributed on the grasshopper battle fronts Eighty percent of this poison bait has already been used The rest together with additional shipments, will be scattered during the next 6 weeks to lessen damage to corn and alfalfa, protect fall seedings of winter wheat and reduce the danger of an infestation next year.

'Right now," Dr Drake explains, 'female grasshoppers are laying from 50 to 200 eggs each in western Iowa and will soon be doing likewise in central and eastern Iowa These eggs will not hatch until next spring, so it is of utmost importance that farmers maintain their vigilance and kill the hoppers before many eggs are laid"

Worms—really larva of moths—have caused noticeable damage in the state this summer, the Ames entomologist reports Variegated cutworms destroyed plants in southern counties and scattered northern sections

Army worms during the last 2 weeks hmave caused damage in all parts of the northern half of the state, migrating from lodged oat fields to corn and alfalfa. Parasitic flies have warred on these worms, destroying many of them. Another brood of army worms will hatch before fall, but it is not expected to cause much damage.

Canker worms have caused trouble to trees and gardens in Southern Iowa, in some places completely defoliating elms Where trees are banded in time, no damage results

Plant lice have attacked all types of vegetation Many farmers have used nicotine sulfate sprays to kill them

Onion mirids, comparatively new insects in Iowa, have caused considerable damage to onion crops, especially in the southern part of the state.

The latest insect threat has been the garden webworm, reported in several Iowa counties.

LIVESTOCK PRICE OUTLOOK FAVORABLE

Signifigant facts relating to the summer outlook for hogs and beef cattle indicate continued relatively high price levels throughout the summer and fall, according to analysis of the livsetock situation made by the Division of Agricultural statistics of the Iowa Department of Agriculture.

THE COIN OF LIVES

Dr. Herbert J. Stack, director of the Educational Division of the National Conservation Bureau, has started on a "transcontinental tour for traffic safety" His trip, which will cover ten or more states, is designed to assist the national movement to make good driving instruction a standard part of high school curricula He will attend summer sessions of colleges and universities, lecture and hold conferences with teachers

If Dr Stack's trip succeds in arousing enthusiasm for driving education, the inevitable result will be the saving of thousands of lives. At the present time traffic safey is taught in a large number of progressive schools During years in which accident fatalities to adults have steadily increased accidents and fatalities to children of school age have gone down

School driving courses need not be costly The main thing is proper planning that will adequately enlist the interest of students and appeal to their imaginations as well as to their senses of self-preservation and civic responsibility Once a boy or girl is taught the vital safety rule of the road, he or she will never forget them In the formative years ineradicable habits are established good as well as bad

Every town in the country should teach traffic safety No course can provide bigger dividends—in dollars as well as the infinitely more valuable coin of lives.

MR. LEFFINGWELL GETS DRIVER'S LICENSE

As told by Ant's-Eye in Anamosa Journal:

Charles Leffingwell of Oxford Junction, is 86 years old, and he drives an automobile He drives it well, too And he has a driver's license.

Someone told Mr Leffingwell that he was a little too old to drive In fact, he was refused a license He didn,t like that a bit He went to the best eye specialist in Cedar Rapids and got a statment from him that his eyes are as good as those of the average driver

Mr Leffinwell didn't mess around with small fry He wrote direct to the head of the state vehicle department He sent the sepcialist's statement and a letter He said "I can drive as well as anybody I challenge you to send out your best checker and let him go with me through the heaviest traffic in the state I live a mile from town, and have to get back and forth, and if I can't drive my car I'm going to get a horse and buggy and raise more hell with your traffic than I ever can with my car"

RURAL FIRE LOSS GREAT

The most fertile field for reduction of fire loss is in the rural sections of the country That is the gist of a report by the National Board of Fire .Underwriters

Last year for instance, the per capita fire lost for the nation was $2.05—an increase of 10 8 percent over 1935 But the per capita loss in cities with more than 20,000 population was but $1.40, an increase of only 5 3 percent The better record of the cities is ascribed "not only to the effeciency of municipal fire departments, but also to the cumulative effects of fire prevention activities and of modern building code requirements."

Adequate fire prevention in rural sections presents difficult problems But, as many sections of the country have shown, they are by no means insoluble The interest of farmers should be aroused in spurring fire prevention campaigns, and in learning the relatively simple lessons that make it possible for individuals to eliminate the great bulk of the hazards in homes and places of business. It is practical for a group of small towns to acquire fire-fighting apparatus that can be strategically located to respond to calls quickly over a fairly wide area The cost of this is far outweighed by the benefits.

Each year, tens of millions of dollars worth of property is destroyed on farms and in villages Lives are lost. This waste can be largely prevented if the bublic is aroused to how it may be obviated Let's make our towns and homes safe from fire.

Shakespeare Was Versed in Music, Plays Reveal

Lovers of music usually are amazed by the number of references to music and the thorough knowledge of music displayed in Shakespeare's plays, observes a writer in the Indianapolis News. "Twelfth Night" is considered as opening with one of the finest eulogies on music. "The Taming of the Shrew" opens with a music-teaching scene. Musical instruments he mentions include viols, violones (double basses), trumpets, fifes, recorders (flutes with mouthpieces), bagpipes, cornets, serpents, virginals, lutes, organs and oboes. "Hamlet" contains a description of how to play the recorder. Closely aligned to the musical instruments are the dances referred to. He mentions such early classic dances as the bergomesque, theromanesca or gailliard, the pavane, courante and gigue, as well as the English country dances known as the morris dance, hornpipe, brawl and hay.

"The Carman's Whistle," an old English ballad, is referred to in "King Henry VIII"; "Oh, Willow, Willow," another ballad, is introduced in "Othello," and "Greensleeves," a famous ballad, is twice mentioned in "Falstaff." "It was a Lover and His Lass," lyric written by Shakespeare in "As You Like It," was set to music by eighteen composers an early one of whom was Thomas Morley.

Shakespeare's lyrics, "Who Is Sylvia?" and "Hark! Hark! the Lark!" inspired two of Schubert's finest songs.

Eighteen settings have been made of the former.

"The Tempest" has been the inspiration for fourteen settings as an opera; the "Merry Wives of Windsor" has had eight settings.

"Measure for measure" was used as a basis for an opera by Richard Wagner in his youth. Incidental music to "Midsummer Night's Dream" by Felix Mendelssohn contains the latter's famous "Wedding March."

Other plays by Shakespeare which have been the inspiration for either operatic or symphonic settings include "Comedy of Errors," "The Taming of the Shrew," "Winter's Tale," "King Richard III," "King Henry IV," "King Henry VIII," "Macbeth," "Othello," "Hamlet," "Romeo and Juliet," and "King Lear."

Hyrax, Odd Little Animal, Is About Size of Rabbit

The hyrax or coney, an animal about the size of the rabbit, is rodent-like in general appearance, having long front teeth and pointed muzzle. However, it does not have the usual five toes and strong claws of the other members of the gnawing family and anatomically resembles more closely the elephant and rhinoceros than any other species living, says Nature Magazine of Washington.

The toenails are short and rounded like those of the huge pachyderms. The large front teeth, at first glance resembling the strong gnawing teeth of the squirrel, are not flat and chisel-shaped, but instead are three-sided and pointed like the fangs of the great cats. These upper teeth grow throughout the animal's life as do elephants' tusks.

In structure, the seven cheek teeth of both jaws resemble those of the rhinoceros and its extinct relative, the palaeothere.

Speed of Animals, Birds, Fish

For centuries man has been trying to assess the speeds of animals, birds, and fishes. According to tables the fastest speeds in the kingdom of Nature, says a writer in Pearson's Weekly, are: Canvas-back duck, 72 miles per hour; golden plover and teal 70 miles per hour; blackcock and swift, 68 miles per hour; pheasant and grouse, 60 miles per hour; merlin and wild goose, 55 miles per hour; homing pigeon, 55 miles per hour. The gazelle, the reed buck and the cheetah are given as the fastest animals, all being able to run at 60 miles per hour; while buffaloes, ostriches, jackals, and giraffes are listed in the 35 mile per hour class. The lion seems to be one of the slowest. He is only assessed at 30 miles per hour, the same speed as the wild pig. The fastest fish is the tuna, at 45 miles per hour, followed by the pike with 15 miles per hour. Trout and salmon can only do 12 miles per hour.

700,000 Words by Signs

The human arm, which includes forearm, wrist and fingers, can produce about 700,000 distinct signs, according to scientists. Sign language is, therefore, far richer and more expressive than human speech. Further, states a writer in Pearson's Weekly, it is very simple and it has no language barrier to overcome. Experts consider that it is the best possible foundation for building up a real universal language, particularly because signs have been a natural means of communication since prehistoric times.

Return Lightning Explained

Return lightning is described as a quite small electrical discharge that takes place here and there from objects on the earth's surface directly with lightning flashes. This discharge is quite insignificant to the main flash, but is powerful enough to cause explosions, to start fires and even take life.—Rocky Mountain Herald.

ITEMS OF INTEREST FROM ELL TOWNSHIP

Mr. and Mrs. Albert Kehl, Marjorie and Harold were Sunday evening visitors at the Wesley Kehl home near Corwith.

Mr. and Mrs. Lewis Neuberger and grandson, Roger, and Mr. and Mrs. Melvin Neuberger and daughter, Elaine, visited at the John Schachterle home near Ackley and at the Alvin Fischer home near Iowa Falls, Sunday.

Mervin Reese, of Rowan, Miss Elsie Edens, of Alexander and Mr. and Mrs Verner Stromer and son enjoyed a picnic supper at Clear Lake, Sunday evening.

Mr. and Mrs. Richard Ax and family were dinner guests at the Will Ax home Sunday. Mr. and Mrs. John Neuberger Jr and family were also visitors there in the afternoon.

Mr. and Mrs. Leslie DeMerritt were dinner guests at the William DeMerritt home at Thornton Sunday.

HOPPERS IN THIS COUNTY

In Hancock County it has been found that grasshoppers are doing most damage to new seedings and shoots of alfalfa following the last cutting. Farmers should investigate to see if such is the case on their farm It has been found that the hoppers are quite general over the entire county

Poison bait can be secured in Garner by calling at the Farm Bureau office. There is a charge of 25 cents per bag (about 50 lbs) for the mixing charge. For further information see your county agent.

COOL SUMMER

Beer Tax Collector Reports Receipts Under 1936

E. F Rahm, state beer tax collector, looked at his receipts Saturday and agreed with the weather man that this summer is cooler than last.

Rahm reported beer tax collections for July totaled $119,593, or $6,848 under the same month a year ago

Other state tax collections registered gains in July over the corresponding period in 1936. Inheritance taxes totaled $91,354, up $14,456, and gasoline taxes reached $1,439,292 against $1,345,110 in July last year

Archeologists exploring tombs of Egypt have found carbonized grains of wheat believed to date back 6.000 years.

Ancient Mexican Aztecs Observed Calendar Cycle

Among the many strange rites of the ancient Aztecs of Mexico, the observance of their calendar cycle of 52 years was one of the strangest. Every day and every night of the Aztec people were under the protection of one or another god or goddess, which had to be appeased, according to an associate curator of Mexican anthropology, in an article in Natural History, published by the American Museum of Natural History.

"Special gods," he writes, "presided over the weeks and months. So completely were the people governed by the calendar that at the completion of their cycle of 52 years, a large unit of time corresponding to our century, they thought that the world might end if the gods were not sufficiently propitiated to renew life again.

"Before the new year, all hearths were extinguished, all household utensils broken and discarded, the people gave themselves up to fasting and lament The priests repaired to a high hill just outside of Mexico City and made sacrifices. When the gods signified their approval, at dawn of the new cycle a new fire was kindled in the heart of a sacrificed slave, and runners with torches lit from this blaze ran to light again the hearths of temples and houses in every part of the valley. Great rejoicing arose, and the people redecorated their homes and temples, made new household furnishings, and were ready to enjoy the life secured them for another 52 years."

Earliest Ohio Railroad "Mere Fanciful Object"

The first steam railroad constructed in Ohio was also "the pioneer railroad of the west," the Erie & Kalamazoo. It was projected by Dr. Samuel O. Comstock of Toledo, and was chartered by the state of Michigan "on the ground that it was a mere fanciful object, of which no harm could come, and it would greatly please the Comstocks of Toledo," relates a writer in the Cleveland Plain Dealer.

In 1836 the line was built and opened between Toledo and Adrian. The original plan had been to lay oak rails and employ horses as the motive power. But before the line was completed steam power was decided upon, and iron "straps" were fastened to the wooden rails The first locomotive, Adrian No 1, was set upon the tracks in June, 1837, and in the same year the road obtained a contract for carrying the mails

Several railway charters had been granted in Ohio, meanwhile, but none of these bore fruit until 1839, when the Mad River & Lake Erie was built from Sandusky to Bellevue, sixteen miles, This road had been chartered in 1832 to construct a line as far as Dayton. It reached there in 1844.

Early Fire-Lighters

Savages start fires by rubbing two pieces of wood until the friction has generated enough heat to ignite the wood. The Romans ground a mixture of sulphur and dry decayed wood between stones. During the Middle ages the use of flint and steel became general. This latter method really does not make use of friction, but it converts mechanical energy into heat. When two hard solids are struck together violently the kinetic energy of their motions has no other outlet than as heat, which is sufficient to throw off sparks of incandescent matter. These sparks are allowed to fall into certain highly combustible fibrous materials known as tinder, which they ignite to glowing.

Rivals for Capital City

There was much competition before Washington was actually decided upon as the national capital, and Germantown, Pa., came pretty near being chosen for the site. Congress had actually passed a bill to that effect in 1789, and only an amendment to the original bill which couldn't be decided upon because the session was so short and which had to be left for the next session when opposition had been mustered against it, kept Germantown from being the capital city of the country.

Progress of the Piano

The piano has come down to us, by way of the virginal harpsichord and clavichord, from the very ancient Oriental stringed instrument called the dulcimer — the word means "sweet tune." The "sweet tune" was little more than a sound-box of wood with strings stretched across it. Music was produced by striking the strings with a padded hammer The full name of the piano, incidentally, is "pianoforte," which means "soft and loud."

World as a Ship

The old Frisians believed that the world was once a great ship and the mountains its masts. Sailors when going aloft as boys came down old men. This ship was afterwards made smaller, but still remained gigantic. She once stuck in the Straits of Dover, but her captain smeared the port side with soap, scraping through, but leaving the "white cliffs of Dover" as a memento.

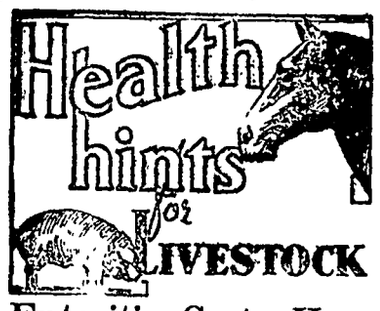
Modern William Tell at Iowa State Fair

Des Moines, Ia., Special:—Shooting an apple out of the mouth of a man speeding by in a car, Edna Alee, world's most famous markswoman, will demonstrate her unbelievable skill with revolver and rifle at the Iowa State Fair here this summer. In addition to her "William Tell" act, Miss Alee puts bullets through the hole in a phonograph record, splits a playing card which faces her edgewise, and does other stunts reminiscent of Annie Oakley She will be one of the twenty famous circus thrillers scheduled to appear at the state fair from Aug. 27 through Sept. 2 in the afternoon and evening grandstand shows.

Open Big Vacation Camp

Des Moines, Ia., Special:—The midwest's largest vacation camp has been opened at the Iowa State Fair, to provide free camping facilities for over 25,000 vacation-seekers at this year's exposition, Aug. 27-Sept. 8.

Besides a regular camping section of 120 acres, the grounds also includes a special trailer camp. Equipped with electric lights, city water service, and all modern facilities, the camp provides ideal accommodations for those taking an outing at the 1937 State Fair. A free circular describing the camp is available on request.



Enteritis Costs Hog Raisers Millions

—Prepared by American Foundation for Animal Health

While hog cholera is, without doubt, the most dangerous and costly swine plague in America, the intestinal disease called Enteritis ranks a close second in causing tremendous annual losses.

Hog cholera, of course, can be prevented almost 100 per cent by vaccination. But there is no dependable vaccination as yet for Enteritis, and no sure cure.

Resembling typhoid fever in human beings, Enteritis creates greatest havoc in growing pigs by producing a surface gangrene or rot of the lining membrane of the intestines.

First signs of the disease are when the hogs begin to lose weight while on good rations. Their appetite continues good, but the loss of weight continues. Sometimes the condition is accompanied by diarrhea. When such symptoms show up, a veterinarian should be called immediately. Because if proper measures are applied in time, death losses and spread of the disease to other hogs can usually be controlled.

There is no sure cure for Enteritis. Farmers should be warned against peddlers who purport to sell cures for Enteritis or "necro", as health authorities have repeatedly advised that no sure cure exists at present.

Vaccination of herds suffering from Enteritis may result in heavy losses. For this reason, hogs should receive careful inspection by a veterinarian before cholera immunization is administered.

Of course, the time to vaccinate against cholera is while the pigs are healthy, and before they can be weakened by any of the prevalent swine diseases.

Prevention of Enteritis is best accomplished by selection of disease-free breeding stock, careful farm sanitation, use of the McLean County clean ground system for growing pigs, and suitable medication by a veterinarian at first signs of an outbreak.

COLLECTIONS INCREASE

Deparment of Agriculture receipts from licenses, fees and tax collections for June 1937 were $58,327.38, according to Dr. Thomas L. Curran, State Secretary of Agriculture.

Department receipts for June, 1937, show an increase of $10,139-23 or 21 7 per cent over the same month last year when collections were $48.188.15. Total receipts for the first half of 1937 were $293,-404 69 as compared to $263,404.67 in the first half of 1936. This is an increase of 11.7 per cent.

KLEMME SUPERINTENDENT WILL TALK ON KGLO FORUM

Supt W. Henry Galbreth will talk over KGLO, Mason City, on next Monday evening at 8:05 o'-clock. Mr. Galbreth has been selected as a speaker of the Forum Program and will talk on Upper Iowa University, of which he is a graduate.

The taxpayer is anything but the forgotten man.

NEWS FROM GOODELL AND VICINITY

Baptismal services were held in the U B Church Sunday morning.

Mr and Mrs. Ray Elliot and daughter, Phyllis, of Des Moines, were callers at the Jay Griggs home Saturday They were enroute home from Lake Melac, Minn., from a fishing trip

Lloyd Smyhe and Frances Tisor of Mason City were Sunday dinner guests at the latter's Aunt, Mrs Mike Kearny The boys expect to leave soon for the navy At present they are in the C.C.C Camp at Clarion

LABOR'S 'BATTLE OF THE CENTURY'

Clash Between John L. Lewis' C. I. O. and William Green's A. F. of L. Broadens on All Fronts; Government May Intervene.

By WILLIAM C. UTLEY

IN THIS corner—Bill Green, flashy stepper of the American Federation of Labor and the craft unions. And in this corner—John L. Lewis, two-fisted mauler of the Committee for Industrial Organization and the vertical unions. The stake—the "championship" of American labor organization. The fight—to a finish.

It was predicted months ago that the battle would be a live and bitter one—and it is. As the weeks roll by it becomes more and more apparent that A. F. of L. and C. I. O. are invading each other's fields. C. I. O. has gained steadily in membership, and A. F. of L. has defended its positions by intensifying its own membership drives.

Today the A. F. of L. claims a membership of 3,600,000, and the C. I. O. is pressing it closely with a claimed 3,000,000. Bulwarks of the Green organization's strength are the printing industry, teamsters and truckers, the building trades and metal trades, hotel and restaurant employees, street car workers and entertainers. Lewis finds his power in the basic and mass production industries — coal, steel, men's and women's clothing, rubber, oil, textiles, automobiles, etc

But Lewis has clashed and is clashing with A. F. of L. in places which it has assumed were its own grounds. The latest of these is the maritime front. Meeting with 26 representatives of 23 maritime unions on both the east and west coasts, he announced that C. I. O. would attempt to gather the scattered unions into one big organization which will include workers on both coasts, the Great Lakes, the Gulf of Mexico and inland waterways. There are said to be 350,000 such workers. A. F. of L. already has two strong unions in the field.

A. F. of L. Wins in Philly.

The apathy of one organization for the other among maritime workers is demonstrated almost constantly on the east coast. Scarcely a week passes when there is not a strike of workers affiliated with one or the other of the two groups on some ship scheduled to leave port. The two organizations will not work with each other; if a ship owner makes an agreement with one union, the other walks out.

The condition is true even when the workers of one group involved are not engaged in the same industry as the other group. In Philadelphia not long ago, 25,000 teamsters affiliated with the Green organization went on strike. They were protesting the fact that C. I. O. unions had made an agreement with bakery employers. A. F. of L. won; it effected a truce providing for elections in the bakery plants, C. I. O. promising to withdraw if it lost the elections. C. I. O. lost and pulled out.

An interesting clash arose on a Seattle newspaper. The dispute was between the American Newspaper guild and the teamsters' union about control over the paper's circulation department employees. The guild was a member of C. I. O., taking in workers in the circulation, advertising and business offices, as well as editorial departments of newspapers.

The paper was forced to suspend publication pending settlement of the dispute. Teamsters refused to deliver the papers until members of the circulation department were placed elsewhere and their jobs given to A. F. of L. members. The guild members then went on strike claiming that the newspaper had

Scenes like this are hardly uncommon in labor's current crisis.

taken 19 circulation men out of their jobs because they had refused to leave the union of their choice and join the teamsters' union. Police eventually removed the strike pickets and publication was resumed.

It is said that the order of the C. I. O. is not to encroach upon industrial fields which the A. F. of L. already has "successfully" organized, but this order has been violated, chiefly by minor organizers who, in their enthusiasm, have simply ignored it.

Federation Doubles Dues.

The Federation is not so passive in policy. It regards the C. I. O. as an out-and-out rival and makes no pretense of foregoing the C. I. O. field. It campaigns militantly and openly against John Lewis' C. I. O.

When it began to recognize the C. I. O. threat to its supremacy, the A. F. of L. lost little time in raising its dues from one cent per month per member to two cents; the old rate has usually been enough to make both ends meet but it was not enough to finance the fight against John L. Lewis.

Until recently the only funds in the C. I. O. war chest were those which affiliated unions contributed to it when money was needed to press its drives But now C. I. O. has started collecting dues of five cents a month per member of affiliated unions.

Of course there are national unions belonging to one organization or the other which have large treasuries of their own. The bricklayers' union is said to enjoy a balance of some $7,000,000, while the ladies' garment workers are $2,000,000 in the black. Lewis is said to have spent $1,000,000 in the steel workers' strikes against independent steel corporations.

What Employers Face.

Employers are often faced with truly mortal problems as a result of the Green-Lewis friction. For instance there is the case of an automobile body corporation which was planning some major construction. The company's employees are dominated by the United Automobile Workers of America, a C. I. O. union. A C. I. O. union demands the work of digging the foundations. The contractor is afraid to begin work on the job for fear the A. F. of L. unions will not work on the superstructure. If he gives the foundation work to A. F. of L. men, he courts reprisals by C. I. O. automobile workers in the town. So the construction is not being done and nobody is benefiting from the employment it would provide.

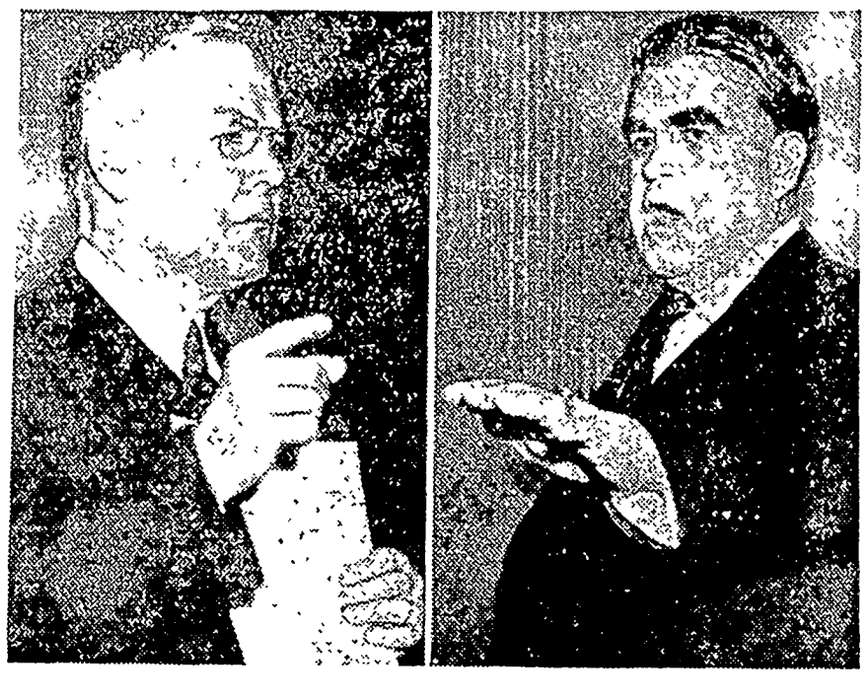
Certain aspects of the rise of C. I. O. have reacted definitely to the advantage of the American Federation of Labor. Industries which in the past have been none too anxious to deal with the A. F. of L. are now welcoming it as an alternative to C. I. O., of which they are apparently afraid.

Here's One Solution.

Where local unions join the C. I. O., the A. F. of L. sets out to make up a rival union. This has happened in a number of cases. The A. F. of L. has been known to borrow employees from factories where its units are recognized to recruit new members in other factories where C. I. O. appears to hold a majority. As one faction or the other has sought to break picket lines, violence has sometimes occurred, with attendant injuries, both serious and minor.

Washington realizes that the labor struggle is no toy conflict and will probably take a hand in it sooner or later. It hardly seems possible that the administration could overlook a struggle with so many and so broad implications. One solution which is reported to have been suggested by one high in administration circles would attempt to bring the two organizations together. The plan is to offer Green a government post, and let him be succeeded by George M. Harrison, president of the Brotherhood of Railroad Clerks. Within the A. F. of L. there would then be formed a new division over the basic industries; this would be headed by John L. Lewis.

But one of the main issues of the present battle within the ranks of labor is over who shall dominate A. F. of L. policy—the craft union groups or the basic industries' unskilled workers. Lewis' bloc threatens now to get so powerful that it will be able to vote itself into control of that policy. If the above plan would be successful, some agreement would have to be reached — and guaranteed — that would allow the two groups to share the power. But it does not appear that either wants to share it, and such a truce would be difficult indeed to effect.



Opponents in labor's current fight: William Green (left), president of the American Federation of Labor, and John L. Lewis, chairman of the Committee for Industrial Organization.

Whether or not the C. I. O. is on the way downhill because of its failure to obtain written contracts in the strike against the independent steel companies is still widely debated. The campaign began a year ago, and by February some contracts had been obtained. The United States Steel corporation capitulated and signed C. I. O. contracts for its Carnegie-Illmois subsidiary's employees. This lent impetus to the Steel Workers' Organizing Committee drive until today it claims 260 contracts involving more than 350,000 steel workers.

Companies Woo Public Opinion.

But the independent companies refused to sign contracts and are apparently getting away with it. Before the federal mediation board they opened up an attack concentrated upon Lewis, charging that any C. I. O. affiliate was irresponsible, threatened to break contracts and did break them. Examples cited included the United Automobile Workers of America, a C. I. O. affiliate, with which General Motors and Chrysler signed agreements, only to be plagued with hundreds of sit-down strikes after the agreement had been made.

Companies lost no chances to impress the public with the violence on the picket lines that were established by C. I. O. unions. When there was resentment of the employment of vigilantes by local police and by the companies, the vigilantes were upheld on the grounds that C. I. O. had regular armies of its own which it continually threatened to move in upon strike areas.

The contention is made that with the failure of C. I. O. in the independent steel strikes, "Big Steel" and the automobile companies will refuse to sign again when their contracts come up for renewal. Predictions are also made that C. I. O. is due for another serious drop in prestige in its attempt to organize the employees of the Ford Motor company.

Despite its failure to date in "Little Steel," the C. I. O.'s leaders are determined that they are here to stay, and are going right ahead in their organization of other industries.

The U. A. W. A. is airing its complaints against Ford in a hearing before the national labor relations board. In Washington the United Federal Workers of America are trying to organize 800,000 federal employees. The drive is on in the maritime field. C. I. O. is seeking national organization of agricultural, cannery and fruit and vegetable workers. It is broadening out into transportation, textiles, lumber, tobacco and education. It does not regard the "Little Steel" failure (if indeed it can be regarded as such) as an important one.

Keeping Up With Science

By Science Service

© Science Service.—WNU Service.

Scientist Says It May Be Possible to Fly Around Moon

Book, "Zero to Eighty," Describes How It's Done

Washington.—Did you know that right now—given money enough for the development of mechanisms — scientists could design a space rocket to take a trip around the moon? And that such a flight could be achieved without invoking any imaginary physical features or laws of nature?

Dr. Edwin Fitch Northrup, one of America's best known veteran electrical scientists of Princeton, N. J., is authority for these statements and proves them in his new book, "Zero to Eighty," which is one of the most fascinating, readable volumes on science for the layman to appear in many years.

Life of Imaginary Scientist.

Zero to Eighty is the life story of an imaginary scientist, one Akkad Pseudoman who was born in 1920 and achieved the Jules Vernian goal of a trip around the moon and back to the earth. Written as an autobiography, it is completely fiction but fiction without one single fact of fancy in it. Dr. Northrup merely chooses the fiction form of narrative because he is wise enough to know that the layman likes to read about people rather than about their works.

All the scientific material skillfully intermeshed with the fiction tale has been worked out in considerable detail and "is believed to be entirely consonant with current proved facts and well tested technical knowledge," as the author puts it.

Behind the book is a considerable expenditure of money and much labor in building small laboratory models of rockets initially propelled by magnetic "guns."

Ideas Are Patentable.

Because Zero to Eighty does represent much experimental work and much of the technical material is presented for the first time, Dr. Northrup takes the precaution in his foreword to point out that there are many ideas in his fiction brainchild and that he reserves the right to protect these ideas by patents at some future time.

Dr. Northrup — pardon, Akkad Pseudoman—has little faith in the hope of launching space rockets by terrific blasts from liquid-air rocket engines. Scientist Pseudoman uses the magnetic gun method which allows a more gradual acceleration to the terrific speed needed to get beyond the sphere of the earth's gravitational influence. Then, once in space, his space ship uses rocket motors to steer it and slow its velocity once it has journeyed around the moon and back to the earth.

Dr. Northrup has built small electro-magnetic guns in his laboratory and gives detailed methods of their construction and how they work. They consist of a long solenoidal coil of heavy conducting wire through which is passed heavy currents of alternating electricity.

At 2,000 cycles a second these electrical waves travel down the barrel of the "gun" with a velocity of three kilometers a second. At this speed they would circle the earth at the equator in 222 minutes. From the instant the nose of the hollow metal rocket "bullet" enters the gun until it leaves the muzzle it is powerfully accelerated, trying ever to catch up with these speed electric waves which drag it along.

No Limit to Size.

Theoretically there is no limit to length which one might build into such an accelerating gun nor is there a limit to its cross-sectional size.

For example, on a trial test of a rocket to a mere 40.6 kilometers (28½ miles!) Akkad Pseudoman uses an abandoned Utah mine shaft barrel of his gun.

Later, when he takes off for the moon, a larger and more powerful electric gun is employed whose base is Mt. Popocatepetl in Mexico. This mountain, 17,880 feet high, has a fairly gentle slope on the southwestern side toward the Pacific; a slope that is 275 kilometers long.

Virtue of the electric gun, points out scientist Pseudoman, is that its barrel does not need to be rigidly straight as long as any curves in it are gentle and of large radius.

Thus, at admittedly staggering expense, the gun 170 miles long and with a barrel about 50 inches in diameter is built. It is really divided into five sections energized with currents of different and increasing frequency going from 1,000 cycles a second at the start to 5,000 cycles a second at the muzzle of the gun nearly 18,000 feet higher up

Prontosil "Steals Show" at Medical Meet; Kills Germs

New Chemical Remedy Combats Many Diseases

By JANE STAFFORD

Atlantic City, N. J.—Prontosil, new chemical remedy that has already saved thousands of lives and promises to conquer four of mankind's major germ enemies, held the spotlight at the meeting of the American Medical association here.

This red dye and its chemical relative, sulfanilamide, were the most important and most talked-of subjects on the program and around the convention hall. They even stole a place on the program from an older remedy.

Latest disease to go down before the attack of sulfanilamide is pyelitis, serious and troublesome urinary tract infection for which there has hitherto been no very successful treatment.

Cases of pyelitis which were completely cleared up by treatment with sulfanilamide were reported by Dr. Henry F. Helmholz of the Mayo clinic, Rochester, Minn. This was the first report of the use of the new chemical remedy for this disease.

Doctor Helmholz was to have reported results of treatments with mandelic acid, but his results with sulfanilamide were so much better and so spectacular that he made a last-minute change in his paper in order to report the treatment.

Meningitis, including the particular deadly variety due to streptococcus infection of the brain membranes, as well as pneumonia, gonorrhea, childbed fever, and other diseases caused by streptococcus infection, all yield to treatment with sulfanilamide or prontosil.

Sulfanilamide is apparently particularly effective in checking the growth of the round germs of the great "coccus" family. These include streptococci, pneumococci, meningococci, and gonococci. These bacteria are the causes of Type III pneumonia, for which there has been no such satisfactory serum treatment as there is in Types II and I; streptococcal meningitis, which up to now has always been fatal; childbed fever, which has killed thousands of mothers every year in spite of all efforts to check it; and erysipelas.

Atom Power Will Probably Be Useful Within a Lifetime

Hoboken, N. J.—While science sees no immediate way in which power directly from the atom nucleus can be turned to useful and practical purposes, it is "probable" that applications of existing knowledge to this end will come within the lifetime of persons now living.

This prediction, with its startling implications, was made here by Prof. E. O. Lawrence of the University of California in the commencement address of the Stevens Institute of Technology. Professor Lawrence has the world's most potent atom-smashing cyclotron equipment in his radiation laboratory and he, and his students, have transmuted most of the chemical elements known to man from one form to another.

"But whether it will be possible to release subatomic energy on a practical and profitable basis for industrial purposes, whether perhaps it will be possible to realize conditions on this earth similar to those in the sun, is the question which of course interests the engineer," said Professor Lawrence. "Indeed, it is a question of interest to everyone and accordingly it has been the subject of much popular discussion and speculation. But speculation is hardly more than a game of fortune telling and this is out of place here. It is only of interest to indicate the present state of knowledge with proper humility, with recognition that what the future holds forth only the future can tell. In this spirit I would say at this time that although we now know that matter can be converted into energy, we do not see any greater prospect of destroying nuclear matter for power purposes than of cooling the ocean to freezing temperatures and converting the heat released into profitable work. It does seem that the same considerations of the second law of thermodynamics govern the availability of energy in the hearts of atoms as in the Atlantic ocean itself.

"Although I cannot encourage the view that some day you will be running power plants by the release of subatomic energy, that you will be using the nuclei or atoms as fuel, I do wish to emphasize that the establishment of the great principle of the equivalence of mass and energy is none the less of great practical importance. It is probable that in your life time and in mine this great principle will play a vital role in technical developments which you and I at the moment are not even dreaming of—for such has been the history of science."

Dean of the Moody Bible Institute of Chicago.
© Western Newspaper Union.

Lesson for August 8

GOD FEEDS A PEOPLE.

LESSON TEXT—Exodus 16:11-20; 17:3-6.
GOLDEN TEXT—Every good gift and every perfect gift is from above, and cometh from the Father. James 1:17.
PRIMARY TOPIC—When God's People Were Hungry.
JUNIOR TOPIC—God Feeding His People.
INTERMEDIATE AND SENIOR TOPIC—How God Provides for Our Needs.
YOUNG PEOPLE AND ADULT TOPIC—God's Supply Adequate for a Nation's Need.

Israel, led by God, is on a journey to the promised land. But to reach their goal they must pass through the wilderness. Not only are there weary miles to travel, but there are privations to be endured. Life is like that.

"People may be strong and hopeful at the beginning of a project, and most effusively and devoutly thankful at its close, but the difficulty is to go manfully through the process. Israel was in the desert, and never were spoiled children more peevish, suspicious, and altogether ill-behaved. If they could have stepped out of Egypt into Canaan at once, probably they would have been as pious as most of us; but there was the weary interval, the inhospitable wilderness! So it is in our life. Accept it as a solemn and instructive fact that life is a process . . . more than a beginning and an ending" (Joseph Parker).

Note how elemental are man's needs in the final analysis—bread and water. The very things we take almost for granted as we concern ourselves with life's weighty interests and profound problems become, if lacking, the only things that have any real meaning. And who is it that can provide them? No one but God Himself.

I. Bread from Heaven. (Exod. 16:11-20).

Observe first of all that this was a divine provision. There are responsibilities in life which we may bear—and must bear, but in the ultimate meeting of our real needs we must look to God.

Secondly, we note that it was a daily provision. What forehanded folk many of us are, and no doubt rightly so, for God puts no premium on improvidence. But once again we must recognize, as did Israel in receiving the daily manna in the wilderness that ours is indeed a moment by moment existence. We plan bravely for the next decade or the next generation, but as a matter of fact it can only come to pass "if the Lord will." Read James 5 13-17.

Finally, it was a limited provision—enough for the day and no more, except for a double portion on the sixth day, and none at all on the Sabbath. These provisions were made clear to Israel, and yet there were those who attempted to lay up for the morrow, and some even went out to seek manna on the Sabbath day.

We marvel at their stubborn obtuseness, but are we not often just like them. Some there are who are always expecting that the laws of both God and man should be set aside for them, but, mark it well, they ultimately come to grief. The spiritual application is obvious, and most serious. God has provided a way of redemption, and has made clear how man should and must relate himself to it. Folly it is to ignore God's plan.

II. A Rock in the Wilderness. (Exod. 17:3-6).

"And the people thirsted"—for the daily manna was not enough—they must have water. Needy, yes, constantly needy are God's children.

God always provides. There is a rock in the wilderness. But what pleasure does a murmuring people find in a rock when they famish for water? It is God's delightful custom to meet our needs in unexpected ways and by means which we do not understand. Even our physical necessities come from unthought of sources.

III. The Bread and the Water of Life.

Let us make certain that we do not miss the spiritual truth of our lesson which is revealed by Scripture itself. Paul speaks in I Corinthians 10:1-4 of this very incident in the experience of Israel, and says that they "did all eat the same spiritual meat and did all drink the same spiritual drink; for they drank of that spiritual Rock that followed them: and that Rock was Christ." See also John 4:14.

Hungry and thirsty soul, you who are still unsatisfied after tasting all that life apart from Christ has to offer, will you not, just now, take him who is the living bread, and come to the Rock which flows with living water?

How to Keep Quiet

Character is revealed by small things; it is also hidden by small things. Speech often hides it, and again distorts it, for those who brand themselves by the pettiness of their conversation have sometimes unsuspected depths within; but the surest revealer of character is silence—intelligent silence.

Progress

No man who feels the worth and solemnity of what is at stake will be careless as to his progress.

Sew-Your-Own Style News

HERE is something practical, something sweet, and something ornamental for your midsummer wardrobe.

Simple As Toast and Coffee.

At breakfast time you need the crisp shipshape style of the little model at the left. He'll proffer that eight o'clock kiss with alacrity and fervor when you greet your hubby in this pleasant surprise. Make it of a gay tub-well cotton for greatest usability.

Lines That Live.

For luncheon in town, for cutting up touches on the Club veranda you can't find a more fetching frock than the one in the center. It combines sweet swing with nonchalance. Never has a designer given more flattering shoulder and waist lines than these. "And what about the skirt?" you ask. Obviously it has the most finished flare in town. Chiffon, acetate, or sports silk will do justice to both the flare and you, Milady.

And If Autumn Comes.

It's a help to have a dress like the one at the right around for it gives that feeling of preparedness. Prepared in case a cool Fallish day or evening is slipped in without warning. Then, too, it won't be long before cool days will be the rule rather than the exception. So it would seem a logical as well as a fashionable step to set about making this elegant model right away. Be first in your crowd to show what's new under the fashion sun for Fall.

The Patterns.

Pattern 1354 is designed for sizes 34 to 46. Size 36 requires 4⅝ yards of 35 inch material.

Pattern 1307 is designed for sizes 12 to 20 (30 to 40 bust). Size 14 requires 3¾ yards of 39 inch material plus 7½ yards of ribbon for trimming as pictured.

Pattern 1324 is designed for sizes 14 to 20 (32 to 42 bust). Size 16 requires 3¾ yards of 39 inch material plus ½ yard contrasting, and 1¾ yards of ribbon for the belt and bow at the neck.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

© Bell Syndicate.—WNU Service.

Foreign Words and Phrases

Ab hoc et ab hac. (L.) From this and that; confusedly.

Per aspera ad astra. (L.) Through trials to glory.

Maintiens le droit. (F.) Maintain the right.

Lucri causa. (L.) For the sake of gain.

O tempora! O mores! (L.) O the times! O the manners!

Gli assenti hanno torto. (It.) The absent are in the wrong.

Household Helps

Do you know the proper thing to say when you sit on a wad of chewing gum?

If your suit is washable, here is the correct command—if you want to get rid of the chewing gum and not your garment:

"Bring me an egg white, some soap and some lukewarm water. Then stand back and watch me soften the gum with the egg white—so! And finally wash it completely away with the soapy water."

If your suit isn't washable, the fabric-saving element is carbon tetra-chloride, which will remove all traces of stain.

The authority for these points of chewing gum etiquette is a new booklet called "Handy Helps for Homemakers," which has been prepared by a group of home economics authorities. This booklet is a convenient, compact handbook of practical remedies for the most common household problems. It is divided into four sections: laundering (which includes not only stain-removal formulae, but also detailed advice on the proper way to wash various fabrics); home lighting; heating, and cooking.

The writers of the "Handy Helps for Homemakers" booklet have confined the chapter on "Cooking" to an informative discussion of meat-selection rules, suggestions for improving actual cooking technique and a summary of the merits and problems of home canning.

A copy of the "Handy Helps for Homemakers" book can be secured by sending 5 cents to cover postage and handling to Miss Boyd, 210 S. Desplaines St., Chicago, Ill.—Adv.

Local Happenings
Klemme and Vicinity

Mr. and Mrs. Frank Ward and family spent Sunday visiting at the Earl Reed home at Burt, Iowa.

There are no domesticated bees. Those in man-made hives are as wild as those in a hollow tree

Mr and Mrs. W C Keraus assisted with threshing at the Albert Etchen farm for wo days.

Mr. and Mrs. Emil Barz of Waterloo, were visiting in Klemme the fore part of the week.

C. A. Larsen and family spent Sunday visiting at the W B Yahnke home at Elmore, Minn.

Mrs. Walter Drake, Cecil and Irene Bridges, were dinner and supper guests Sunday at the Orville Bridges home.

Mrs Ernest Henschen, Sr is visiting at the home of her son, Walter, where she went last week Wednesday.

Mr. and Mrs. Gerald Koerner and son of Dow City came Monday and are visiting at the A. G. Koerner home.

Dr and Mrs. H. H. Raney left Tuesday morning on a short vacation trip. They expect to return home Sunday.

Dr. and Mrs. H. H. Raney took her nieces back to Algona Sunday after the girls had visited here the past week.

Mr and Mrs. Gunnar Anderson and children of Mason City were dinner guests Sunday at the Carl Anderson home.

Mrs Dale Schreiner, of Hibbing, Minn, came Monday for a visit with her parents, Mr. and Mrs. Elmer Schneider.

Miss Pearl Briggman of Manchester, Iowa was a caller at the homes of Mrs. Henry Lau and Mrs. Will Greimaan Sr Thursday Miss Briggman is a cousin of the Laus.

Mr. and Mrs. Melvin Neuberger and daughter, Elaine, took Mrs. Neuberger's sister, Miss Jeanette Halverson back to her home at Osage Sunday.

Mrs. Anna Anderson and Mr. and Mrs. Chris Olson, of Clear Lake were supper guests at the Carl Anderson home Sunday evening.

Novella Bredbenner accompanied Mr. and Mrs. Emil Barz to Waterloo Tuesday for a few days visit. She will also visit with college friends at Cedar Rapids.

Mrs. Lew Lewis became ill the past week and has been in a critical condition the past few days. At this time there is little change in her condition.

Piano, medium size, $75. Beautiful Small Piano. $6 monthly Can be seen in Klemme. Baldwin Factory Representative, Box 75, Mason City, Iowa. 1tp.

C. G. Waterman and family and Mrs. Mary Waterman returned Tuesday evening from their trip to the Black Hills and the Yellowstone Park.

Rev. and Mrs. Wm. Galbreth and daughter, Agnes, of Mason City, came Thursday evening and visited for a couple of days at the Henry Galbreth home.

Louie Janssen, who lives three miles north of Meservey, was a business caller in Klemme Monday morning. The Times office acknowledges a fine visit with Mr. Janssen.

Mr. and Mrs. Ernest Palmby, of London, Ontario, Canada; Mr. and Mrs. Kenneth Rogers and Mr. and Mrs. Ben Fuller of Bradford, Iowa, were visitors at the C. A. Larsen home Tuesday.

Mrs. Harold Gruetzmacher and sons Roger and Jimmie, of Carroll, Iowa, came Monday for a visit at the Frank Gruetzmacher home. They came to Belmond on the train where they were met by Glenna Gruetzmacher.

Mr Lester Lon, of Chicago and Mr Tom Newman, of Emmestberg were visiting at the local telephone exchange Tuesday afternoon while on their inspection trip of Iowa Union Telephone Co. exchanges.

Mr. and Mrs. Paul Grange and son, Dorance, and Mr. S. S. Grange left Saturday afternoon on a week's vacation trip From here they drove to the Dells of Wisconsin, but from that point they were not certain where they might go.

Mr. and Mrs. Ben Coobs, Melvin and Peggy, and Juanita Pavey, left last Thursday for McGregor for a visit with Henry and Herman Coobs, and at Elkader where they visited with William Coobs. The men are all brothers of Ben Coobs.

John Day and Sumner Trumbull, accompanied by Wm. Knisely of Belmond, and Mr. and Mrs. Jim Trumbull of Mason City, left early Saturday morning for Madison, Wisconsin, to attend the funeral of Jim Elder, a relative of Mr Day and the Trumbulls They returned home Sunday evening

Mr. and Mrs. Lyle Liebendorfer, of Mason City, came Monday evening and visited at the R. A. Jorgenson home until Tuesday afternoon. Mr. and Mrs. Liebendorfer were returning home from their vacation which they spent in Nebraska, Missouri and Colorado, visiting with relatives and sightseeing.

"Abe" Lauritsen came Monday for a few days visit at the Einar Salling home. "Abe" has been attending summer school and working on his Masters Degree Mr. Lauritsen, who has been superintendent of the Ledyard schools for several years. goes to Parkersburg this fall to take over the position of superintendent.

Mrs. Lloyd Lau received an announcement of the marriage of her niece, Miss Bernice Jante, to Mr. Kenneth Becker of Garner. The couple were married Sunday by the groom's brother, Rev. Father Elmer Becker. They will make their home at Allison where Mr. Becker is in the furniture business. He was employed for several years by Shannon and Bohn at Garner.

Had Picnic At Clear Lake

Harvey Barz and family; Martin Barz and family; Melvin Neuberger and family; Carl Anderson and family; all of Klemme, and Mr and Mrs. Emil Barz of Waterloo, all enjoyed a weiner roast and picnic supper at Clear Lake Monday evening

You're likely to get into all kinds of trouble on your vacation. Find out why in the AMERICAN WEEKLY, the magazine distributed with NEXT SUNDAY'S CHICAGO HERALD AND EXAMINER.

On motion the Clerk was authorized to issue cigarette and beer permits to all holders of record of this date

On motion meeting adjourned.

A. J. KUDJE, Clerk.

INCREASE IN PRICES OF TIRES PREDICTED

According to word recently by leading rubber authorities, tires are expected to take still another increase in price within the next few days. This is seen as a direct result of increased manufacturing costs and recent labor problems. With already three price increases since January 1, another one will bring tire costs to the highest figure reached since 1929.

THE KLEMME TIMES

VOLUME 41 — KLEMME, IOWA, WEDNESDAY EVENING, AUGUST 11, 1937 — NUMBER 64

egulations On Water-owl Given By Department

A'S DUCK SEASON BE EARLIER

he United States Department Agriculture has announced that state of Iowa has been placed the northern zone for the open on on migratory waterfwl, the on opening on October 9th and ing on November 7th. Nebras- Minnesota, Wisconsin and th Dakota are also included in northern zone, but Illinois re- ins in the intermediate zone, season opening November 1st closing November 30th.

n 1936 Iowa was in the inter- diate zone and the open season waterfowl opened November and closed November 30th. y hunters complained that open season was too late and not give them a chance to hunt se as these birds usually go th during October. Many of smaller ponds and lakes froze r before November 30th last r and deprived duck shooters that kind of shooting.

Bag Limit Same

The daily bag and possession its for ducks remain the same last year, according to the an- uncement. Ten ducks in the ag- gate for one person is the daily bmit with ten—or the daily limit—as the possession limit. Wood ducks, ruddy ducks, can- backs, redheads and buffle- d ducks are on the protecte l and may not be killed.

Five Geese

The daily bag and possession it on geese has been raised m four to five for one person e new daily bag limit on coots mudhens is twenty-five. Last ar the limit was fifteen.

Baiting of waterfowl and the e use of live decoys is prohibited gardless of the distance between e bait or decoys and the shooter The three shell limit for guns still in effect as is the require- ent of a duck stamp to hunt cks and geese.

Shooting hours for ducks, geese d coot are from 7:00 a. m. to 00 p. m.

The open season on Wilson or cksnipe is the same as the duck ason. Snipe may be hunted from 00 a. m. to sunset each day The ily bag limit for snipe was not anged and remains at fifteen for e person. There is no open seas- n on woodcock, rails or morning ves in Iowa.

While the Federal regulations ermit daily bag limits of five ese and twenty-five coot, the ate law permits only four geese nd fifteen coot. The increased ily bag limits established by the nited States Deparment of Ag- iculture was based on the in- reased number of these species. he Conservation Commission is onsidering the issuance of an ad- ministrative order which it may do nder the new laws, to make the tate and Federal laws conform. If he state law is not changed, the ily bag limits fixed by the state or four geese and fifteen coot, ill hold inasmuch as the state aw is more restrictive and takes precedence.

ARGE CROWD ATTENDED MISSION FESTIVAL AT REFORMED CHURCH

A large crowd was present at each of the Mission Festival ser- vices held at the Klemme Reform- ed Church Sunday. Rev. Frank Stuckey, of Waukon and Rev O. G. Poppen, of Belmond, delivered the sermons Other visiting min- isters included Rev. Kruse of Wo- den; Rev Plessher of Kanawha and Rev. Kampmann of Meservey.

At the noon hour the ladies of the church served all with a din- ner in the church dining rooms.

An offering for Missions was taken up which amounted to $167.

KLEMME REFORMED CHURCH

Calvin Grosshuesch, Pastor

NO SERVICES TO BE HELD SUNDAY AT THE KLEMME REFORMED CHURCH

Congregation Invited To Worship With Ell Town Next Sunday

There will be no preaching services or Sunday school at the Klemme Reformed Church Sunday.

The congregation has been invited and will worship at the Ell Town Reformed Church at their Mission Festval.

Rev Walter Stuckey, of La Crosse, Wisconsin, will be the guest speaker

Card Of Thanks

We wish to express our sincere appreciation for the many kindnesses bestowed upon us by our friends and neighbors during our recent bereavement.

Mrs. John Bock and family.

STRAW STACK CAUGHT AFIRE AT THE WOERT LOGER FARM, FRIDAY

While threshing at the Woert Loger farm just South of Klemme last Friday morning, the straw stack caught fire from an unknown cause and for a time the flames endangered farm buildings The threshing crew managed to keep the fire under control, however, and the burned stack was the only loss.

M. E. Aid Meets August 19th

Mrs Missman, Mrs Fred Ridder and Mrs. E. G Schaeffer will be hostesses at the next meeting of the Methodist Aid Society, Thursday August 19th

NEW RAILS BEING LAID FROM ROWAN TO GARNER

Steel rails for the Rock Island lines are being laid between Rowan and Garner The work started July sixth and it will be late fall before it is completed.

Between forty-five and fifty men are being employed at this work, the majority of the men coming from Belmond, Rowan and Goodell Twelve of them are from Cedar Rapids and are under the supervision of Geo E. Heinst. L. Drake is in charge of all the crew

The rails which are being laid wegh 80 pounds apiece which is 20 pounds heavier than the old rails.—Belmond Independent.

HELLO, FOLKS!

A baby girl was born to Mr and Mrs. Ruben Greimann on Sunday, August 1st.

On Trip To Yellowstone Park

Mr. and Mrs. Albert Barz and Mr. and Mrs. Walter Rosendahl left Tuesday on a trip to the Yellowstone Park.

Double State Fair Entertainment

Des Moines, Ia., Special —A huge, double night-show program setting a new midwest record for lavish amusement has been announced for this year's Iowa State Fair The first three nights of the fair, Aug 27-28-29, the annual State Fair Rodeo will be the headline event. Then, starting Monday night, Aug 30 through Thursday Sept 2, the feature will be a big musical extravaganza, "Parade of Stars" Coming to Des Moines directly from Chicago, it will be the largest open air show ever to take the road in this country, officials say. With a cast of more than 100, its own orchestra, and a stage 120 feet long, the show includes some of the world's best-known entertainers, hippodrome stars, ballet artists and movie performers Above are some of the chorines from the well-known Lambert-Hall ballet featured in the show. In addition, each night show at this year's State Fair will include a complete open-air circus, a huge fireworks display and festival of light.

Klemme Farmer Finds A Rare Specimen Of Plant Life

HERE'S ONE THAT ROBERT RIPLEY CAN MAKE GOOD USE OF!

Henry Ward Found An Albino Thistle Near His Farm Here

Henry Ward, farmer south of Klemme, who is quite a naturalist, found something very unusual in plant life this morning and brought a specimen to town which is now on display at the Times Office.

Mr Ward's unusual discovery is an "albino" thistle All ordinary thistles have pink or red blossoms, but this specimen has a white blossom and can be classed as a true albino There were several plants in the group and all had white blossoms

An "albino" is described by Webster as " a person with white skin and hair and pinkish eyes. a man, animal or plant abnormally white in color" In other words certain color pigments are lacking

An albino is a freak of nature and is a rare occurrence The chances are perhaps one in a million that the seeds from this thistle if planted would again be white In all probability next year the blossoms will again be the normal pink or red

Driver's License Examinations

The date for examination for Driver's license has been changed and becomes effective August 15, 1937 The dates for Hancock County are as follows August 16 & 30, Sept. 13 & 27, Oct 11 & 25, Nov 8 & 22, Dec 6 & 20, and Jan 3, 17 & 31.

The better grade of Panama hats are worth more than their weight in gold on the market. They are all hand woven. It is said the Panama hats worn by J P. Morgan, Herbert Hoover and the Duke of Windsor cost $500 each The better Panama hats sell from $50 to $500 each. It requires from eight to ten months to weave a better grade hat. The cost of the fibre used is about a dollar.

Last of the Dalton boys dies "with his boots off." Sole survivor of the notorious train and bank robbers passes away—respectable. An interesting article in the AMERICAN WEEKLY, the magazine distributed with NEXT SUNDAY'S CHICAGO HERALD AND EXAMINER.

PATROLMAN J. C. WEST TRANSFERRED TO STATION AT RED OAK

State Highway Patrolman J. C. West, of Klemme, who for the past several months has been stationed at Algona, left Tuesday for Red Oak, Iowa, where he has been transferred.

The transfer also comes as an advancement as Mr. West will be in charge of the station at Red Oak and will have two patrolmen under his supervision

Under the new system of highway patrol the state has been divided into districts. Hancock County will in the future be served by the Mason City station. Anyone who has occasion to call a patrolman can telephone the State Highway Patrol at Mason City.

SUCCUMBS OF SCALP WOUND

Mrs. Ellis Of Britt Was Hurt When Hair Caught in Wringer

BRITT -Mrs Jennie Ellis died Sunday morning at a hospital at Mason City She was taken there Wednesday night, suffering from shock. Infection set in from the scalp wound received when her hair became caught in the wringer Tuesday morning as she was doing the weekly wash.

Mrs. Ellis was a member of the Britt Congregational church and held the office of treasurer for many years. She was also a member of the Britt Chapter 318 of the Eastern Star.

Dairy cows are far more likely to have a deficiency of phosphorus than of lime in their ration, according to C Y. Cannon, head of dairy husbandry at Iowa State College He suggests the use of 2 per cent of bone meal and 1 per cent of salt and no lime as a mineral mixture.

Farmers Will Have Big Picnic At Fort Dodge

KLEMME CIVIL WAR VETERAN OBSERVED 92nd BIRTHDAY SUNDAY

Family Gathering Marks Birthday Celebration Of Lew Lewis

Mr. Lew Lewis celebrated his 92nd birthday on Sunday, August 8th when his children and their families in this community came to his home to have dinner with him.

Mr Lewis, who was born August 8, 1845 at Beaver Dam, Wis., is the only Civil War Veteran m this community.

On December 27, 1936 Mr. and Mrs. Lewis celebrated their Golden Wedding Anniversary when a large number of relatives and friends gathered in Klemme for the occasion.

Three sons, Henry, Verner and Ernest and their families, of Klemme, and his daughter, Mrs Henry Jahnke, of Garden City, Minn, were present Sunday at the Lewis home

Mr Lewis enjoys good health and is very active, being able to be out doors in his garden and up town every day. Mrs. Lewis has been ill for the past couple of weeks.

SLOW DOWN AT SUNDOWN

A new slogan is being offered the motorists of America by safety experts, and if they will adopt it and abide by it there will be a far happier story to tell when this year's death and accidents are counted.

"Slow down at sundown" is the new safety slogan, and when motorists realize that 60 per cent of all auto accidents in 1936 occurred between sundown and sunup they will see the wisdom of obeying it With more cars on the highways than ever before; with every indication that this will be the biggest touring year in he nation's history; with the undeniable fact driving has become more dangerous since the drunken operator has been added to the list of hazards, when all these things are taken into consideration it's a pretty dumb driver who spurns the new slogan and continues to hit as fast a pace at night as he is accustomed to in the daytime

From now until the fall months it is going to be far more dangerous to operate an auto anywhere in the U. S. than it has been at any time in the past. The only hope of keeping down the death and accident rate—even now fifteen per cent greater than for the same period last year— will be through the use of even greater care in driving Even then there is no guarantee that the safest driver will escape. Slowing down to moderate, sensible speeds after sundown, or avoiding night driving altogether where it is not absolutely necessary, is about the only way left to reduce the national auto death toll. Unless each and every driver resolves here and now to do so we may prepare to read the most gruesome lot of figures at the close of 1937 that newspapers have yet been called upon to publish.

Missionary Society Entertained Liberty Township Ladies

The W.F.M.S. of the Klemme Methodist Church last week Thursday afternoon entertained the members of the Liberty Township W.F.M.S. at the Klemme M. E. Church parlors. A program was provided for the ocassion and the Klemme ladies served a lunch.

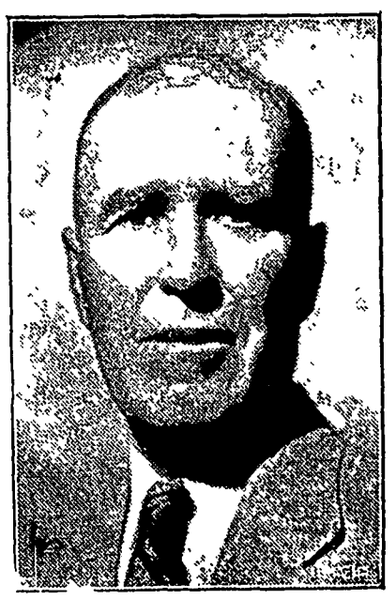
Dairy husbandrymen at Iowa State College recommend using 2 per cent of bone meal and 1 per cent of salt in the ration of dairy cows.

LEMKE WILL BE SPEAKER AT BIG GATHERING TO BE HELD AT FORT DODGE

A big day for Iowa has been scheduled, the Farm and Home Picnic and Barbeque, which will be held at Fort Dodge on Sunday, August 15th. The place chosen for the picnic is at the Messerly farm, one mile north of Fort Dodge on Highway 169.

Congressman Wm Lemke will speak at 2:30 o'clock and there will be a round table discussion also.

There will be a number of amusements, contests, etc. and



WM. LEMKE

movies will be taken of the crowd.

Quite a number of farmers from this vicinity are planning to attend the celebration.

CORN RAISED CONTINUOUSLY FOR THIRTY-SIX YEARS ON SAME GROUND

First Crop Of Oats In That Length Of Time Was Threshed Last Week

Here's one for the book and just a little bit hard to believe in this land of Iowa where it is thought that crops must be rotated in a given order year after year to produce the best crops.

For the past thirty-six years Frank and Robert Loock have raised corn continuously on a part of their farm west of Klemme. This year the land was rented to George Schoenwetter who put in a crop of oats on the land which had been in corn for the past thirty-six years.

Friday this field of oats was threshed and as near as could be estimated it went sixty-five bushels to the acre and was of fine quality. Old timers recall that Frank Schuldt of Garner, then owner of a steam rig, threshed on this particular piece of ground thirty-six years ago. That was the last threshing done there until this year when the West Union Thresher Co. pulled in their machine to thresh. This is also a steam outfit and in one day they ran through 2400 bushels of grain.

Clipping Short Alfalfa Aids Weed Control; Stops "Setting"

Alfalfa should be cut the second time this year, even though it may be so short it is not worth harvesting. Clipping, says J. B. Wentz, Iowa State College agronomist, will keep weeds down, prevent weed seeding and will keep the alfalfa from "setting" seed.

If the alfalfa is cut now, and if there is some rain there is a possibility of getting a third crop Farmers who are short of pasture may pasture lightly alfalfa meadows and dispense with the second and third cuttings this year.

Washington Digest

National Topics Interpreted
by William Bruckart

National Press Building Washington, D. C.

Washington.—There are many occasions on record where several important issues have engaged the attention of congress and frequently one of these issues has aroused such bitterness and developed such a controversy that it overshadowed all others. That has been the case in recent weeks during which President Roosevelt's plan to add six justices of his own choosing to the Supreme court of the United States completely subordinated everything else.

"Ever-Normal Granary"

But the crushing defeat received by the President through refusal of the vast majority of Democrats in congress to support his court reorganization scheme suddenly has directed attention to other major questions. Outstanding among these is Secretary Wallace's farm bill and the so-called wages and hours bill which is claimed to contain complete protection for the laboring classes. It is of the farm bill that I shall write now since it is much more imminent as far as congressional action is concerned than is the case with the wages and hours proposition.

The basis of Secretary Wallace's program is what he calls the "ever-normal granary." There are other provisions included in the bill but the idea of a maintained supply of farm products is the heart of the plan.

Now, it seems that if the words "ever-normal granary" mean anything, they must be accepted as meaning a continuity of supply at a level which government agents arbitrarily determine as the proper rate of accumulation or sale of such supplies.

The house of representatives has been muddling along with the question for several months. It has been under much pressure from Secretary Wallace and his associates and from some of the farm leaders whom the secretary has convinced of the value of his scheme. The farm leaders as a whole are far from unanimous on the proposition despite the fact that Secretary Wallace and the tremendous propaganda machine within the Department of Agriculture has been exceedingly active in an effort to "sell" the plan to the country as a whole and thereby bring additional pressure on congress.

I shall not attempt to give all of the details of the Wallace proposal here. It is too complicated for explanation in the limited space available. Indeed, I have found quite a number of members of the house of representatives who are unable to give a complete explanation of how the plan would work—and they admit it. It is a piece of legislation that must be complicated in order to accomplish things its proponents claim for it and my observation of government agencies leads me to the conclusion it is so complicated that the chances of it succeeding are almost nil.

* * *

In the first instance, as I have said, the ever-normal granary idea comprehends a constant level of supplies. At first blush, it would seem that storage of wheat or corn or cotton or other farm products in a big crop year to be sold in years when crops are small should work out to keep prices at a satisfactory level. That is the theory. On the other hand, in times past this same sort of scheme has worked out to depress prices instead of maintaining them and the farmers have been the losers.

Included in this legislation are provisions for benefit payments to farmers under certain conditions when the price level falls below parity. This injects into the problem again the influence of the general price level of all commodities in the United States whether from the farm or from the factory and it also forces upon the United States additional influence wielded by the level of prices in foreign countries where the law of supply and demand continues to operate without impossible amendment at government's dictation.

No doubt, the Wallace proposal would boost prices at present. This is true because we have had several short crop years and there is no surplus now. But with indications that the current wheat crop, for example, is going to be exceptionally large, it is entirely possible that the nation as a whole will have a surplus of wheat this fall. In addition, there will be wheat crops grown in other countries as usual. Some of our wheat must be sold in foreign markets and compete with wheat grown in Russia or in South America. It is easy to see, therefore, that the lack of a wheat surplus in this country is exceedingly temporary.

* * *

The ever-normal granary, if it works as the theorists claim, would store or keep off of the market that portion of the crop which is not needed for current consumption. That sounds fine. Great users of wheat must buy their supplies far ahead.

It Sounds Great

If they do not take this precaution, they stand a chance always of finding their bins empty and are faced with the necessity of closing their mills. It is this feature that causes long range buyers to resort to what is called hedging. That is, they sell on option nearly as much as they buy on contract. They are thus able to offset losses whether the price of wheat goes up or whether it goes down and the losses or the gains are distributed throughout the industry. It is the only way by which the industry can protect itself.

Mr. Wallace's scheme proposes doing away with that sort of thing, not directly but through the effect of the ever-normal granary. In other words, the net result of the ever-normal granary would be for the government to hold these stocks and feed them into the market as demand for supplies requires. This sounds feasible and it probably would be except for the fact that we have no means of controlling production in the other wheat producing countries, and I repeat that I am using wheat as illustrative of all farm products. In fact, the Wallace plan provides no control of production in this country and that question is vital. As far as I can see, nature is going to operate to give us rain or give us drouth in accordance with the judgment of the Higher Power. No human is going to be very influential in that regard.

To get back to the question of the price level, it should be said that while the Wallace plan provides what appears to be an insurance against fluctuation, it is more likely to have the opposite effect. Because of the influence of world prices, great storehouses of wheat in the country will hang over the market like an epidemic. No one can tell when it will strike and since markets are made up of individuals who are human, a portion of the markets is always going to be frightened by the uncertainty of when government wheat will be offered for sale. It is a perfectly human reaction because it involves the pocketbooks and humans naturally want to buy as cheaply as they can and sell as high as they can.

* * *

One of the things that happened in the administration of President Hoover that is sure to be remembered is the utter failure of his farm policy. That farm policy centered at one time in what was called the Federal Farm board. If you will go back a few years and recall the operations of the Federal Farm board, I think you will agree that the things it undertook to do were exactly comparable to, if not exactly the same as, the scheme set up by Secretary Wallace in his ever-normal granary idea. The only difference that I can see—and I watched the operations of the farm board from close at hand—is a change in the name. It must be admitted that the phrase ever-normal granary has a pretty sound. But when it comes to a question of an attractive expression, one that is soothing and one that should convince us all that every problem is solved, I submit those favorites which Mr. Wallace used to use when Professor Tugwell was with him in the Department of Agriculture. Who does not recall the "more abundant life," and who has forgotten the "doctrine of scarcity to assure plenty?"

Tried Once and Failed

As far as I know, neither the house nor the senate committee on agriculture has held hearings on this ever-normal granary phase of the Wallace legislation. Thus far, the discussion has been largely on questions involving benefits and subsidies and means of marketing. No attention has been given to the ever-normal granary threat, and I regard it as a menace.

If this discussion were devoted to only the consumer phase of our economic life, I think I should be selfish enough to urge enactment of the Wallace plan. I believe I can see where the ever-normal granary idea will make bread cheaper, where it will make cotton textile goods cheaper and when cotton is cheaper other textiles are cheaper, and where other food and necessaries of life that have their origin on the farm will be reduced in price by such a legislative policy. But that is not my idea of a sound economic structure. It is just as necessary for the consumer to pay his fair share toward the maintenance of a living agriculture as it is for farmers to pay their fair share to a living commerce and industry of whatever kind it may be.

The senate Democrats have elected a new leader to succeed the late Senator Joe Robinson, of Arkansas. He is Senator Alban Barkley, of Kentucky. In a previous column I mentioned the split among the senate Democrats and suggested that it would be difficult to replace Senator Robinson because of the qualities he had in holding the various factions together in the senate. It was not a forecast; it was a statement of fact

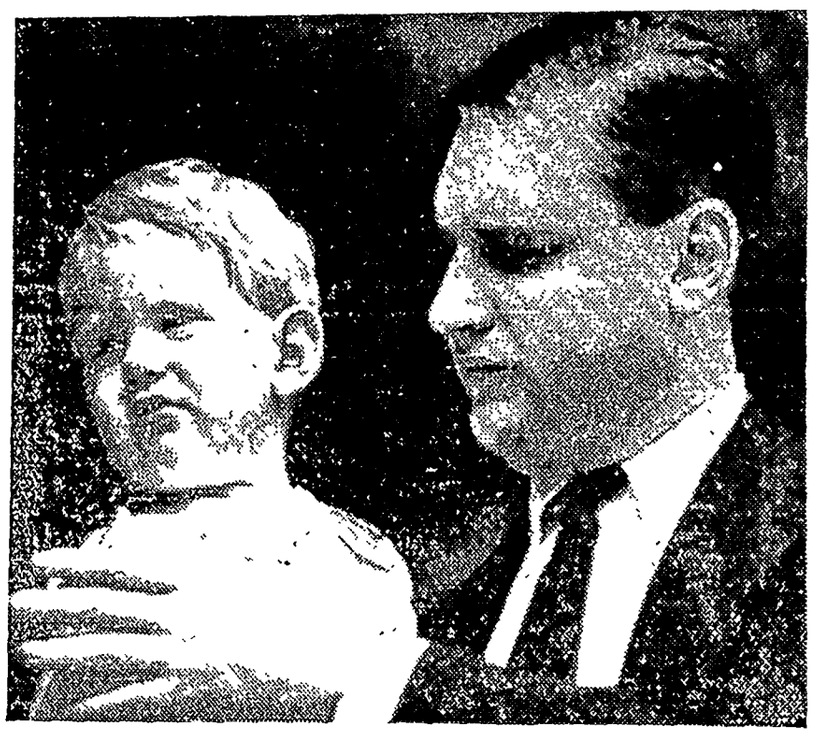
Marriage May Reunite the House of Bourbon

Prince Alvaro of Bourbon, Orleans, and his bride, Carla Delfino Parodi, just after their marriage in the Church of San Roberto Bellarmino in Rome. The wedding brought about the first formal appearance in six years of former King Alfonso and former Queen Victoria of Spain, stimulating reports that they are considering a reconciliation. They served as patrons for their cousin, Prince Bourbon-Orleans.

WILLIAMS' PREXY

Dr. James Phinney Baxter III, professor of history and master of Adams house at Harvard university, who was unanimously named to succeed Dr. Tyler Dennett as president of Williams college, at a recent meeting of the executive committee of the Williams board of trustees. Forty-four years old, he takes office September 1 as one of the youngest of the ten men who have held the presidency in the college's history.

Famous Father and Two-Year-Old Son



An exclusive pose of John Jacob Astor and his two-year-old son, William Henry Astor, as they appeared in commune, on the steps of "Chetwode," their summer home at Newport, R. I. William Henry recently celebrated his second birthday with his dad and mother, the former Ellen Tuck French.

Socialite Back From Wild Life Hunt

Bronzed George Vanderbilt, twenty-three-year-old socialite, pictured aboard his yacht, Cressida, on his return from a 20,000-mile, six-month cruise in the South Seas during which he gathered about 20,000 wild-life specimens for the Philadelphia Academy of Natural Sciences. George is shown with Tag-Along, the tortoise-mascot he picked up on the Galapagos islands.

MOUND MARVEL

Atlea Richard Donald, youthful pitching sensation of the Newark club of the International league who won his first 13 starts, shattering all previous minor league records. The future will probably see him on the Yankee pitching staff since the Newark club is part of the Ruppert farm system.

Honorable Artillery Company Has Birthday

Sir George Broadbridge, the lord mayor of London, inspects the Ancient and Honorable Artillery Company of America during a garden party in honor of the British Honourable Artillery Company on the four hundredth anniversary of its founding recently. The British company is one of the most exclusive regiments in England. The American company dates from 1638 when a group of planters in America who had been members of the British company formed a similar regiment.

...ching Lace Trims Silk Sheers

By CHERIE NICHOLAS

...MATTER how much your ... taste and the general tenor ...our life may call for practical ...red and sportsy-type clothes, ... other than a really and truly ...s-up dress will answer to oc... ...on. If anything more apropos ... be found than either of the ...ning models pictured in the ... of dressiest-dress gowns that ... graciously to afternoon func..., garden parties and such, pray ... where is it?

...e illustration presents exactly ... type of dresses we have in ...d. Here you see two gowns that ... one hundred per cent voguish. ...y are modern up to the instant, ... they are fascinating in regard ...ucety of detail and they carry ... air of sartorial elegance which ...y woman of discriminating ...e covets Make it yourself, have ...ade, or buy it ready made as ... will, a dress of the type of eith... ...of these handsome frocks will ... you endless satisfaction, for ...matter what comes up in the ... of social affairs unless extreme ...mality demands ultra full-dress ...re, gowns such as pictured class ...r wearers as among the those... ...sent in the best dressed group.

...his gesture of dying lace in exact ...tch to the silk sheer it trims is ...ving a most exciting venture to ...igners in that it invites such ...e play of imagination. Then, too, ... lace being the identical color ...ances the dress without making ... look too fussy or overdone—gives it the exclusive accent that many covet but few attain.

Current collections include both dark and light sheers with matching lace trims. A costume done in monotone color scheme of either the very fashionable spruce green or beetroot red would be outstanding. Grays in the pastel shades are greatly stressed, also rose-beige.

As to swank styling the redingote theme prevails since it offers such excellent opportunity to introduce border effects with lace insertions after the manner shown in the charming dress to the left in the picture. This redingote gown is a most fetching style for the cocktail hour. It is made of gray silk marquisette tastefully embellished with insets of matching lace. The huge red straw open-crowned hat worn with it plays up in dramatic contrast to the demure gray of the dress. It is flower-trimmed and has black streamers that tie under the chin.

The other young woman seeks and finds midsummer coolness in a gown of beguiling rose-glow silk marquisette trimmed with insets of matching lace. The tiny self-fabric buttons add to the choiceness of this dress. Short sleeves and short gloves also do their bit toward giving smart style accent. The modish poke bonnet is a blue straw with violet and old rose velvet ribbon trim.

MANY COLORS SEEN IN COATS FOR FALL

Coats of many colors have been featured so extensively in Paris that they are expected to be early fall fashion successes in this country. All of these coats are very brief and are made of elegant fabrics or of ribbons, thus indicating their place with evening dresses.

One French designer has introduced a little jacket made of two-inch velvet ribbon sewn together in vertical strips, the ribbon combining shades of apple green, old blue, chamois, pink which has a blue cast and an orchid-purple. This is worn over a gown of black Chantilly lace. Another jacket is made of red and blue grosgrain ribbon interlaced to suggest a woven pattern.

Matching Headdress and Heels Offer Gala Touch

Matching headdresses and heels are providing a gala touch to simple summer outfits worn by attractive young spectators at smart mid-western country clubs. Dusty pink frocks combined with beige turbans and ostrich skin pumps with beige-colored built-up heels are a popular combination. On many of the smartest white ensembles, effective accents are furnished by paisley print headbands and heels.

Tailored Jersey Suit Is Made With Loose Jacket

Chanel's tailored suits in jerseys and wools are made with loose jackets that are cut somewhat like box coats. Blouses are finished with round collars or jabots, which are worn outside the jackets. The short and comfortably full skirts often are trimmed with hip pockets.

Parma Violet Undies

Parma violet underwear! They are doing it in Paris, featuring the violet as well as the more delicate mauve and orchid tones in georgette and satin negligees.

STAR DUST

By VIRGINIA VALE

EVERYTHING goes in cycles in motion pictures, and just now the Russian cycle threatens to monopolize the screen. No less than three of the most fascinating screen sirens are currently holding forth in the midst of Russian magnificence.

There is Marlene Dietrich with Robert Donat in "Without Armor" for instance, Miss Dietrich and Robert Donat make a thrilling romantic pair Another of the Russian cycle is "The Emperor's Candlesticks" in which Luise Rainer and William Powell appear as rival spies of Russia and Poland Last, but by no means least, particularly for music lovers, is "Two Who Dared," with Anna Sten, who has been too long absent from our screens.

Rudy Vallee spends many of his evenings nowadays at a night club in New York where his friend Jackie Osterman is making a comeback after a long stretch of hard luck. Vallee is a great story teller, and one of his favorites concerns Jack Benny. Vallee whole-heartedly admires the drastic way in which Jack Benny treated a hostile vaudeville audience years ago. Benny came out on one side of the stage merrily saying "Hello folks" only to face a bunch of tough-looking ruffians who glowered at him. Continuing right on across the stage, he exited from the stage saying "Good-by folks" and walked right on out of the theater never to return.

—*—

Martha Raye made the hit of her life and smashed all box-office records making personal appearances at the Paramount theater in New York recently. The audience simply could not get enough of her. They surged down to the footlights when her act was over, shot questions at her, begged her to sing one more song, and then just stood and yelled when her voice threatened to give out.

ODDS AND ENDS—There is a fan in Grand Rapids, Mich., who writes Gene Autry a sixteen-page letter of criticism and comment every time a new picture of his is shown. He not only reads every line appreciatively, he tries to correct all those faults in his next picture . . . Everyone is marveling at Connie Bennett's good sportsmanship in letting Roland Young get most of the laughs in her first comedy "Topper" . . . Paul Muni has been proclaimed the best of all screen actors by all who have seen "The Life of Emile Zola." And Muni says this is the very last biographical picture he will make. He doesn't want to make any more pictures for a long time.

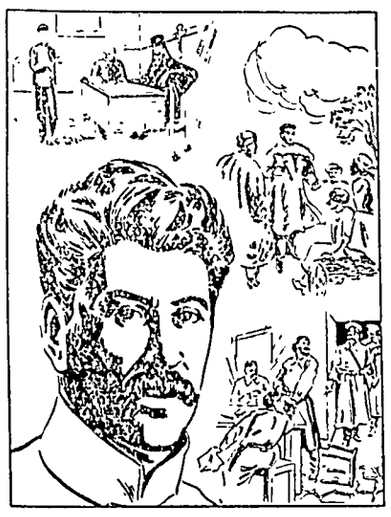
JOSEF STALIN STUDIED FOR THE PRIESTHOOD

WITH what blindness do we attempt to guide our children's footsteps in life, so often forcing on them an ambition of our own!

It might be laughable were it not so seriously in opposition to the man's own desires, but Josef Stalin was forced to attend the Tiflis Greek Orthodox seminary, because his mother wanted him to be a priest. Young Stalin, legally named Josef Vissarionovitch Djygashvili, did not want to be a priest.

Born in 1879 Josef was educated in the village school of Gori, Russia In his young days he was a fighter who bore many a black eye and he was somewhat of a bully although he always displayed intelligence and character At the seminary he led the other students in plotting against the authorities and local railway workers met in his



room Eventually, he was dismissed in disgrace. At the age of seventeen, he joined the underground dock workers of Batum in a riot and, when the terrorist Bolsheviks were formed became active in their movement. While attending a Bolshevik party conference in Stockholm, in 1905, he met Lenin for the first time.

Josef Stalin was arrested a half a dozen times, and exiled from Russia the last time He changed his name regularly and returned again and again With Lenin and Trotsky, he took over the government of Russia in October, 1917. After Lenin died in 1924, Stalin supporters exiled Trotsky and through ruthless executions made Stalin dictator

Josef Stalin's life is hardly the kind of biography you would expect from a boy who studied for the priesthood

* * *

JOAN CRAWFORD WAS A TELEPHONE OPERATOR

JOAN CRAWFORD'S life is an example of a girl who had talent, ambition and enthusiasm, but who might never have risen beyond an ordinary occupation without the necessary confidence to keep trying.

Joan Crawford was born about 1907 in San Antonio, Texas, daughter of a theater manager Most of her play hours were spent playing "show," and she danced her way through many struggling years before a real opportunity came her way. At fourteen, Joan went to work as a telephone operator in Lawton, Okla. Then, she was sent to a convent in Kansas City, where she had to earn her way by acting as a kitchen maid and waiting on tables. After leaving college, Joan Crawford found a job in a Kansas

City department store as a stock girl at $10 per week, working during the day and practicing dancing at night.

Finally a theatrical agent found a job for Joan in a show which failed a month later, leaving her stranded 300 miles from home. Courageously, she found job after job in cabarets and night clubs in Chicago, Detroit, and New York She was working in a Shubert show, "Innocent Eyes," when a Metro-Goldwyn-Mayer executive saw her and signed her for pictures.

Think of the troubles this girl had, the disappointments and struggles. Born in the atmosphere of show business, she was inspired from the time she could first toddle to find a place for herself in that glamorous life. Then, circumstances took a hand and forced her into occupations that were far more on the side of drudgery than glamour. She plugged lines into a switch-board, washed dishes, swept floors, carried heavy trays, wrapped packages. But through it all, she kept her confidence in herself.

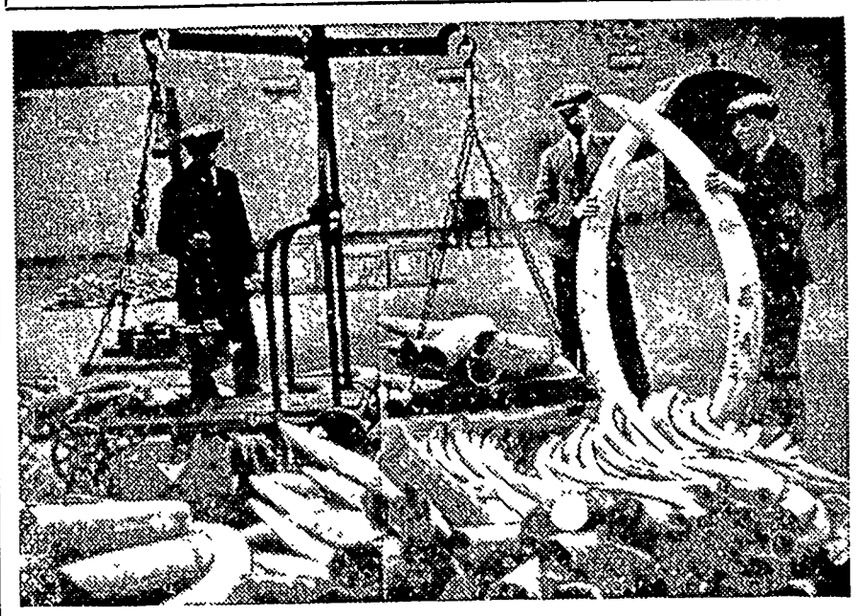
THAMES TELLS ITS TALE



Weighing a Shipment of Elephant Tusks on a London Wharf.

From Every Corner of the Earth Come Ships That Ply This River

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

THAMES traffic makes London the world's foremost river port. Since Roman galley days—when Britons traded grain, slaves, and dogskin for European salt and horse collars—commerce has flowed between London and the continental countries along the Schelde, the Rhine and the Elbe. After Drake nerved England to smash the Spanish Armada, London ships gained in time the lion's share of ocean-borne trade.

Names immortal in discovery and conquest are linked with this water front From here Frobisher went seeking the Northwest passage, and Hawkins to Puerto Rico and Vera Cruz; from here Lancaster made his voyages to the East, before the downfall of Portugal and the rise of the British East India company. Raleigh sailed from here to explore the Orinoco, to popularize tobacco and, tradition says, to start the Irish planting potatoes.

It was London's daring money which sent Sebastian Cabot to found the Russia company, opening trade with that land. London merchants and skippers promoted the Turkey, African, Virginia and Hudson's Bay companies.

London emigrants helped colonize in the Americas, in Australia, New Zealand, China, India, Africa and the rich islands of the sea.

English Spread From Here.

From this water front went the English language. In Drake's day only a few millions spoke it. Now it is a world tongue. Of all letters, telegrams, books and papers printed now, it is estimated that 70 per cent are in English. London alone uses enough newsprint every day to cover a ranch of 9,350 acres—or nearly 15 square miles of paper.

"The smell from that big paper mill at Bayswater is one of the marks I steer by on foggy nights," a Thames pilot will tell you.

Exploration of London's crowded docks reveals not only what amazing piles of food a great city can normally eat, but also what odd items, from live bats to rhino horns, are mixed in the life stream of world commerce.

Imponderable, in variety and magnitude, are these fruits of man's barter. Here, too, his work ranges from rat catching and opium sampling to dredging the Thames and handling annual cargo enough to fill a road with loaded trucks from the Yukon to Patagonia.

To say that every day some 500 craft, big and little, pass through the Thames mouth tells only half the story. More significant is what happens on the docks.

Commission Ends Confusion.

Even London people themselves don't dream what incredible activity is here. Few ever see it. Confusion on this crowded river, in days gone, grew so intense that waiting boats often lay unloaded for weeks; goods were piled in disorder on river banks, and pilfering was enormous. One river bandit stole almost a whole shipload of sugar! To combat this chaos the West India merchants built their own fortlike docks.

With more trade came more docks, and more toll-rate wars and other confusion. This ended in 1909 when the Port of London authority, a Royal commission, took full control under act of parliament.

It paid 23,000,000 pounds for privately owned London docks, spent millions more to make the lower Thames the world's longest deep-water channel and to enlarge and re-equip cargo-handling facilities.

It has dredged mud enough out of the Thames to build a Chinese Wall, and has constructed the world's most extensive dock system. One of its cranes, the "London Mammoth," lifts 150 tons!

Finally, with characteristic British financial genius, it sold its debentures on the stock exchange, and now its operations usually pay all costs and interest and leave a profit which is used for more improvements.

Giant Docks and Yard.

The PLA is not in trade. It is merely custodian of merchandise that may range from wild animals for the zoo to a shipload of molasses from which to distill fuel alcohol. It weighs goods, reports on their quality and condition; it opens bales and boxes for customs inspection, furnishes samples for buyers, and looks after repacking and loading for those who ship from London to other ports.

On the north bank of the Thames, scattered for miles downstream from the Tower, stand these great PLA docks: London, St. Katharine, East and West India, Millwall, Victoria and Albert, King George V, and the Tilbury.

On the south bank, near London's heart, are ancient Surrey Commercial docks, with a lumberyard that covers 150 acres!

Besides the railways and truck lines that tie these docks to the outlying kingdom, some 9,000 Thames barges handle goods to and from ships' sides.

Each dock has its own character. St. Katharine docks are built on the site of the old Church of St. Katharine by the Tower, founded by Queen Matilda in 1148. What heterogeneous goods they store: wool, skins, wines, spices, sugar, rubber, balata, tallow, ivory, barks, gums, drugs, coffee, iodine, hemp, quicksilver, canned fruits and fish, coir yarn, coconuts, and brandy!

Navy at One Dock.

West India and Millwall docks lie in a river peninsula known as the Isle of Dogs. Here the passer-by may smell 12,000 puncheons of rum, a million tons of sugar and shiploads of dates.

Victoria and Albert and King George V docks form one huge structure, the world's largest sheet of enclosed dock water. Often 40 or 50 ships—equal to a good-sized navy—tie up here at one time.

Tilbury is the first dock one sees when sailing up the Thames. Its long landing stage forms a homeland gateway for people from Australia, New Zealand, India, China and other eastern countries who land or embark here. Fast trains of the London, Midland and Scottish railway touch the dock's edge and whisk passengers away to all parts of the kingdom.

In the city, PLA has still more warehouses. At its Butler street building are 70 rooms full of oriental carpets—enough to cover a farm of 120 acres!

People buy most carpets in June, for wedding presents, you are told. There are electric ovens, too, for conditioning raw silk, a mountain of Havana cigars and leaf tobacco enough to last one man, say, 500,000 years!

Here is a furtive horde of lean black cats, to help out the official human rat catchers. Musty wine vaults use 28 miles of underground track on which to roll barrels that hold the 12,000,000 gallons of wine brought to London each year.

This is the world's ivory and tooth market. It takes 16,000,000 artificial teeth from the United States every year—and some 2,000 elephant tusks from Africa and Asia.

Not many tusks are from newly slain elephants. Most of them come from mudholes, left by animals long from mudholes, left by animals.

Tea for Londoners.

Wool was England's chief export in the Middle ages. Today it is one of London's main imports. It takes the fleeces from about fifty million sheep to meet London's annual demands!

Tea trade has centered here for 300 years. In Mincing Lane you can see brokers bidding on lots which have been expertly sampled by PLA's own teatasters.

When they "bulk" tea, or mix it, on some warehouse floors you may see it heaped up in mounds higher then men's heads.

Think of all the "liquid history" that has been packed into this ancient water front since Roman galleys traded here; since Danes and Vikings came to plunder; since the great companies of merchant adventurers launched their tiny ships for daring trade and colonizing far over then little-known seas.

Think of the 60,000 ships a year that now form smoke lanes from London to every nook of the world where goods can be bought or sold and you begin to see why this 70-mile stretch of "London River" is, incomparably, the world's busiest water front.

Verner Stromer was a business caller at Hampton and Alexander Monday.

Mr. and Mrs. C. E. Lemke and Woert Loger visited at the Lewis Neuberger home Sunday evening.

Daze McWilliams and sons, of Peoria, Illinois, spent Tuesday and Wednesday visiting at the Albert Kehl home.

Mr. and Mrs. Will Ax and Mr and Mrs. Leslie De Merritt were entertained to dinner at the Geo Schoenwetter home Sunday.

Mr. and Mrs. Awalt Jahnke and son were Sunday afternoon visitors at the Guy Geddes home near Hayfield.

Mr and Mrs. Carl Swanson and family were Sunday evening visitors at the Ruben Greimann home.

Mr and Mrs. W J. Anderson and children Allan and Alice Mae visited at the Elmer Anderson home Sunday afternoon.

NEWS FROM GOODELL AND VICINITY

A. C Carpenter has been ill the past week

Mr and Mrs. Lew Avery are the ownmers of a new Ford V-8.

Mamie White is visiting at the home of her sister, Mrs Sherman, in Tarrington, Wyoming.

Mrs Merlin Finn of Belmond spent Saturday at the Jay Buchanan and Mrs. Allaben homes.

The Missionary Ladies held their annual picnic Friday at the home of Mrs Sherwood.

Miss Lila Griggs of Des Moines spent the week end with her parents, Mr and Mrs. Jay Griggs.

Mrs R. F. Kernan attended a 6 o'clock dinner as a guest of Miss Nell Sullivan Sunday evening at the Clarmond Country Club.

Quite a few town folks spent Sunday in Pilot Knob and some attended the ball game at Forest City in the evening.

Mr and Mrs R W. Hofer accompanied by Mr. and Mrs. Anson Avery attended the Legion Convention in Des Moines.

The O Evanson, Sherwood, J J Cook and H. Brede families enjoyed a picnic dinner at Fertile Sunday where they were joined by relatives of the Evensons.

John Lass has purchased the E. J Nelon farm and will take possession next March. Mr. Nelson has not made any definite plans for the future as yet.

ITEMS OF INTEREST FROM AVERY TOWNSHIP

Jim Wilson is assisting with the work at the Harlow Helps home for several weeks.

Mrs. John Trampel and son were entertained as dinner guests by Mrs. Albert White Thursday.

Mr. and Mrs. Martin Kartzens and Children were visiting at the Will Waddingham home Sunday evening.

Mrs Harlow Helps and children were visiting at the D. A and Herbert Marshall home Friday afternoon

Mrs. Aug. Trampel and daughters, Gertie and Esther were shopping in Mason City Saturday afternoon

Mrs John Lass and daughter Betty assisted Mrs Ben Merkel in cooking for her threshing crew a few days during the past week.

Mr and Mrs Harlow Helps and family and Clyde Marshall were Thursday evening visitors at the D A and Herbert Marshall home

Mrs. Peter Trampel and daughter, Anna and Mrs. Paul Cavitt and son Robert spent Friday at the Mrs August Trampel home.

Mr. and Mrs. Fred Bachman were visiting at the Jake Bachman home in Goodell Tuesday afternoon.

Mrs Oswald Evenson and Miss Esther Trampel assisted Mrs. Ted Dutheridge in cooking for threshers Wednesday.

Mrs. John Trampel and son Melbourne and Mrs. Johnnie Beek and son Gerald were visiting at the Albert White home Wednesday.

Mr and Mrs. Harness Cunningham and daughters, of San Jose, Illinois came Thursday evening for a few days visit at the D. A. and Herbert Marshall home.

Mrs. Hennrieta Wilkins, of Meservey, Mrs. Tom Nelson and Mrs. Ben Coobs and Peggy helped Mrs Verner Nelson prepare meals for threshers Thursday.

Miss Gertie Trampel who is working at the D. A. and Herbert Marshall home spent a few days during the past week helping her mother, Mrs. Aug. Trampel cook for threshers.

Mrs. John Bachman and daughters, Gladys and Madeline; Mrs. Clarence Bachman and Mrs. Bob Roths and children assisted with the cooking for threshers at the Fred Bachman home Wedneday

Mr. and Mrs. Will Johnson and Mr. and Mrs. Raymond Rooks, of Meservey, are visiting for several weeks with relatives in Ohio. Mr and Mrs. E. J. Nelson and sons are looking after the chores for the Johnsons.

Mr. and Mrs. D. A. Marshall Mr. and Mrs Herbert Marshall and Irene, Mr and Mrs. Robert Marshall, Clyde Marshall, Leonard Kennedy, Mr. and Mrs. Harness Cunningham and daughters. of San Jose, Ill., all enjoyed a picnic dinner and supper at the Harlow Helps home Sunday.

FAVORABLE EGG MARKET SEEN BY POLTRYMEN

"Sunny side up."

That's the "turn" Iowa State College poultry marketing specialists expect the egg business to take late this year and early in 1938.

Farmers discouraged by the "upside down" egg situation during the first half of the year when the egg-feed ratio was unfavorable, have reason to be more optimistic about results with this year's crop of pullets.

Unless something happens to scramble the situation, the poultry business will be improved early in 1938 because:

1 Feed conditions will be more favorable than a year before.

2. Pullets carried through until the winter of 1937-38 will enter their season of heaviest production early in 1938 when egg prices are likely to be above those of 1937.

3 Egg production over the country as a whole will be lower early in 1938 than a year ago because of the reduced number of layers.

4. The farm price of eggs is about to make its seasonal rise and should hit its peak about December Although a 26 per cent increase in storage stocks may hold back this upturn, storage supplies will be a less important factor in early 1938.

5 Poultry prices should be appreciably better this fall than last year because of the smaller national poultry crop expected.

On July 1, Iowa had an average of only 240 chickens per farm flock as compared to 272 last year and 260 for a 10-year average The number of pullets was, however, virtually the same, 107 to 108.

PROTECTION OF COWS FROM SUMMER HEAT PROFITABLE

Protecting dairy cattle from summer heat with plenty of shade and good air circulation is as important and perhaps more important than protecting them from winter temperatures, declares Dr. C. Y Cannon, head of dairy industry at Iowa State College

"Experiments show," he says, "that dairy cows produce best when the temperature is near freezing—it is easier for them to get rid of excess body heat."

Excess body heat, Dr. Cannon explains is virtually a waste material generated by the burning up of food.

Ordinarily a dairy cow gets rid of excess heat by radiation into the cooler air But when the air is not cooler, she can lose it only by passing more water through the digestive tract, sweat glands and lungs.

Cows produce more milk at temperatures close to freezing, if kept dry and out of winds, Dr Cannon declared, because they can dispose of an unlimited amount of heat—and consequently can eat a maximum amount of feed.

A THOUGHT FOR TODAY WHICH MAY SAVE A LIFE

Some amazing figures are revealed in Accident Facts, the annual publication of the National Safety Council. In 1936, all types of accidents claimed 111,000 lives. Enough citizens to populate a thriving metropolis.

We get a better idea of the magnitude of the accident situation when we compare it with some of the major catastrophes of other years. Let's run down the list:

There were 50,000 U. S. doughboys killed in the World War. There were nearly 11,000 homicide cases and 18,000 suicides in this country in 1935.

The Galveston tidal wave claimed 6,000 lives in 1900. The Johnstown flood took 2,200 victims. Two hundred and ninety-four persons were killed in the Texas high school explosion.

And so on. But the lives lost in all these disasters falls far short of the 1936 accident toll.

The safety committee of the Junior Chamber of Commerce asks each and every one of you to help prevent these accidents. Live safely and you'll live longer.—Northwood Index.

LET ME LIVE FAR AWAY

("Old Timer" in Storm Lake Pilot-Tribune)

"Let me live in a house away from the road, where the cars and the trucks go by; where the noise and din and the rattle of tin, ring loud through the midnight sky.

"Where the siren shrieks like the fire alarm and backfires like cannon roar I've sold that shack and not going back to live there any more.

"The maple that stood where it looked so good, with seats beneath its shade, was hit by a truck—it was my hard luck—when the brakes failed down the grade.

"The sparkling spring with its babbling brook that flowed through the meadow green, along its brink looks a bit like ink, and it smells like gasoline.

"I'd like to live by the side of the road and be a friend to man; and freely give of the life I live, but I don't believe I can.

"I've lost my nerve watching Dead Man's Curve, where the maimed and the dying call, where through the night from a glaring light, strange ghosts dance on my wall

"I'm moving back from that old race track, from the din and the traffic's roar, to a little home where the roses bloom and the birds sing round my door; where the trees in bloom give a sweet perfume—a part of an infinite plan, where the sun shines bright and I sleep all right and feel like a friend to man."

THEY MAKE HOME DEARER

To me it wouldn't be home without.

The two-year-old stumbling around in Mom's best white shoes, scuffing them and breaking down the arches.

The youngsters picking the frosting off the Sunday dinner cake.

Everyone crowded around the stove when Mom takes the fresh bread out of the oven, each one trying to get the first fluffy brown slice.

Having to stop getting dinner in order to wrap a stubbed toe or a cut finger

The little ones asking a dozen times a day, "How many days before Santa Claus comes?"

Discovery that nearly all the doughnuts have taken legs and run away from the window sill where they were placed to cool.

A request for a "jink" from a weak little voice just when Mom and Dad get to sleep.

Big Sis discovering she has sore Knuckles on washday.

A pet chicken running about Mom's feet at the busiest time of the day.

"My son went to Chicago ten years ago to make his fortune," boasted an old Southern Oklahoma billbilly to a city visitor recently.

"And what is he worth now?"

"Ah really don't know for sartin', but the state of Illinois is offering $20,000 for information about him," boasted the old man. —Witchita Eagle.

Laundry soap rubbed on dresser drawers that stick will make them work easy.

SET YOUR GOAL AT THE CONSTRUCTION OF

One New Building A Year---

Every farmer should have a definite provement plan outlined for each year improvement of his farm A program e over a number of years is a logical plan sue . . both in crop rotation and buildi

Perhaps your farm needs a new Silo, New Hog House, a Chicken House Crib and Granary, a Machine Shed or a These buildings are all a necessity

Take advantage of our FREE PLAN SE on all types of Farm Buildings Select the ing most needed on your farm and get timate on its cost. Perhaps a few dollars each year in remodeling will do the trick ever your plan in Farm Building Improv we will be glad to help you

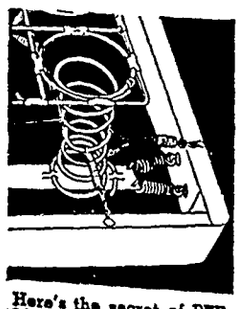
C&E PERMALUX

All-Steel SPRING SUSPENSION

When Uncle Hector took his girl out for an airing on a bicycle built for two . . . burlap and twine spring suspension were quite the thing for "parlor" furniture. But in these more modern days, living room suites must be made of sterner stuff . . . PERMALUX *All-Steel Spring Suspension*, for example . . . the greatest improvement in furniture design in 50 years! Suites made the PERMALUX way are *softer, more luxurious* . . . and longer-lasting than suites made with webbing spring suspension. Every spring is securely seated in strong "floating" steel bands. There is NO twine or burlap to stretch or wear out. Seats cannot sag. The entire spring assembly is steel with silver-white finish, and open to full view. Sanitary. GUARANTEED to outlast the upholstery and the frame.

Be sure to see our smart new PERMALUX designs and models. You'll love their rich luxury. Terms to suit every budget.



Here's the secret of PERMALUX' unusual luxury! Every spring anchored in "floating" steel bands!

FINGERPRINTS INDICATE COLOR OF EYES, ETC.

Robert Heger, a St. Paul man, has made some interesting experiments with fingerprints, according to press reports Recently he was given the fingerprints of four men he had never seen. After a study of each print for six or eight hours, he was able to give a very accurate description of each man, which it is said closely resembled the suspects In one instance he gave a man's height within one inch, his weight within five pounds, the color of his eyes and hair, as well as his complexion and gait. He also described the man as brutal, impulsive, with degenerate tendencies

Ray Jorgenson, Jr. And Party On Way To Los Angeles

The Editor received a letter from his son, Ray, Jr written at Portland, Oregon, and mailed Monday evening.

He stated they would leave for San Francisco Tuesday morning and expected to arrive at Los Angeles the latter part of the week

After leaving Seattle the party visited Mt. Rainier National Park, and at Portland took in the many sights there, including the beautiful Columbia River drive

At San Francisco they will drive over the world's largest bridge and will see the many interesting places in that city Enroute to Los Angeles the will take in the Yosemite and Sequoia National Parks

They will probably spend two weeks at Los Angeles and will make numerous trips from that city They will make a trip to Old Mexico before starting for home through the southern states

---

Mr and Mrs Henry Jahnke, of Garden City Minnesota came last Thursday evening, being called here by the illness of Mrs Jahnke's mother Mrs Lew Lewis Mr Jahnke returned home the same evening but Mrs Jahnke remained to assist in caring for her mother

COUNCIL PROCEEDINGS

July 12th, 1937

Regular meeting of the Town Council held at the Town Hall, with W M Kirkwood acting as Chairman, with four members of the Council present

Minutes of previous meeting read and approved as read

On motion the following bills were allowed

Treas of State	
Sales Tax	7.37

The Budget Estimate of Taxes for the coming year was made ready for publication, a hearing to be held on August 9th, 1937.

Meeting adjourned

A. J KUDJE, Clerk.

IOWA THE BEAUTIFUL LAND

For recreation, social diversion, scientific interest, scenic beauty and historical reminder, the state parks, lakes and streams of Iowa almost defy classification It would be impossible here to list the manifold attractions of Iowa's public domain in its setting of urban and rural activities.

The pioneers in promoting the movement for the public estate of Iowa were men of vision, "tall men, sun-crowned, who lived above the fog in public duty and private thinking"

The Honorable John F. Lacey Thomas H Macbride, L H. Pammel, Bohumil Shimek and others some three or four decades ago began to sound the clarion call that awoke the interest of the citizens of Iowa in the natural heritage the state then possessed, but was in danger of losing

Less than twenty years ago Iowa did not possess one state park, and only one decade earlier many beautiful lakes had been drained.

Since 1919 through the inspiration of those early leaders and the efforts of other public-spirited citizens the state has become "conservation concious." Coming generations may say, concerning recent accomplishments, "See! This our fathers have done for us!"

Iowa's state parks and preserves number seventy-two, and aggregate some 18,500 acres. These tracts range in size from a small park of a few acres, situated on a beautiful lake, to a tract of some 1,700 acres of wooded hills, verdant forest cover and majestic rocks. Combined with Iowa's sixty-five public lakes of over 40,000 acres of water, and her 15,000 miles of rivers and streams—800 miles of which are owned by the state—these recreation areas present a picture beautiful and enchanting, and offer something of interest for all

A number of parks have historical or memorial association, aside from their scenic, scientific and recreational aspects, that recalls the pioneer days of exploration and settlement.

Other parks offer scenic views and enticing drives and trails to add to the charm of the natural outdoor museum

Again in certain areas the ice caves, the interesting plant life or the geological exposure especially capture the interest of the scientifically minded visitor

For those who are interested in that ancient game of Scotland, the golf courses of several parks offer a challenge and an invitation not to be denied

Five times in geological history have great glaciers invaded this state, each one leavng its imprint for those who can to interpret The last, known as the Wisconsin ice sheet, covered the north central portion of the state, and created most of the natural lakes Spirit Lake is the largest of these, with 5.600 acres There are many others of lesser size, among which are West Okoboji Clear Lake and Storm Lake each exceeding 3,000 acres

Many of the state park areas are located on the shores of these gleaming lakes and provide access to the public waters Recently acquired state forests of some 12,000 acres represent an advance in harmony with the conservation plan of the state for preserving its natural resources And as a fitting frame for all this, on the east the Mississippi Father of Waters—and on the west the Missouri, on its way from the snow-clad Rocky Mountains Augmented by the interior rivulets, brooks and streams of the state there is created a natural mosaic that indeed renders true the definition of "Iowa" as "The Beautiful Land."

THE UNITED STATES WINS—NOBODY LOSES

The United States of America is the winner in the present Supreme Court controversy before the U S senate When the United States wins, nobody can lose What is best for our form of government, is best for the individual citizen So, not a single American is the loser because of the failure of the court packing bill. It was a bill to so pack the court that the court that the White House could anticipate and dicate decisions in advance That was the most serious threat to our country since the Civil War. The average individual does not realize the protection afforded by the Supreme Court The court is his protection against the government. Possibly the passing of the packing bill might have resulted in a temporary advantage, but it was a step in the wrong direction, dead wrong, and the majority of our senators recognized the danger, forgot politics, became statesmen, considering only what was best for the country What's best for the United States became the paramount consideration America won. Nobody lost.—Eagle Grove Eagle

A SALUTE TO THE GOOD DRIVERS

With everybody telling everybody else how to drive cars on the highways, Chief John Hattery of the Iowa highway patrol thinks it is time to salute the good drivers.

"I honestly believe," he is quoteded as saying, "that more than 90 percent of the drivers in the state are actively interested in highway safety and want to be good drivers.

"The worst thing we have to contend with is the selfish driver --the fellow who, for some reason, thinks he has special priveleges on the highway But there aren't so many of those and they're getting fewer all the time."

Chief Hattery, however, continues to warn all drivers that handling a car is a "full time job" from the moment the foot presses the gas lever untill the car is brought to a halt. That means the driver will not allow himself to be distracted by the persons riding with him, nor by the scenes as he drives along. Incidentally, that puts a part of the burden on the passenger who should be careful not to disturb the driver.

Huge
DOUBLE SHOW
Most lavish entertainment in State Fair history. Complete change of shows between first and second week.
PARADE of STARS
America's largest musical extravaganza. 175 people, symphony band, magnificent ballet, famous movie and vaudeville stars. 4 nights—Aug 30, 31, Sept. 1, 2.
RODEO
Midwest's greatest rodeo; over 100 contestants; 3 nights, 4 days of riding, roping, bulldogging, racing, steer wrestling. A thrill a minute.
IOWA STATE FAIR
AUG. 27 to SEPT. 3
America's Greatest FARM AND LIVESTOCK SHOW
AUTO RACES
3 days' National Circuit races with 50 of America's top speed aces competing Aug 27, 28, and Sept. 3.
HORSE RACES
4 days, $10,000 in purses, nearly 200 of the fastest trotters and pacers in the country The racing classic of the year
THRILL DAY
Airplane crashing into house, auto smashups, dynamite smashups, a dozen sensational thrillers in one afternoon—Sun only, Aug 29
MAMMOTH CIRCUS
Trained animals, gymnasts, clowns, famous daredevils of 2 continents—biggest open-air hippodrome ever assembled by any fair
10,000 THRILLS
Mammoth farm and stock show, 4-H club show, women's exposition, machinery show, thousands of things to do every day
300 ACRES OF EXHIBITS!

Hay Fever Is No Longer Such a Mystery to Medical Science

Skin Sensitization Test Can Now Find What Allergy Is Troubling You

By WILLIAM C. UTLEY

KA-CHOOO-OO-OO! Ha-ha-ha-WISH-eeeeeeee! Sniffle, sniffle, wheeze—gib be a haggichiff, quig! Hey, hey, it's the good old summer time and the hay fever season is open.

"Why, oh, why, do I have to go through this every year?" is the wail of the hay fever sufferer, and well it might be for there is hardly an affliction so relentless in its unwelcome annual visits.

The answer to the victim's cry is that he is allergic to something in the air, probably the pollen from a plant or weed. What particular plant it is determines whether its pollen rides the air waves in May, June, July or September.

Time used to be that hay fever victims, when they began to sneeze, their eyes started to water and their noses to sniffle, simply had to pack up, leave home and make for the North Woods or the resorts at Charlevoix and Mackinac island in Michigan where the air is comparatively free from dust and pollen. While this made an excellent excuse for a vacation it was a considerable expense and often a great inconvenience

Fortunately today medical science has made such strides that hay fever can now be treated with a pretty fair degree of success right at home. The big task is to find out what type of pollen is causing each individual case. To do this doctors may have to be expert detectives, for many different individuals are allergic to different things.

Results of Allergy.

All of us are allergic to something or other, whether it be a certain type of food, the hair of a certain animal, feathers from pillows, some types of dust, or even smoke. But only about one person in ten is allergic to such a degree that he is uncomfortable.

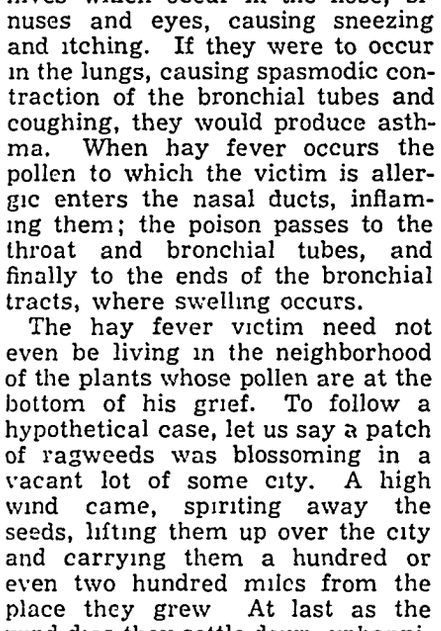
By allergic we mean, in a free sense, that we are unusually sensitive to something. A high degree of allergy to some of the things mentioned in the foregoing paragraph may result in any one or combination of a number of afflictions—eczema, hives, "colds," hay fever, headache, diarrhea and other ailments.

Hay fever symptoms spring from hives which occur in the nose, sinuses and eyes, causing sneezing and itching. If they were to occur in the lungs, causing spasmodic contraction of the bronchial tubes and coughing, they would produce asthma. When hay fever occurs the pollen to which the victim is allergic enters the nasal ducts, inflaming them; the poison passes to the throat and bronchial tubes, and finally to the ends of the bronchial tracts, where swelling occurs.

The hay fever victim need not even be living in the neighborhood of the plants whose pollen are at the bottom of his grief. To follow a hypothetical case, let us say a patch of ragweeds was blossoming in a vacant lot of some city. A high wind came, spiriting away the seeds, lifting them up over the city and carrying them a hundred or even two hundred miles from the place they grew At last as the wind dies they settle down, unhappily, right before an unfortunate soul who is allergic to ragweed pollen without ever having discovered it. He breathes them into his nose—thousands of them, for it would take 50,000 to cover the head of a pin.

Test Skin With Pollen.

Soon his nasal duct is inflamed and he begins to sneeze. Then the poison passes down through his throat and bronchial tubes and



Aerial surveys, conducted thousands of feet up, test the air for hay fever pollen.

swelling occurs. His eyes redden, his nose itches "where he can't get at it to scratch it," and he begins to sniffle constantly.

Perhaps our friend thinks he has a cold. But the doctor says, "Hay fever," and tells him he had better find out what type of pollen is causing the trouble. The customary procedure is for the doctor to begin making skin sensitization tests. Little scratches are made on the arm, and into each of these scratches one drop of pollen solution is placed; a different type of pollen is used on each scratch. The sufferer is allergic to the type of pollen placed in any scratch which reddens and swells.

We'll say our hypothetical victim is allergic to ragweed pollen. His protests to the doctor that he has not been near any ragweed need not confuse us, for we know how the pollen got to him. The doctor explains it to him, too.

Now the doctor orders injections of the proper type of pollen vaccine into the blood. Next year, now that the patient's allergy is known, he will be given minute, but increasing doses of the injection, starting in February and continuing for a few weeks until it is thought he should be immune when the season comes. It does not always work out that way, and sometimes daily injections during the season itself do not help.

Different pollens do their dastardly work at different times of the year in different sections. In the eastern and central states, for instance, June grass causes trouble around the beginning of that month; in early July it is Timothy hay, late the following month the giant ragweed and as September starts it is the small or common ragweed.

Here are what the pollens which make hay fever sufferers sneeze and sniffle look like. The models (magnified 3,500 times) which the young lady is holding are, left to right: Timothy hay, short ragweed, burweed, marsh elder and cottonwood.

When Suffering Begins.

How severe a victim's symptoms are depends upon the amount of pollen that is filling the air he breathes as well as upon his susceptibility. The amount of pollen is likely to vary from day to day. It will be stirred up more, of course, when there is a good breeze, and it will tend to settle on a calm day. In some states at the height of the season it is not unusual to find 1,000 to 2,000 grains of pollen to the cubic yard of air. Pollen thins out in higher atmospheres, but aviators making scientific tests can find it a mile above the earth.

It is when the air contains a pollen count of 25 to the cubic yard that the hay fever victim begins to suffer, so you can imagine his misery when the count reaches 2,000!

According to medical scientists, you should not sit next to an open window on a train if you would avoid hay fever, although air-conditioned cars are all right, for the pollen is filtered from the air in them. Nasal sprays will protect the nose in some measure from attack, and a little white vaseline around the opening of the nostrils will keep some of the pollen from getting in. Victims will find themselves more comfortable in a dark room where there are no drafts.

Although ten persons in one hundred suffer to some degree because they are allergic, only one of these ten, on an average, has hay fever. Various allergy victims suffer in various ways.

Sensitive to Horse Hair.

Take the case of the city child who was accustomed enough to thousands of automobiles in his daily life, but seldom, if ever, laid eyes on a horse. Finally coming across one in the street one day he approached it closely to examine the queer animal at length. He began to choke up and there was a severe excretion of fluid from the lungs. Now he had played with cats at times, and he owned a little wire-haired fox terrier, but none of these had ever affected him so It just turned out that he was allergic to horse hair.

Actually, now that skin sensitization tests are common, it has been found that many supposed hay fever sufferers did not have hay fever, but were allergic to their own dog or cat. You can even be allergic to cigarette smoke. There is on record the case of a woman who was sensitive to that kind of smoke Her husband smoked a pipe; when she played bridge at the home of friends who smoked cigarettes she would begin to sniffle and appear to have a cold. The doctor found what was troubling her and treated her for it. Now her companions could smoke corn silk without bothering her.

Seasonal asthma is frequently caused by house dust which mixes more actively through the air at the time of the year when the radiators are turned on for the first time. June flies cause asthma in the area about the Great Lakes; elsewhere butterflies or other insects could provoke it; so can certain foods, such as berries, asparagus or muskmelon. Almost anyone knows somebody who simply can't eat strawberries without getting the hives.

When a person begins to have regular attacks of asthma at a certain time of day or night, the doctor is likely to examine every article with which the victim regularly comes in contact at that time. If they occur at night, it might be the feathers in the pillow, the hair in the bed mattress or the wool in the blankets.

Boys Hate Haircuts, Anyway.

Sometimes the doctor has to be a mighty clever detective to find them, however. There is the case of a small boy who had an asthmatic attack every few weeks. After much observation it was found that in a general way the attacks corresponded to the time of his periodic visits to the barber. It was eventually found that he was allergic to hair—not to his own hair, or the hair of anyone in his family, but to the hair of anyone with whom he was not in daily contact!

The Detroit News reports the case of a doctor in that city who suffered from asthma every Sunday. He finally discovered that he was allergic to Sunday newspapers! No kidding. He was sensitive to certain aromas which the various inks gave forth; because of the much larger paper on Sunday, he spent a great deal more time with it. Te daily paper did not have enough time to affect him, but the Sunday one did.

Cosmic Rays Man Finds on Earth Are Trapped in Galaxy

They May Originate in Blast of Stellar Worlds

New York.—A Nobel prize winner in physics and a Chinese scientist joined forces, through the printed word, here to tell the world of a new hypothesis on the origin of the cosmic ray. The men are Prof. Arthur H. Compton, University of Chicago, and Dr. P. Y. Chou, physicist at National Tsing Hua university, Peiping, China. Their medium of expression was the highly technical journal of the American Physical society, the Physical Review, published here.

In the present stage of cosmic ray knowledge, say Professor Compton and Dr. Chou, there is no known act of nature—even the annihilation of the atomic nucleus—which can provide sufficient energy to fit the observed energies of some of the cosmic rays.

The only possibility, they feel, is the primeval explosion that sent worlds and galaxies literally rocking and reeling into space.

Acknowledge Belgian's Theory.

Every kind of particle and the packets of energy known as photons would be the debris of such a staggering catastrophe, they admit. To account for the known preponderance of electrically charged particles, they suggest that the non-charged photons and neutrons have been lost in space because they could penetrate the magnetic field of stars and galaxies. But these same magnetic fields might trap the charged particles and so produce the observed particle component of the cosmic rays.

The scientists acknowledge the expanding universe theory of Abbe LeMaitre, the Belgian scientist-priest, as the inspiration for this newest cosmic ray origin hypothesis. The Compton-Chou report is the first one in considerable time which has tackled the origin of the cosmic ray. For some years scientists have been content to study and obtain more and more experimental data, leaving the fitting together of the pieces to a later time.

Discussing the high energy of cosmic rays and their apparent origin somewhere out in space, the scientists said, "If the cosmic rays come from beyond the Milky Way, at a really typical place in intergalactic space the density of cosmic-ray energy would be of the order of 100 times as great as that of starlight. It is thus apparent that either the source of the rays must be a radiator which is very powerful compared with stars as a source of light, or the cosmic rays once emitted must be retained by the metagalactic system instead of being lost as is starlight.

May Deflect Rays.

"Although nuclear processes occurring in interstellar space might result in an adequate total energy," they add, "it appears that such processes are inadequate to account for the great energies of the individual cosmic-ray particles."

Concerning the trapping of the electrical particles they ask, "Is it possible that electrically-charged rays emitted by the initial explosion may be deflected by stellar or galactic magnetic fields just as a cosmic-ray electron is deflected by the earth's magnetic field? If so, those particle which would be most probably retained by the metagalactic system would be those with the highest ratio of charge to mass in order, electrons, protons, etc., whereas all neutral rays might be forever lost."

Trace Lip Inflammations to Dyes in Lipsticks

Atlantic City, N. J.—Cases of inflammation of the lips due to hypersensitivity to certain dyes in lipsticks were reported by Drs. Joseph Goodman and Marion B. Sulzberger of New York at the meeting here of the Association for the Study of Allergy.

By making tests of the various ingredients of the lipsticks, it was possible to discover which dye was the offender in a particular case, and to prescribe for the patient a lipstick she could use safely.

Other cosmetics, notably powders and nail polishes, have also caused inflammation and skin irritation, the New York doctors found.

Dyes in wearing apparel, ranging from dresses to shoes and socks, frequently cause irritation.

Get Elderly Patient Up in Two Weeks to Avoid Death

Doctors Find Confinement to Bed Hastens the End

By JANE STAFFORD

Atlantic City, N. J.—Elderly persons who get sick must be gotten out of bed and back on their feet as rapidly as possible, in order to stall off death, Drs. Louis B. Laplace and J. T. Nicholson of Philadelphia told members of the American Medical association here.

Confinement to bed hastens death in persons over sixty years, they found. The reason is that remaining inactive and prone for long periods allows the blood to accumulate in the small veins and arteries. The total volume of blood is thus reduced and its circulation is further impeded by the hardening of the blood vessels that occurs in old age.

The blood, therefore, remains in the capillaries until it is forced out by contractions of the muscles, but a person confined to bed moves his muscles so little that the blood does not circulate enough. As a result, tissues degenerate, ulcers form, and the body is slowly poisoned by absorption of the products from the degenerated tissues. The patient sinks into stupor and the final invasion of the bacteria into the lungs causes the fatal pneumonia.

The way to prevent all this is to order elderly patients out of bed as soon as possible and while they must remain in bed to give them massage, exercise in bed, deep breathing and frequent shifts of position.

A new, quick and inexpensive test to determine whether a woman is going to become a mother was reported by Drs. John Huberman, Howard H. Israeloff and Benjamin Hymowitz of Newark, N. J. The test is made by injecting under the skin of the forearm one of the hormones present in the body of an expectant mother. If the skin becomes red and inflames, the test is negative and the woman is not about to become a mother. If there is no reaction, the test is considered positive evidence that the woman is bearing a child.

The test was originally devised by Drs. G. C. Gilfillen and W. K. Gregg of Dayton, Ohio. The Newark physicians found it 90 per cent accurate in tests of 200 expectant mothers and 95 per cent accurate in 150 women know not to be pregnant.

New Gadget Devised for Measuring the Blueness of Sky

Washington.—How blue is the sky? That is not a mere rhetorical question put by a poet for the purpose of dragging his lady's eyes into the discussion. The exact color of the sky is a matter of considerable scientific, commercial and even military importance, for it is a measure of air turbidity, dust content, haziness, etc., affecting visibility at a distance, intensity and color composition of sunlight, and a number of other intangible but important matters.

A new device for measuring sky blueness was described before the meeting of the American Geophysical union here by Drs. H. Landsberg and H. Jobbins of Pennsylvania State college. It is considered an advance over the series of standard color cards hitherto employed, being more rapid and direct in use, and having no abrupt jumps from one degree of blueness to another.

The device consists of a wedge of clear blue glass of a standard hue, mounted so that sunlight is reflected through it from a mirror. Half of the opening of the frame in which it is mounted is open, so that the observer can look at the sky, and then slide the wedge along until the color matches.

Action of Mangroves Adds to U. S. Coast

Memphis, Tenn.—New land is being added, slowly but surely, to the map of the United States. The mangrove bushes along the coast of Florida are doing it, declares Prof. John H. Davis of Southwestern university here. Professor Davis has been making a special study of this subject, from personal observation, examination of old maps, and comparison of newest air-survey photographs.

The red mangrove, which grows in salt water, has numerous roots which catch and hold silt and clay. As the deposit becomes higher, the red mangrove is supplanted by the white and black varieties which grow better on the higher soil. On decay, the mangrove remains form peat formations which aid further in the land-building process.

Lesson for August 15

GOD GIVES LAWS TO A NATION.

LESSON TEXT—Exodus 20:1-17
GOLDEN TEXT—Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind . . . Thou shalt love thy neighbor as thy self. Matt. 22 37, 39
PRIMARY TOPIC—God's Good Laws.
JUNIOR TOPIC—Before the Mount of God.
INTERMEDIATE AND SENIOR TOPIC—Why a Nation Needs Laws
YOUNG PEOPLE AND ADULT TOPIC—Basic Laws for a Nation's Life.

Basic laws have been laid down by God for the orderly administration of his universe. Men see them clearly in the physical universe, although at times they do not recognize the One who created all things.

Physical laws are of great importance, but of even deeper significance are the moral and spiritual laws which control the human life. There is in the world a moral law—a distinction between right and wrong—which man may ignore only to his own sorrow, and which he cannot abrogate or destroy. All laws of men which are true and right are founded on this underlying moral law, and are in reality simply a development and interpretation of "God's Code of Morals"—the Ten Commandments.

These commandments given to Israel at Mt. Sinai are worthy of careful study on the part of every reader. They may be grouped under two divisions.

I. A True View of God (vv. 1-11). The first and most important question to be asked regarding any law is, "By whom was it established?" Legislation by an unauthorized person or organization has no power over others. Who gave the ten commandments? Verse 1 tells us "God spake all these words."

Men sneer at theology as being out-moded, but the fact is that Christian doctrine is the only safe foundation for Christian character. Unless my view of God is right, my life will be wrong. Until I know him I will not appreciate the authority of his law

1. Whom to worship (vv. 2-5). There can be but one true God, and he alone is to be worshiped. He is a personal being, ready to enter into communion with each one of us. No image can take his place.

2. How to worship (vv. 6, 7). We are to love him and keep his commandments. There is to be no sham about this, for no matter how sweet and pious may be the praise and prayer of a man, he has taken the Lord's name in vain unless he keeps the Lord's commandments by holy living

3. When to worship (vv. 8-11). God has ordained that man should not incessantly bear the burden of toil. He is to have a day of rest and a time for worhip, undisturbed by the duties and responsibilities of daily labor. America needs a mighty stirring up about the desecration of the Lord's day.

II. A Right Relationship to Man (vv. 12-17).

To be right with God means that we will also be right with our fellow man.

1. Family life (v. 12). The fifth commandment has to do with the relation between child and parent. There is a plain and direct command that father and mother should be honored. Only in respect and obedience to parents can the child possibly find true and proper development.

2 Physical life (vv. 13, 14). God is interested in our bodies. Already we have noted his provision for a day of rest each week. Now we are reminded of the sanctity of human life. "Thou shalt not kill," and remember there are many other ways to kill a man than by shooting him. Dr. Wilbur M. Smith makes a telling point by reminding us that we may kill others by selling them tainted food, intoxicating liquors, or "dope;" by neglect of duty, by careless driving, by failing to provide employees with sanitary and healthful surroundings.

There is another way that the body may be destroyed—by its misuse in adulterous living.

3. Social life (vv. 15-17). "Thou shalt not steal" — and remember any dishonest appropriation of what does not belong to you is stealing—call it what you will. And "false witness"—how it has honeycombed our very civilization. Not a little of it is found within the church, more shame upon us! Lastly, we come to "covetousness'—which has been called one of "the respectable sins of nice people." It is subtle and often hidden. Let us root it out of our own lives by God's grace.

Enthusiasm in Work

Enthusiasm is the element of success in everything. It is the light that leads and the strength that lifts men on and up in the great struggles of scientific pursuits and of professional labor. It robs endurance of difficulty, and makes a pleasure of duty.—Bishop Doane.

A Translation

Let us learn what death is. It is simply a tr[illegible]n, not a state, but an act; [illegible] dition, but a passage.

Sew, Sew, Sew-Your-Own

TO MAKE you the girl of his dreams (and to keep him always dreaming), that's the happy ambition behind these newest creations by Sew-Your-Own. One of these frocks to enhance your beauty, and an evening to spend in that romantic lane of Moonlight and Roses—isn't it quite likely that you will become the girl of his dreams?

Luncheon for Two.

When he takes you out to luncheon you should be the very essence of chic. A two piecer like the one at the left will bring the sort of eye-compliments you like, and you'll find it a great boon to comfort if the date is to be soon. You will probably want it made of the season's hit material, sheer crepe. The vestee is smart in a contrasting color.

When It's Dancing.

He'll be very Scotch about giving away dances when he sees you in your copy of the frock in the center. It was really born to dance. The tucked skirt has all the thrilling sophistication of a gored one, and it's much easier to sew. Little touches of grosgrain, and pretty puff sleeves add the kind of quiet elegance that makes this your choice for those happy hours of dancing under the stars.

End of Summer.

The season, like romance, rolls swiftly. But you still have time to do a few summery things in a summery frock such as the one at the right. In dimity or swiss it will make you more youthful and charming than many a more ornate style (and after all the girl of his dreams must be young and charming). A good suggestion might be to cut a carbon copy, while you're about it, in sheer wool with long sleeves. Then there'll be nothing to worry about when a cool evening happens along.

The Patterns.

Pattern 1288 is designed for sizes 14-20 (32 to 42 bust). Size 16 requires 3½ yards of 39-inch material.

Pattern 1326 is designed for sizes 12-20 (30 to 38 bust). Size 14 requires 4 yards of 39-inch material.

Pattern 1228 is designed for sizes 11-19 (29 to 37 bust). Size 13 requires 4⅜ yards of 35 or 39-inch material. With long sleeves 4¾ yards are required.

Attended Wedding Of Sister At Little Brown Church

Mr. and Mrs. W. H. Galbreth drove to Nashua, Saturday, to attend the wedding of Mrs Galbreth's sister, Miss Faye Hodson of Plymouth, to Mr Lee Heiner of Osage, which took place at the Little Brown Church near Nashua. The couple will reside at Flint, Michigan.

GOOD RAIN HERE MONDAY NIGHT BENEFITS CROPS

This vicinity was visited, Mondya night, by a good, steady rain, which fell in a slow drizzle beginning at about 8 00 o'clock and lasting nearly all night long The rain soaked into the ground and was a benefit to all crops which were in need of moisture

FORTY-FIVE DIE ON HIGHWAYS IN JUNE

Number Shows Increase Over Same Month In 1936, But Is Less Than In 1935

Forty-five persons were killed on Iowa highways during the month of June, according to the monthly summary just released by the state motor vehicle department.

During June of last year 43 people died as a result of highway accidents; 58 died for the same month in 1935.

In addition 855 people suffered injuries in the 952 accidents reported involving 1461 vehicles Over 4,000 people have been injured in Iowa as a result of highway accidents.

More accidents occured during daylight than after dark, but on the other hand the peak hour for accidents was between the hours of 9 p m and 10 p. m Accidents were most numerous on Sunday, followed by Tuesday, Saturday, Wednesday, Thursday, Monday and Friday.

M. E. Aid Thursday

The ladies will hold the monthly aid meeting at the church parlors Thursday afternoon. Mary Swanson, Mrs. Earl Schaeffer and Mrs. Fred Ridder will be the hostesses. Members are asked to bring clean clothing for rags. Come and help sew.

Children Free at Iowa State Fair

Des Moines, Ia., Special—A huge, free party at the Iowa State Fair for all boys and girls under 16 years of age, was announced here today in connection with plans for the annual "Children's Day" at the fair on Friday, Aug 27. The youngsters will be admitted to the fair free of charge on this day, and will be guests at a big children's entertainment in front of the grandstand Friday morning Fair officials expect over 30,000 youngsters to take advantage of this year's free party, for a last fling before school opens.

Prominent Farm Leader Will Deliver Address Here Aug. 25

EVERSON TO SPEAK AT KLEMME PARK AUG. 25

Hear E H Everson, National President of the Farmers' Educational Cooperative Union of America, at the Klemme City Park Wednesday evening, August 25 Farmer Union members cordially invite the public to hear Mr Everson's instructive and interesting talk

Farmers have worked hard separately for years with some degree of success but may have been somewhat negligent in working together in a farmers' organization to sell their farm products at Cost of Production No industry can operate on less than Cost of Production Organization is right Anything else is chaos The universe is one of the best examples of organization. the moon, the stars, the planets all move together in perfect unison, each in its particular place, working as accurately as the different parts of the most delicate piece of machinery

Farmers will and can solve their own problems no one else will or can May farmers be a help to society, not a burden by allowing tax-money to be wasted to destroy Farm Products

KLEMME BOY MAKES GOOD IN C.C.C. WORK AT LEON CAMP

Paul Sampson, of Leon, a former Klemme boy, is here this week visiting relatives and friends

Paul is now on his fifth year in C C.C. work and has been stationed most of that time at Leon, Iowa, where he now ranks as Sergeant and is second high in charge of the camp. Paul is eligible for a commission and has been working toward a higher rank for some time When he receives his commission he will not only receive a sizeable pay check each month, but will be given full charge of a C.C.C. cmap.

Americans eat an average of 18 pounds of butter per person a year, our Canadian neighbors and the Australians consume over 29 pounds. The consumption of butter in Sweden, Finland and Germany is larger than in the United States.

The reason the man in the moon doesn't get married, we've been told, is because he only gets a quarter a week and he has to save that to get full on.

A Needed Step Toward Recovery

By RAYMOND PITCAIRN

National Chairman Sentinels of the Republic

After months of delay the Senate recently passed a measure providing for a count of the actual number of unemployed.

All Americans interested in constructive steps toward real recovery undoubtedly hoped, when they read that announcement, that the bill would pass safely through the remaining machinery of our legislative mill and go into early effect.

For, as one Senatorial supporter of the plan has pointed out, only by knowing the true conditions can lawmakers hope to steer a safe course through the fog which thus far appears to have obscured the way to solution of our No 1 problem—unemployment and its relief.

And America wants that problem solved—not through wasteful methods of political patronage, but through some practical system of bringing together the capable worker and the productive job.

This is hard to do when government neither knows nor seeks to know how many men and women need jobs It is hard to do when the laudable objective of helping the jobless is hampered by ignorance of who they are, or in what work they are skilled. It is hard to do when no two sets of official figures agree.

It is hard to do when facts are unknown and the course uncharted.

A carefully-conducted census should develop these facts—and at least some of the answers. And it cannot be made too soon. For on the success of efforts to restore American workers to their accustomed places in the activities of American enterprise — whether in the fields, the office or the shop—depends not only their own well-being, but our entire national progress.

This cannot be achieved through the futile and extravagant technique of a guessing contest. It demands purposeful study and constructive action.

TEN MILES OF FILM USED IN MAKING STANDARD "TALKIE'

More than ten miles of film was used on the RKO lot in Hollywood to produce the feature length talking picture "Stan" which is sponsored by the Standard Oil Company of Indiana and will be shown here Friday evening, August 27th at the open-air theatre.

When finally put on the screen, it was reported from the studio, only some 7,000 feet was selected by Marshall Neilan who directed production.

During the County Fair and tractor plowing contest scenes, a total of 400 actors and actresses were before the camera, including almost two score leading film characters, among them such stars as Robert Armstrong, Andy Clyde, Peggy Shannon and Si Jenks.

Building Boom Continues Here; More Homes Built

JOST HAS PATCH OF ARGENTINE CORN THAT GROWS LOTS OF EARS

Last spring H. F. Jost, manager of the North Iowa Grain Co accumulated some Argentine corn The kernels are a bit different than the Iowa corn, and resemble somewhat Yellow Bantam sweet corn.

Twelve hills were planted in the Jost garden to see what the South American corn would do in North Iowa The result is surprising The other evening the writer looked over "Hank's" corn patch The stalks are tall and healthy looking, but the remarkable thing about it is that each stalk has from two to four ears of corn.

LEMKE ASSAILS FARM IMPORTS AT FORT DODGE GATHERING

FORT DODGE, IA Five hundred farmers from all parts of Iowa and Minnesota listened to Congressman William Lemke assail the Wallace farm program here Sunday at a Union party picnic

Terming Wallace one of the few lemons Iowa has ever produced, the former presidential candidate gave numerous statistics on importations of agricultural products and then asked the very rural audience if it wouldn't rather eat domestic produce.

"They are getting too internationally minded," he said. "What we need is more nationally minded Americans in Washington. The only thing in which we have overproduction is ignorance at the capitol."

He also objected to the manner in which President Roosevelt has vetoed over 200 bills since his inauguration, the Frazier-Lemke bill among them The North Dakota representative then outlined his bill for refinancing the farms and homes of the nation by making the government the lender rather than the banks.

At the conclusion he answered questions put to him by the crowd, and prizes were awarded to the largest family present, the Tony Danklau brood from Webster county with ten children. -- Des Moines Register

LOCAL BUTTER MAKERS ARE ENTERED IN STATE CONTEST

Paul Mueller and Wayne Pavey, both of the Klemme Creamery have entered the statewide contest to choose the champion butter maker of Iowa at the 1937 Iowa State Fair, according to announcement of entries made today by state fair officials.

The local butter makers have each entered a twenty pound tub of butter in competition with seventy-seven other leading butter makers of the state The prize butter show, a part of the big dairy show at this year's fair in Des Moines carries with it $700 in cash prizes besides gold, silver and bronze medals and diplomas.

Sent to jail for shooting a "Ghost." Read this true story that's stranger than ficion in The AMERICAN WEEKLY, the magazine distributed with NEXT SUNDAY'S CHICAGO HERALD AND EXAMINER.

Are On Long Trip To The West Coast

Mr. and Mrs. Ernest Helps left Monday morning on an extended trip that will take them to the West Coast. Enroute they will visit the Black Hills, Yellowstone Park and then continue on west to Seattle, Washington.

THREE NEW HOUSES NOW UNDER CONSTRUCTION IN KLEMME

Three new houses are under construction in Klemme at present Mrs John Bock is having a house built on the lot south of the E. F Jacobs residence and the basement has been completed.

Peter Josten is having a house built on East Main and the house is now enclosed ready for plastering

Fred J Arnold is having a basement dug in south Klemme, east of the F A. Arnold residence.

Both the Jacobs Hardware Store and the Larsen Cold Storage Plant are about completed in the business district.

PROMPT POTATO HARVESTING PREVENTS SUNSCALD; ERWIN ADVISES EARLY MARKETING

Sunscald of potatoes may be prevented by harvesting the tubers as soon as the vines are dead, says A. T. Erwin, Iowa State College vegetable crops specialist. When potatoes are scalded they soon become soft and watery in storage, followed by a soft rot which makes them inedible. Potatoes are particularly apt to scald on sandy soil.

It is also undesirable to allow dug potatoes to remain exposed to the sun for any length of time. Mr Erwin advises picking them up at once or digging them in the late afternoon or evening and harvesting them the following morning. This practice allows the potatoes to cool thoroughly before they are stored.

Storage of potatoes in the coolest part of the basement is essential to safe holding of the vegetable during the fall and winter.

Farmers who grow potatoes for market are urged by Erwin to sell them as soon as possible as the price will gradually decline until about Nov. 1st, by which time the harvest will be completed.

ADVISES AGAINST BUYING OF ACORN-FED HOGS FOR FEEDING

Farmers who contemplate buying acorn-fed or "oakleaf" hogs to be finished out on the new corn crop were issued a warning this week by I. W. Arthur, Iowa State College extension livestock marketing specialist.

His warning is:

"Don't buy acorn-fed hogs unless you can get them cheap enough to stand the dockage which will be made against them at the central market."

Even when "acorn" hogs are well finished out on corn, packers offer $2 to $3 less per hundred for them. They complain that "acorn" hogs produce soft carcasses.

Large numbers of acorn-fed hogs are being trucked into Iowa at the present time from southern states for sale at livestock auctions.

These imported hogs can be identified by their fine bones, large heads and erect ears. They are usually undersized.

BAILEY LEASES SPACE FOR IMPLEMENT BUSINESS HERE

Floyd Bailey has leased the warehouse at the rear of the Kluckhohn store and also space at the rear of the Etchen garage Mr. Bailey states that he will handle a full line of farm implements and expects to have his opening date in the near future.

There are 11,800,000 tons of paper manufactured in this country each year. One-half of all this paper is used in the manufacture of boxes, folding cartons. ice cream pails, cracker boxes, shoe boxes. candy boxes. etc.

Washington Digest

National Topics Interpreted
By WILLIAM BRUCKART
NATIONAL PRESS BLDG WASHINGTON D C

Washington.—The government's silver policy again is attracting attention. Several things have caused it. First among these things is the matter of rising prices for foods and other necessaries of life, but attention seems to have centered on the silver question again as a result of the Treasury's newly arranged agreement to trade some of its gold for some of the Chinese silver.

Silver Question

Probably the silver question is not as widely discussed as it might be because it is a complex subject and there are not too many people who understand it and its implications.

I cannot refrain at this time, however, from recalling that when the silver act of 1934 was passed, I wrote in these columns a prediction that the country sooner or later would regret that legislation. I repeat the statement now and I do not believe it will be long until the average citizen will recognize what the silver policy is doing to most of us. I mean by that, it will not be long until Mr. John Q. Public will understand that the silver policy has a lot to do with the high prices he is paying for his pound of bacon, his slice of beefsteak or a thousand and one items that he buys at the grocery store. He will feel it, too, when he seeks to buy a new suit of clothes or a new pair of shoes. There can be no argument about it: The affect of inflation brought about by a perfectly ridiculous silver policy is upon us.

Early in July, the Chinese minister of finance visited Washington and called personally at the Treasury to express the appreciation of the Chinese government for the satisfactory conclusion of negotiations that enable the Chinese to give the American Treasury silver for gold. It was the usual diplomatic courtesy. At the same time, however, the visit of the Chinese minister served to awaken America to the fact that the Treasury has been going along, buying silver from foreign countries in order to maintain an arbitrary price which the Washington administration contended should be the world price for silver. This price is forty-five cents an ounce, and it is a most profitable price for silver producers in Mexico and Canada and some other foreign countries. It is not as profitable, however, as the price the Treasury pays to American producers—which is seventy-seven and one-half cents an ounce.

But, one may ask, what has this thing to do with the cost of beefsteak, ham and eggs or shoes?

I hope I may be able to explain it as I have watched the picture unfold and to explain it in a manner that those unacquainted with high finance may see the thing in its true light.

* * *

First of all, the policy of the administration that has brought billions of gold into the Treasury to be stored as so much dead weight has resulted in many thousands of shares of stock in American corporations or their bonds being bought by foreigners who gave gold in payment. President Roosevelt early in his administration insisted that gold should not be in circulation as money. Consequently, the Treasury has so much gold that it has had to build separate storehouses to protect it. Now, we are sending some of that gold to China in trade for China's silver. I think most everyone will agree that the silver is just as useless because we have no need for it in our currency structure. People do not want to carry silver dollars around in their pockets.

How It Works

Assuming that the exchange was simply an even trade of two objects, neither of which was usable to us, one probably could dismiss the matter with a wave of the hand. Regrettably, such is not the case. The additional silver frankly is adding to our troubles because of the Silver Act of 1934 which permits the Treasury to issue currency—silver one-dollar bills—against it.

So, instead of being sterilized and stored away in vaults, the silver accession results in a prompt increase in the amount of currency in circulation. That action tends to increase the excess reserve—unused money—of the banking system. As this money becomes available for circulation, its value necessarily and obviously is cheapened. Or, to say it another way, the things you buy with money become of greater value because it takes more of these pieces of currency to buy the same quantity of food or clothes or shoes.

* * *

Authorities will disagree with the above statement to the extent that all kinds of currency have not been expanded (which means inflated) by the issuing of silver certificates That is true. But we must be realistic and recognize that a silver certificate occupies exactly the same place in our currency structure as does a bill that is backed by gold or one that is issued by the Federal Reserve banks. Therefore, it seems to me to be a fair statement to say that the whole currency structure is tainted by this deluge of silver certificates now and heretofore coming from the Treasury. And it is equally a fact that prices of every kind are going to increase exactly in accordance or in ratio with the new money that is put out from the Treasury.

Some Will Disagree

I do not know how long it will be until the voters wake up to the necessity for repeal of the silver act. It probably will not be long before there is a wave of public indignation against the policy if the average person realizes that the program is actually a tax upon the American public. Surely, if the silver policy were labeled, "tax to support the silver program," the attitude of the country would change overnight. That really should be the name of the Silver Act of 1934 because that is its effect. The tax results from the fact that the Treasury is paying foreign producers as well as American producers prices for silver that are higher than the value of the silver warrants. This means that any article of silver that you buy in a store costs you more than it would if silver producers abroad and in the United States were not being subsidized. The additional cost is a tax on every buyer just as much as though you had paid the tax directly into the Treasury.

It may be interesting to know that the Treasury has issued nearly eight-hundred million in silver certificates. In addition something like seven million silver dollars have been coined, and these still remain in the package in which they were wrapped at the mints. Besides all these, there is silver bullion that cost $375,000,000 piled up in the Treasury. Silver certificates can be issued against this.

The silver act of 1934 provided that the Treasury could buy one dollar's worth of silver to three dollars' worth of gold for what is called reserve purposes. On the basis of the gold now held, the Treasury can buy under that law a total of $4,125,000,000 in silver. At the present time Treasury records show we have silver reserves amounting to around $2,600,000,000. These figures show, or ought to show, how much inflation lies ahead—how much higher prices may go—unless something is done to restore a sound currency policy in the United States.

* * *

Some Democrats who are not too friendly with Postmaster General Jim Farley, along with the Republicans in congress, are having fun these days with the Democratic National committee. They are also succeeding, it appears, in making President Roosevelt's political seat uncomfortably warm. Nothing will come of it except that the subject will fill many newspaper columns of attack and defense as the politicians shoot back and forth.

Just Good, Clean Fun

To review the situation, it should be recalled that the Democratic National committee found itself in debt to the tune of about $650,000 at the end of the 1936 campaign. Some bright mind in the Democratic National committee conceived the idea of selling Democratic campaign handbooks to corporations at $250 per book, or more, as a means of raising money.

To make the book attractive, a single sheet bearing the autograph of Franklin Delano Roosevelt was inserted. Hundreds of corporations were solicited, and hundreds bought the books—theoretically, because of the autograph of the President. Mr. Roosevelt stated he did not know he was autographing the blank sheets for the purpose for which they were used.

Republican Leader Snell, of New York, introduced a resolution in the house of representatives, proposing an investigation of the sale of these books to corporations. He contended that it was a violation of the corrupt practices act.

Mr. Snell remained determined, however, and sought to harrass the New Deal further by asking Attorney General Cummings for an official opinion. At the same time, he read on the floor of the house a long list of corporations who had bought the "souvenirs" of the 1936 campaign, together with a list of prices they had paid.

These facts cut deeply into the Democrats who are seeking to protect Chairman Farley and the Democratic National committee wiggled and squirmed. Nevertheless, Mr. Snell may as well have butted his head against a stone wall since he got no further than Representative Rayburn, the house Democratic leader, would have gotten, if Mr. Snell had been majority, instead of minority, leader.

a slim youth of seventeen look- over her shoulder her heart beat a studio gong; she decided right e that Jim Jordan (for that's it was) was the man for her. must have been a two-way mir- for Jim Jordan decided the e thing.

m sang with a quartet which rehearsing with the choir. y had their first date on New r's eve. Marion can't suppress ttle giggle whenever she thinks t.

They Still Tease.

His mother went along with us, took him home afterward!" she hs. Even after 20-odd years charge still makes him hot un- the collar. "Oh, here now," he ects. "Cut that out!" Then, h a grin: "Anyway, didn't you ays bring your big brother along our dates after that?"

For three years they courted be- e they were married, and for 19 rs since. Before their marriage, toured in vaudeville with a sical act called, "A Night With Poets." He sang on the Chau- qua circuits, and later started a cert company that toured the k towns, an experience which y have developed some of the nk town tourist" flavor which aracterizes the McGee and Molly ts.

Shortly after their marriage Jim t for France as a replacement

Fibber McGee . . . and Molly.

for the one hundred twenty-second engineers, but sickness prevented his seeing service, and he was in a hospital when the Armistice was signed. Meanwhile, was Marion, back home in Peoria, merely twiddling her thumbs, awaiting his return? "Heavenly days!" says she. "I was that busy teaching piano to 50 pupils, some good and some bad, I didn't have a moment to myself!"

They decided to get out of the show business when Jim came back, but it was no go. Jim wasn't very successful finding steady work and, with his brothers-in-law constantly taunting, "When are you going to get a job?" he soon found himself behind the footlights again. He and Marion had real success with their concert company, and no one complained that he was shiftless any more.

An Agent Gets Fired.

Billed as a 15-piece ensemble, the company was literally that—a 15 piece affair—but there were only six people in it; some of them played several instruments. This led to complications.

An advance man preceded them on tour and arranged for their billing. When they arrived they usually met a stage crowded with 15 chairs and a manager stirred with indignation at finding only six musicians. At this point Jim would become highly incensed at the audacity of his agent in permitting so gross a misrepresentation. Loudly and righteously, in the sight of all concerned, he would discharge the agent. Marion and Jim estimate that this hardy soul was "fired" in such a manner twice a week for four years.

There followed more success, this time as a harmony team in vaudeville. Then the night which was to open up new and miraculous vistas to them.

They were playing cards with friends in Chicago in 1924. An old battery radio set was blatting away. Conversation was all but impossible as what might or might not have been a harmony team struggled with the notes in the upper ranges.

Jim Wins a Bet.

Jim stood it as long as he could. Then:

"Dad rat it!" he cried. "We can do better than that!" His host was a doubting Thomas with a bit of sporting blood and bet Jim they couldn't. So the next day found them seeking an audition at the station to which they had been listening—old WIBO, "the top of the dial," in Chicago.

They clicked immediately, and soon made their debut in a commercial program on the ether waves as the O'Henry twins—at $10 a broadcast! They collected the $10 they had bet, too.

Those were the days before anybody got fat eating on a radio star's salary. Marion and Jim for eight months broadcasted two hours a day for $35 a week. They were known under dozens of different names, and it is a tribute to their amazing versatility that they did not run out of things to do. They sang songs, acted out little skits, dialogs and monologs, and Marion played the celeste.

But vaudeville still offered more money, and reluctantly they left the microphone for another year in the theaters. Then when WENR went on the air they returned, never to leave. The character of Fibber McGee may be traced by veteran listeners to that of an old man named Luke in one of their early broadcasts. Molly is much the same character as Mrs. Smith in their old skit, "The Smith Family." They had another program called the "Smackouts," which they intend to bring back to radio some day.

All this time it might be supposed that the national networks were overlooking them; in fact it has often been reported that they never had a chance at the networks until Fibber and Molly came to life. Nothing could be further from the truth, Jim insists. They simply made so much money off local broadcasts plus theater appearances that they avoided the networks. When NBC bought WENR they went to WMAQ, where they could remain a local team, but when NBC bought WMAQ, as well, Jim had to hit the national hookup as "Mr. Twister."

Marion Has Many Tongues.

The first Fibber McGee and Molly broadcasts was in March, 1935. The "show" was a "natural" from the start. That it has remained so, in fact has never ceased to add to its popularity, testifies to Jim Jordan's showmanship. The sponsor wanted to base the show on Fibber's "fish stories" and outlandish lies, but Jim saw that the listeners would soon tire of them and refused. Instead we hear this quaint Irish couple, genuine, witty, and at all times sympathetic, surrounded by some of the funniest characters radio ever has known. Fans have learned to love and laugh at the little girl whose tiny voice can ask the most embarrassing questions on earth; Geraldine, the tittering bride; Grandma, the old lady with the chorus girl philosophy; Mrs. Wearybottom, who always seems as if she will surely run down like an old-time phonograph before she finishes a sentence, but never does, quite; and Molly, herself, an able foil for the cocky McGee. All of these and more are played by Marion herself!

Horatio K. Boomer, the small time big shot; the raspy Russian, who says "Hallo, Petrushka! Hallo, Tovarich!"; the Scotchman, and other dialect characters, are played by young Bill Thompson, whom Jim discovered. Silly Watson, the politely uproarious blackface comedian, is Hugh Studebaker, who never acted at all until he got into radio—he was a pipe organist. Studebaker also has a show of his own, "Bachelor's Children." Harpo, the announcer who loves to "spoil" Fibber's favorite jokes by "sneaking in" a commercial announcement, is Harlow Wilcox, who is Harold Isbell in real life. Fibber, of course, is Jim Jordan.

Coin Many 'Catch Phrases.'

You'll find no "mother-in-law" jokes on the Fibber McGee and Molly program. " 'Taint funny, McGee!" Molly said, and that was that. And you'll never hear anything on the program that you wouldn't want your children to hear; Marion and Jim have children of their own. Don Quinn, who has written the Jordan scripts for seven years, has taken a lesson from the honest-to-goodness romance that has followed the pair throughout their married life. You will never hear any serious arguments between Fibber and Molly; it's very apparent that they love each other, and you love them for it.

Seldom has any troupe in the show business coined so many catch phrases that have become by-words throughout the nation. Among all classes of people today you may hear repeated almost any time Molly's "Heavenly days, McGee!" and " 'Tain't funny, McGee!"; Fibber's "Dad rat it!"; the little girl's "I betcha!" and Grandma's "Hi, Skippy!"

They're riding on top of the world right now, the Jordans. But would they quit if they could? "Just give me a chance," says Jim. "Boy, I'd like to go right back where I started. I'd like to live on a little farm by a lake and take life easy."

"Heavenly days!" says Marion.

"You bet," Jim replies.

'Way Back When

By JEANNE

MOTOR EXECUTIVE WAS A DAY LABORER

WILLIAM S. KNUDSEN, vice president of General Motors, hardly gave promise to the casual observer of being executive material 30 year ago Born in Denmark in 1880, he came to the United States at the age of twenty, with $30 in his pocket. His first job was as a reamer and riveter in a New York shipyard, and later he worked in the railroad shops at Salamanca, N. Y., repairing locomotive boilers. Knudsen had worked in a bicycle plant in Denmark, and he finally obtained a job as a bench hand in a similar factory in Buffalo, N. Y.

The result? In five years, Knudsen was manager of the bicycle factory, the Keim mills which Henry Ford bought in 1911 During the next ten years, he worked closely with Ford in the development of mass production of automobiles In

1921 he joined General Motors, where he steadily advanced to his present position as one of the most prominent men in the whole automobile industry.

There is so much in liking the work you do that, even if offered more money at something I did not like, I think I would stick with the thing that appealed to me more. And I would be thinking of my own success in doing that. For, when we are working on things we like, we can put in more extra hours, we take more extra pains, we can do a better job. Doing the things we like, we tire less easily. We are inspired toward finding better ways, and we are able to contribute so much more than we may be actually paid for at the moment that advancement cannot fail to be rapid.

• • •

FLIVVER KING WAS A SIMPLE MECHANIC

TIME is so short, so swift in passing, we should never be at loss for how to use it. The question should not be "How can I kill this evening?" but rather "Do I need to take this valuable time for fun, or is there something important I can do with it?"

Consider the life of Henry Ford. He was born on a farm near Dearborn, Mich., in 1863. The oldest of five children, Henry helped his father with the plowing, shucked corn, mowed hay, cut grain, dug potatoes, and milked cows. Time never hung heavily on his hands. Mechanically inclined, he rigged up a small machine shop on the farm and repaired watches at night for the village jeweler After finishing the local public schools, the farmer boy left for the city to seek his fortune In Detroit, he obtained a job as a mechanic's apprentice and the

fortune he received was $2.50 per week. When he was twenty-four he returned to the farm and ran a sawmill, experimenting in his spare time with a steam car. There was never a question in his mind about what to do with time.

His father was not in sympathy with Henry Ford's experiments, so he again went to Detroit, and worked for a power and light company as an engineer on the night shift. During the seven years that he was there he became general manager; and night after night, at home, he worked far into the morning hours in developing a gasoline motor car. Success came from his experiments at last, and in order to popularize the new vehicle, Henry Ford built racing cars and drove them himself in race after race. You know where Henry Ford stands today.

His life is the story of time well used. It is an example worth remembering the next time you are wondering "how to kill time."

Malaga, Spain, before shot and shell marred its beauty.

Civil War Makes World Conscious of Modern Changes Felt in Spain

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

CIVIL war in Spain signalizes the startling changes which have swept that ancient land in recent years.

In the swift rush of daily news, more is said of military leaders and their campaigns, of statesmen and changing governments, than of the deep social and economic transformations behind the news, or the character of this land and its people.

Long before King Alfonso fled, these changes were of course under way, and because of them his monarchy failed.

These transitions have gathered momentum, until today this once romantic land of duennas, monasteries, bullfights and leisurely pastoral life has written a new and dramatic chapter in its long history.

Where centuries-old country lanes and mountain trails used to wind, fine new concrete roads now streak over the hills. To a large degree, men have exchanged their saddle mules for flivvers, and the high-wheeled, clumsy oxcart yields to the whizzing motor truck.

Senoritas Bob Their Hair.

From the Bay of Biscay down to the blue Mediterranean, traditional peasant costumes are being discarded and men are dressing in plain blue overalls. Black-eyed senoritas today lay away the time-honored mantilla, get their hair bobbed and hunt city jobs as typists, telephone girls and shop clerks, as do their sisters in many lands.

New thinking, as well as new machines, changes the way of Spanish life. Bullfighting still goes on, but now the intrepid toreadors belong to a labor union! You may still find guitars and fandangos, for Spaniards are ever a music-loving people, and possibly you may find here and there a lovesick couple mooning at each other through an old iron-barred window. More and more, however, the radio supersedes the guitar and the girl has come out from behind the historic grillwork and gone to the movies with her sweetheart—or to the street barricades to fight with him!

One fact to grasp, in understanding the social muddle here, is that Spain is divided into 50 provinces; and not so many years ago it was commonly said that it also had 50 different national dances and costumes, together with almost as many dialects.

Comparatively sudden advent of new high-speed roads, faster vehicles, speeches and news broadcast by air, and the breakdown of church influence, all combine now to dissipate this old conservative provincial spirit. Thus has Spain been turned into a milling, restless land. For the first time country and town life are freely blended, and the peasant can hear the exciting talk of city radicals and revolutionaries that yesteryear came only as a remote murmur.

Spain is now becoming so modernized that busses of every kind and color race along from village to village, from town to city. Till a few years ago, many country people never journeyed more than 20 miles from home in their lives. Now by cheap, or even free, rides in war times, they travel all over the country!

Political Parties Are Many.

With the rise of the republic came, of course, more liberty of speech and action; but, born of the 50 provinces and their 50 different ways of thinking, came also wide division of opinion and action.

Political parties of all shades sprang up in great variety and number. Certain factions held that progress should be attained gradually through education of the masses—masses as yet untrained in the art of government. This is obviously a slow process and one would suppose that in a romantic "land of manana" a slow process would be acceptable.

But the manana idea is another of those old Spanish customs so rapidly disappearing; many now demand a quicker approach, a faster progress.

Thus a peek at Spain of today reveals a startling modernity of thought, civilization and up-to-the-minute comforts and contrivances, superimposed upon the stubborn survival of many local ways and prejudices that bend or break but slowly.

Irrestibly, however, the cities put on a more modern dress and quicken their pace. Consider, hastily, some of the cities and towns that have figured in recent war news.

The New York of Spain.

Take a look at Barcelona, the New York of Spain. It is the largest city in the country, the most important financial and industrial center and by far the busiest seaport.

The sun shines in air crisp and exhilarating as you stroll down the Paseo de Gracia, Barcelona's most important thoroughfare and indeed one of the most interesting and modernistic streets in the world. Fine motorcars (no trucks allowed on this wide avenue) stop and go at modern American traffic signals.

At the foot of the Paseo is the very heart of Barcelona—the Plaza de Cataluna—a large open space filled with statues, fountains, flower beds, paved paths, and benches.

Always animated, human streams flow in and out of its subway entrances. The Plaza, too, is the center of fierce turmoil in every political upheaval. It is surrounded by large, ornate structures—banks, hotels, and new telephone office building with copper-green tower, a Yankee skyscraper indeed in a Spanish metropolis!

Flying at another corner is a welcome sight for American eyes—the Stars and Stripes—indicating the splendid offices of the United States consulate general.

Use American Cash Registers.

Big signs advertise American automobiles. Indeed, three-fourths of all cars in the Plaza are of familiar make. There is a large American bank a few doors up the street; in bookstores are displays of American fountain pens, and in the tobacco shops even chewing gum!

All these business houses use American adding machines and cash registers, and the offices hum with American typewriters. Many of the fine new apartment buildings are equipped with American doors and electric refrigerators. Here "foreign trade" is a pulsing thing far removed from the dry statistics of our commerce.

"Rambla" really means a dry ravine, but in Barcelona the word is used to designate a wider street or boulevard. The original fascinating Rambla of Barcelona is like no other thoroughfare in the world! It is a long, straight avenue with a wide promenade for pedestrians in the center and is lined with tall plane trees.

Busy stores flank the Rambla from end to end, interspersed with theaters, cinemas, an ancient church or two and a large number of cafes. Under bright, wide awnings that canopy the sidewalks and shade the little tables, idlers sit and watch the lifeblood of the metropolis stream up and down its main artery—streaming at a much quick tempo since recent shooting started!

Like the Paris boulevards, each section of the Rambla bears a different name. First come ornamental kiosks displaying an amazing variety of newspapers and magazines in every European language. Then comes the bird market. Arranged in cages of all sizes along the promenade is a bewildering show of yellow and brown canaries, gray parrots from western Africa, green ones from Brazil, tiny parakeets, all setting up a lively chatter.

New World Gives Way.

The next section is the brightest of all—the Rambla de las Flores. Here open-air flower stalls, bossed by black-haired peasant women, offer flowers of every color and shade. Love of flowers is one point at least upon which all divergent political parties can agree!

Following the flower stalls come more kiosks where one may procure ice cream or soft drinks. Buildings begin to look older now—the New World gives way to the Old—and finally we come out into the wide water front, with its ornate customshouse, the tall statue to Columbus, and the palm-lined Paseo de Colon. To the right, in the shadow of the huge, somber stone barracks, is a long double line of bookstalls.

Sloping up on the right of the harbor is the high hill of Montjuich, with a sinister old fort upon its crest. In turbulent days of riots and strikes, executions of ringleaders take place here.

A Queer Crop

What would you think of three acres planted to nothing but gourds? Leo Armstrong, whose home is near Ames, has that many gourds growing on his place and he has raised them for several years and has done so well with them that he expects to continue with the business He says they are bought for almost everything that people can think of Some old-timers buy them because they used to drink out of them when they were children Some use them for flower pots and some for fruit baskets He has a few growing which are of strange shapes, resembling some kind of animal He has one which after he attached a tail of pine cones, looks like a skunk with the aid of a little imagination At any rate passers by from great distances often stop and buy gourds at good prices.

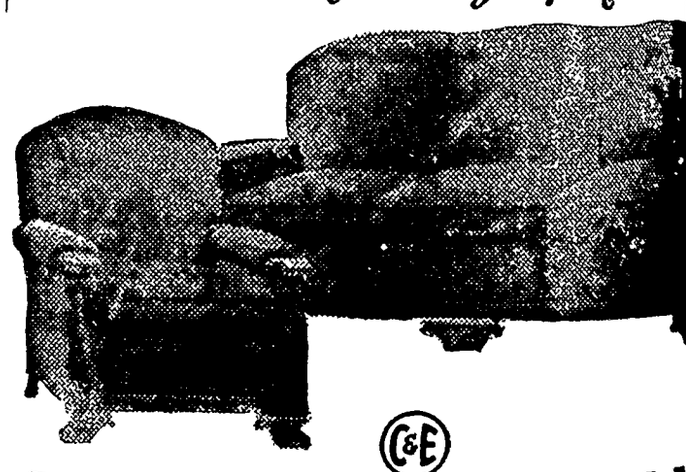
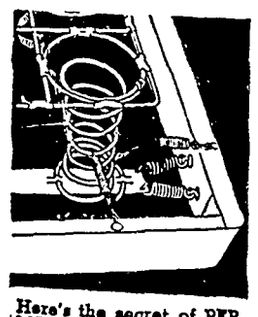
A BICYCLE BUILT FOR TW
...and Burlap Spring Suspens
— Follies of the Gay 90's



C&E
PERMALUX
All-Steel SPRING SUSPENSIO

When Uncle Hector took his girl out for an airing on a bicycle built for two . . . burlap and twine spring suspension were quite the thing in "parlor" furniture. But in these more modern days, living room furniture must be made of sterner stuff . . . PERMALUX *All-Steel Spring Suspension*, for example . . . the greatest improvement in furniture design in 50 years! Suites made the PERMALUX way are softer, more luxurious . . . and longer-lasting than suites made with webbing spring suspension.



Here's the secret of PERMALUX' unusual luxury! Every spring anchored in "floating" steel bands!

Every spring is securely seated in strong "floating" steel bands. There is NO twine or burlap to stretch or wear out. Seats cannot sag. The entire spring assembly is steel with silver-white finish, and open to full view. Sanitary. GUARANTEED to outlast the upholstery and the frame.

Be sure to see our smart new PERMALUX designs and models. You'll love their richness of luxury. Terms to suit every budget.

Medieval Gilds, Archers Conduct Colorful Fetes

Twice each year, Vise, a quiet little city on the border of Belgium and Holland, decks itself in festive array and holds celebrations reminiscent of medieval times. Its Gild of the Arquebusiers holds a fete, while the Gild of the Free Arquebusiers make merry a week later, states a writer in the Boston Globe.

Even though the arquebus, a Sixteenth century gun, which preceeded the musket, went out of use about 1570, its carriers in this city, the arquebusiers, have kept up their ancient gilds and today membership in them is still looked upon as a mark of distinction. Twice annually they turn back the calendar 400 years and stage these celebrations with all the color of the Middle Ages.

Other Belgian cities as well as Vise preserve gilds and contests that date from medieval times. Just as colorful as the Fetes of the Arquebusiers are the archery contests still held throughout the year in Bruges by the Archers' Company of San Sebastian. Once made up of men who formed the bodyguard of the Counts of Flanders, this company still prides itself that Charles II of England visited its tower in 1656 and wrote his name in its golden book. His brother, the Duke of Gloucester, even tried his hand at the bow there and left behind a silver arrow, still the show pieces of the tower.

About 50 men take part in the tournaments, wearing white jackets and shooting from a bandstand at the back of the tower Their target, a clay pigeon on a pole above the building, is a hard one to hit, and on windy days it sometimes happens that no one breaks it.

History of London Runs as Far Back as 43 A. D.

London, the greatest city in the world, lies 50 miles above the mouth of the River Thames, spreading over both its banks It has an area of 693 square miles and a population of more than 8,000,000 London is really the mother city of the British empire, and it would take the visitor weeks to view all the sights in the grand old city, which dates back so far that there isn't a recorded time when there wasn't London The Roman legions were there in A D. 43

The British metropolis is but 1½ hours by rail from Southampton.

London has always been the workshop of Great Britain's literary lights. There toiled Shakespeare, Chaucer, Coleridge, Defoe, Dickens, Dryden, Gibbon, Goldsmith, Johnson, Keats, Lovelace, Marlowe, Milton, Raleigh, Shelley, Thackeray, and scores of the men and women who built the sturdy foundation of literary England. Many of the houses connected with the lives of these great writers wtill stand.

The Buffalo

The buffalo never has been regarded as a smart animal, but he had the sense of self-protection. He was known to the Indians as a prairie animal.

From the Indians the pioneers learned that the buffalo provided the redskins with fresh meat, dried meat, tallow (marrow kept in bladders), and dried tongue. From the skin the tribesmen made robes with the hair on; clothing and bedding. Dressed without the hair, they built tepees and boats by sewing the green skins and stretching them over a wooden framework. Shields were made from the thickest parts; bags for use in traveling the trails and clothing of many kinds. Even coffins, then known as "winding sheets," served for the dead. From the sinews the Indians made ropes, thread and bowstrings. The Indian and buffalo taught the pioneers a lot of lessons in being provident.

Words of War

Only two and three generations ago Europe still considered Americans a raw and primitive people and her diplomats talked to us as they wouldn't dare talk to each other. In the year 1850, for instance, a British subject was put on trial for murder in New York and the British premier dared say: "The President should understand this—that the British nation will never permit a British subject to be dealt with as the people of New York propose to deal with this man . . ." and so forth, even to words of war.

Hearty Eaters

If certain celebrities really ate what legend says they did, the wonder is that they managed to do so much work Dumas, they say, was insulted if offered less than three steaks for a meal. Balzac consumed 100 oysters, a dozen lamb cutlets and a sole or two at a sitting. But don't feel inferior if you require only a ham sandwich for lunch. Isaac Newton lived on a scanty diet of bread, water and vegetables.

Phoenix Sacred in China

The phoenix, called in Chinese "feng huang," is one of the four sacred creatures of the country, the others being the dragon (perhaps the most important of them all), the tortoise, and the unicorn. The unicorn is recognized as the king of the quadruped world, says Nature Magazine, the phoenix, ruler of all feathered life.

Enterprising Snakes

People are not so much afraid of snakes as they used to be and we do not always kill every one that we see That may be one reason why they are growing more venturesome Fred Nulle, a farmer who lives near to Audubon, had occasion to climb up to the cupola of his granary to get it ready for threshers When he got up there he found a bull snake about three feet long at the highest point Snakes are no supposed to climb that high, but Nulle supposed that it had gone up there in pursuit of sparrows About the same time Mrs Fred Newell, a farmer's wife living near Emmetsburg, found a three-foot rattlesnake under her bed when she was sweeping the floor. She called a neighbor, who shot it for her She thought that it had gotten in through a hole in he floor. Another farmer reported during the latter part of July that he discovered a snake coiled up on the roof of his house.

Approximately 105,000 baseballs are used by the major leagues during one season.

The More You Use The Less It Costs...

Electric rates are arranged in decreasing steps.
As your use of electricity increases your average rate goes down.

For this reason you can use additional lights and appliances and your electric bill will be only slightly more.
Every day more of our customers are taking advantage of this fact.

Convince yourself by using all the electricity you want next month.

We are certain you will be agreeably surprised at the small increase that will result in your bill.

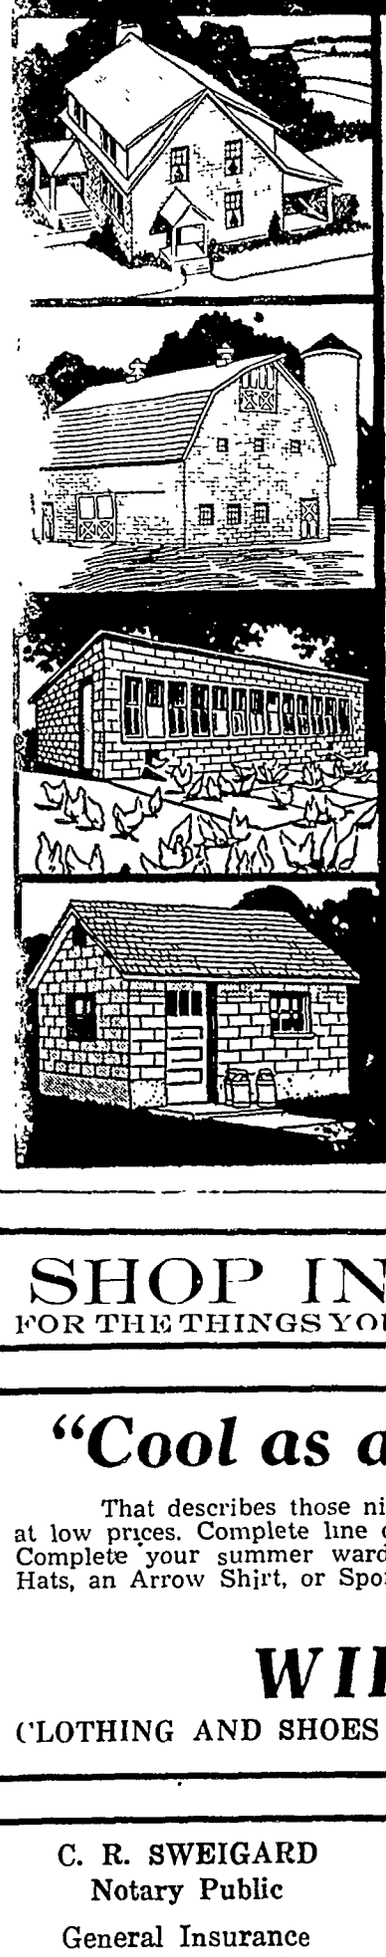
Central States Electric Company

Catches 'Em

Evidently August Grees, a farmer living near to Fontanelle, does not like the idea of spreading poison in his fields to kill the grasshoppers He has therefore, rigged a trap for catching them He built a low sled-like affair and put on it a box about four feet wide and open at the front. The front end is about six inches from the ground and covered with a screen He goes out into the stubble fields and runs his contraption over the ground and the hoppers, willing to hop anywhere to get out of the way, are caught through the front opening as he drives forward At the trial of his novel machine, after he had driven slowly around three or four acres, he opened up the top screen and found that he had collected about two bushels of hoppers.

Single electric signs in New York cost as much as $15,000 a month to operate

FOR ALL KINDS OF FARM BUILDINGS
USE THRIFTY, DURABLE, FIRESAFE
CONCRETE MASONRY



ALL over the country, concrete masonry is constantly gaining wider use. And no wonder! It is low in first cost, strong, firesafe and permanent. The generous-sized blocks are easy to lay, speed up work, and save mortar.

The check list below suggests a few of the many places where concrete masonry can be used profitably on your farm. We'll gladly supply free booklets showing how to build. You can do the work yourself, or hire a good mason contractor.

Cool Organdy for Midsummer Dance

By CHERIE NICHOLAS

DURING midsummer moments when a high-registering thermometer gives promise that torrid weather has decided to prolong its stay even to the point of trespassing on the rights of autumn then is it that dainty cool lingerie frocks swing into the spotlight in all their glory.

Especially this season the craze seems not to have abated for frocks of simple, inexpensive, yet fine and lovely wash materials. The younger set adore the pretty dimities, organdies, dotted swisses for their party frocks and when they go away to school this fall many a college-faring girl will slip one or two of her summery wash frocks into her wardrobe trunk knowing full well that she will get any amount of wear out of them ere the cool fall days come upon us.

If you have never tried shadow print organdie for your midsummer-night party frock, do it now! You can get this lovely material in pastels or white and it makes up beautifully, and best of all it costs such a trifle compared with luxury-type weaves, while it "looks a million." The charming gown on the seated figure is made of white shadow print organdie and we venture to say when this gown dances hither and thither on the ballroom floor or under the stars at the country club it will be voted among the prettiest. The fact that it is picturesquely and fashionably full-skirted makes it all the more enchanting The corsage of flowers in realistic coloring is in gay contrast thus adding another beguiling note.

Some there are who prefer statuesque slenderizing lines rather than bouffancy.

The princess gown to the left will tune to the liking of those who prefer the slim and tall silhouette. There is an exquisiteness expressed which reflects the new trend toward meticulous detail such as fine hand-tucking and myriads of wee self-material covered buttons such as fasten this princess all the way down the front. Here is really a very charming way to make up organdie if you like to be outstanding in distinctive dress.

It is not only that delightsome lingerie materials are favored for party frocks but the tendency all the way through the season is to wear dainty frilly blouses in the daytime of exquisitely fine cotton sheers, also prettily feminine neckwear and beguiling accessories—jabots, ruffled halter fronts and other such flattering items. With the approach of fall, tailored suits are coming out in full force and the fad of the moment is to wear with them the frilliest fluttery blouses that fancy might picture. Fine handwork is lavished on the high-quality types.

For these handmade blouses sheerest of fine white organdie or daintiest batiste or filmy handkerchief linen are first in favor. Popular too and heartily to be recommended are the attractive allover embroidered organdies that are definitely practical and pretty for the making of the blouse to be worn with one's jacket-and-skirt tailleur. It should by all means have a sprightly frill fashioned after the manner of the model pictured in the inset to the right. Trimmed with lace edging, as is this blouse, makes the effect all the more daintily feminine and alluring.

© Western Newspaper Union.

SHIRRED JACKET

By CHERIE NICHOLAS

As if the new sheer woolens for fall were not attractive enough in themselves designers are making them even more so in the clever way they are manipulating them via elaborate shirrings, tuckings, stitchings, bandings and other intriguing workings. Sheerest navy wool makes this graceful costume. Its full cut jacket is fascinatingly shirred and banded. The frock itself, which is a slim one-piece, is also beautified with shirred bodice and slenderly fashioned skirt.

TIGHT SLEEVES ON FROCKS FALL STYLE

While the designers are draping blouses, lowering waistlines and straightening out the hemlines of skirts they also are cutting out the fullness of sleeves. Advance autumn fashions which forecast the coming season's mode have sleeves that are straight and tight. Absence of shoulder pleats is especially noteworthy and if any fullness does appear it is in the form of a drapery on the forearm.

Sleek satins are the fabrics which show off the new straight sleeves and slender skirts to best advance so the shiny fabrics are the first to show the changes of fashion. Look for them not only of perennial black but flaunting such colors as bright blue and purple.

Dressmaker Details That Class as Important News

The continued importance of embroidery is noted. Gold embroidery on black is much employed; also fanciful effects on the new silk frocks. Much favor is expressed for appliqued felt motifs on black silk crepe day dresses.

Dressmakers are making use of any amount of shirring and tucking and they delight in scalloped and sawtooth hemlines, thus trimming the dark silk sheers and crepes effectively. The skirts of the newest silk print frocks are frequently pleated or vertically tucked all around.

Lace-Trimmed Lingerie

Black lace as a trimming on lingerie is a prominent note in the summer season's offerings. It is contrasted with pastel shades, particularly blues, greens and yellows, and sometimes worn with all-black.

STAR DUST

Movie • Radio

★★★By VIRGINIA VALE★★★

WHEN word went around the Metro - Goldwyn - Mayer studio the other day that Leatrice Joy Gilbert, thirteen-year-old daughter of Leatrice Joy and the late John Gilbert, was making a film test, there was more craning of necks and rushing toward the set than there is even for Garbo.

If good wishes could make good actresses little Miss Gilbert will be the greatest of all. Back in the wardrobe department many a tear was shed as seamstresses who had dressed her mother and her father sewed on her costume, and cameramen who had been devoted to her father begged for the chance to photograph her. For a long time the studio has owned film rights to "National Velvet," but couldn't find a girl who was both young and appealing enough to play the heroine. Everyone hopes that little Leatrice will be chosen.

—★—

Hot weather in Hollywood so intense that the closed-in sets of sound studios are like furnaces seems to have a calming effect on temperament and nerves. Ginger Rogers and Katherine Hepburn sit together at the edge of the "Stage Door" set at RKO studio, calmly sipping tea and discussing the day's news. At Twentieth Century - Fox, Virginia Bruce and Loretta Young swap theories on child-raising. At Columbia, the staff is daily more amazed to find Grace Moore agreeing wholeheartedly with every suggestion the director makes. Incidentally, John Ford has an effective way of squelching actors who want to play scenes their way instead of taking his direction. If an actor grows argumentative, he lets him go ahead and play the scene his way. Then he rips the film out of the camera, hands it to the stubborn thespian and says, "You can have it. No one else would want to see it."

Ginger Rogers

—★—

The daffiest picture of the week is RKO's "Super Sleuth." You couldn't find better hot-weather entertainment anywhere. Jack Oakie provides the laughs, expertly aided by Ann Sothern, but it is the story that really deserves loud cheers. I don't want to spoil it for you by telling too much, but you won't mind knowing that it is the story of a movie star who specializes in detective roles.

—★—

Ann Sothern's career, in the doldrums lately because of second-rate pictures, has suddenly picked up and no one is happier than her close friend, Joan Bennett. If you heard Ann spouting Shakespeare on that best of all summer programs, Charlie McCarthy aided and abetted by Edgar Bergen, you know that she has a sense of comedy that should put her up in the front ranks of high comedy with Claudette Colbert and Carole Lombard.

—★—

When Sonja Henie decided to go to Norway for a vacation a big farewell luncheon was planned for her by Tyrone Power. That seemed like a charming idea when it was planned and the invitations sent out, but in the meantime Sonja and Tyrone had a squabble and weren't speaking. They carefully selected tables at opposite ends of the studio lunchroom and avoided speaking to each other. Hollywood has often giggled over parties where none of the guests were interested in meeting the guest of honor, but this was the first time on record when the host and the guest of honor weren't speaking. His attentions to Janet Gaynor and Loretta Young are supposed to have caused it.

Sonja Heine

—★—

ODDS AND ENDS—Officials at NBC who discovered Doris Weston and called Warner Brothers' attention to her are delighted with her performance in "The Singing Marine," say she is the only girl who looks intelligent while listening to other players sing . . . Ben Bernie is attending dramatic school in hopes of outsmarting Walter Winchell in their next film . . . Joan Crawford will star in the re-make of that grandest of all film stories, "Shopworn Angel," which Nancy Carroll once made . . . Ray Milland has been given Claudette Colbert's former dressing room and his friends are kidding him unmercifully about his flossy surroundings, walls of blue mirror glass, white dressing table, and thick, thick rugs . . . Whenever actors insist that they just can't do justice to more than two pictures a year, producers remind them that Gene Autry is the biggest attraction in pictures nowadays, partly because he is so good, partly because he makes so many pictures that audiences have no chance to forget him.

"Sky Dog Team" of 2,000 Balloons Seeks Stratosphere

Jean Piccard Will Attempt Hop, Using New Method

Denver. — New stratosphere records will be sought in an entirely new kind of stratosphere balloon, Jean Piccard, twin brother of strato-pioneer August Piccard, announced to the meeting of the American Association for the Advancement of Science here.

Mr. Piccard will undertake the long ascension under the lift not of a single giant balloon as heretofore used, but with a "sky dog team" of 2,000 small rubber pilot balloons of the type now used by the U. S. weather bureau for unmanned flights with light recording instruments.

"Since a single sounding balloon is able to carry a half-pound instrument to an altitude of twenty miles it is obvious that 2,000 sounding balloons could lift an air-tight gondola weighing 1,000 pounds to the same lofty position," he said.

"It is my intention to construct such an assembly and to make scientific observations at the altitudes reached by sounding balloons.

"Before making such a flight I intend to test the possibilities of the composite balloon by making, in the near future, an experimental flight with eighty sounding balloons attached to an open gondola."

On this experimental flight, Mr. Piccard expects to be contented with the modest altitude of about two miles. He added:

"As a whole, our new lighter-than-air craft, if it works, will work like a very large dog team and the pilot will be the driver of 2,000 'sky dogs.'"

There is a widely accepted story of a multiple-balloon flight 150 years ago, with a craft said to have been invented by two prominent early members of the American Philosophical society in Philadelphia. Published in France not long after the first balloon flights there, it went into great and convincing detail—and was all a hoax. But the story has persisted, and is solemnly repeated in every history of aeronautics and in all the encyclopedias.

However, multiple balloon flights really were made in both this country and Europe during the 1820's, so the Piccard proposal has precedents of quite respectable standing.

Fear of Dead Is Blamed in Indians' Babel of Languages

Washington.—Dead men tell no tales, but they helped create the babel of over 100 languages spoken by American Indians.

This theory is advanced by Dr. John P. Harrington, Smithsonian Institution ethnologist and authority on America's ancient tongues.

Widespread among Indian tribes, he explains, was terror of the dead so intense that even a dead person's name was not whispered aloud. Since Indians commonly bore personal names such as Blue Reindeer or Strong Bow, relatives and friends, after a death would find it advisable to invent new words or at least change slightly the words of the dead Indian's name.

This doubtless accounts in part, Dr. Harrington says, for there being over 100 Indian languages, many as different as English and Russian.

Laws Now Bar Child Marriage in 39 States

Washington. — The wave of sentiment aroused by publicity given to a number of child brides early this year has apparently resulted in general tightening of regulations to prevent such marriages of very young children.

A survey by the United States children's bureau shows that the legal minimum marriage age for children has now been raised above the common-law age in 39 states and the District of Columbia. In all but nine states the youngest age at which a girl can legally marry is between fourteen and sixteen years For boys in these states the legal minimum marriage age varies from sixteen to eighteen years.

In Colorado, Florida, Idaho, Maryland, Mississippi, New Jersey, Rhode Island, Tennessee and Washington the common-law marriage age still applies and boys of fourteen and girls of twelve years are considered able to give valid consent to marriage.

Warns Young Men of Big Cities Not to Overtax Hearts

Beware Too Much Work, Food; Too Little Exercise

Atlantic City, N. J.—Warning to young professional and business men who live in large cities, work hard, exercise little, eat too much and smoke too much appeared in the report of Drs. R. Earle Glendy, Samuel A. Levine and Paul D. White of Boston at the meeting here of the American Medical association.

Heart disease before they are sixty years old is the likely fate of such young men.

More than one out of every hundred cases of heart disease—1.6 per cent—occurs in patients under forty years of age, these physicians found. Young men are much more frequent victims than young women in the ratio of 24 to 1.

Hoping to learn why so many young men are falling victims to what has generally been considered a disease of old age, the Boston physicians investigated the inheritance and living habits of a group of 100 young heart patients and compared these with similar information obtained from men and women of eighty, ninety and one-hundred years of age.

Jews More Susceptible.

Relatively far more of the older people were of British race stock, although the method of selection of this group for study and the time of immigration may have influenced this factor. Jewish people are more susceptible to heart and blood vessel disease, the study showed. The old men and women had longer-lived ancestors than the young patients.

These factors are beyond the control of the individual, but living conditions and habits which he can control evidently also play an important part in causing development of heart diseases.

Country life, for instance, is not as hard on the heart as the stresses of city life. Nearly three-fourths of the men and women past eighty years old lived in the country or small towns, while nearly nine-tenths of the young heart patients lived in large cities.

The older persons all claimed to have been moderate eaters and while, as the doctors pointed out they may have forgotten the hearty appetites of their youth their body build was generally lean as compared to the heavy build of the young heart patients.

Smoking Plays Big Part.

Over nine-tenths of the older people exercised considerably till well past middle age. The young heart patients had many of them been strenuously athletic in their youth but only few continued to exercise regularly.

A striking difference between the two groups was found in their use of tobacco, and this together with other evidence of the effect of tobacco, the Boston physicians believe, suggests that smoking plays an important part. A little over half the old group were smokers but only a few were heavy smokers. Over nine-tenths of the young group were smokers, more than half of them heavy smokers.

The two groups were more alike in their use of alcohol. A surprising finding was that severe infectious disease, generally supposed to impose considerable strain on the heart, had occurred, with the exception of diphtheria and pneumonia, more frequently in the older group than the young group.

Irregular and few hours of sleep and nervous sensitiveness and nervous strain were other conditions found much more frequently in the young group.

Fainting Spells May Be Latest Strike Technique in France

Washington. — A fainting strike as an advance in technique over sit-down strikes may be the explanation of the reported mass faintings of girl workers in a Lille, France, sugar refinery where 400 workers fainted while at work one day and another 70 collapsed within a few hours after resuming work.

The faint strike explanation is the suggestion of a national authority on industrial hygiene. He refused to be quoted directly but pointed out that a combination of high temperature and high humidity, labor unrest and a little hysteria might lead to such mass collapses. Dissatisfaction with working conditions generally plus uncomfortable working conditions during hot weather might lead the girls to think all their troubles due to something in the plant and they would then faint on going to work.

A possible chemical explanation is that during the refining process there might be some fermentation which would increase the carbon dioxide content of the air and reduce its oxygen content. This could easily cause fainting.

Lesson for August 22

THE PLACE OF RELIGION IN A NATION'S LIFE.

LESSON TEXT—Exodus 25:1, 2, 8, 9; 29 43-46, 40:34-38.

GOLDEN TEXT—Blessed is the nation whose God is the Lord. Ps 33:12.

PRIMARY TOPIC—The Meeting House.

JUNIOR TOPIC—The House of the Lord.

INTERMEDIATE AND SENIOR TOPIC—Why a Nation Needs Religion.

YOUNG PEOPLE AND ADULT TOPIC—The Place of Religion in a Nation's Life.

The nation of Israel was under the direct government of God—a theocracy as distinguished from a monarchy, or a democracy. God spoke to them through his servant Moses, but his relationship to the people was far more intimate than that of a distant power delivering laws through a representative. God dwelt in the midst of his people, and today we consider how he made provision for a place in which to meet with them, for a holy priesthood to minister before him, and made known his personal presence by a manifestation of his glory.

I. A Place to Meet God (Exod. 25:1, 2, 8, 9; 29:43-46).

Every place of worship, whether the tabernacle in the wilderness, or a church on a busy city street, testifies to the fact that man is indeed "incurably religious." He is a spiritual being, made by God for fellowship with himself. He is never satisfied until he meets God.

The pattern or plan for the tabernacle was given by God (v. 9), and was to be followed in every detail. But note that the people were to make a willing offering of all that was needed for its construction. God gives man the glorious privilege of partnership with him. Shortsighted and foolish is the man who grumbles because the church needs money. A father might just as well grieve because his children outgrow their clothing. Thank God if your church is alive and growing, and be glad for the opportunity to buy it some "new clothes."

Sacrificial gifts and faithful building according to God's plan, brought to completion a place of meeting which God sanctified and accepted.

II. Priests to Minister to God (vv. 44,45).

Note, first, that they were men called of God. Those who stand to minister to him for the people dare not appoint themselves, or seek an appointment by men. They must be "God-called."

They were also sanctified, or ordained, by God. Only as men act in true recognition of God's selection and setting apart of his chosen servants does ordination have real meaning.

Finally, notice that the priests were "to minister to" God. His servants are to serve him, and thus to meet the need of the people for whom they speak. They are "put in trust with the gospel," and therefore to "so . . . speak; not as pleasing men, but God" (I Thess. 2:4). If you have that kind of a pastor, praise God for him, and give him your earnest support and encouragement.

III. The Presence of God (Exod. 29 45, 46; 40:34-38).

He dwelt in the midst of his people. Christians also know what it means to have "God with us," for such is the very meaning of the name "Immanuel" (Isa. 7:14; Matt. 1:23). He it was who as the living Word "became flesh and dwelt among us" (John 1:14).

For our further instruction and blessing let us observe that when God dwelt with his people his glory "filled the tabernacle" (v. 34). Is that true of our churches? Have we so loved God and so fully yielded ourselves and our churches to him that he is free to fill the place with his glory?

The word "abode" in v. 35 is significant. What blessed peace and assurance must have come to Israel when they knew that God had come to abide with them. In this world of transitory things we need such an anchor for the soul—God's abiding presence.

But God's people must move on. There are victories to be won, a promised land to take. So we read that the cloud arose when they were to move forward, and when it was "not taken up, then they journeyed not until the day that it was taken up."

The Psalmist tells us that "the steps of a good man are ordered by the Lord" (Ps. 37:23). I believe it was George Mueller of blessed memory who inserted three words—"and the stops." The man, or the church, or the nation, that trust God, will have both "steps" and "stops" "ordered by the Lord."

Beginning of Eternal Life

Eternal life does not just mean that when our bodies die our souls last on. It means a kind of life which we can begin to live here and now, and which cannot be destroyed by death because it is united with God.—A Day Book of Prayer.

Always an Answer

A little girl was once teased by a skeptic, who remarked that God had not answered her prayer. "Yes," she said, "he answered. He said no."

Intimate With Chic

THE lovely flower may have been born to blush unseen, Milady, but not you. Anyway, what chance could you have of going unnoticed when you wear one of these exciting new frocks by Sew-Your-Own—not the Ghost!

Cool, Cool, Cool.

The clever new dress at the left is as young as you are, and in dotted Swiss you'll be as crisp, pretty, and cool as though you bloomed always in an air-conditioned room.

Be certain of success because Sew-Your-Own has made everything easy for you in the step-by-step sewing instructions.

We Only Heard.

Maybe we're wrong, Little Sis, but we heard that this is the dress Mommy has her heart set on for you. You know princess lines that flare, and puff sleeves that give you that cunning big-little-girl look go over well with both mother and you.

You won't go wrong on gingham, silk crepe, broadcloth or percale. So here's hoping, Little Sis.

Vivacious Version.

Thumbs up on taffeta; eyes right for pattern 1349! It's a picture-pretty frock with a knack for bringing out the best in you. A happy idea is to cut one copy with short sleeves for now, another with the long style in a fallish fabric for that popular season just ahead.

The Patterns.

Pattern 1341 is designed for sizes 12 to 20 (30 to 38 bust). Size 14 requires 4½ yards of 39 inch material plus 2⅛ yards of machine pleating.

Pattern 1828 is designed for sizes 4, 6, 8, and 10 years. Size 6 requires 2⅛ yards of 35 inch material plus ¼ yard contrasting.

Pattern 1349 is designed for sizes 12 to 20 (30 to 38 bust). Size 14 requires 4⅛ yards of 39 inch material; with long sleeves 4⅜ yards. To trim as pictured, 13 yards of ribbon are required together with 1⅓ yards for the bow.

Send your order to The Sewing Circle Pattern Dept., Room 1020, 211 W. Wacker Dr., Chicago, Ill. Price of patterns, 15 cents (in coins) each.

Uncle Phil Says:

Aristocracy Is Real

Aristocracy consists in holding one's self above vulgarity and ignorance.

Are you satisfied with the friends who choose you or do you want to initiate all your friendships yourself?

In hot weather it is not much use to try to look well dressed. Try the next best thing—Look comfortable.

The World's Reply

Vandals commit the kind of desecrations that show they hate the world, and the world should apply a stout hickory paddle.

An "inferiority complex" is so severe a handicap that it ought to be spanked out of some youths. Those who have it worst, hate it most.

The ant and the bee are made symbols of man when men are serious. When men are having fun, monkeys might be.

Mr and Mrs Henry Schroeder, of Chicago, arrived Tuesday from Eitzen, Minn, where they had been visiting Grandma Schroeder and Dorothy Croner will return to Chicago with them sometime next week

The Standard Bearers of the Methodist church met Tuesday afternoon at the church for their meeting Then the girls and their leaders took their lunch and went to Lake Cornelia where they enjoyed a picnic supper and roller skating

Mr and Mrs. Elmer Schneider and daughter, Mrs. D Schreiner; and son, Bob, drove to Moravia, Iowa, Sunday where Mrs. Schreiner remained for a visit until the latter part of the week, when she will return to her home at Hibbing, Minn.

Threshing is pretty well over with in this county and there are but a few scattered fields here and there that have not been threshed. The small grain crop this year was one of the best the farmers have harvested in several years.

Mr and Mrs George Stokesbary drove to Des Moines, Friday where Mr. Stokesbary attended a Watkins convention Friday and Saturday Their daughter, Eva Sullivan, went to Des Moines Saturday evening and returned home with them Sunday.

Mrs. Bob Risser and son, Bobbie, of Washington D C., arrived Sunday evening to spend several weeks visiting with Mrs. Risser's parents, Mr. and Mrs. P. M. Wilson Grandpa and Grandma Wilson are feeling extra happy to have their daughter and grandson with them for the balance of the summer.

GRASSHOPPERS SEEN AS MENACE NEXT YEAR

Farmers generally have been voicing some concern over the great clouds of grasshoppers that rise along fence rows and other places which afford them protection While they came to late to do much damage this year, they are seen as a menace next year. Many farmers propose to burn the grass and weeds along the fence rows and in the sloughs directly after frost this fall to destroy the eggs which must have been laid by millions.
